Does This Look Good to You?

$3.00 Hen That Lays $21.27 in Eggs in One Year

This Is Why There Is Such An Increasing Demand for My Anconas

Sheppard's Famous Anconas

Have made another big sweep at the Cleveland Fancier's Club big Show by ning all the first prizes in both Rose and Single Comb classes, and all the ond prizes excepting one. We also won special for best display of Anconas special for best display of any variety in the big show. They have won first he world's greatest shows, including London, England, Cleveland and Mad- n Square Garden, N. Y. For seven consecutive years my birds have won three times as many first and second prizes at the nation's greatest shows as all my competitors together, (including the late shows), so have earned the distinction of being

THE WORLD'S BEST

They are famous egg machines and the greatest **winter layers,** with the wonderful egg record of **256 Average for a Flock.**

If you want to win at your show or increase your egg production, write for catalogue. Orders booked now for eggs and baby chicks. A fine lot of stock for sale.

H. CECIL SHEPPARD Pres. International Ancona Club **Box M2, BEREA, OHIO**

AUG 23 1913

F. E. HARRISON'S

CHAMPION ROYAL RED S.C. RHODE ISLAND REDS

again sweep Chicago

The most phenomenal winnings of all times have just been awarded to this great strain in a most decisive manner.

Bred, Owned and Exhibited by F. E. Harrison

In the largest class of Single Comb Rhode Island Reds ever caged in a National show, Royal Reds win as follows:

First and Fourth Cock.
Second and Fifth Hen.
First and Fifth Cockerel.
First, Second, Third and Fourth Pullet.
First and Third Old Pen.
First and Fifth Young Pen.
Special Best Display.
Color Special Male.
Shape Special Male.
Color Special Female.
Shape Special Female.
Best Colored Pen.

And the Red Club of America's Western Championship Cup for Best Display.

My First Prize Cockerel was the sensation of the show, winning First and Championship in a class of one-hundred-six (106) Cockerels, a most enviable record, more so when it is taken into consideration that this bird was bred and raised from shell to show room by me. Particulars of this great win on request.

My egg offer for 1914 will be the best ever offered.

I have every First Prize Winning Male at the Great Chicago Coliseum Show from the 1912-13 and 1913-14 shows.

I have the largest flock of quality Single Comb Reds of any breeder in the world.

CATALOG FREE.

90 PER CENT SHOW PRIZES

TECKTONIUS' STRAIN BUFF LEGHORNS

Highest Market Prices

Are Good for the Big Chicago Show

For seven years my **famous birds** have captured **90 per cent of first and second prizes, cups and specials at all big poultry shows.** The "TECKTONIUS STRAIN" so surely has the **habit** of "coming back," that this year some of my best customers—buyers of my high-grade stock—have asked **me not to show at Chicago** in December. **They want a chance.** Therefore—unless my line is already sold—**I will not exhibit at the Chicago December Show.** Just now, am offering

Unrivaled Bargains in Single and Rose Comb Leghorns

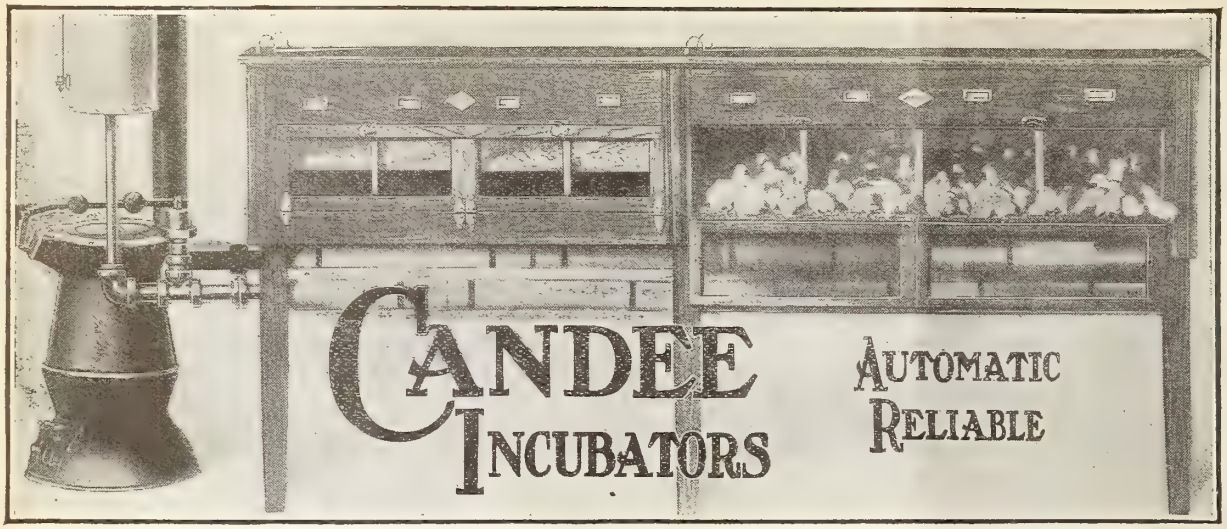
—For quick acceptance: **Special values** in $10 and $15 trios and pens, Single Comb Buff; especially good values in $3, $5 and $10 Single and Rose Comb males; extra good values in lots of twelve Single Comb females, mated to one male—utility grade—price $18 for thirteen birds. This offer **good** only until **November 15th.**

Scientific mating methods have made my Buff Leghorns "rulers of the roost." What I have done for the "TECKTONIUS STRAIN" **you can do for yours.** Care and persistence have made **"Tecktonius Buffs" ace high winners** in **market** and **show. My handsome illustrated catalog**—sent postpaid, 25c, coin or stamps—shows you how to put **your birds** in **the same class.**

Get some "TECKTONIUS STRAIN" **pedigreed stock**—the **world's feathered aristocracy**—into **your flock**—while my prices are **away down.** They will show you how to get in the best prize winning, show room, and general utility class—decrease sickness in the flock—increase percentage of fertility—grow strong, early maturing chicks—breed beautifully shaped birds—reduce cost of feed—increase productiveness—and to get a **Buff** Leghorn that is really **buff**—that lays the same, regardless of climatic conditions or moulting periods, is easy to domesticate, and that **thrives** under **any conditions.** Get the "TECKTONIUS STRAIN" and you will have **the best there is** in Single and Rose Comb Buff Leghorns. Do you know about the **"Tecktonius & Reed Single and Rose Comb Buff Leghorn Farm?"**

After October 1st, 1913, the **"Tecktonius" Farm** will be known as the **Tecktonius & Reed** Single and Rose Comb Buff Leghorn Farm—breeding, exclusively, Single and Rose Comb Buff Leghorns. Mr. B. C. Reed—**professional** in the care and rearing of featured stock—will be my partner in the **further development** of the now world's best "TECKTONIUS STRAIN" Buff Leghorn. "TECKTONIUS" Single and Rose Comb Buff Leghorns are a **safe and sure-return investment** for any poultryman. With maximum, or minimum care—in the best, or the poorest quarters—in show room or market—summer or winter—**they will earn money for you**; they CAN'T HELP IT.

Tecktonius & Reed Buff Leghorn Farm **Route 7** **Racine, Wisconsin**



Rudy's Perfection White Wyandottes

Breeding Conservatively, producing birds of standard type, pure white color, egg laying qualities, that's Geo. Rudy's Specialty

At the great Mid-West Chicago Show last month, Rudy's display of 60 Perfection White Wyandottes consisting of 40 male birds and 20 females of uniform type and color attracted the attention of all visitors.

You can't get better quality—better Treatment—better satisfaction anywhere. All birds sold subject to approval. Egg orders booked now. Mating list furnished. Send for handsome illustrated catalog telling all about Rudy's Perfection White Wyandottes—how he raises them—where he raises them and how he sells them. Address

GEORGE H. RUDY **Route 15** **MATTOON, ILLINOIS**

Only the Candee has All these Features

1 Exact even temperature all all the time
2 Safety from fire
3 True sectional construction
4 Easy, quick installation
5 Extra sections added at any time
6 Automatic safeguard against overheating
7 A proved successful record
8 Every size a success
9 Nursery under the egg trays

Simplest to Install
Simplest to Operate

A Candee 1200-egg size, shown in the illustration, is uncrated, set up and ready for the eggs in a day.

The heater is tended twice a day, the same as any coal stove. A compartment regulator is adjusted once for a hatch.

In the Candee, the heater regulator automatically regulates the fire—nothing else, only what any heater regulator should be called upon to do.

Each 300-egg compartment has its own automatic regulator to control the heat in that compartment only. A slight turn of a thumbscrew makes the adjustment. This regulator automatically controls the flow of hot water in its egg chamber, increasing or diminishing it as needed—making unnecessary the raising or lowering of the trays by hand.

Solves the Labor Problem

The Candee does automatically the work heretofore done by hand. One heater takes the place of the oil lamps and the automatic compartment regulators take the place of the hand regulation of the egg trays.

On top of this, Candee operators say that they get larger hatches and better chicks than they ever did before. Their financial returns last season were so satisfactory that more than a third have already ordered extra sections.

Almost Everybody is Buying the Candee

It seems so, the way orders are coming in.

The Long Island duck district is solid Candee.

More than a dozen State Universities and Government Stations are teaching their poultry students modern methods on the Candee.

1914 Candees are going up into the Great Northwest, the Middle West, the South, and all over the country in the poultry centers. The recommendation of one customer sells another.

No wonder there are more Candees in use than all other mammoths combined.

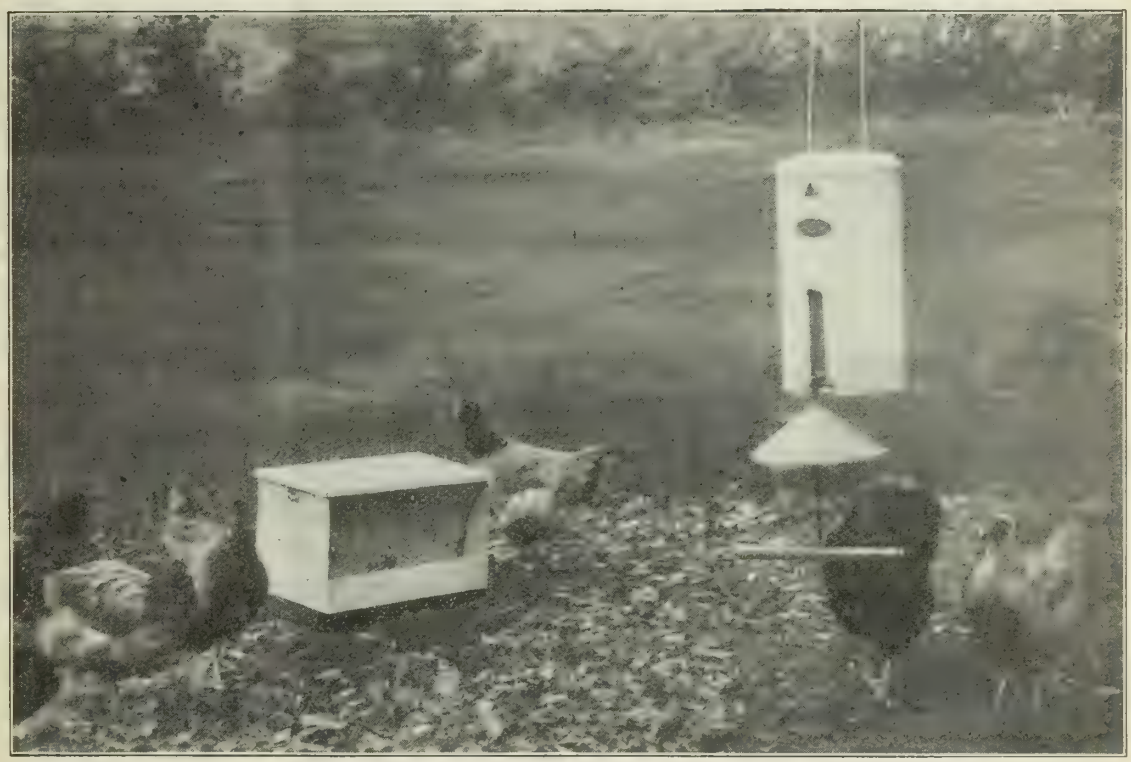
Why not buy what the great majority are installing?

Why Experiment?

Every Candee ever built has always had the patented automatic water regulation. No other incubator can be built that way.

The triumph of the Candee principle has been overwhelming. It is considered as far in advance of other types as the coal heater was an improvement on the oil lamps.

Why do by hand what the Candee does automatically?



Have You Seen Our New Catalog?

This 108-page catalogue is illustrated with pictures of hundreds of farms from Coast to Coast, where Candee equipment is used. It describes all sizes of Candees from the 1200-size to the 50,000-egg capacity installations. If you wish to keep in touch with the most modern methods of incubation, send us your name and address and the catalogue will be sent to you by return mail. Write to-day.

Candee Incubator & Brooder Co.
Dept. 2 Eastwood, N. Y.

Gillette Poultry Hoppers

SOME of the most profitable flocks of poultry in the world are fed by the Gillette Poultry Hoppers. On the successful roaster plant of Fessenden & Allen over 200 Gillette Hoppers are doing the work of a practical man. It takes exceptional ability to raise winter chickens, yet the Gillette Hoppers are feeding these chickens from the time they are three days old, successfully and economically, far more efficiently than by hand.

THE GILLETTE HOPPERS AT WORK ON THE RANGE

The list of Gillette users embraces plants in every part of the country. These plants, owned or managed by men of keen ability, have adopted the Gillette Hoppers only after careful consideration. Their sentiment is invariably expressed as follows:

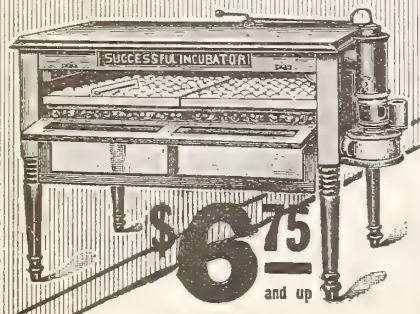
F. W. Morse Co., Seekonk, Mass., Dec. 8, 1913.
Providence, R. I.

Dear Sirs: I am not often disposed to commend in writirg any article and as a rule refuse to lend my name to the indorsement of any Poultry House Fixtures or Furnishings, but in your Dry Mash Hopper I have found such absolute satisfaction and advantages that it is a pleasure to commend it. I am discarding all other Hoppers and providing yours for my fifteen hundred hens.

Very truly yours, L. L. PALMER.

The Gillette Ground Grain Hopper solves the Dry Mash problem. This is due to the Gillette method of agitation. The vibrating flexible sides bring down the grain as fast as the birds eat and no faster. Waste and Clogging are eliminated entirely.

The Gillette Hard Grain Hopper eliminates all hand feeding. It responds to the appetite of the birds, it feeds them just as nature intended, a little at a time during the day, with every opportunity to secure a full crop just before going to roost. It fulfills the requirements of every bird, a tremendous task to perform by hand.



The Gillette method of agitation and regulation used in connection with the ball-bearing bait-bar shaft makes all this possible—therein lies the essential difference between the Gillette and all others. Whether you have ten chickens or ten thousand, you surely will want to investigate the merits of the Gillette Hoppers at once. Ask your dealer to show you our line of Hoppers.

We guarantee satisfaction or refund you your money.

Write today for our circular. It's free for the asking. Mention A. P. J.

FRED W. MORSE CO., Manufacturers, PROVIDENCE, R. I.

Read this Page—Then You'll Know What Kind of an Incubator to Buy—

There Are 20 GOOD REASONS Why You Should Buy a "Successful" Incubator In Preference to Any Other Hatching Machine.

18 of These Reasons are the Features of Superiority Printed Below. The Other Two Reasons Are Records for Larger Hatches and Our Low Price Offer.

I WISH everyone interested in the *big profits* to be made from the poultry business, especially those interested in incubators and brooders, could see this page announcement of mine.

Probably it would mean the saving of *many dollars* to them, the saving of *many hatches*, the saving of a lot of *trouble, time and annoyance*—by keeping them from buying a cheaply constructed or poor incubator.

You know there are two kinds of incubators on the market. One built merely to sell for a low price—the other built to hatch the greatest number of chicks from the eggs put into it, do it year after year as long as the incubator is in use, and sell at a price that anyone can well afford to pay.

The latter exactly describes my

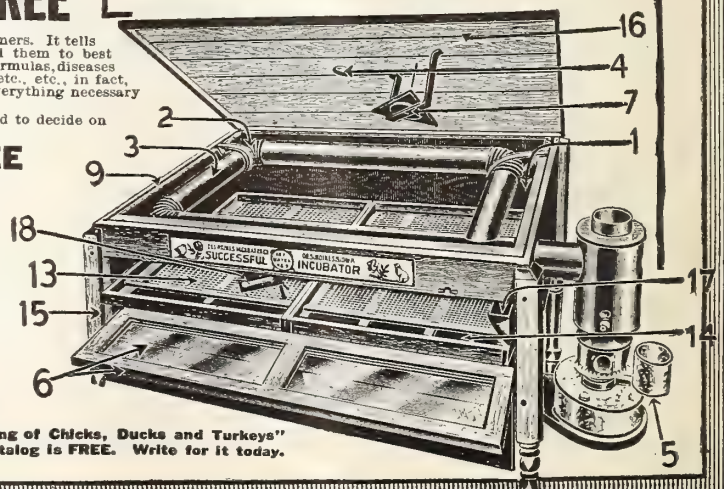
Successful Incubators—Successful Brooders

Life Producers **Life Preservers**

I do not promise you impossible things. But what I do promise is that a "Successful" will hatch *larger* and *stronger chicks* and a *larger percentage* of them than any other incubator in use anywhere. No other machine is so big a money-maker—none other so big a profit-payer.

This is no idle statement. The special construction of my Successful Incubators, combined with exclusive points of merit, go to make an incubator the equal of which has never been manufactured. You can see this for yourself in the detailed description of the hatcher.

If you are anxious to get into the poultry business, to make a good living out of it, and *want to start right*, you will make no mistake buying a Successful Incubator.



With the "Successful" no experiments or trial hatches are necessary—you'll have no failures.

We also have **"High Grade Poultry"**—stock and eggs of all the leading varieties—land and water fowls.

Successful Grain Sprouter made in sections—capacity 50 to 600 hens—keeps your fowls laying all winter—when egg prices are up. Furnishes green food in coldest weather—will enable you to get three bushels of fresh, succulent, egg-making green food from one bushel of oats, wheat or rye. It sprouts grain in 24 hours. Send for free booklet.

Here Are 18 Features—Any One of Which Should Make You Buy a Successful

1—The only hatcher that heats the colder edges of the body first.
2—Round corners on tank, giving faster current, more even heat, better regulation.
3—Heaviest copper tank used on any incubator.
4—Only one scientifically ventilated. Admits cold air at center of top. Does not create draft which dries out eggs.
5—Safety attachment on lamp burner—provides absolute protection from fire.
6—Only incubator with two glass doors—through which thermometer may be seen.
7—Combination water thermostat regulator.
8—*The only machine guaranteed with a guarantee that guarantees and evades no issue.*
9—Built like a refrigerator.
10—Case non-warpable.
11—Weighs more.
12—Cost less per pound.
13—Strongest, most durable egg trays.
14—Nursery under egg trays. The greatest feature applied to artificial incubation.
15—Detachable legs, allowing machine to be stored in very small space.
16—The only incubator in the world cabinet made.
17—Simple, effective application of moisture when necessary.
18—Adjustable thermometer. Never necessary to open doors or pull out the trays to read temperature. Thermometer is stationary; chicks cannot knock it over.

$25.00 Poultry Course, FREE

This course contains the most practical advice ever given to beginners. It tells how to produce poultry and eggs at lowest cost, explains how to sell them to best advantage; all about poultry house construction, many different feed formulas, diseases of poultry and their remedies, how to raise ducks, geese, turkeys, etc., etc., in fact, takes you from the beginning to end of the business, revealing everything necessary to insure you more profit from poultry.

If you are thinking about buying an incubator, don't be persuaded to decide on any make until you write for my

Successful Catalogue—It's FREE

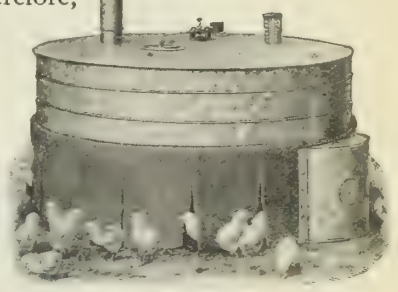
—and learn what I have to offer you. My book tells all about various incubators and brooders. It gives you a good idea of the advantages of each, what size to buy, etc. It is frank and comprehensive—free from all exaggerations—and tells you just what steps need be taken to insure success.

Write for my book if only to get my low price offer and to read page 6 which contains my guarantee—the strongest guarantee ever put behind an incubator. Don't buy an incubator that guarantees less. Don't fail to ask for prices on Successful Brooders—the only brooders made with automatic heat regulator, therefore, the best chick preservers. Address

J. S. GILCREST, Pres. and Gen. Mgr.

DES MOINES INCUBATOR COMPANY

1 Second Street, Des Moines, Iowa



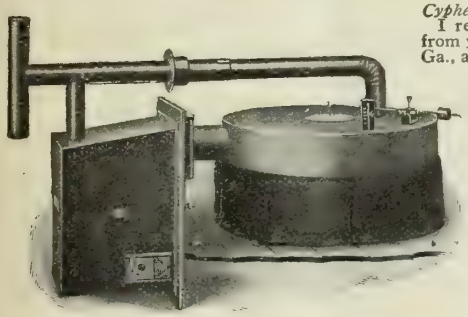
NOTE—Our famous little booklet, "Proper Care and Feeding of Chicks, Ducks and Turkeys" —worth its weight in gold—sent for 10 cents. But our big Catalog is FREE. Write for it today.

STANDARD LOW-COST BROODING DEVICES

FACTS TALK, not mere "claims," and this company *always backs up with facts* every claim it makes for its goods—backs up its every claim *with proof* in the form of *signed* and *dated* reports from *satisfied customers,* from men and women who have "paid their good money" for our products and who know, therefore, from *actual, personal experience* whereof they speak or write.

CYPHERS PORTABLE HOVERS

If you, Reader, are looking for a *low-cost method* of brooding the early chicks you are planning to raise—either home-hatched or bought as day-old chicks—you *cannot do better* than invest in a Cyphers Self-regulating, Self-ventilating, All-metal PORTABLE HOVER. See accompanying illustration, also footnote. Please read the *sample reports* herewith and write today—now, before you forget it!—for our latest (1914) large-size, PORTABLE HOVER CIRCULAR, telling "When, Where and How To Use" for best results.



Cyphers Portable Hover

Set it down Anywhere Indoors and you will have a Safe and Comfortable Place for the Little Chicks. "Movable" at a Moment's Notice without even turning down the Lamp Flame. No steps or Inclines that Chicks Must run up and down. Weighs 35 Pounds in use. Price, Complete, Safely Boxed, $8.50 free on cars at all our Places of Business, except Oakland and London. Oakland F. O. B. price, $9.50. Entirely Safe to order a sample from this advertisement.

Kendal Green, Mass., July 16, 1913.
Cyphers Incubator Co., Buffalo, N. Y.—
The four Portable Hovers you shipped us have **proved very satisfactory.** We regret that you could not at the time furnish us with ten more of these hovers, for we are sure they would have proved of considerable financial benefit to us. We have ten hovers of an **inferior make** which we were obliged to purchase, not being able to obtain yours, **and we are now disposing of them** to make room for the Cyphers Portables. Of the twenty-five hovers in our modern, latest-style brooder house, fourteen are Cyphers and the remaining ten **are to be exchanged** for Cyphers the coming season.
G. L. & W. L. HAGER.

Maple Beach, N. Y., September 4, 1913.
Cyphers Incubator Co., Buffalo, N. Y.—
I have five of your Self-regulating, Self-ventilating Portable Hovers and consider them wonderful. Have never had a bit of crowding in these hovers and not one chick has smothered. **All were strong and vigorous.** We kept a record of two of the hovers and out of 295 chicks placed in them, **not one died.** Morning after morning we would find **every chick alive and healthy.** These hovers are both self-regulating and self-ventilating, as you claim, and ran like clock work. During **the entire season** they never smoked or bothered us a bit. W. W. FENNO.

College Park, Ga., May 3, 1913.
Cyphers Incubator Co., Buffalo, N. Y.—
I recently purchased nine Portable Hovers from your agent, H. G. Hastings & Co., Atlanta, Ga., and **am more than pleased with them.** I have used a number of the different makes of brooding hovers on the market, including the ——, —— and ——, but yours **is far superior to any of these.** They are self-regulating, automatic in ventilation, convenient to use and being all-metal and substantially made **will last for many years.** RESTHAVEN POULTRY FARM,
F. O. Alexander, Prop.

Cyphers Adaptable Hover

Fire-proof, Wind-proof, Insurable, Self-regulating and Automatic in Ventilation. Best Device in World's Markets for Use in Home-made Brooder Cases, Colony Coops, Roosting Coops and Portable Houses. All Metal and will last Many Years. Price, Complete, Safely Boxed for Shipment, $8.50 free on board cars at all our Places of Business, except Oakland and London. Oakland F. O. B. Price, $9.50.

CYPHERS ADAPTABLE HOVERS

The All-metal, Fire-proof, Self-regulating and Self-ventilating ADAPTABLE HOVER, illustrated herewith, is the recognized "standard brooding device of the world" for use in home-made or factory-built brooder cases, colony coops, large-size roosting coops, portable or stationary poultry houses and in long brooder houses equipped with rear aisle or passageway. Have been used for years in *tens of thousands* of Standard Cyphers Outdoor and Indoor Brooders and *never yet* has one of these Hovers been returned to us *as being unsatisfactory.* Are sold on basis of "personal satisfaction guaranteed."

PLEASE READ the three *sample reports* herewith and *write today* to *our nearest place of business* for 1914 special, large-size ADAPTABLE HOVER CIRCULAR, which tells "When, Where and How to Use" to best advantage.

Vulcan, Mich., June 25, 1913.
Cyphers Incubator Co., Buffalo, N. Y.—
I am perfectly satisfied with your Self-regulating Adaptable Hovers. We **set one up in a dry-goods box,** and although the weather was very bad, we raised nearly all our chicks. **Cannot say too much in favor of these hovers.** Only wish I had had half a dozen of them so I could have raised a larger number of chicks. Your Adaptable Hovers **save lots of worry**—and there is **no danger of fire** or of chicks **freezing to death** if these hovers are used.
CHAS. A. ALBERT.

East Derry, N. H., July 15, 1913.
Cyphers Incubator Co., Buffalo, N. Y.—
The two Adaptable Hovers purchased from you last winter have proved more than generally satisfactory—"wholly satisfactory" is the least I can say. Your Adaptable Hover **warms the air without polluting it** and is really a perfect "warmer" **in cold, wintry weather.** We have very severe winds here during the winter and early spring and **sudden changes in temperature,** but these self-regulating brooding devices **seemed to care nothing for that.** The above facts, gladly stated, simply confirm the claims you make for these brooding devices. R. W. SKIRROW.

Algonquin, Ill., June 28, 1913.
Cyphers Incubator Co., Buffalo, N. Y.—
I bought three Adaptable Brooding Hovers from you this spring and **would not again try to raise chicks without them.** They are easy to regulate and keep an even temperature, **which chicks surely need.** I had 160 chicks in a coop 14x16 feet and the outside temperature **went down below zero** in February, but they were as happy a lot of chicks, thanks to these Cyphers Adaptable Hovers, as if it had been 80 degrees in the shade. I raised over a thousand chicks this season and a very small per cent. died.
CHAS. C. NASON.

Reader, if YOU, personally, have not already sent for a *free copy* of our 52-page (7¼ by 10 inches) booklet, "Best Methods of Brooding," be sure to do so *without delay.* It goes into the subject fully—*telling you in detail* what to do step by step and *day by day* in the proper care of chicks and ducklings. It is FREE, postage paid, and should be worth a great deal to you in your poultry work. Address nearest office of

Cyphers Incubator Company, Dept. 721 Factory and Home Offices, **Buffalo, N. Y.**

Fishel's World's Best White Wyandottes

have again demonstrated the fact that they are the dependable strain

At Cincinnati, Ohio, December 1-7, 1913, in the strongest show ever held in that city, they won:

First, Second, Third and Fourth Cock.
First, Second and Fourth Hen.
First, Second, Third and Fourth Cockerel.
First, Second, Third and Fifth Pullet.
First Old Pen.
First, Second, Third and Fourth Young Pen.
Sweepstakes for Best Cock bird in the American Class.
Sweepstakes for Best Pen in Wyandotte Class.
And Several Cups and Specials.

IS NOT THIS CONVINCING PROOF

Considered with the fact that for years they have been outclassing all rivals wherever shown, that Fishel's blood lines are right? Fishel's World's Best Strain is the product of a life time devoted to the perfecting of this most beautiful and profitable of all breeds of poultry,

THE WHITE WYANDOTTES

Our stock is all grown on free range where every individual bird has room to roam over large fields and pick up nature's food, thus insuring a vigor never found in birds reared in enclosed pens. We grow these beautiful and profitable birds by the thousand and devote our entire time to this work. We can supply your every want, be it an individual show specimen to fill your weak place, or an entire show string, or a breeding pen, and our prices are very reasonable, quality and established blood lines considered.

Why experiment and face disappointment when for a very little money you can get the benefit of our years and years of careful line breeding that has for years and will for years to come produce the prize-winning birds.

The Biggest Shipment of Mammoth Incubators ever made to one Poultry Plant

5 Carloads of HALL INCUBATORS

for the

Pittsfield Poultry Farm Co., Holliston, Mass.

This Company started with two 6,000 capacity Hall machines in 1909; in 1911 added 12,000 more and now possess a combined total egg capacity of nearly 100,000. Read what they say about Hall Equipments:

PITTSFIELD POULTRY FARM COMPANY

HOLLISTON.MASS., Nov. 10th, 1913.

The Hall Mammoth Incubator Co.,
Little Falls, N.Y.

Gentlemen.-

Now that our new installation of incubators at our big HOLLISTON PLANT is practically completed, it is a fitting time for us to express our satisfaction with your equipment. They have given us the very best of satisfaction from the very start. They not only give us excellent hatches at any time of the year whenever the eggs are in suitable condition as to fertility, but the hatches also run very uniform, one compartment has no advantage over another, showing that the principle of your incubator is absolutely correct.

At no time do we see chicks that are over-heated or chilled come from these machines. They are all good vigorous quality and the kind that makes poultry breeders happy, and it is no doubt the quality of these chicks as hatched that has helped us to build up the reputation of PITTSFIELD STRAIN. We have been able to ship our chicks to all parts of the country, making some very remarkable deliveries.

To be specific as to hatches, we may say that last season our hatches averaged about 70% of all the eggs set. Of course, this would not be considered a remarkably big percentage on some breeds, such as the Leghorns and other smaller breeds, but I think you will agree with me, is very good percentage indeed for medium heavy breeds like the Plymouth Rocks.

As you know, we made our first experiment with Hall Incubators by buying two 6000 egg machines. These, of course, we found in a very short time to be much too small to handle our growing trade. The following year we added on to our cellars and installed a 12000 egg machine. The next year it was our intention to install another 12000 machine, which would have given us

Page 2—Pittsfield Poultry Farm Co.

36000 egg capacity, but we had at that time an idea that we would develop our business in a different way, along the line that we have developed this summer, so decided to hold up on the purchase of further equipment until these plans were fully worked out in our minds. The results you know. The same being the erection in Holliston, Mass., of one of the largest poultry breeding establishments in the world.

The 82500 capacity of Hall Machines that we have installed at Holliston, Mass., this summer should be absolutely convincing proof to the outside world that we have every confidence in your equipment.

We have tried no other equipment in the Mammoth type of machines, but at the same time, we have been watching the different machines that have been put onto the market, at the poultry shows and at other opportunities, have examined them closely and it is our opinion that up to date at least, there is no machine that can equal the "Hall."

We have also, as you know, had excellent success with the pipe brooder system which we installed in our PITTSFIELD PLANT, but think that this system will be speedily supplanted by the HALL COLONY BROODER SYSTEM, which we tried out to a considerable extent last summer and found to be quite satisfactory. Without any doubt, we shall install the colony system on our new plant in Holliston, Mass., and of course it will be the Hall Equipment.

Kindly allow us to take this opportunity to thank you for the very great courtesy that you have shown towards us in the past and that you are continuing to show for the very excellent service that you render us. It is very much of a pleasure to do business with you. We assure you that with our present knowledge of equipment any extensions which we make in the future will certainly include the "Hall."

Yours very truly,

PITTSFIELD POULTRY FARM CO.,
F. W. Briggs, Treasurer.

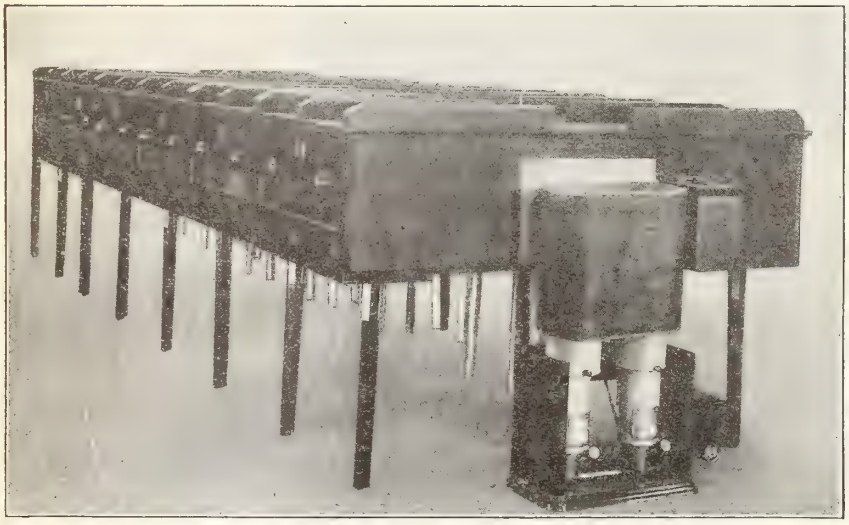
FWB—FS

No more convincing proof of superiority and reliability of *Hall Equipments* could be conceived. The Pittsfield Poultry Farm Company of Holliston, Mass, and Pittsfield, Maine, has grown from a very small beginning to one of the largest Poultry Plants in the East, if not in the whole country. Its success has been largely due to *Hall Equipments.* It stands to reason that a concern hatching upwards of 250,000 chicks per annum, doing both custom hatching and day-old chick business in addition to rearing and maintaining a large flock for its own use, would not continue to buy *Hall Equipment* from year to year unless it had proved its superiority, economy and reliability. *Write today for detailed information.*

"Approved By The Fire Underwriters"

Hall Mammoth Incubator Co.

132 Southern Avenue **Little Falls, N. Y.**



HERE IT IS!

All Reliable Authorities in the Poultry World Assert That the Best Way to Succeed is to Start Small and Grow Big

And when it comes to incubation, it is now clear that a single heating unit is more easily, economically and quickly managed than when many heating units are used. These are two great requirements, and to meet them successfully is the aim of

Schwalge's Hot Air Sectional Incubator

(Patent Pending)

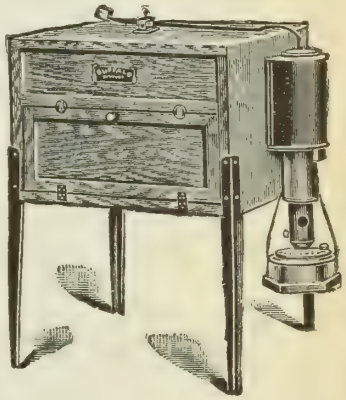
This is the only Sectional Mammoth Incubator on the market

It is made in two styles: style A is divided into 150 egg sections and style B is made in 500 egg sections. The beginner can start with either size. Style A can be successfully increased to 1500 eggs, and Style B to 5000 eggs, as desired. The extra sections can be added in a few moments, and this can be done without shutting off the heat or disturbing the hatch in any way.

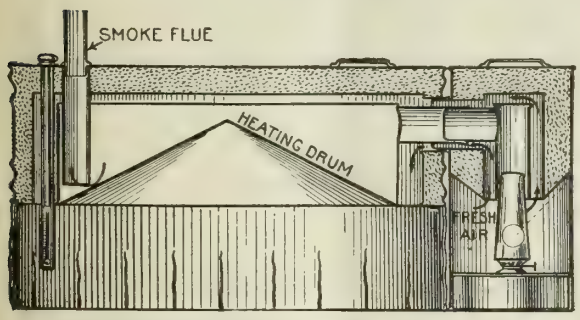
Schwalge's Hot Air Sectional Incubator is the only mammoth hot air machine and does not require a steam fitter to install it. You simply uncrate it, screw on the legs, attach the regulators and it is ready for operation. By this simplicity it can be sold cheaper than any other mammoth machine on the market. It is designed to hatch any kind of eggs—hens, ducks, geese, turkeys, etc. Each section has its own regulator and the heat is under perfect control no matter how far the section is located away from the heat unit, just like a single small machine. Its exclusive ventilating device prevents the impure air entering the hatching chamber. For further particulars, send for catalog.

WM. SCHWALGE, Manufacturer Dept. A, ELMHURST, ILLINOIS

Buy Your Incubator of Chas. A. Cyphers



The Original and the Only "Cyphers" in the Incubator Business



The Cyphers who is "The Recognized Authority on Artificial Hatching"—The Cyphers who made Commercial Hatching possible—The Cyphers who discovered the Cyphers Principle—The Cyphers whose Incubators Circle the world—The Cyphers who will sell you his latest creation, the "Buffalo" at .

HALF THE STANDARD PRICE

Every vital Principle that made my original Cyphers a world success is embodied in the "Buffalo". The same three-compartment heater; the diffusive ventilation; and sensitive and accurate regulation; combined with heavy insulation and durable construction. For Durability, Reliability and quality, the "Buffalo" is a wonder. "Buffalo" incubators insure you big hatches of strong chicks that live and are easily raised to make money for you. 80% of the output of "Buffalo" Incubators are sold to poultry raisers who must make a success of their work to live. 80% go to men who know; who have used my incubators in the past; who would use no others. **You can't make a better selection.**

THE BUFFALO HANDY HOVERS

Buffalo Handy Hover, 100 Chick Capacity

The Buffalo Handy Hovers are just what their name implies.

The Buffalo **"Handy"** is a floor level hover. You can set it any old place.

Sanitary—All galvanized Iron.

Heats Easily—Walls are heavily packed with good insulating material.

Uses But Little Oil—Flame burns with a white light, which indicates complete combustion.

Hottest at Outer Circle—Heat is brought lowest at that point.

Perfectly Ventilated—Heater is double with fresh air flue.

Handy—Just pick it up and set it aside to clean the floor:

Lamp flame can be seen without stooping. Lamp compartment or heater is attached to hover with "rolled-edge slip-joint," and is quickly detached for tending lamp.

Has all the good points of others, with thick walls and complete combustion added. Others are thinly insulated and are hard to heat. Other lamps burn a yellow flame, and waste oil. The Buffalo Handy Hover will heat 10 degrees hotter with same oil consumption; and in a room too cold to use any other hover.

Send Postal for fuller description.

FISHEL'S "BEST IN THE WORLD" WHITE PLYMOUTH ROCKS, OWNED AND BRED BY U.R.FISHEL, HOPE, IND.

With X-Ray Incubator only **One** gallon for entire hatch.

With other incubators **Five** gallons required for hatch.

Let X-Ray Incubator Save You 4 Gallons of Oil on Every Hatch

The X-Ray actually makes this saving for you. Saves you 75c to $1.25 on every hatch—four to six dollars a season on oil.

It is the only incubator in the world that can do it. Why? Because the lamp is **underneath**—squarely underneath the egg chamber—where it ought to be. The lamp produces just the heat needed at all times—and all the heat is **used**. Used **properly**—evenly distributed—in the X-Ray and no other.

That's why it saves—saves you money—**insures** you far the largest per cent of your hatch.

There's no cold side. There's no overheated corner—just the right hatching temperature in every nook. It saves you oil. It saves you eggs—and that's not all. It saves you a world of work and worry. You fill the big 4 to 8 quart oil tank **just once**—at the beginning of the hatch. You don't have to bother with filling again. No more filling jobs until the hatch comes off. Think of that.

And that's not all. You don't have to bother with the burner either. The X-Ray is the machine with the automatic trip at the burner. It **works itself**—cuts down the flame if heat exceeds the need—lets out more flame if the temperature drops. It doesn't think, but it does better. It never "forgets."

There's a vast difference between the X-Ray — the scientific incubator and the old fashioned kind. 750,000 incubator users now know why the X-Ray is 100 per cent efficient on so many hatches—why a lot of old-time work is now unnecessary.

The X-Ray is the simplest, yet practically every feature is a special feature. Go over it, notice the two double glass panels in the top. You can look at the eggs any time without raising the lid or letting in cold air. Ventilate or turn eggs simply by raising lid.

It takes just 15 minutes to raise X-Ray to hatching temperature. 4 to 8 hours for others.

Our new factory at Des Moines is the largest exclusive incubator factory in the world, the most modernly equipped. Come and see it if you can.

And the X-Ray Brooder Just as Much Ahead

The lamp is beneath—same as in X-Ray incubator. It makes the difference between saving chicks and losing them. And that means poultry profits.

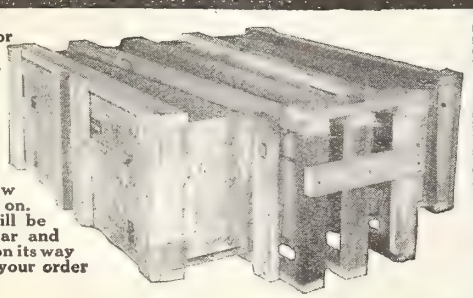
Old Trusty Takes All The Mystery Out of Making Big Profits With Chickens



Triple Walls—Top, Sides and Bottom. Highest Grade Hatcher Made.

$5 Less

than any other Factory could afford to sell it for, even if we let them use Old Trusty patents. And Johnson Pays the Freight.

Incubator Crated, ready to ship—and ready to use when you unpack and screw the legs on. Yours will be put in car and started on its way the day your order comes.

WHY Experiment When You Can Be Sure?

Right now is the time to "stop, look and listen" before you buy your new incubator.

No matter what incubator you may be thinking about buying, you can not get away from this fact—the Old Trusty outsells all others three or four times.

Half a million people have bought this hatcher. I don't know how you would reason it out, but I believe that if that many people can decide on the Old Trusty, to keep their chicken profits up and their expenses down then their choice ought to be a pretty safe one to go by.

You cannot afford to experiment. Life is too short to be fussing around with uncertainties. You want profits. You are entitled to them and you get them quick and in big volume with the

OLD TRUSTY

Three or Four Times as Many In Use as Any Others —Big Hatches in Coldest Weather

The difference between the Old Trusty and all others is that it is simple—practical—and proves its worth right at the start. You can get good hatches with it at any time of the year—winter or summer. Your success does not depend upon your mastering a string of highfalutin instructions. Let others go in for experiment, but you get an Old Trusty and go in for profits.

Every buyer of an Old Trusty saves $3 to $5 because of the Johnson factory—the largest exclusive incubator factory in the world. But price is not my argument, for the Old Trusty is not built to meet a price. It is built as good as we can make it. Just to look at the picture the first thing that occurs to an experienced incubator user is that the top is clear. A mighty fine convenience for holding trays, etc. But there are many other good features such as the case with triple walls on all four sides, top and bottom. The iron is an exterior protection, the asbestos is an insulation and the California redwood forms the inner case. This wood, as you know, gets along without warping, shrinking or cracking.

Your Old Trusty Is Crated— All Ready to Ship

Prompt shipments are the regular rule here. Your Old Trusty will be on the way to you, freight prepaid, the same day your order reaches us. You can start your hatch right away. Bear in mind, the Old Trusty does not have to be rebuilt when it reaches you. Only the legs are removed, just to save space in shipping.

What It Has Done for Others—the Rayo Will Do for You

Am much pleased with your machine I purchased last spring as a time and labor saver. 96% of fertile eggs hatched out every time.—*Mrs. Bowles, St. Clairsville, Ohio.*

Your Rayo is simply O. K. I just pulled off a hatch that clipped the best record here. I want you to know that I am more than pleased. — *Oscar Dixon, Takamah, Nebr.*

It's a fine hatcher and easy to take care of. Worth twice what you ask. — *Grace Jones, Center Point, Iowa.*

I made two hatches in the Rayo. I like it better than any other incubator I ever saw. I have a ..... incubator of 100-egg size which took four times the amount of oil and looking after. — *J. M. Hood, Albertville, Ala.*

I will say that the Rayo is the best I have ever seen. I made three hatchings with it and have over 400 chickens alive up to date. — *Ernest Johnson, Balaton, Minn.*

I count on more chicks with a Rayo—and I get them. I make money, too, on the oil I save —*Roy Best, Waverly, O.*

I am a mechanic and read how the Rayo was made. That's why I bought mine. Only lost one chick in my first hatch. That's going some, thanks to the Rayo. — *F. L. Lee, Indianapolis.*

Our Best Advertisement

The Thousands of Satisfied Users of RAYO Incubators Are Our Best Advertisement!

We've told you of the **superior** and **exclusive** features of Rayo construction over and over again. **We've** told you that because of this construction the Rayo boosts profits, slashes expense and cuts out the drudgery. **We've** told you, too, **why** the Rayo uses **only one gallon** of oil, where others use five. And **we've** told you that the Rayo **is** so nearly automatic that it practically **runs without attention,** while others require constant looking after.

Now let some of our **customers** tell you what **they** think of the Rayo Incubator. Read the notations from letters printed above, also the few letters below. They back up all our claims.

You can be sure of buying the right incubator if you get the

RAYO Incubator

Hundreds of experienced poultrymen will have no other and you can be safe in following their lead. The Rayo is especially recommended to beginners on account of its simplicity, reliability and certainty of producing best results. For instance, here's a beginner who

Won Big Hatching Contest With a RAYO

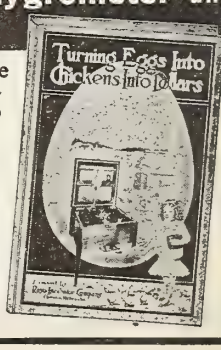
"The Rayo I bought of you won for me in the contest conducted by Successful Farming, which included practically all of the best makes. I had only 71 fertile eggs in the machine but I **got 71 nice, hearty chicks**, and **raised 70** of them. It never varied 3 degrees, and only used seven quarts of oil for two hatches." — *Mrs. Wm. Weaver, R. F. D. 1, Baltimore, Ohio.*

An Expert Breeder Orders Another RAYO

"I just made my first hatch this season and hatched **every fertile egg** with the Rayo I got last season. Enclosed find an order for another machine, complete. Send it as soon as possible, for I am in need of it badly, and I would like to have the agency for same, as the machine I have has 'skinned' all." — *David Crowe, Breeder of S. C. Rhode Island Reds, Hanna City, Ill.*

Beats All His Neighbors' Hatches

"I am well pleased with the Rayo Incubator. I have no trouble from start to finish—no lamp to fill every morning, as with other machines. The Rayo heat is regulated in less than one hour, ready for the eggs, but with other makes of incubators I have been from 12 to 24 hours regulating the heat. This spring with the Rayo I hatched the highest percentage of fertile eggs in this neighborhood. Everyone who has seen my machine likes the looks of it at first sight."— *James P. Cook, Morris Plain, N. J.*



RAYO INCUBATOR COMPANY
1012 S. 13th Street **OMAHA, NEBRASKA**

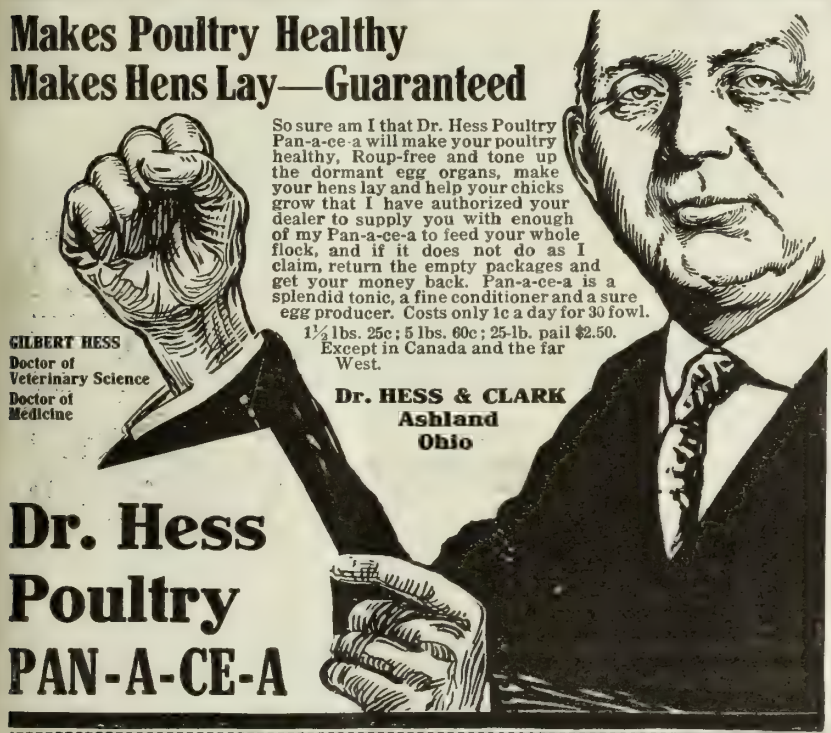
A Better Incubator At A Lower Price

The "Rayo" requires only one filling to a hatch. Eggs and thermometer can be seen through double glass top, which raises for airing, cleaning and turning eggs. Lamp under egg chamber gives perfect radiation. Double wafer thermostat **acts on flame**—produces exact heat needed—**none thrown away.** Automatic ventilator. Strong redwood case, covered with steel, enameled like mahogany, makes it fireproof and handsome.

Write for Book No. 17 and we'll send you RAYO free sample hatching chart, **special low factory price** and combination offers.

FREE Hatching Chart, Hygrometer and Money-Making Book

Absolutely free, a sample of the Rayo Patent Hatching Chart. It tells what to do day by day during hatch. We also give you a $1.50 Hygrometer with each Rayo Incubator you purchase. **Book,** "Turning Eggs into Chickens Into Dollars" **FREE** and postpaid on request. This **FREE book** also tells all about Rayo Incubators and Brooders. Write for it and sample of only patent hatching chart in the world. Both are FREE. Get Book 17.



NO LIVING MAN

5TH YEAR — SEE THAT "XX"? POINTS THE WAY. START RIGHT. YOU END RIGHT

can hatch **one** egg the Magic Egg Tester rejects **before** incubation. We challenge the world to do it. Why put eggs under the hen or in the incubator that you are not first **sure** about? You **lose** if you do it. You are wasting the earliest and best hatching month if you delay its use. **Heed this warning,** or next May you will wish you had. "The Magic Egg Tester is the poultry raiser's *vade mecum.*" $2.00 each, and **and no further expense to use.** One year's trial, **fully guaranteed,** and cost refunded if not satisfied. Experimental specialists in incubation, giving the latest and best methods with each Tester. Circular mailed for the asking.

How to Get More Eggs

You can get more eggs than you ever thought possible from your hens by feeding them cut bone. It keeps them laying regularly, in season and out. The

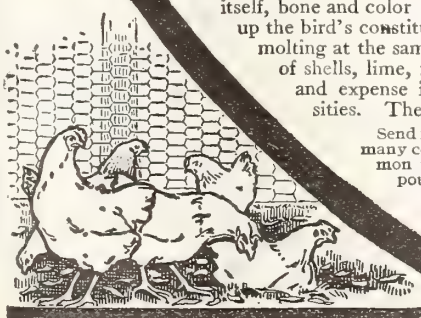
STANDARD BONE CUTTER

is the only machine that cuts bone *across* the grain, securing greatest food value. Cuts green bone, dry bone, meat or gristle. TEN DAYS FREE TRIAL TO PROVE SUPERIORITY. Cut shows No. 9 machine, price $8.80. Many improvements in this cutter. 12 different sizes for hand and power, costing from $6.75 to $195. Write for free catalogue and free trial plan.

PRICE $8.80

STANDARD BONE CUTTER COMPANY, Milford, Mass.

Help Your Hens Molt



Help them get over it quickly— help them lay while molting—make them more profitable to you and save yourself time and expense by feeding—Pearl Grit.

It's a double purpose grit. It does all other grits will do and more too. It is clean, white, hard and sharp. It thoroughly grinds the bird's food and aids digestion.

PEARL "THROW PEARL TO POULTRY AND WATCH RESULTS" GRIT T.O.M.Co. TRADE MARK

Pearl Grit

is rich in egg and strength producing materials. Furnishes lime for shells, sulphur and carbohydrates for the egg itself, bone and color for beautiful plumage and builds up the bird's constitution so it can withstand laying and molting at the same time. Pearl Grit takes the place of shells, lime, magnesium, etc. It saves you time and expense in furnishing these egg-making-necessities. There's no other grit like it.

Send for free valuable booklet telling how to cure many common diseases among poultry with common remedies. Most valuable, most beautiful poultry booklet ever issued. Also tells the story of Pearl Grit.

Money Making Outfit

This 60-Egg Hatchalot Incubator will start you on the road to poultry profits with early chicks. Made of best cypress, "the wood eternal." Large double-jacketed boiler gives a mild, dependable heat, preventing evaporation of moisture and assuring healthy, *vigorous* chicks from every fertile egg. Self-regulating, economical, durable. Sold with money-back guarantee. **Price, $7.50**

The International Sanitary Hover Keeps chicks thriving from the day they are hatched. Portable; ready for instant use anywhere. Vermin-proof galvanized metal, heavily insulated and practically everlasting. Warmest at the outer edge; chicks will not crowd. Heats from *above*, ending leg weakness and diarrhoea. Cannot burn, break or warp. Nearly 200 square inches more brooding space than ordinary hovers. Used everywhere by money-making poultrymen **Price, $8.50**

6 in 1 Exerciser Feeder Keeps Poultry active and healthy by making them work for their feed. Prevents overfeeding and induces laying. Holds all the food needed—central section for grain, six other sections for dry mash, beef scraps, grit, etc.—all other feeding devices unnecessary. Made substantially of galvanized metal and supported by four strong iron legs. No food can be wasted. Pointed cover keeps top clean. Used on world's largest poultry farms. Increases poultry profits everywhere **Price, 40-quart, $4.75; 20-quart, $3.75**

Lee's Egg Maker

Are your hens laying *now?* If not, are you doing your part in furnishing proper feed. Protein—*digestible* protein—is the feeding secret. It's a simple matter to get food rich in protein, but the percentage of it that is *digestible* is the thing to consider. Lee's Egg Maker is almost a pure meat product, clean, sweet, and wholesome, and contains more protein in *digestible* form than any other meat product. Successfully replaces all other kinds of meat food at *less* feeding cost and better results. That's our *guarantee.*

Prices 25c to $7.50 according to size

GERMOZONE

is the best health-insurance you can furnish your fowls. Indispensable as a remedy for *Roup, Colds, Chicken-Pox,* and other poultry ailments. Disease in your flock now will probably mean diseased birds all winter and poor breeders in the spring. Germozone twice-a-week tones and builds up the system, destroys disease germs, insures better and healthier stock *now* and strong, vigorous birds for the breeding season. Best guarantee *against* disease; surest remedy if disease has already taken hold. *Either tablet or liquid. Price 50c.*

Lee's goods are on sale in almost *every* town, but if yours is an exception send your order direct to us and ask for our *free* offer.

"Dandy" Bone Cutter

You needn't pay one penny for this bone cutter until you try it and it satisfies you. Feeding green bone is one of the first steps to gain a big egg yield. But the bone must be cut right. The Dandy Green Bone Cutter cuts *across* the grain of the bone, enabling the hen to digest the nutritive elements better and convert same into eggs, blood, feathers. Our terms on the Dandy Bone Cutter are

$5 AND UP

NO MONEY IN ADVANCE
30 DAYS FREE TRIAL

The Dandy costs less than most bone cutters and it works infinitely better. Also cuts meat, vegetables, roots, etc. To ensure big sales this year we have made special reduction in prices. Write quickly for free booklet. Prices are liable to rise next month, owing to big demand for raw material.

STRATTON MFG. CO., Box 17, Erie, Pa.

It's a Pleasure to Farm in the South

NATURE coöperates with you at every turn in the Southeast. Crop failures are hardly known.

You are favored with 200 to 300 growing days, which allow two and three crops from the same land each season.

Expensive irrigation is unnecessary, as 45 to 60 inches of rain, well distributed through the growing season, fall annually.

The assortment of crops raised in the Southeast is the greatest anywhere in America. From the tropical citrus fruits to the finest varieties of apples, peaches, pears, grapes and numerous other fruits and nearly every known variety of grains, vegetables, grasses and legumes can be produced somewhere in the Southern Railway territory.

And with all these superior advantages Southeastern land now averages less than one-half the price of farms in other parts of America.

$15 to $50 An Acre Buys Excellent Homesteads

where the climate is exceedingly agreeable and healthful, where railroad communication is of the highest order and transportation to Northern markets but 24 to 48 hours.

Life in the rural sections of the South is all that could be desired. Modern highways and telephones, the best of high and agricultural schools, good churches and trading centers—all these advantages are to be had in this growing section.

INVESTIGATE SOUTHERN CONDITIONS

Avail yourself of the low **Homeseeker's Rates.** Write for particulars. Learn of the favorable conditions in the South. Ask for the "Southern Field" magazine, state booklets on Virginia, North or South Carolina, Georgia, Florida, Alabama, Mississippi, Tennessee and Kentucky. Let us know the state and line of farming in which you are interested.

Big Winter Eggs Out of Clover. How? Ask Me.

A BIG JOKE

It's a big joke on the other Hover makers to claim they have the only Portable Hover on the market that is Self-ventilating and Self-regulating, Warmest at the curtain, and a lot of other claims, when these features are found in the Ideal Portable Hover. Another indisputable fact regarding this Hover is its Originality, the inventor didn't copy his neighbor and then try to make a bigger noise than the real owner. The Ideal is next to the oldest Portable Hover on the market. It is the first one that could be picked up with one hand and carried any place with lamp burning. It can be set in any room suitable for brooding young chicks. Use it in a Brooder, Colonyhouse or Layinghouse, sets on level floor with no bridge for chicks to climb. The Double Drum Hot Air Heater will produce 15% more heat from the same amount of oil than a Hover using a single Drum Heater. This makes it a great Hover for Winter use. Our Automatic Lamp was especially designed for a Portable Hover; the oilfount is on the outside of the lamp box, feeding cool oil to the wick and just enough to keep it covered at all times, this makes it possible to place the burner close to the floor allowing the use of a tall chimney with a large airburning space around the lamp flame and still this chimney is not pushed up into the Heater to become overheated and cause trouble. This Lamp will never cause trouble by smoking. The Hover is all metal, but the double curtain is 24 inches in diameter, and will brood 100 chicks, and it is the lowest priced machine on the market. We have a Special Offer for you this month.

Used on Ohio State Farm. 17 Ideal Hovers were used on the State Farm at Dayton, Ohio, last season with wonderful results, the picture in this advertisement shows two Ideal Hovers used in an A shaped hoghouse on that Farm.

Queen Incubator and Ideal Hover. We sell the Queen Incubator, which we consider the best low priced machine on the market, and we make you a Special Combination Price on this and the Ideal Hover. We want you to write us at once for circulars of our Hover, Incubator, Catsprouter, and Poultry Supplies, we will tell you all about our 12 months' course in Practical Poultry Keeping, Free to our customers and if you will mention this paper when writing, we will inclose a copy of "How to raise 90% of your Chicks." Write today. Dealers wanted to handle the Ideal Hover.

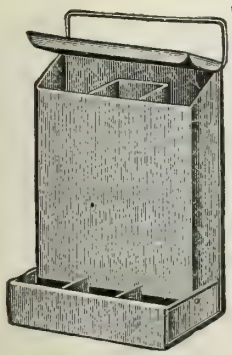
Keep More Healthy Birds

Make Less Work—More Profits

If you believe that healthy birds in your poultry yard make wealth in your bank book—insist upon having Kentuco Ware. You can raise *more* birds—keep them *healthier*—and save money on feed with

KENTUCO Poultry Ware

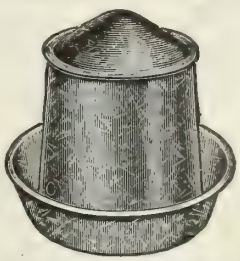


We have experimented repeatedly to get these results for you. For example, study the Kentuco Grit or Food Box illustrated here. We made and discarded no less than 15 different styles before this style was accepted. Now, we know of no other feed box in the world that can equal its service. Food or grit cannot clog in the reservoir—it cannot be wasted or polluted in the tray—you cannot pull box apart.

Kentuco Fountains are galvanized *after* they are made. That's why they are *entirely* rust-proof.

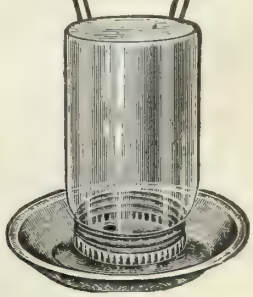
Ask your dealer for Kentuco articles. Their prices are no higher than those asked for most poultry ware, yet benefits of service are incomparable.

Write us for the big folder which tells the real facts about poultry ware. Also ask for the Kentuco Jar Fountain—free. Address



Kentucky Stamping Co.
104 N. 15th St. Louisville, Ky.

Kentuco Grit or Food Box
Prevents birds from wasting feed—there is always feed in the tray.



Kentuco Sanitary Wall Fountain
Can be taken apart and cleaned with a brush. No other fountain in the world like it.

Kentuco Two Piece Fountain
Absolutely rust-proof. Cone top keeps birds from perching on it and polluting water in the tray.

This Fountain Given Away

Kentuco Jar Fountain
If you will pay the postage and packing, we will send you the metal base for this handy jar fountain *free*. This is just to let you know more about the Kentuco Poultry Ware. Send eight cents in stamps.

BLUE ORPINGTONS :: SILVER CAMPINES

At the Crystal Palace Show, London, Eng., Nov., 1913, I won on Blue Orpingtons, 3rd Cock; 2nd, 3rd cockerel and 2nd pullet. On Silver Campines, 3rd cockerel and 4th pullet.

At the great Dairy Show, London, England, held on October 21, 1913, I won on Blue Orpingtons first in a class of 34 entries, the biggest class ever known in this variety. Also 3rd and 5th. After my previous wins at Madison Square Garden, New York, and the Crystal Palace, London, in this variety, it's positive proof of the excellence of my strain. Remember, I am the originator of the Blue Orpingtons of today. It's easy to buy winners, but a different thing to breed them, unless you have the stock and the knowledge. I have got them ready right here for you and birds that will reproduce their like. I have birds now for sale that will win in the keenest competition in the world. Having attended personally the Madison Square Garden Show, New York, in 1911 and 1912, I know the exact American requirements. Write me, stating your needs. I will answer by return mail and guarantee you every satisfaction. I can ship immediately on getting your order and guarantee live delivery in New York. I arrive at the Seville Hotel, 29th St. and Madison Ave., New York City, December 24, and can book any orders then as well.

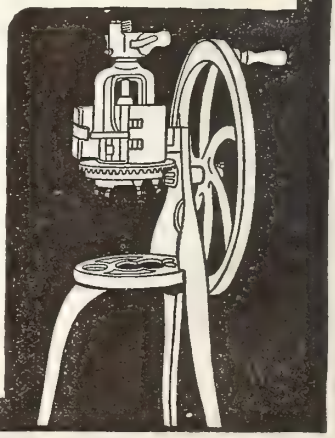
CAUTION Any Bone Cutter claiming to be Mann's without F. W. Mann Co. cast on its surface, is an imitation. If made in Milford, Mass., it is Genuine.

Make Your Hens Lay

When Eggs Are Worth Most



HENS relish juicy bugs and worms because these supply the protein feed they require to make eggs. The craving for meat and bone food—protein feed—is simply nature working out the egg-laying proclivity. Hens **must** have food rich in protein or egg-making elements, or it will be impossible for them to lay.

Our little book tells you all about the how and why of this. It makes you master of egg-getting. It's a book that opens up to you the real possibilities with poultry.

It's simply a matter of knowing what food to supply and how to prepare it. It is now established beyond all doubt that raw, green bone, with adhering meat and gristle, cut fine, is the ideal egg-producing food. Its cost is a mere trifle and its preparation is easy with a

Mann's Latest Model Bone Cutter

Sold On 10 Days' Free Trial—No Money Down

It turns easily and rapidly, cutting green bone, with adhering meat and gristle, wasting nothing.

Its self-governing feed automatically adapts the cutting to **your** strength, so that anyone can use it.

Its open, hinged cylinder is easily cleaned, and it takes in large bones. It is strong, durable, and requires few repairs. We want you to try one.

We will send you a Mann's Latest Model Bone Cutter on **10 Days' Free Trial**—no money down. If satisfied **after the trial,** buy it. If not, return it **at our expense.**

You want our good books, at any rate, send for them. We'll forward by return mail.

F. W. Mann Co., Box 56, Milford, Mass.

FRENCH'S
POULTRY MUSTARD

Absolutely Pure — **The Original Poultry Mustard** — **Pat. Applied For**

We have learned that unscrupulous dealers are buying for low prices, cheap and inferior mustards in bulk and offering them in place of French's Poultry Mustard. French's Poultry Mustard is made from imported seeds in the most careful manner and is as near as possible to the mustard used in England during the experiments, excepting that it has greater strength.

In order to be sure and not get counterfeits or inferior articles palmed off on you, insist upon having French's Poultry Mustard, and see that it is in the original and unbroken packages. We do not ship this mustard in bulk, excepting to consumers, and mustard that is offered you in unbroken packages or in bulk, as French's is not French's, but a counterfeit.

If you have not already done so, write us for a copy of the booklet as published by Mr. Ralph Allen of England, upon the subject of the use of mustard with poultry, and if you use mustard, use the one that is adapted solely for the purpose for which it is intended. Don't accept counterfeits or the substitution of inferior goods.

For the Laying and Show Season

Condition your stock by using **"French's Poultry Mustard."** There is nothing to equal it in value. **It insures an increased egg yield.** It helps the **moult**—makes it **quicker and more natural** and the hens get to laying right quick. It is beneficial and insures the richest plumage, and keeps the birds toned up at all times to show at their true worth. It is used by the leading breeders and highly endorsed by thousands.

Old and Young Thrive On It

Experiments here and in England have proven its value. It is used and recommended by thousands of poultrymen. It is not the amount of food a hen eats, but the nutriment she extracts from food by the digestive process that supplies all nature's demands and produces eggs. It is sold the world over—here is a partial list of the principal dealers handling it. If your dealer does not have it send us his name with your order.

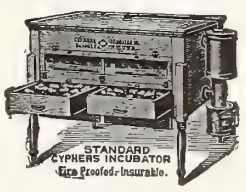
Cyphers Co's

Will Make You

It's come—the Poultry Raiser's *Harvest Time*—the time when *biggest sales, richest profits, knock at the door* of *every* poultry grower. Poultry and eggs are in highest demand everywhere—*all* that can be supplied—at top prices. It's a nation-wide demand, *fixed*—one that will continue for years.



The enormous shortage of beef cattle, of sheep and swine, that *must be* faced this year and for years to come has sky-rocketed meat prices and, *more than that,* the *demand* is *far ahead* of the supply. There's just one direction for people to turn in this emergency—AND THAT'S TOWARD POULTRY AND EGGS.

Please grasp the *bigness* of this wonderful chance. Then ask yourself, straight *self-to-self*—"Am *I* going to fail utterly or to have miserable setbacks in meeting this splendid money-making opportunity?" "Am *I* going to handicap myself with *poor tools,* when *real* incubators and brooders and other poultry equipment will insure my getting on the market early with the choicest poultry meat—the biggest egg production?" "Am I going to *fail* to *meet up with* this unequaled opportunity?"

Now, *if ever,* you want to give this business your *best efforts.* You want to give yourself a fair, square chance to prosper by using *only* poultry equipment of *proved* reliability—by relying on the name that stands first in the service of the most successful large scale poultry raisers—the World's Standard—

CYPHERS INCUBATORS and BROODERS

Don't start out with *small ideas* during this great poultry money-making period. Time is too precious to experiment. Don't buy an incubator you have to coax and cuddle and stay up nights with! Remember Cyphers is Standard wherever incubators are known. Remember Cyphers Company products are the right tools—the proved tools, safe and dependable. Let us help you win the *fullest* measure of real success.

CYPHERS
Quality Proved by Big Continuous Hatches

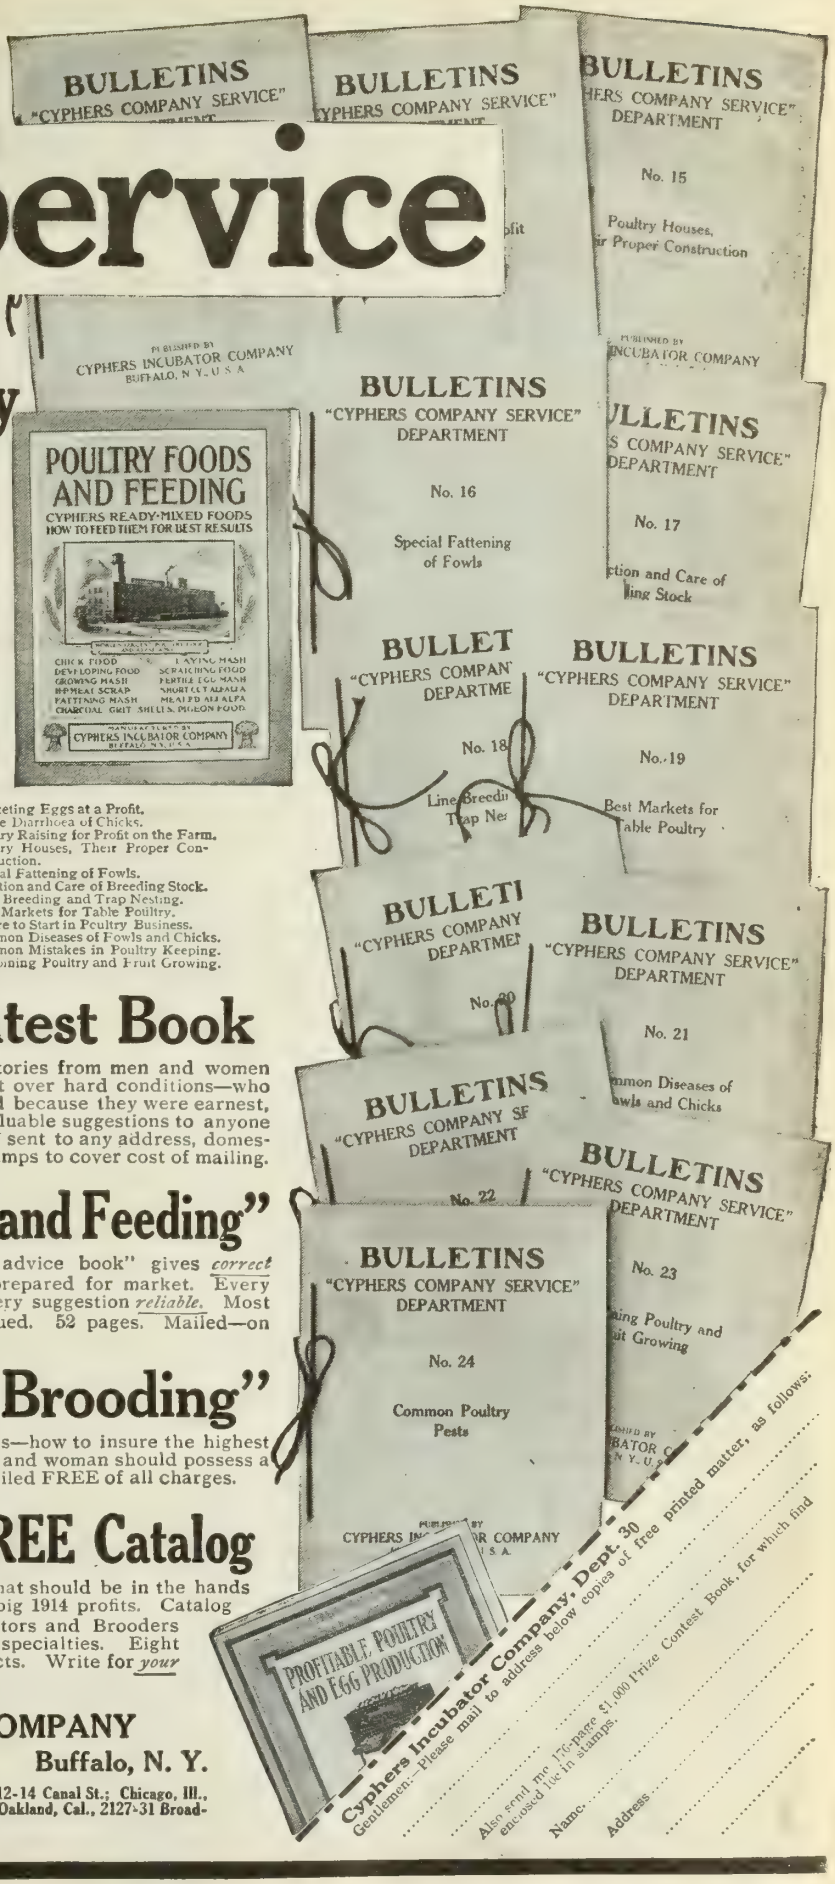
Mrs. R. H. Pote, R. F. D. 8, San Diego, Cal.—"I have four Standard Cyphers Incubators—three 390-egg and one 244-egg capacity. For my *first hatch* I set 440 eggs in a large machine, tested out 58 as infertile, leaving 382 eggs, and got *338 fine, strong chicks.* In another machine I set 440 eggs, tested out 38, and got *372 chicks.* In the other large machine I set 400 eggs, tested out 60, and got *306 chicks.* In the 244-egg machine I set 260 eggs, tested out 31, and hatched *200 chicks.* Remember, these were all my first hatches, and *I had never run an incubator before.* From the 390 egg machines I have never had less than 300 chicks. I find the Cyphers very easy to run and regulate and I had no trouble whatever with them."—June 29, 1913.

Hillside Farm, Joseph S. Roe, Breeder of White Wyandottes, Silver Campines, Houdans, White Leghorns and Ornamental Bantams, Lafayette, N. J.—"I have been operating two 244-egg, one 144-egg and one 70-egg Standard Cyphers Incubators, all of which have given splendid satisfaction. Here are some of my recent hatches, good average results from tested eggs: 160 eggs, 145 chicks; 162 eggs, 147 chicks; 82 eggs, 79 chicks; 157 eggs, 146 chicks; 175 eggs, 167 chicks. From personal experience I have found that there is no incubator that will *hatch as many strong, livable chicks* from a given number of fertile eggs as will the Cyphers."—July 24, 1913.

Cyphers Company's Free Bulletin and Personal-Letter Service

We want to *help all poultry raisers*—we want them to have the benefit of our knowledge and experience whether or not they are Cyphers customers.

Free Service



More Poultry Money

Because we are far-sighted enough to realize that every step that advances the poultry industry—advances *our* interests in the long run.

That's why we've a big Free Correspondence Department in charge of Poultry Experts. We *gladly* answer in detail, give experiences and advice to *anyone* anywhere who writes us for poultry counsel. No charge whatever.

Our Free Bulletin Service preserves in permanent form, for the benefit of our customers, the experiences and facts developed at the Cyphers Company's $75,000 Experiment and Demonstration Farm. *Any* reader of this paper is entitled to a choice of any *three* of the Bulletins listed below. Aldrich White Orpingtons

The Strain of Quality

Great Win at Chicago, at the Great Mid-West Coliseum Show, Chicago, December 12-17, 1913

We entered nineteen birds and made the greatest win ever made at America's Strongest Orpington Show, (341 Orpingtons entered) winning Grand Special for Best Display, White Orpington Club Cup for **Best Display,** and Special for best Colored Male and Best Shaped Male.

We Won—

1st Single Comb White Orpington Cock
3rd Single Comb White Orpington Cock
1st Single Comb White Orpington Cockerel
2d Single Comb White Orpington Cockerel
5th Single Comb White Orpington Cockerel
1st Single Comb White Orpington Pen, Old
1st Single Comb White Orpington Pen, Young
2d Single Comb White Orpington Hen
4th Single Comb White Orpington Hen

Pullets not entered, acct. customers showing.

We won seventy-six points or eight more than last year, thus again proving that Aldrich Strain White Orpingtons are the best, as all these birds were raised and bred on our farm.

At the Great International Exposition, at Atlanta, December 1-7, Aldrich Strain White Orpingtons shown by us and Mrs. L. P. Eberhart, won seventy-six points against seventy for all competitors combined in strongest class ever shown in the south winning

1st and 2d Pens [in class of 18 pens]
1st, 2d and 3d Pullets
1st, 3d and 4th Hens
2d Cock. 3d and 4th Cockerels

Aldrich Strain Orpingtons have also won for our customers this season in all parts of America and Canada in the strongest competition Cleveland, Cincinnati, Allentown, Winnipeg, St. Louis, Davenport, Roanoke, Little Rock, Brandon and Vancouver, Canada, Indianapolis, Springfield, Meridan, Jackson, Jersey City, Plainfield, Albany, Grand Forks, Richmond and many other shows, thus proving their quality under any competition, so if you can advertise the **Aldrich Strain** your success is assured, as **the superior quality of the Aldrich Strain is now acknowledged by all.**

We sell only one customer in a class at any show, so place your order early to avoid disappointment. Our birds are **bred-to-lay** with the same care they are **bred-to-win.** Eggs now ready from the best pens of White Orpingtons ever mated, at $15.00 per setting of 15, fertility guaranteed. Book your order early if you desire eggs for any certain date. When writing mention American Poultry Journal.

Hatching Eggs in the Higher Altitudes

Report of Experiments in Solving the Problem of Successful Incubation Five Thousand Feet Above Sea Level and Higher

By W. H. Mathews

THAT the cook and the poultryman have a close community interest has always been a great hobby of mine, and with this belief in mind I have always personally paid all possible attention to their whims and caprices when producing retail commercial poultry. An entirely new angle to the case came to me this year when I went west to northern New Mexico at an altitude of nearly 8,000 feet above sea level, to try and solve the hatching problem there presented.

Most poultry keepers have had trouble in artificial incubation even at "mile high" (5,000 feet) Denver, though many hate to admit it. And in the majority of cases, hens themselves have trouble landing chicks on the twenty-first day in high altitudes. Above 4,500 feet the trouble increases in a greatly increasing ratio, and at Cripple Creek, and especially Leadville, the effect of the altitude makes hatching almost an impossibility.

It is a well known fact that altitude may be determined by the temperature of boiling water, the water boiling with a lower temperature with each degree of rise. Similarly meat roasting and all kinds of baking are much simpler at sea level than thousands of feet higher. A striking example of the effects of altitude may be seen in egg boiling. A fresh egg will boil quite hard at sea level in five minutes. At 8,000 feet it requires about fifteen minutes to produce the same result. The older the egg, the longer required to cook it owing to the change in the albumen due to age.

When I first went to New Mexico I wrote experiment stations of the west, as well as to incubator manufacturers, to get some line on "what was what," but the sum total of the replies was limited to the moisture problem. No one had ever worked the problem out and it seems to me now that those living at 5,000 feet or above, who have hatching troubles, may find a suggestion or two in the following:

In the first place, in northern New Mexico and all through the mountains an ordinary Tycos hygrometer, which will most always show at least a quiver of 10 degrees at 103 degrees temperature, sea level, does not register at all in 103 degrees of heat, at 8,000 feet. A great deal of added moisture is therefore necessary in any incubator. In general, it requires at least two quarts of water a day in any two hundred or four hundred egg incubator. But even with that amount of added moisture eggs will not hatch within five weeks. Instead they are far more likely to have dried up and, just as in ordinary cooking more time is required to produce a given result at a certain temperature, so in hatching with the twenty-one days remaining a fixed point, a higher temperature than 103 degrees is required to give results in the time limit.

Roughly stated, the problem is about as follows:

To hatch in twenty-one days, eggs require a higher temperature than 103 degrees, but each degree of higher temperature in a small lamp machine means greater ventilation, and greater ventilation means greater evaporation, and that in a locality in which great evaporation is one of the chief stumbling blocks. Again, the greater the amount of added water, the greater the evaporation, and the rapid evaporation of water is one of the quickest ways of lowering temperature. We have, then, a sort of a "ring-around-a-rosy" problem which seems endless.

In reality, once the theory of the problem is understood, it becomes a technical question to be worked out in detail by successive hatches. With an Essex-Model machine the general plan followed was to start the eggs at 104 degrees for the first two days, and to spray the inside of the incubator, though not the eggs, with slightly more than one pint of water at noon each day, the lamp being filled and trimmed previously each morning. After the second day, when the eggs are turned twice each day, the temperature is allowed to go up to 105 degrees and the amount of water increased till by the end of the week the amount of water is about one and one-half quarts. With this amount of water the hygrometer will average around 45 degrees to 48 degrees. For the first two weeks both felts are left in and, as during the spraying they become quite soaked with water, they greatly reduce the ventilation through most of the day. During the last week the temperature is allowed to go up to 106 degrees and the spraying done twice a day, one quart of water being used each time. Throughout the entire hatch the cement floor upon which the machines stood was kept soaked by pouring pail after pail of water on it as often as it dried off. This course was followed until the eggs began to pip, at which time and as many times thereafter as judgment dictated, a cloth was loosely wrung out in warm water and laid over the eggs until dry. For the last week, only one felt was left in the machine.

By following this course I endeavored to strike a medium between the necessary possible things and those which, while probably advisable, were impossible of accomplishment. Under the procedure outlined above, I finally secured regular results of about 50 per cent of all fertile eggs from the start. I had difficulty with the fertility due to lack of green stuff, disease, altitude, etc., but the problem gradually worked itself out in a very satisfactory way. At the same time some hens hatched out their eggs in seventeen days and others in thirty-two days, and the long and short periods of incubation brought such confusing results that little could be argued in their favor.

Strange as it may seem, the duck and goose eggs incubated best when set under cover in a dry place. Most of the goose eggs set under geese and bringing good results, ran from one to two and even three weeks over time.

It is the intention this year to eliminate the spraying of the incubators by putting a steam jet into the heater jacket of the incubator. But steam varies in its humidity with its temperature, and becomes rather a problem for a poultryman. An-

other machine is to be fitted with a water tray on top of an electric heater, this insuring a steady, even, governable evaporation of water. If none of these work as expected, plans for a new heater, injecting live steam directly into the machine, thereby using both the heat and the moisture, are under way.

In any event the matter was carried far enough to show that despite the lack of oxygen in the air, excessive ventilation is unnecessary through the bulk of the hatch; that a given amount of water is required during the hatch; that more heat, even as high as 108 degrees, is necessary; and that the laws governing cooking are closely allied to those governing incubation. A second year's work should bring additional interesting results. Also there seems to be little difficulty in raising chicks hatched at that altitude.

Hatching Chickens by the Million

Enormous Production of Eggs and Baby Chicks at Petaluma, California

By John Y. Beaty

IT is not an unusual sight in traveling through certain sections of sunny California to see by the side of a building a huge pile of white material, looking at a little distance like snow, and towering above the gable of the building. And this at a time of the year when vegetation is green. The white pile, however, is not snow, but egg shells. This immense pile of shells represents the accumulation from one of the large hatcheries maintained in the great poultry centre of California with its largest shipments from Petaluma. Here chickens are hatched literally by the millions.

The average poultry raiser, of which there are thousands in this district, specializes on the production of eggs. He puts his entire time and effort on this end of the business and depends upon the large hatcheries for renewing his laying stock.

Over ten million dozen eggs were shipped in 1912 from Petaluma alone, so it can readily be seen that it requires a great many chicks to replace the laying stock that must be yearly discarded.

There are fifteen or twenty large hatcheries in this poultry centre, the largest of which has a capacity of 165,000 eggs at each sitting in mammoth machines, each machine extending across a room fifty feet wide. These machines are heated by gas and cared for by seven men, who devote their entire time to regulating the machines, turning the eggs and removing the chicks when hatched. The eggs are secured from poultrymen making a specialty of producing eggs for hatching. Before being put into the incubators they are carefully culled, and the usual thin shells, thick shells and deformed shelled eggs discarded. When the trays are put into the machines, they are filled with the best eggs that can be secured.

Some of the hatcheries are in operation during the entire year, the heat never being turned off, but the flush of the season is from January to July. For example, the largest of the hatcheries shipped out 58,850 chickens in January, 1912, and in the busiest month, March, 164,700.

Twice a day the eggs are removed from the incubators and placed on top of the machines, as shown in the accompanying illustration, and after being turned, returned to the machines.

Baby chicks being made ready for shipment. See article "Hatching Chickens by the Million."

At hatching time, after the chicks are well dried off, they are taken from the incubators to the shipping department, where weaklings are killed, only the strong, well-hatched specimens being placed in the shipping boxes.

The chicks are shipped in the usual fibre-board boxes, divided into four compartments, each one of which holds twenty-five

Interior view of California Mammoth Hatchery at cooling time. Capacity 165,000 eggs. See article "Hatching Chickens by the Million."

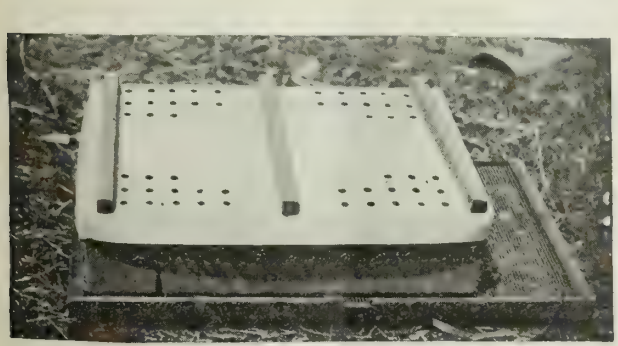
fluffy baby chicks. The chicks are sent by express sometimes quite long distances, and the percentage of loss is very light, due probably to the fact that all weaklings are discarded and that the newly hatched chick needs no food for the first day or two, and arrive ready and anxious for their first feed.

Day-old chicks in this section are sold at ten cents each, as a rule; though some of the best hatcheries get as high as fifteen cents each.

Production Cost of New-Laid Eggs

Comparison of Per Dozen Cost and Price of Eggs, Month by Month—Seventy-five Cents Profit per Hen to Pay Manager

By Frank Jones



YOUR November article on cost of eggs interested me so much I read it aloud to the wife. I don't believe you will get many answers to your call for accurate cost accounts. Few are kept. But why does everybody talk in annual costs and annual averages. It doesn't mean much. Monthly accounting tells the story more truthfully. Annual food-cost per dozen is mostly dribble. Actual per-dozen cost each month is what is wanted as a guide to selling price. Both cost and selling price vary all the time.

A few years ago I read a Cornell Station bulletin that gave the food-cost per dozen all the way from about six cents up to six dollars. That had me guessing. Some of the nature-fake stories about hen profits, all the way from $2 to $12 a hen annually, make me smile. Although it was reading this nature-fake dope that got me into the egg farm business. I expected to make a fortune and retire early. I like to read that kind of dope, though, it helps to keep me from brooding over being a hen man. But, joking aside, I don't believe all I read.

I was a clerk, had short hours and couldn't live on my salary. That's why hen profits appealed to me. I wanted more money and easy money. I am still a clerk at $1,800 a year. I work in the city six or seven hours a day and spend an hour and a half a day commuting. I average about four hours a day working for the poultry farm, employ a man all the time and keep a horse. I can't live decently on my salary alone and send my children through school. I need an extra $1,000 or more a year to keep things going. Last year I got about $1,500 out of my hen farm to pay for my own services, and I feel good about it, too. I have quit expecting nature-fake profits.

In October, 1912, I had 1500 early pullets and a few over 500 year-olds. I did not raise any chickens in 1913 and was able to buy early pullets this last fall at about $1.50 each, mostly from folks I sold eggs to in the spring. I couldn't get

Corrugated fibre-board shipping box used for day-old chicks. Plenty of ventilation supplied by holes in top. See article "Hatching Chickens by the Million."

as many good pullets as I would like. This winter my flock is about half pullets and half year-olds.

I figure the difference between selling price of the hens and cost price of pullets as expense. Losses count as expense. My expense account includes all hired labor, cost of keeping the horse, feed, interest and other upkeep.

I didn't start to figure monthly cost of eggs per dozen until December, 1912, "egg price war." The slump in egg prices that winter hit me hard and I tried to get actual cost. Each month I figured, as near as I could, the total expenses of the hens for the month, not including my own services, and divided that expense by the number of eggs produced and got the actual monthly per-dozen cost. I manage the plant, pack, candle and sell the eggs and buy all feed, and do all the work on the man's days off. That is what I get paid for. Here are the average production costs and average selling prices month by month from December, 1912, to November, 1913, inclusive. This has

* In these three months 24 cases of eggs were sold for hatching at market prices. Part of my pullets came from these eggs.

The pictures shown above give an idea of what may be accomplished by persistent and concentrated effort. Mr. E. B. Thompson, the owner of this farm, has made a life study of Barred Plymouth Rocks and by concentrating his efforts and time to this one variety has built up a most wonderful business.

Scenes on the poultry farm of E. B. Thompson, Amenia, N. Y., the home of the "Ringlet" Barred Plymouth Rocks. This is the largest and most up-to-date poultry farm in the country devoted exclusively to the breeding of Barred Plymouth Rocks.

Some Pertinent Poultry Paragraphs

"Quick Lunch" Suggestions and Practical Information on Many Subjects of Interest to Poultrymen

By H. H. Stoddard, Riviera, Texas

INVESTIGATE.

Follow nature.

Parasites make work.

Save the best cockerels.

Nature's darlings are the strong.

Attend the shows. Good for you.

Winter laying in cold climates is unnatural.

Women excel as poultry keepers in many respects.

History of civilization almost means history of labor saving.

That feeding meat will cure feather eating is a fallacy.

A great many branches on one farm are not a blessing but a curse.

Underfeeding causes small eggs. They should be 24 ounces to the dozen at least.

Don't be a slavish imitator. Get in an original "quirkum" on your own hook.

If there was ever a roosting place for dogmas, it is in the poultry business.

Do you try to tell visitors something useful about poultry? They won't listen. They know it all.

Utility poultry plants have failed in great numbers during the last forty years, principally because, as contrived, they made too much work.

Natural obstacles are sometimes no detriment to the man who knows. They put others out of the race and give him a monopoly.

Locality is very important in modern business. Manufacturing plants have to be moved sometimes, experience having shown that they were in the wrong place.

It uses up more time to take care of the fowl house at the North, than to do the whole poultry work where houses are unnecessary.

Labor-saving contrivances are valuable in poultry business on a small scale, but it is on the big plants of the future that they will specially shine.

Invention of the open-front roost revolutionized poultry keeping. Fowls were never "built" to stand close air when grown, whatever may be the case when they are only a few days old.

I would not give a last year's bird's nest for most of the cures proclaimed for poultry diseases, any more than I would for the abominable nostrums for human ills advertised in the newspapers.

Making a good race of fowls is just like making a good race of men, so far as mating is concerned. Scores of stocks should be fused together, but these should not be too diverse to nick well.

That "all things come to him who waits," may be true, but death will be one of them if he waits too long. The modern ways of doing business demand that you know a good idea when you see it and grab it p. d. q.

"If your boy was not born with courage, he may exhibit some but will never have any," and if he was not born with love for animals he may exhibit some, but he will never have any and will be badly handicapped if he tries either fancy or utility poultry-keeping.

They are saying that fowls will lay well till they are five years old! Important, if true; but, if true, how mistaken thousands of poultrymen have been for over a half century. Well, almost any whopping big mistake may be possible, since several monumental errors in poultrydom prevailed for an equal time before they were exploded.

There is much chicanery and fraud in the fancy poultry business, and so there is in any other kind of business. Have been trying, lo these many years, to find out whether in fancier's trade there is more or less deviltry than in other kinds of business, but haven't found out yet. Fanciers' circles, anyhow, comprise some more honest and better-hearted fellows, with fine sympathies, than any other class I have ever met.

He who develops health in fowls instead of vile degeneracy, and he who invents mechanical appliances to save labor in the poultry yard are both wealth producers, as truly as is the man who guides the plow or wields the hammer. Edison has produced more wealth by his brains than any ten thousand men ever produced by their hands in their whole lives. Dr. Woods has produced more poultry than all the sixty managing poultry editors of the present sixty poultry papers combined.

Ants are one of the worst pests the Southwestern poultryman has to contend with. They invade the nest just as eggs begin to hatch, and prey on the young birds. Nests of sitters should be supported on a rack standing on legs with these legs set in pans or cans of water. The cans which once contained canned goods may be turned to good account. During four years ants have troubled us only one year, and this is just about the experience of other people. But when they are troublesome they are very troublesome and must be set down in the list of drawbacks peculiar to this part of the country.

Three parties that I know of are now raising late fall hatched chicks, and all report thrift and vigorous growth of their S. C. W. Leghorns. One has fed nothing but cracked corn and skimmed milk. Another Milo maize and wet mash of shorts and bran. Another fed cracked corn and dry bran mash, with buttermilk for drink. Mother hens cooped and chicks allowed free range in each case. All three owners swell around and praise their respective feeding methods. Meanwhile said methods were not the chief factor, which was that the eggs hatched were from hens just beginning to lay after the moult.

This doctrine first set out in 1870, has had slow growth. A few fanciers, anxious to retard until spring the laying of the hens producing high priced eggs, have however practiced it to some extent. The free forage helped to balance the various rations to some extent in all of the three instances.

There was an era when the "symposium" had a great run in poultry papers. In response to a series of printed questions sent out to a score or so of eminent breeders, these would forward answers for publication. One query might be this: At what average age do White Leghorn pullets generally begin laying? The answers would range from four to five and one-half or six months, but how many of the replies were based on casual observations and how many on careful records for a series of years, followed by accurate figuring of averages? The fact that answers were invariably given four, four and a half, five, five and a half, or six, instead of most of them being in intermediate fractions, as would have been the case if averages had been carefully reckoned, was a dead giveaway.

In stating the egg yield, answers would be 125, 130, or perhaps 140, 155 or 160; but always even tens or fives, showing that it was all guesswork. Statistics based on guesswork of parties who have something to sell are mighty poor statistics.

The trouble with the new light evolutionists is that they don't deliver the goods. They were going to show how poultrymen could, by Mendelism, accomplish in three years as much in fixing type as had ever been previously done in six years. They can "point with pride" to no valuable practical results whatever, and a foremost representative of theirs at last A. P. A. meeting was driven to a virtual admission of the fact that their efforts were as empty as a cuckoo's nest in March.

A late prominent contention by a writer so worthy of respect that it should command attention, is to the effect that almost the whole body of poultry keepers have been mistaken in thinking it unprofitable to keep hens beyond their first or second laying seasons. Very likely somebody started the decrying of three-year-olds on insufficient evidence, and the crowd repeated the yarn, parrot-like. Well-guarded experiments are needed. In some cases where three-year-olds or four-year-olds have failed in laying to a paying degree, the management the first and second years may have been the cause.

Again and again we hear of experiments that do not amount to a hill of beans because there is a stitch dropped.

A friend, who is a staunch advocate of "breeding in line," thinks my prescription in December JOURNAL, of breeding

brother and sister, is "too drastic." Well, this friend begins his breeding with stock nowhere near as vigorous as my sixteen-in-ones are. If his can stand a certain closeness of relationship in breeding without becoming sick or weak, mine can certainly stand a much closer. And, by the way, this friend's fear of the evils of closeness is virtually a recognition of the merits of out crossing, and of this wholesome practice his method offers none, while mine bestows it in bigger measure than is afforded by any system previously published. Again, there is lots of leeway. Breed less closely, if you choose, during the later years embraced in the scheme.

Another man objects to the trouble involved in securing so many different unrelated stocks. Right here co-operation shines with signal luster. A fellow believer can co-operate with you and each need collect but eight stocks. Or better, four good fellows can hitch horses and each will need to procure but four stocks, which is not much of a job.

The projected Water Level Railroad from St. Louis to the Panama Canal, as described by B. F. Yoakum, the railroad magnate, and which had aid guaranteed by the Mexican government previous to the late unpleasantness, will most assuredly be built when order is restored beyond the Rio Grande, and will parallel the great United States intercoastal canal through the whole extent of Southwest Texas, the future great poultry world. The service which one of these lines cannot accomplish to the best advantage, the other can.

The road will be a novelty in engineering, second only to the Panama Canal itself, and the business it will transact, connecting as it will the great middle west with virtually the rest of the whole world, staggers imagination. "A dream of empire," Mr. Yoakum well calls the project. "Trains carrying a tonnage greater than any of the steamships leaving New Orleans could move more easily and swiftly to the Canal Zone on the proposed road," he said.

It can be seen at a glance that terminal facilities for loadng and unloading ponderous cargoes by bigger traveling derricks and electric automatic machinery, and moving such cargoes by means of engines and cars heavier than any ever built previously, will follow as a matter of course, and serve to lower the cost of transportation. Water carriage has always beaten the water level railroad in Germany, but this road is to be different from any ever built, because colossal and its rolling stock likewise, and not adapted to run on any other road.

I have an interesting letter from a stranger who thinks I "draw a long bow," when I say that traits may skip thousands of generations and then crop out. He considers them "simply abnormal, just freaks that start up in accordance with no known law," and since I, he says, "insist that nature imposes the things that are necessary," he asks what necessity there can be in "keeping, lingering in the blood, traits once rejected and put out of business by natural selection said to act through long periods?"

Now let our friend imagine what would be the case if traits were inherited only through short periods, that is but from a few generations back. If this were so, environment must act quickly in effecting changes or there could be no selection to give a race the adaptation to its surroundings necessary to its survival in a world where all life is maintained by continual strife. But if it always acted quickly there would be dozens of new varieties of every species of plants and animals on the stage at one time, and all living things would present a jumble. In fact there would be no real species at all, and the adaptation would in most cases be very imperfect, because they would not have been subjected, as now, to the test of time. This state of affairs would not be best. But yet in some few cases there are sudden changes or "leaps," making new varieties or even new species, as De Vries proved.

Nature seems to have recognized that though conservatism is the best as a rule, a few exceptions in the shape of changes, as "sudden" as the proposal a woman has angled a year for, are of advantage too.

Old dame nature thus has two strings to her bow, the De Vries string, however, being seldom used.

As a matter of fact, and not of hypothesis, the inheritance of ancestral characteristics millions of years old is easily proved, over and over again, in many ways. For example, though I know not how greatly or how scantily hirsute, the writer of the letter above referred to, look at the persistent "fur" on his wrist for evidence of the descent of a feature which came down from his ancestors who went on all fours and were "educated in the higher branches."

In American Poultry Advocate for November we read that "how to feed a hen to secure the maximum egg production is still an unsolved problem!" Ye gods and little fishes! This statement was made in a formal address before the Connecticut State Poultry Association by the owner and manager of one of the most successful utility poultry plants in this country or any other.

Thousands of poultry keepers in hundreds, yes, hundreds of poultry periodicals alive and dead, have for forty years been writing on poultry feeding; and at poultry plants costing tax payers enormous sums in all, at State Stations, food conglomerations have been mixed to be forced down fowls' throats on the principle of, "take that or starve." The recipes for these wonderful concoctions, each surely better than any of the others, would fill a book. Yet how to feed poultry is still an "unsolved problem"!

After saying that the problem is unsolved, the speaker proceeds to declare that

"To get a maximum egg yield, practice has proved that all grains should be given at one feeding; to allow a dry mash before them at all times for best results. Experimenting with different combinations of wheat, corn and oats as whole grains; bran, middlings, corn meal, alfalfa. Linseed meal and beef scraps in dry mash will make performances square with theory. One pen of 6 hens 5 years old proves much of the above. This pen is closely confined with a board floor in house and a small yard bare of anything green; a dry mash is continually before them; they get no attention but once in 24 hours at 4 p. m., at which time the water pan is usually filled with fresh water and their allowance of mixed grains is thrown on the board floor and eggs picked up for the day; they get no green food whatever."

Well this is getting interesting. The "problem" is not only solved, and an unsolved one "both at wunst," but on top of that a new slogan comes wafted on the ambient air. A yard "bare of anything green" and no green food whatever allowed, yet all Petaluma, and pretty much all the rest of the poultry world have been insisting on green food; and who shall decide when doctors disagree? It would seem anyway, as though in a consultation, if there are ten thousand doctors on one side and a single dissenter on the other, the fellow would be rather lonesome.

The quotation is somewhat obscure, but it plainly states one thing, which is that to "make performances square with theory" you must begin "experimenting" with different combinations of wheat, corn and oats, these whole; and bran, middlings, cornmeal, alfalfa, linseed meal and beef scraps in dry mash!

Has there been no "experimenting" with these meritorious ingredients already, during many weary years?

The attachment which fowls have to the particular range they have lived on for a considerable time is astonishing. From my window I can see a range of ten acres surrounded by a coyote proof fence of wire netting only three and one-half feet high, for the suspicious animal will not leap a fence even if it is low. Now another encouraging fact is that the fowl won't do it either, if the enclosure is large enough. They will keep running along side. If the enclosure was small they, being Leghorns, would be over such a fence quicker than you could say Jack Robinson.

Well, what I am coming at is, that on the west five acres of the ten there are three small clumps of bushes and trees, that seemingly do not amount to much, while the east five are as bare of trees and bushes as Mother Hubbard's cupboard was bare of dog feed; though this plot is well clothed with grass and various wild plants, which shelter and feed insects of corresponding abundance and variety.

Now, for three years though free to go to the east side they persistently keep away. There are but few grasshoppers on the west plot. You walk across there and almost nary a one will you see. On the east plot they are in abundance, affording, it would at first appear, an almost irresistible temptation. The explanation is that early in the game, when first allowed the freedom of the ten acres, and when scared at the immensity of this great world, the fowls kept near the trees and bushes. The gate through which they were let onto their range was not far from one clump, and at first they kept near it and later wandered to the next clump, and the next, and retreated to their yard by the same line of march, and gradually formed a confirmed habit of considering the west five acres their home.

Two things are especially stereotyped in fowls' brains, to-wit: Attachment to their roosts, and attachment to their "beat," when you turn them loose and undisturbed, to allow their ancestral nature to assert itself so that they may select a beat to be attached to. When once this adopted they will stick to it with the fidelity that the unmarried policeman is supposed (in theory) to stick to his beat at night, untempted by the proverbial handsome cook with her doughnuts and coffee in a kitchen, on his line.

This trait of fowls is far from being merely a curiosity. It is extremely valuable to the keeper who has an ample range available.

For forty years the colony plan was practiced in all civilized countries and it was published and re-published, that by scattering fowl houses all over a farm at ten or fifteen or more rods apart, different flocks could be made to range by themselves without any separating fences, but it has been only lately published that the acreage, once considered proper for many widely separated small houses, can be furnished with one large house, or where climate permits, sets of open-air roosts close together, and with very little time and trouble, a number of large separate flocks can be made to range over their respective beats, and between them use the whole area that would, under the colony system, for a long time so popular, be occupied by widely scattered houses. Just here I cannot refrain from saying that for a half century that I know of, and a much longer previous period (during which comparatively little was found out by anybody about anything), study of the nature and habits of fowls has been lamentably neglected.

Utilization of their actions and capacities can, in many ways, save much in time, labor and dollars. My own disadvantages and drawbacks in poultry keeping, and I know that other people have had the same experience, have been largely owing to not studying my fowls enough, and intelligently enough. And there it is again. ignorance is at every turn, the great foe of mankind.

Eggs Are Wonderful and Needful Food

New-Laid Eggs From Well-Fed, Healthy Hens Are Second Only to Milk, the Most Wonderful Foodstuff in the World

By Prince T. Woods, M. D.

SCIENTISTS agree that wholesome fresh milk is the most wonderful complete foodstuff in the world. It combines every variety of nutritive constituents ready for immediate use and easy assimilation. The milk of every mammal is a well-balanced, well-suited, accurately fitted food for the young of that animal, and it varies according to the special need of the particular animal for which it is intended. More than that, milk is a wholesome, complete food, ready for use of man and easily adaptable to his needs.

"Next to milk, eggs are the most wonderful foodstuff in the world," says Dr. J. B. S. King, an authority on the chemistry of food and dietetics. A hen's egg of average size will weigh a little more than two ounces—eight eggs running a little over a pound. Well-fed, selected eggs can be had that will run six eggs to the pound. Large eggs have been produced that will run five eggs to the pound, and at the beginning of laying it takes eight pullet eggs to make a pound.

"Uncle Dudley," in an excellent editorial on "Eggs and Hens," in the Boston Sunday Globe, November 16, said:

"An Egg Superstition."

"If it were not for the widespread belief that eggs cannot be dispensed with as an article of diet, we should never have heard of the 700,000 members of the Housewives League engaging in 'a 30-cent egg war.' But the belief is not altogether well founded. Eggs are highly useful, beneficial, nutritious, but not indispensable.

"All the food elements they contain are in other common articles of diet. Most meats have more nutritive value, more protein and fat and less water than eggs. It is an old superstition that one egg is equivalent to a pound of beefsteak. In fuel value a whole dozen eggs does not equal a pound of round steak.

"But eggs are popular because they are digestible and are easily prepared. It is less work and it takes less time to boil an egg than to broil a steak for breakfast. In that simple fact may lie an explanation of the great demand for eggs and of the ensuing excitement when prices rise.

"The difference between the actual food value of a storage egg and that of a fresh laid egg is more than offset by the very great difference in price. If it were not for their unfortunate flavor, storage eggs would not be in such ill-repute, for the amount of nourishment—of tissue-forming and fuel-producing qualities—they contain is not seriously diminished by a sojourn of reasonable length in a storage warehouse.

"Should every one keep hens who has a backyard in village or country? Not unless he likes hens and has indulgent neighbors."

Besides the paragraphs quoted above, there was over a column and a half more concerning eggs and hens in that editorial, dealing with egg boycotts, crusades, egg hysteria and certain town and city ordinances which prohibit poultry keeping within town limits. It is good reading, but we haven't space for it here. We discussed the egg war and egg prices in other articles.

Are Eggs Indispensable?

"Uncle Dudley" will find it hard work to convince cooks and housewives that eggs are not indispensable. Ask any good cook and you will learn that eggs have a multitude of uses in the preparation of our daily food. It is easier to tell what eggs are not used for than it is to enumerate the many and varied uses for which the good housekeeper finds eggs necessary. Eggs in various forms are served raw to invalids and convalescents and in a great variety of drinks for the well and strong. Boiled, fried, poached, scrambled and in omelettes, they help wonderfully to give variety and wholesomeness to the daily bill of fare. Practically all desserts require eggs—cakes, puddings, many kinds of pies, custards, souffles, dainties and doughnuts fried in deep fat, ices, many kinds of bread, most entrees and salads, many sauces, frostings and confections, and a multitude of other uses in cookery, too numerous to mention, all call for eggs, eggs, and still more eggs.

The average well-fed family of four will find it difficult to get along comfortably with less than five eggs a day. If you do not consider that a conservative estimate, just bear in mind the fact that the statistics for New York City show a per capita consumption of eggs averaging one egg a day for each inhabitant of Greater New York, and the city of Boston, Mass., shows an average daily consumption of eggs of 2¼ eggs for each inhabitant.

Now, maybe eggs are "not indispensable," we could live without 'em, but we would find it mighty hard to get along without this most desirable, delicious and easily digestible food. Mankind has fed on eggs for some thousands of years and it will be difficult to stop his clamor if he fails to get 'em. We want more eggs, better eggs, and better returns for the producers of good eggs.

What an Egg Contains?

Consider the wonderful composition of an egg. Within it are found in proper proportion all the elements necessary to build all the tissues of a completely formed chick and the possibility of a new life. It is not only complete food, it is more (when fertile), it is a new life, a separate existence, in potential form.

Assuming that the weight of an average sized egg is two ounces, about .22 of an ounce (or about 11 per cent) is shell; about 1.14 ounces (or about 57 per cent) is white; and about .64 of an ounce (or about 32 per cent) is yolk. In food uses the shell, which is chiefly lime carbonate, is waste.

The white of an egg is practically pure albumen in solution. It contains 85 to 88 per cent of water, about 12 per cent protein and a very small amount of fat and minerals. The mineral content is in the form of carbonates, sulphates and chlorides by combination of potassium and sodium with sulphur, carbonic acid and chlorine.

The yolk of an egg is a wonderfully complex substance. It has from 15 to 16 per cent protein and from 32 to 33 per cent fat. Mineral matter is found in the yolk in much greater pro-

portion than in the white and includes salts of iron, much phosphorus and lime. According to Dr. King, "Seven egg yolks daily would supply all the iron required by a man of average weight. The peculiar value of the yolk of egg is the large amount of phosphorus and iron it contains in organic combination, and hence an easily absorbable form."

The clear yellow oil, or fat, of the egg is one of the most easily digestible forms of fat. In this oil are found olein, palmitin and sterin. Lecithin, a phosphorized oil, one of the most essential and valuable constituents of brain and nerve tissue, is present in egg yolk in considerable quantity. It is said that an ordinary egg yolk contains about 16 grains of lecithin, or sufficient to feed the brain and nerve cells of the average man for one day, and on the strength of this an egg for breakfast daily has been recommended as one of nature's best medicines. Cerebrin, another constituent of the human brain, is also found in egg yolk. Nuclein is also present.

Carbohydrates, a source of energy and muscular movements, are not found in eggs, but are easily and cheaply supplied in most food combinations.

In looking over a large number of analyses, when preparing this article, we found considerable variation. Some eggs ran as low as 11.9 per cent protein, 9.3 per cent fat, and others as high as 15.5 per cent protein, 13.96 per cent fat. The ash or mineral salts varied from .64 to 1.41 per cent. The water content varied from 64.8 to 70 per cent. It is apparent that well-fed, well-cared for hens will produce the best and most nourishing eggs. Selected new-laid eggs from well-managed flocks have a value all their own.

Food Values.

"Uncle Dudley" says: "In fuel value a whole dozen eggs does not equal a pound of round steak." Well? One good egg will yield about 89.7 (plus) calories of energy. Eight such eggs, or one pound of eggs, will yield about 718.2 calories. A pound of round steak will yield about 950 calories. One dozen good eggs will yield about 1076.4 calories of energy or 126.4 more calories (units of fuel value) than a pound of round steak. A pound of egg yolk will yield about 1672 calories or greater fuel value than any food cut of beef.

While calorie value may be used as a basis of comparison, it is not always a fair comparison of values. A pound of eggs will go much further toward satisfying the family appetite than a pound of round steak. Eggs are very palatable, easily digestible and very satisfying. They have become one of the great food essentials and hold their high place on actual merit. A pound of wheat has a food value of 1675 calories and a pound of oats a value of 1850 calories, but we won't abandon eggs and steak for a while yet to feed on a diet of wheat and oats.

Attention has been called to the fact that eggs contain about 70 per cent water. Well, what of it? All foodstuffs contain more or less water. Round steak has 65.5 per cent water. Sirloin, when lean, has about 70.8 per cent water and when fat about 54.7 per cent. Average lean meat is about 75 per cent water. Bear in mind also that with average meat as purchased there will be more waste, pound for pound, than with equally good eggs. A table of comparative food values is given below. We are not responsible for the figures, which are averages from a large number of analyses, and are taken from several works on food chemistry.

Comparative Table of Foodstuffs.

Foodstuffs.	Water.	Protein.	Fat.	Carbohydrate.	Ash.	Fuel Value per Pound.
EGGS	70.	14.8	10.5	.....	1.	718.2
Round steak...	65.5	20.3	13.	.....	1.	950.
Chuck (fat)....	62.7	18.5	18.	.....	1.	1105.
Sirloin (lean)..	70.8	24.6	3.7	.....	1.3	615.
Sirloin (fat)....	54.7	17.5	27.6	.....	.9	1490.
Cod fish.....	82.	16.5	.4	.....	1.2	325.
Oysters	88.3	6.	1.3	3.3	1.1	230.
Cow's milk.....	87.	3.5	3.7	4.8	.7	310.
Wheat	10.6	12.25	1.75	71.25	1.75	1675.
Oats	10.	12.	4.5	58.	3.5	1850.
Corn	10.75	10.	4.25	69.45	2.5	1730.

That is table enough and sufficiently accurate for all practical purposes in comparison. We do not submit it as a basis for figuring a dietary. It does show, however, that the chemistry of food is not the whole thing—not by a jugful. Calorie value or fuel value is all well enough, but it only measures the possible fuel units in a given food. It does not measure digestibility, palatability, appeal to the appetite, or quantity easily assimilated by the one who consumes the food. So please don't overestimate the chemical analyses or fuel values. They have their uses, but are only factors in considering actual food values.

Appeal to appetite is an important factor in selection of food. Forced feeding on food that does not appeal to appetite (is not relished) results in indigestion. Ease of digestion, completeness of assimilation, rapidity of digestion, and satisfaction of the hunger craving, all are important factors in considering foods.

Sawdust, for example, has no food value and is indigestible, yet an analysis will show that it has a calorie value about the same as starch, which is digestible and nutritious.

Six or eight good new-laid eggs possess more actual food-fuel value than a pound of lean sirloin steak and less than a pound of fat sirloin or of round steak. Well, who wants to eat much round steak or the fat rind of a sirloin, anyway? All things considered, a pound of eggs is equal in real food value to the average pound of good edible portions of beef. Pound for pound, the best winter eggs and the best beef cost about the same at the present time, and the price of beef is not likely to lower much in the next few years. It is much more apt to keep on going up in price. If what the packers claim is true, we may expect a beef famine within the next ten or fifteen

years, but the good Biddy hen is working hard to increase her output of eggs and to continue to give us big values.

Eggs are palatable and appetizing food. Everything but the shell is easily and rapidly digested and is in a form readily made use of by the tissues. Eggs contain feeding elements of the greatest value and they may be eaten raw or cooked in a multitude of ways, all of which appeal to the appetite. Nervous and anaemic people are greatly benefited by the proper use of eggs as food. For persons suffering from wasting diseases and for convalescents, eggs prove restorative and extremely useful. Growing children are greatly benefited by liberal use of eggs in the diet. In fact eggs, next to pure milk, are the best food and most adaptable foodstuff we have.

However, eggs used for food should be new laid. The stale or storage egg is not appetizing. The fresher an egg is when used for food the better it is. Food eggs should be from healthy, vigorous hens that are well fed and well cared for. It costs money to make good eggs. A good article of food isn't to be had for nothing at the present time. Well-fed, new-laid, wholesome eggs are good food, the best of foods, and selected eggs of good size are well worth five cents each.

The Second National Contest Closes

English Pen of S. C. White Leghorns Wins First—R. C. White Leghorn From Missouri Makes the Best Individual Record

A gain of nearly ten eggs per hen was made in the second National Egg Laying Contest which just closed at the Missouri State Poultry Experiment Station at Mountain Grove. The hens averaged over 143 eggs per hen. This increase would indicate that poultrymen everywhere are devoting more time and attention to selection for egg production and constitutional vigor. We believe we will see this average increase from year to year. We had at this station over 100 hens which made an average of 225 eggs per hen last year. We had several flocks of thirty to fifty hens each of different varieties which averaged 150 to 175 eggs per hen. We believe that the average poultryman has just begun to realize the possibilities of careful breeding and selection. Last month we predicted that before long the 300-egg hen was a possibility and would be heard from in the near future, and this month the news comes from a reliable source that one hen has laid 303 eggs in 365 days.

A dainty little R. C. White Leghorn pullet No. 55, from Maryville, Mo., worn and ragged because of her year's hard work, and weighing only 2¾ pounds, won the prize for the best individual record with 260 eggs. She laid twelve times her own weight in eggs. She manufactured more pounds of eggs from her body weight than any hen in existence. An S. C. White Leghorn from England was second with 258 eggs; a Buff Wyandotte from Vermont was third with 255 eggs; a Buff Wyandotte from Missouri was fourth with 253 eggs; and an S. C. White Leghorn from England was fifth with 246 eggs.

The S. C. White Leghorns from Catforth, England, made the best pen record with 2,073 eggs. Seven of the ten hens in this pen laid over 200 eggs each. One of the hens in this pen died, and one was out of condition for sometime, and nearly all went into a moult about two months before the contest closed, and these things all tended to lower their record, but in spite of these facts, they were 189 eggs in the lead of their nearest competitor. Buff Wyandottes from Missouri won second prize with 1884 eggs to their credit, Silver Wyandottes from Iowa were third with 1,877 eggs, White Wyandottes from Arkansas were fourth with 1,759 eggs, and R. C. White Leghorns from Missouri were fifth with 1,724 eggs.

First prize S. C. R. I. Red Cockerel, Cleveland's Coliseum Show, December 2-7
Shown by Ira M. Crowther, Box A, Willoughby, Ohio

There is nothing especially sensational about any of these records, and we are glad that there is not. They are just such records as any poultryman can get who practices good sensible methods of housing and feeding, and who devotes some thought to selection and breeding. Sixty-four hens laid over 200 eggs, or over 10 per cent of all which were entered in the contest went over 200 eggs. A pen of S. C. Rhode Island Reds from Florida won the silver cup for November by laying the most eggs that month.

The standing or rank of the varieties for the two years' contests has been as follows:

	Eggs per hen 1912.	1913.
All S. C. White Leghorns averaged	143	173
All Silver Wyandottes averaged	160	172
All Buff Wyandottes averaged		167
All Black Langshans averaged	156	160
All Black Minorcas averaged	145	158
All White Wyandottes averaged	125	151
All Anconas averaged	139	149
All Barred Plymouth Rocks averaged	126	148
All R. C. White Leghorns averaged	127	146
All S. C. Brown Leghorns averaged	122	144
All R. C. Reds averaged	150	142
All White Orpingtons averaged	150	140
All Buff Plymouth Rocks averaged	120	139
All S. C. Reds averaged	156	139
All Buff Orpingtons averaged	147	134
All White Plymouth Rocks averaged	118	132
All S. C. Buff Leghorns averaged	115	128
All Black Orpingtons averaged	155	128
All Partridge Plymouth Rocks averaged	124	110
All Partridge Wyandottes averaged	99	110

The hens consumed about 36 pounds of grain each, or about one pound more than last year, and about the same amount of dry mash.

The egg yield by months has been as follows for the two years:

	1912	1913		1912	1913
November	3,118	1,711	June	9,798	10,411
December	5,082	5,215	July	8,875	9,687
January	3,203	7,016	August	7,015	7,691
February	6,442	8,666	September	5,716	6,424
March	10,828	12,889	October	3,832	4,652
April	12,458	12,997			
May	11,478	12,455	Totals	87,843	99,814

A pen of Black Langshans owned by L. E. Meyer of Bowling Green, Mo., made the best pen record for a single month laying 248 eggs in March. The following pens and varieties won silver cups for the various months:

November—Pen 43, S. C. Reds, Florida.
December—Pen 2, S. C. White Leghorns, England.
January—Pen 2, S. C. White Leghorns, England.
February—Pen 56, White Orpingtons, Kentucky.
March—Pen 57, Black Langshans, Missouri.
April—Pen 26, Buff Wyandottes, Missouri.
May—Pen 9, S. C. Brown Leghorns, Missouri, tied.
May—Pen 39, Barred Plymouth Rocks, Iowa, tied.
June—Pen 1, Anconas, Missouri, tied.
June—Pen 11, Black Minorcas, Iowa, tied.
July—Pen 1, Anconas, Missouri.
August—Pen 10, R. C. White Leghorns, Missouri.
September—Pen 26, Buff Wyandottes, Missouri.
October—Pen 26, Buff Wyandottes, Missouri.

It will be seen from the above that the Missouri breeders have made considerable advancement during the past year, and are holding their own with the world. Eight out of the twelve months, Missouri pens either led or tied for that month. Missouri hens win first and fourth, and Missouri pens win second and fifth prizes. The State Labor Bureau has recently reported that the surplus poultry and eggs shipped in this state during the past year amounted to over $48,000,000. The Missouri hen is not doing so bad after all. We are glad to have the outside world come in and compete with us. The next contest includes hens from many states, and the best from many foreign countries. We are informed by their government authorities that Australia and New Zealand are sending their best. The Rhinelanders are said to be the best that could be obtained in Germany, and have won many prizes in that country. We know that the Campines from England and South Africa are to compete. The best to be had in Canada, Vancouver Island and the United States are entered, and on the average the birds all appear to be better in every way than those entered in previous contests. The ones which win in the next contest can truly claim the championship of the world. No such collection of high bred-to-lay pullets were ever before assembled at one place in the world. Barring accidents, we

look for some especially good records for the next year.

In the feeding test where pens of five S. C. White Leghorns and five Buff Orpingtons were fed for a year, the results were as follows:

Pen.	Eggs.
63—Fed according to Maine method	1,598
62—Fed according to New York method	1,522
67—Fed with Norwich feeders	1,510
70—Fed and confined to house continuously	1,495
64—Fed according to Canadian method	1,480
68—Feed kept before them at all times	1,403
69—Fed simple farmer's ration	1,402
65—Fed according to Saylor method	1,399
66—Fed according to any egg farm method	1,318
61—Fed according to Connecticut method	1,232

The following prizes were won for the year:

Best Pen Record—$50.00.

Pen 2—S. C. White Leghorns, Tom Barron, Catforth, England ..... 2,073 eggs

Second Best Pen Record—$25.00.

Pen 26—Buff Wyandottes, C. H. Rogers, Eagleville, Mo..1,884 eggs

Third Best Pen Record—$15.00.

Pen 19—Silver Wyandottes, V. G. Warner, Bloomfield, Iowa ..... 1,877 eggs

Fourth Best Pen Record—$10.00.

Pen 20—White Wyandottes, S. L. Todd, Green Forest, Ark. ..... 1,759 eggs

Best Individual Record—$20.00.

Hen 55—Pen 10, R. C. White Leghorn, Missouri..... 260 eggs

Second Best Individual Record—$15.00.

Hen 62—Pen 2, S. C. White Leghorn, England..... 258 eggs

Third Best Individual Record—$10.00.

Hen 860—Pen 30, Buff Wyandotte, Vermont..... 255 eggs

Fourth Best Individual Record—$5.00.

Hen 600—Pen 22, Buff Wyandotte, Missouri..... 253 eggs

Best Pen Record of Each Variety—$5.00.

Pen.	Eggs.
1—Anconas, Mrs. Daisy Rose, Bois d'Arc, Mo.	1,711
2—S. C. White Leghorns, Tom Barron, Catforth, England.	2,073

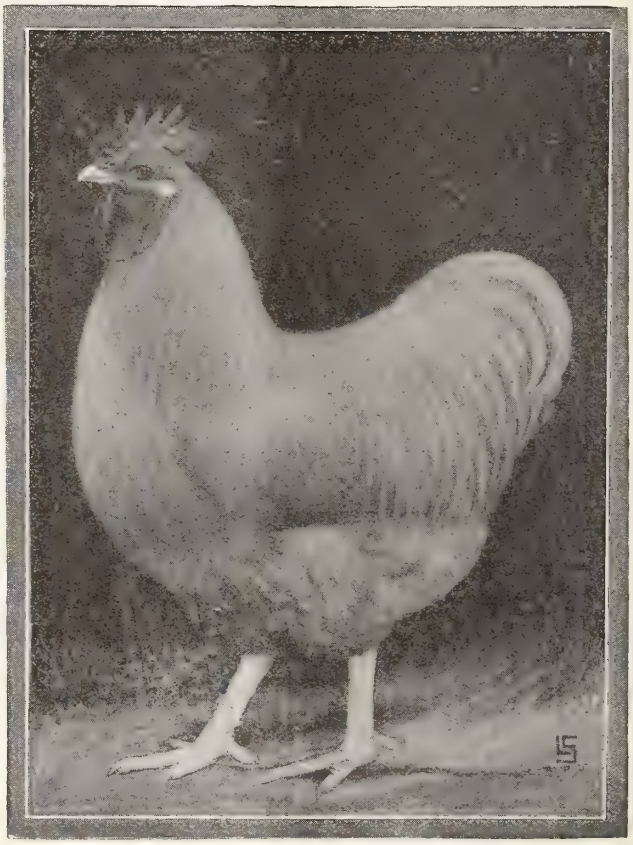
667—Buff Orpington, Missouri	201
2163—Buff Orpington, Missouri	200

The data covering the two years' work, pictures and measurements of the winning hens, and facts relative to housing, feeding and breeding for egg production, are now being compiled for a bulletin, but same will not be ready for distribution before March or April, 1914.

The following gives the pen number, the name and address, the number of eggs laid by the leading hen in each pen of



each variety, and the total eggs laid by the entire pen for the year:

Pen No.	Variety Name and Address	Leading Hen Laid Eggs	Pen Record Eggs
	S. C. White Leghorns.		
2	Tom Barron, Catforth, England	258	2,073
8	Walter Hogan, Petaluma, Cal.	225	1,717
14	Pennsylvania	186	1,381
	Buff Wyandottes.		
26	C. H. Rogers, Eagleville, Mo.	222	1,884
30	J. H. Clark, West Pawlett, Vt.	225	1,661
22	Crawford & Saylor, Maryville, Mo.	253	1,458

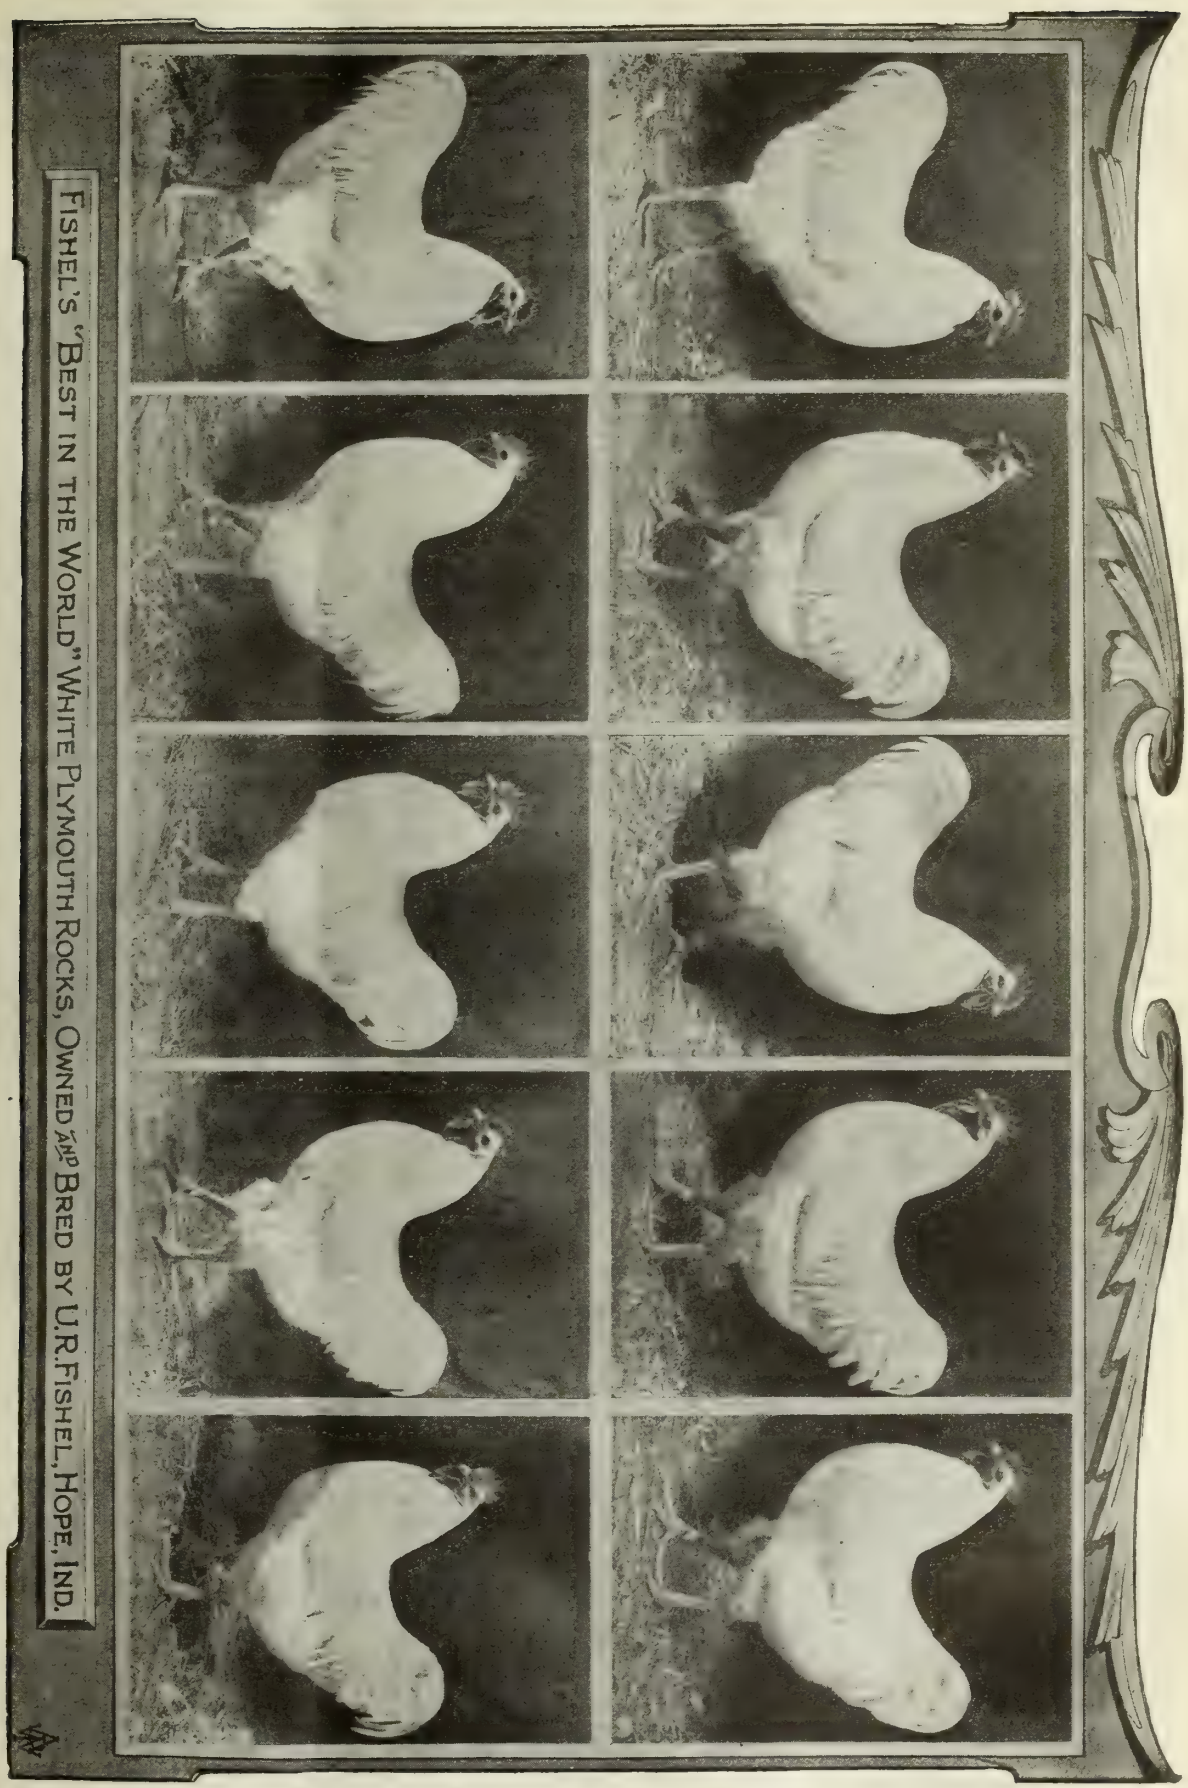
I hereby certify that the above is a correct final report of the Second Missouri National Egg Laying Contest, which closed at the Missouri State Poultry Experiment Station, Mountain Grove, Mo., on November 15th, 1913.

T. E. QUISENBERRY, Director,
State Poultry Experiment Station,
Mountain Grove, Mo.

(Note.—Mr. Quisenberry's final report on the Second National Laying Contest, Mountain Grove, Mo., is interesting. Director Quisenberry has an admirable habit of furnishing interesting reports of work at his station and in convenient form for publication. It will be noted that the average yield per hen for all fowls in this contest was a trifle less than 12 dozen eggs, which is considered a fairly good average for a well conducted egg farm. In this contest the actual difference in laying ability between the various breeds for both years is not as great as is popularly supposed. Fecundity evidently does not depend so much upon the breed as it does upon the selection and breeding. Here we have Silver Wyandottes averaging almost as many eggs per bird as the S. C. White Leghorns and more than the R. C. White or Brown Leghorns. Yet a 2¾ lb. R. C. White Leghorn hen made the best individual record, a S. C. White Leghorn came next, Buff Wyandottes third and fourth places, and a S. C. White Leghorn fifth. Heavy laying is evidently a good quality found in all breeds and careful selection and breeding is essential to secure it. We will be glad to learn further details concerning the feeding experiments and presume these will come later. One is surprised by the small amount of grain credited as eaten by the fowls in this contest: "36 pounds of grain each and about the same amount of dry mash." That is only a little more than



FIRST PRIZE COCKEREL
Indianapolis, Sept., 1913, owned by Bruce & Abbott, Whiteland, Ind.

1.5 ounces of grain and a similar amount of dry mash, or about 72 pounds grains and ground grain per hen for the year. A daily allowance of approximately 3.1 ounces of grain and ground grain per hen, which suggests small hens as the average for the contest.

In the Maine feeding tests of some years ago, a daily allowance of about 4 ounces of grain (whole and ground) was required per hen, or about .9 of an ounce more grain food per hen a day than in the Missouri contest.

According to this Missouri test a 2¾ pound hen produced 33 pounds of eggs while consuming 72 pounds of grain and ground grain. Canada's best Plymouth Rock of record produced 41 pounds of eggs while consuming 90 pounds of grain. The average yield per hen in this Missouri contest was approximately 18 pounds of eggs on an allowance of 72 pounds grain (whole and ground). On the Maine ration we have a record of New England Plymouth Rocks (farm flock) averaging 23 pounds of eggs on an allowance of 90 pounds of grain (whole and ground). We would like to know the actual food consumption of heavy layers, average layers and indifferent layers and the actual total cost of keeping the hens. Probably such data will be forthcoming in the not too distant future. Certain it is, though, that the hen is a wonderful producer, returning a surprising weight of eggs for the amount of foodstuffs consumed.—Editor A. P. J.)

FISHEL'S "BEST IN THE WORLD" WHITE PLYMOUTH ROCKS, OWNED AND BRED BY U.R. FISHEL, HOPE, IND.

Notary Public.

OUR GUARANTEE.

We guarantee our subscribers against loss due to fraudulent misrepresentation in any display advertisement appearing in the American Poultry Journal, providing the subscriber when ordering the fowls or merchandise states that the advertisement was seen in the American Poultry Journal, and places the order during the month or months in which the ad is inserted in our columns and notifies us of the fraudulent misrepresentation of the advertiser, giving full particulars, as soon as it occurs.

AMERICAN POULTRY JOURNAL

TRADE MARK REGISTERED, NO. 74,059.
Issued the first of each month.
Published by

American Poultry Journal Pub. Co.

JAS. W. BELL, President.
542 So. Dearborn St., Chicago, Ill.

JAS. W. BELL, Editor.
CLARENCE WARD, Assistant Editor.

L. A. STAHMER, Artist.

PRINCE T. WOODS, M. D., Managing Editor, Silver Lake, Plymouth Co., Mass.

HELEN T. WOODS, Editor Woman's Dept., Silver Lake, Plymouth Co., Mass.

H. H. STODDARD, Riviera, Tex., Associate Editor.

H. P. SCHWAB, Eastern Representative, Irondequoit, New York.
H. H. COBURN, Central Representative, Marysville, Mich.
E. J. W. DEITZ, Special Advertising Representative, Chicago, Illinois.

SUBSCRIPTION PRICE.

United States and Mexico, 1 year, $1.00; 3 years, $2.00.
10 cents a copy of all newsdealers.
Canada, 1 year, $1.25; 3 years, $2.75.
Foreign, 1 year, $1.50; 3 years, $3.50.

Look at the address on your wrapper. See that it is absolutely correct and notify us of any mistake, no matter how slight. Note the expiration date which appears thereon, as American Poultry Journal stops with the issue marked on your wrapper.

If you change your address give both your old and new address as well as your subscription number when notifying us of the change.

AMERICAN POULTRY JOURNAL is the oldest poultry paper in America. It has a national and world-wide reputation. The best writers on poultry matters contribute to its columns. It receives the patronage and endorsement of the foremost representative breeders of standard poultry and manufacturers of poultry appliances in the country.

More "War" Talk About Egg Prices.

Egg price hysteria in the yellow newspapers and egg boycotts by the 700,000 members of Mrs. Jennie Dewey Heath's Housewives' Leaguers have been rife again this winter. A year ago a similar crusade helped to kill the winter prices for a good many egg producers. Just how much the sale of nearby new-laid eggs was affected in 1913 is not yet known. The ultimate result of all this "egg war" talk seems to be big advertising for storage eggs. It helps the price of storage eggs to go up and slams down the price of new-laid eggs.

Storage men claim a considerable shortage in egg holdings for fall and winter of 1913 over same period for 1912. Also that the entire fall and winter output of new-laid eggs went almost immediately into consumption and that if it had not been for the supply of storage eggs, the price of eggs would have soared sky high and there would not have been enough eggs in the country to supply a very small per cent of actual needs. There is probably much truth in this, for the 1913 egg crop was considerably less in proportion to population than it was in 1905 according to statistics.

Dispatches from Washington state that U. S. Attorney General McReynolds has ordered a Federal investigation of the causes of high egg prices. It is reported that the Attorney General stands just where the average consumer does in the matter of high prices and alleged storage abuses. He knows that prices are high, but he does not know why, and he proposes to find out. If there is any "egg trust," conspiracy, or illegal restraint of trade, the Government has a remedy and can apply it speedily.

We are glad Uncle Sam is taking a hand in the game and hope he will get at the real truth of the matter and so help to lessen the lurid stories about egg prices. We believe he will find that the only real "egg trust" is the American hen and that even the Federal Government can't force her to produce eggs when Nature says no.

Meanwhile, if there are such storage abuses as are claimed, and also abuses by collectors and shippers, we hope Uncle Sam will force a "clean up" and help producers to better and more fair prices.

Roasting the Public.

Kansas City dispatches state that over 200 turkeys and 500 chickens were delivered in that city by parcel post for holiday dinners. About ten per cent of these packages were sealed which made them first-class matter instead of parcel post matter and the recipients had to pay excess postage amounting to two cents an ounce. Packages that ordinarily would go unsealed for 12 cents, cost the receiver $2.50.

Here is one example of where the parcel post falls down. If you send a package by express you can seal it and enclose a letter at no additional cost. If a parcel post package is sealed, or contains writing, it immediately becomes first-class matter and costs two cents an ounce to send. It costs no more for the Government to transport the package whether it contains writing and is sealed or not. There are many packages (especially dressed poultry and other foodstuffs) that really ought to be sealed by the shipper to insure the contents remaining wholesome and uncontaminated and it is often desirable to enclose a letter or memorandum with the goods. There is no good reason why Uncle Sam should refuse to permit it. He really ought to encourage the practice and allow the packages to go through at parcel rates. It wouldn't work any injury to the regular first-class mail service either, or result in any real loss to the Post Office Department. This overcharge on turkeys and chickens sent by parcel post simply because the packages were sealed was roasting the public. The rule should be amended.

Parcel Post.

It is quite evident that the parcel post has proved a paying business for the Federal Government, the statements given to the public show a comfortable profit for the Post Office Department and one which should lead to improvement of parcel post service and to lessening the cost to the public. There is room for a lot of improvement yet before the parcel post gives us the great benefits which the people of other parcel post countries derive from their home service.

Surprise is expressed that farmers and poultrymen have not used the parcel post as much as was expected in the distribution of their produce. Fact is, the accommodations are not yet sufficiently good, cost of packages for produce is too high and cost of shipping by parcel post is, of itself, too high. The farmer cannot yet place his produce in the hands of the consumer, by parcel post, as cheaply as the consumer can buy the goods through the regular market channels. The parcel post merely puts the middleman's and transportation company's profits into the hands of the Post Office Department and as yet doesn't benefit the producer or the consumer, except under unusually favorable conditions. Then too the producer has yet to become used to advertising and its value.

The conditions for sending butter, eggs, and the like by parcel post are not yet suitable. Eggs for hatching go safer by express and day-old chicks must go by express. The cost of packages for eggs and the cost of postage is almost prohibitive. The excelsior egg bale has to date proved the safest parcel post egg carrier.

We hope and believe that good times

are coming for us in the parcel post service, but considering that we have the experience of other countries to draw on, as well as our native resources for study and experiment, it does seem as if Uncle Sam was mortal slow about giving us a real parcel post.

Stop Thief!!!

"Subscriber," name not signed and unknown, sends us a clipping from a newspaper, which he refers to as the "Weekly Gazette." The postmark shows that the clipping was mailed at Champaign, Illinois, November 14, 1913. Apparently the clipping is a part of the poultry page of "The Commercial Tribune" as a communication headed "Large Bouquet Thrown at Our Poultry Page" is so addressed and is signed by "Len Lanius, President Ohio Branch American Poultry Association. This letter compliments the "Tribune" on its poultry page and the "worthy articles" published. On the same page is a picture showing The Commercial Tribune's poultry editor and expert, Edward H. Borchers. The regular poultry department is headed "Queries and Answers by Our Expert." Of this poultry department over nineteen inches of reading matter, consisting of questions and answers, was stolen bodily and verbatim from November American Poultry Journal, "Questions and Answers" department, pages 1408, 1409 and 1410. The thief does not even take the trouble to cut out one of our personal references where in relating personal experience we say: "it is quite evident to me as a physician," etc.

Our anonymous correspondent wants to know if Dr. Woods is the "poultry expert" of the Tribune. We will say right here that Dr. Woods never saw a copy of that publication before and does not know where it is published, but is taking steps to find out. This lifting of our work from the columns of A. P. J. and using it as original matter, whether it is done by Editor Borchers or some other member of the Tribune staff, is about the rawest and nerviest bit of stealing we have observed in a long time. We congratulate Editor Borchers and the Tribune on their nerve and on their good taste in stealing something that was worth reprinting. We cannot help wondering if the "worthy articles," complimented by the President of the Ohio Branch, were also stolen from A. P. J. If not, we presume that they were stolen from some other poultry publication. Probably the Tribune's expert is earning his salary by pirating the work of other writers.

We have no objection to any reasonable use of extracts from A. P. J. articles in other publications when proper credit is given to the author and to American Poultry Journal. We are glad to help in the dissemination of helpful poultry information. We do, however, object to piracy and theft, especially such wholesale robbery as that practiced by the Tribune. It is time to shout "STOP THIEF" and if the stealing does not stop we shall do something more than shout.

We have learned from one "professional hack writer" that certain western publications paid him a good salary for several years to "rehash" articles from three of the leading poultry journals. This stuff was syndicated for several papers. Finally the piracy became so bold that they didn't even trouble to "rehash" but simply "clipped" the articles used, and a halt was called. Now the thieving is getting worse than ever.

We give fair warning. If this form of piracy and robbery does not stop, we intend to make an example of a few thieves.

Out-Champions the Champion Layers.

Things appear to be moving swiftly these days in the business of producing champion layers. In an editorial entitled "World's Champion Layers" we had already chronicled the doings of the 292 egg Barred Rock "Lady Morley" of Arcadia, Nova Scotia, and of the Oregon Experiment Station's crossbred 291 egger and we had sent this matter to press. Now, we are beginning to feel that a monthly magazine is inadequate when coping with the wonders in the news of wonderful laying. There seems to be need for big black scare-head type and the usual "Extra! Extra!! All About the New World's Egg Record." We were just convalescing from a full page Sunday newspaper illustrated story about Prof. Dryden's Oregon hen No. C 543, and some of the remarkable things told therein,

C. 543, Oregon Experiment Station's Remarkable Hen. Record for twelve months, 291 eggs. For one year and three weeks, 312 eggs and laying throughout the moult.

including the possibility of hens that we may have some day that will lay 3,000 eggs in a lifetime, and were still gasping mentally, when we received a letter from Prof. Dryden.

Now Prof. James Dryden is known to us personally, and we have always considered him a bit conservative and a careful experimenter. He has been doing some mighty good work since he went to Oregon and he is a man one would expect to be particularly careful in making public statements concerning his work. We don't believe that all we read in the newspaper article was his own writing, it savored of sensational editing. His letter however tells the remarkable story of a cross-bred hen No. C. 521 that has made a record of THREE HUNDRED AND TWO EGGS and still had one day left to complete her laying year. Here is Prof. Dryden's letter:

"Corvallis, Ore., Nov. 11, 1913.

"Dear Sir:

"You have probably read dispatches about our 291 egg hen, C. 543. Today a relative of this hen from the same flock laid her three hundred and second egg and has another day to finish her year. We are almost certain of getting another egg on the last day of her year, unless some accident happens. Both of these hens are bred from good layers several generations back, but came from an original cross, five years ago, of Barred Plymouth Rock and White Leghorns. Since then we have been selecting each year, individuals with records of over 200 eggs from these crosses, to see what could be done in the way of fixing high laying characteristics. We have been following the same method of selection and breeding with the Barred Plymouth Rocks and White Leghorns and have gotten some very excellent results also from this method of breeding. Up to date, however, our best records have been from the crosses and I feel that we already have a strain of fowls that breed pretty true to type when it comes to egg laying. The results have been most encouraging to me and I think will be to you and to everyone interested in higher egg production, when they are fully published.

"These are not two isolated cases. Five of the best layers in the flock of which they were a part, average over 280 eggs. Five sisters, including C. 521, that has laid over 300 eggs, have averaged over 240 eggs, the lowest record being 204. About 30 out of the 40 in the yard went over 200 and the whole flock of 40 will average about 210 eggs. This average would have been higher but for the fact that in this flock there were a number of pullets that were put in there as a check, having been bred differently.

"C. 543 is a most wonderful hen. Beginning laying at five and a half months of age, she finished 12 months of laying with 291 eggs and has continued laying since she finished her record, nearly three weeks ago, by laying about every day. She has now laid to date, 312 eggs and has taken no rest during moulting season.

"In the same yard with these record hens were a number of pure bred Leghorns bred from several generations of good layers. They also show their breeding by making fine records.

"There was no special pains taken to secure high records. Our flocks have been kept under similar conditions for several years, the purpose being to demonstrate the effect of selection on egg yield. They were kept in colony houses with an open front and had the liberty of a good sized yard at all times of the day in all kinds of weather. I enclose photograph of C. 543, showing her at the end of her year's work. Have taken no photo yet of C. 521. With kind regards, I am

"Very truly yours,

"James Dryden."

Poultry Show in India.

We recently received the following from one of our subscribers in India:

The "Crystal Palace" or Simla Poultry Show of India, took place on the 10th of October, and was productive of some very interesting results. Some very high-class birds were exhibited, but those requiring special comment were the "Arthurston" White Orpingtons, exhibited by Mr. Betteridge of Lahore. These birds won the first prize for a cock, first for a hen, first for a trio, and the Lieutenant Governor's cup for the best bird in the show. Truly an unique record. The "Authurston" White Orpingtons were originated by Mr. A. C. Bullmore of Mount Road, Madras, a

breeder known throughout the length and breadth of India, Burma, Ceylon and the Straits. They win at every big show in India, and Mr. Bullmore is to be heartily congratulated. His farm at No. 32 Poonamalee Road, Madras, is most extensive and is replete with all the latest inventions. His birds are of the highest order, and his poultry remedies have won for themselves a great reputation in the East.

Are Your Hands Clean?

We have no desire to preach with hypocritical unction, to attempt judgment of others, or to pose as any better than the general run of human kind, but we don't propose to sit tight and quiet when certain evils are called to our attention, simply because voicing our opinions might lose us business.

Some friends write us that our "free speech" in editorials will "give offense" and "result in loss of advertising patronage." We believe our friends are mistaken. Time will tell anyway. We make mistakes, we expect to make mistakes, for the man who doesn't make mistakes is either dead or he never does anything. We don't, however, believe that it is a mistake to talk plainly and to talk straight, or to try to tell what we believe to be the truth. We have no desire to be destructive or to "give offense" to anybody. Certainly any "free speech" we may have indulged in could not give offense to any honest man.

We don't think it is wise, necessary, or desirable to fill our columns with many of the complaints which come to us. We have investigated many such complaints and found only a simple misunderstanding and no intent of dishonesty on either side. We have found cases of dishonesty, that could be proved, and have reported them and barred the offenders from our columns. We have found other cases open to grave doubt, but not probable, and we had to keep quiet or to generalize, because it is not permissible to make charges unless they can be proved.

There are, however, many happenings between buyer and seller in the poultry business that don't look right from the outside. We are loath to believe that it is actual dishonesty, but some cases certainly have "the appearance of evil" and we have always been told that the man who would make the greatest success of his life will "avoid the appearance of evil" as much as possible. It is easy for a man to get exaggerated ideas of values in the poultry business, particularly when he has been breeding in line for a few years and has won a few ribbons and launched an advertising campaign. Birds of his "blood lines" (no matter how remote the relationship) take on exaggerated values in his eyes and any old egg or any old specimen, (cull, scaly legged, lousy, or runty) he thinks is good enough to sell because of the "breeding back of it."

For pity's sake wake up. Play the game square and with clean hands. Don't try to deceive yourself or to excuse yourself to yourself. When a man begins to make excuses to himself to justify his own acts, he is getting in a bad way. Every man is presumed to have his own code of honor and he is entitled to have it just so long as he doesn't interfere with other people's rights, but there are certain standards of right and wrong that everybody should observe.

A good many of the troubles, complaints, misunderstandings and accusations of dishonesty, in the poultry business and out of it, are the result of ignorance, indifference, carelessness, exaggerated ego, and want of business system. Poultrymen are prone to be lax in their business methods; slipshod in their methods of doing business, attending to correspondence, and in filling orders. Many of them lack business training, experience in business methods, and courtesy, and it is a wonder that they "get by" as often as they do. There isn't any excuse for this lack of system and decent method of doing business, except the excuse of laziness and indifference.

Here is a letter from a Connecticut reader that bears on this subject. It is clearly and forcefully put. It names no name and is a straightforward statement with not a whine in it. We print it entire in hope that the moral will strike home to some of the breeders whose methods of doing business appear slipshod to the point of criminal negligence. Here it is:

"New Haven, Conn., Nov. 12, 1913."

"Dear Sirs:

"I wish to cite a few instances of the so-called 'fair treatment' I have received from advertisers in your paper, and other papers for that matter. This fall I decided to purchase some White Wyandottes. Previous to this I had been making some inquiry among the breeders, sent for catalogs, etc., and I

Fashion Plate Strain
BUFF ORPINGTONS

One variety correctly mated and line bred for ten years develops family characteristics and is worthy the name, Strain.

Trap-Nesting your pullets to select the best layers as your breeding hens leads to big profit.

Only a few hundred birds of this double value to sell in January and February—nicely finished cockerels, trim pullets, ready to go into the best shows right now **to win**—conditioned free and guaranteed to please. First-class selected breeders, all bred from our best families of trap-nested layers, ripe and ready to ship out at **Special Prices.**

1914 Orpington Fashion Plate Book

Our book for this season is the best ever issued on Orpingtons. Many high schools and colleges use it as a text where poultry husbandry is taught; **56 pages, Fashion Plate Buffs** in natural colors, over 40 other illustrations, full description of our **28 yards** and the price of stock and eggs, articles on trapnesting, conditioning birds for show, feeding, etc., **free.**

A. E. MARTZ & SON **Buff Orpington Specialists** **Box A, ARCADIA, IND.**

finally decided to invest $25.00 in a utility pen from a prominent breeder. It turned out that I expected far more than I got (as usual) but whether I got what I deserved for the money or not I will leave you to judge.

"The birds arrived in good condition, well crated, banded, etc. I also received notification of shipment and when I could expect the birds. Upon examination of the birds I found them to be pretty lousy, three of them had such scaly legs that they came near walking bowlegged. (Two of which have since died and as they were in reasonably good health I laid it to old age.) One weighed 3½ pounds and another weighed 7 pounds, the balance weighing on an average of 4¼ pounds—this for hens, and utility hens at that, which are supposed to tip the scales at 6½ pounds, standard weight. The male of the flock had more brass than a book peddler, but otherwise was all right both in weight and shape. That was investment No. 1.

"No. 2 was a pullet purchased from another prominent breeder, who said he could give me a pullet sired by so and so winner of so many prizes in so many shows, etc., and hatched March, April or May. I told him to ship the bird and let him decide the age, but asked him to kindly let me know his decision. In the course of a week I got the bird without having heard from him as to shipment or age. I have since written to this man again, but as that was over three weeks ago have dispaired of hearing anything. The pullet itself was very fair with the one exception that it was decidedly Plymouth Rock in shape.

"Now for investment No. 3. Also a prominent breeder. He said he would be glad to get my order, guaranteed satisfaction, etc. Well, I sent him the money and waited about two weeks, when not having heard from him I wrote him asking if he received the money and order. He answered saying he had received the money and thanking me for my order, which would receive his prompt and personal attention. I waited about two weeks more and wrote again. This time he said he was under the impression that I was going to show the bird and he was waiting to wash it. Well patience is a virtue I suppose, anyhow, I waited two weeks more and wrote again. This time he said, 'I fully intended to ship your bird before, but it's rain, rain all the time, my wife has been sick and she does all my writing, etc., etc.,' but in this letter he said he would ship the bird on Thursday. It arrived Saturday. I can at least give this man credit for giving me some idea as to when I could look for it. This bird turned out to be better shaped than the other but quite a little smaller and a few other minor defects. I received her six weeks from the time I sent my order.

"I am not dissatisfied with these birds, indeed I am confident that I got nearly full value for the money invested. It isn't that, not a bit of it. The trouble lies in the fact that the breeders as a general rule are careless, negligent, or don't care. Which is it?

"Perhaps you think I am too fussy and maybe I am, but listen or rather read this, my fourth investment.

"I sent to another man, also an advertiser in your columns, this time for a male bird. Told him what I wanted and asked him for prices, same as in other letters. He wrote at once back giving me prices and the age. I sent this man the amount he advised and he at once acknowledged receipt of my money. He said he was busy that week but would give my order his personal attention the following week. The next Wednesday at 9 A. M. I received notification of shipment and two hours later I received the bird.

"It is needless to say I was satisfied. His courteous treatment insured satisfaction, and that is not all. I have since ordered my third pullet from this man and have also written him at least half a dozen letters all of which have been promptly answered. Can you blame me for finding fault with the others, after what I received from him?

"Now regarding breeding. You are having at this time considerable talk in your paper about line breeding and inbreeding. I had fully intended to follow the breeding chart in your Year Book, (which by the way I consider a fine book and sincerely hope you will carry the same idea out in 1914) but do not dare to now very extensively. It is all very well for you to say find out for yourself by experiment, but one hates to experiment on high class stock, particularly if he has but a few. You say in the November issue on page 1046 in the article "Inbreeding" that you do not know of anyone who has carried out the Felch chart for more than ten generations, and yet there are advertisements in your paper continually of breeders who profess to have stock linebred for twenty or twenty-five years. Why not ask them? I have heard recently that one of these twenty-five year line-bred farms purchases stock from a farm in the same city in which I am living. (Remember I merely heard this). He is the one of whom I bought the utility pen, and to think I chased this same man over the country to get stock that was originally purchased in my own city, if this statement is true. You will however admit that the question of breeding is a weighty one to a man who does not know.

"D. E. Parmelee."

With regard to the question of breeding, the matter is being threshed out by able writers who have had much observation and experience and you will have to consider their views and decide for yourself which course you prefer. If you want to breed winners you will have to line breed, (inbreed) to some extent in order to fix and hold type and exhibition points. If you always use healthy specimens, with strong constitutional vigor, for breeding purposes you will be able to inbreed some time before noting any serious ill effects. If you combine the use of the chart with the introduction of new blood every third season you may not

REGAL QUALITY

Crusader III, a Boston Winner

In giving my own winnings from time to time, it is well to remember that my customers are just as successful. Hardly a day passes I do not receive some show report. Some of these I am not at liberty to mention, but the following winning at one of Canada's largest shows will serve as a sample:

Sinclairville, Nov. 23, 1913.

You will no doubt be glad to hear of my win at Hamilton. In a good big class I won Cock 1, 2, Hen 1, 2, Cockerel 1, 2, Pullet 1, 2, 3, 4, and all specials on White Wyandottes. I also won the Spectator Cup for best Cock in the Show. Ryrie Silver Medal for best Pullet in the Show. Silver Shield for best Hen in American Classes. I showed ten birds and had them all placed. They are all pure Regal Strain and descended from the cock I bought of you two years ago. You can use this if you like.

Yours truly,

W. A. IRVINE.

MY CATALOGUE IS READY

I have just received from the printers my new Catalogue and Mating List for 1914. It is illustrated from cover to cover with photographs of my famous winners and snapshots of my breeding pens and plant. It has a number of articles on feeding and rearing chicks, also on the care of breeding stock. It also has a full description of my matings for 1914. If you will send me your name I will forward you a copy free of charge.

1,500 Cocks, Hens, Cockerels and Pullets for Sale—1,500. SPECIAL—100 Exhibition Cockerels and 200 beautiful Pullets ready to now win the blue ribbon for you. 100 well matured Cockerels from my heavy laying Dorcas Line, $10, $15, $20, $25 each. Dorcas Pullets, $5, $8 and $10 each. Stay White utility Cockerels, $3 and $5 each.

John S. Martin : Box 51 : Port Dover, Canada

experience any difficulty. But, we don't see how you can expect to breed and get results without first acquiring some skill and experience. Until you acquire skill and experience, unless you employ a skilled breeder to do your mating and your rearing, your breeding is bound to be more or less experiment. Even the skilled fanciers have to experiment with matings.

As to asking about years of experience with line-breeding, we have asked, and we here ask again for detailed facts and figures concerning ten or more years of consistent line or pedigree breeding with the records and affidavits to prove its authenticity.

Poultry breeders, as a class, are quite as careless about keeping accurate records of breeding as they are about handling orders. There isn't any excuse for the negligence in handling orders, but there is excuse for neglect of pedigree record keeping in many cases. Unless a man keeps poultry as a hobby or fad, he seldom has time to go into the detailed record keeping that consistent pedigree breeding would necessitate. It costs money and requires time to keep accurate stud books and it also requires experience. Generally the price obtained for stock birds do not show sufficient profit to warrant such elaborate book keeping and also such extensive marking, banding and record keeping of growing chicks, and recording and segregation of hatching eggs, as is necessary to line breed whole flocks by chart.

When a man sells a Standard bred fowl for $5.00 he does not make any very considerable percent of profit if he gives fair value for the money. It may be true that the market value of the bird as meat is only $1.50 or less. That has nothing to do with the case. The bird sold you as a breeding bird at $5.00 should represent a selected specimen from a carefully bred and carefully reared flock, the culls have probably been marketed at about cost of production and this selected bird has had better care and has actually cost the breeder more to rear in consequence, then there is the advertising, correspondence, selling and cooping expense. We should not expect too much at this price, but we should get a healthy specimen of good standard type and weight, and we should not get a runt, cull or a worn out scaly legged fowl.

In investment No. 1, carelessness and indifference amounting to bad judgment, if not actually bad faith, was shown by the shipper. It matters not that the pen was a utility pen and moderate priced, at least four of those birds were not fit to sell as breeding stock and should not have been so sold. Such methods of doing business do not hold business or satisfy customers.

As to the breeder buying stock from a plant in your home city, that does not necessarily make his line breeding a fraud or your birds any the less his strain, even if they came from your city originally. The breeder might have arrangements whereby stock of his blood lines is bred in New Haven to be sold to him. Where real line breeding or close breeding is practiced it is a good plan to have some of the stock birds reared in localities remote from the home plant and where the climate and environment is different. We don't know anything about this particular case.

Case No. 2 shows both carelessness and negligence. It is a poor way to get and hold business. Case 3 is a peculiar one. If we had not met a few just such men, we might think it overdrawn in the telling. It is difficult to account for this type of breeder. Such people either ought to wake up and show a little life in their business or else drop it altogether. As no names have been mentioned we don't know who the breeders are and, therefore, there is absolutely nothing personal in these remarks. Should these generalizations wake somebody up to cleaner and better methods of doing business we'll be glad of it.

Case No. 4 is the moral of the tale. It needs no further comment than that once more it is proved that it pays to be businesslike in all business dealings and to satisfy the customer. The man who plays a square game, and plays with clean hands, is the one who wins lasting success.

It pays to treat customers courteously, to be prompt in all business transactions and to deal squarely and honestly with all. The man who has a poultry business where customers repeat orders and where old customers come back season after season for more stock, more chicks, or more eggs, has something he can well be proud of and it is bound to be a substantial business.

———o———

"The Producer Be Damned."

Pretty sentiment in that heading isn't it? Yet, that is about what the public, the middleman and the poultry shipper think and sometimes say.

The New York Produce Review quotes the following interesting paragraph from a circular of the National Association of Car Lot Live Poultry Shippers:

"The thing for you to do is to get your prices down, and then after you get them down, get them down again, and then the next day think it over and get them down once more. The more 'downs' a foot ball team makes the more progress for them. The oftener you get your prices down the more money you will have in your pocket. Work for yourself, not for the farmer."

Attention, Farmers, Poultrymen and Producers! ! Collectors, shippers, poultry houses, and commission men have always and everlastingly been cutting down the prices they pay you for your produce. Many, many times now they buy of you for less than cost. They work for themselves and not for you and they are advised to keep on cutting down the prices they pay you.

On everything you buy the price goes up and keeps on going up. It is up to the producers, who are fighting hard to make a bare living, to take a leaf out of the other fellow's book. Get more for your produce. Think more about

Keeler's Wh. Wyandottes

"THE WORLD'S GREATEST STRAIN"

WINNER from WIN-amac

For 20 years I have been producing White Wyandottes that win

—Winning in mine and my customer's hands in the hottest kind of competition. New York, Chicago, St. Louis, Pittsburgh, New Orleans, Indianapolis, Washington, D. C., Kansas City, Dallas, Texas, Los Angeles, Portland World's Fair, etc. My customers win. Stock hatched from my eggs and shipped from my yards has won in every section of this country as well as foreign lands including England, South Africa, New Zealand and Australia. The coming show season will be no exception, so let me sell you the birds that will land you among the winners. Get in line with the strain that produces a larger percent of SHOW BIRDS than any other.

The World's Greatest Strain

In producing this grand show quality I have not lost sight of the Utility points and my birds are large, mature and lay from 200 to 265 eggs a year. I have succeeded in raising more good birds than ever and have for sale something like 150 cocks, 500 hens, 900 cockerels and 1,200. **Selected Breeders $25, $35 and $50 a pen of four females and male. CHOICE SHOW BIRDS $50, $75, $100 and $150 a pen.** Get in touch with me now for your Show Birds. Stock conditioned, washed and fitted for your show without extra charge. My new 64-page 1914 Art Catalogue of America's finest White Wyandottes describing the 16 best matings of White Wyandottes in America ready January 1st. It's free—send for it (5 red stamps appreciated). Eggs for 1914, $5 per 15, $9 per 30, $14 per 50 and $25 per 100. Special matings $10, $15 and $20 per 15.

Keelersville, Chas. V. Keeler, Prop. and Mgr., R. F. D. 11, Winamac, Ind.

the cost of production and insist on getting a better price. Produce no more than you can sell at a price that will pay you an honest profit and stop selling at actual production cost or less. Efficient cooperation would help.

Farmers, Poultrymen, Producers everywhere: Work for yourselves; not for the middlemen!! The Lord knows you need the money to pay living expenses for yourself and family and you seldom have any surplus in your pocket; why not stop buying automobiles for the middlemen who are fattening on the profits of your hard labor?

———o———

A Living From Poultry.

"Can I make a living with poultry?"

That is one of the questions most frequently appearing in the editor's correspondence. We have always been conservative in our replies because we have had no standard by which we could determine what "a living" really is.

Now, Uncle Sam's experts have compiled figures showing what the average "living" or income of 96 per cent of us is statistically. Therefore we do not hesitate to say that if you like hens, possess a little common sense and are willing to work, you should be able to make a living from poultry that is better than the average income of 96 per cent of us.

Maxwell Edgar, secretary of the Illinois Tax Reform Association, in December Pearson's says: "The average American according to the figures now in possession of the Treasury department, earns six hundred and one dollars a year. Not a great amount of money with which to supply the necessities of life in these days of exorbitant prices, is it?

"There are 38,240,000 persons in the United States who receive incomes; this means incomes of all kinds, wages, profits from investments or aught else. Of these 37,815,000 or 96 per cent have an average annual income of $601, and no more.

"And out of this paltry six hundred dollars the average American must do more than provide for himself and his family. He must pay a large part of the cost of maintaining the most expensive government on earth—a government, by the way, which does little enough for him in proportion to what it does for the rich man."

Think of it, the average income $601 a year and no more! What must some of the smaller incomes be? And, our Secretary of State, the "Great Commoner," has told us that he can't live and support his household on a salary of $1,000 a month, or nearly twenty times the average income of 96 per cent of us.

You know and we know quite a few families that find it difficult to make "both ends meet" on an annual income of $1,000; but they do do it, because they have to.

Poultry keeping is not a get rich quick business. There is no easy and rapid transit road to golden success. It isn't a diamond mine or a bonanza. But there is a good and honest living in the poultry business for you if you are fitted for it and have an opportunity to make a favorable start.

From $1,200 to $3,000 a year can be made with a flock of 2,000 hens, according to the ability of the man. Some have earned more and some have earned less. Hard work alone won't do the trick. It takes some common sense, some experience, some liking for the business and some skill, as well as some hard work in order to make a comfortable living from poultry.

Remember that the income is not all velvet profit, but it is wages for your own labor and management. Some individual hens have paid very big profits. Some have never paid at all. (You seldom ever see or hear anything about the latter.) Some poultry keepers have earned very big profits, but they are the exceptions to the general rule. We know men who are earning an annual income of $1,000 a year with 600 hens and we know others who make no more than that with 2,000 hens.

If a man is unfitted for the business he is not likely to make a success of it. If he is fit, he can win fair and good remuneration. In exceptional cases he may earn unusual compensation, but it is not a business of extraordinary profits.

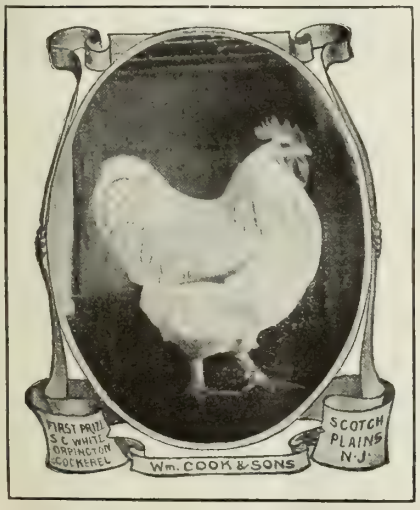
It is a good plan to "look well before you leap," and to decide first if you are suited to the business and if the business will suit you for a life work.

———o———

Turkeys at 15 Cents a Pound?

A November 16th newspaper report contains the following:

"Dr. Charles H. Higgins, pathologist for the Dominion of Canada, in a lecture at the Harvard Medical School yesterday, declared that turkeys could be raised and marketed so that they could sell for 15 cents a pound.



"'The disease of blackhead has been the cause more than anything else,' he said, 'of the scarcity of turkeys. Turkeys can be raised at a small cost and can be marketed profitably. To raise turkeys successfully they should be hatched by artificial means and should be kept away from ordinary fowl.'"

If Dr. Higgins really made the above statement it is up to him to prove it and make good. We're "from Missouri" and willing to be shown. Furthermore, we'll wager that if Dr. Higgins can grow turkeys in considerable numbers at a price that will permit retailing at 15 cents a pound, or teach anyone else to do it, he can become independently rich inside of five years and make more money than he could earn in a lifetime of lecturing on veterinary medicine. He will find the market willing and eager to buy at 25 cents a pound. For the past five years we have never

Send 10c for illustrated catalogue. containing history of the origination of all the Orpingtons and hints on poultry keeping. Eggs from our winners and the finest Orpingtons in the world, $20 a setting; from fine stock, $10 a setting. Advice free. Inspection invited. Trains met. Over fourteen thousand first prizes won by us. We are by many times the largest poultry breeders in the world. Ornamental land and water fowl for sale.

paid less than 35 cents a pound for our Thanksgiving, Christmas or New Year turkey, and good ones usually had to be ordered some time well ahead of delivery.

Cost of production in all poultry and poultry products has nearly doubled within the last twenty years. You can't figure profits sanely without considering cost of production. We would be glad to have a demonstration from Dr. Higgins, or anybody else, on how to raise good market turkeys in good sized flocks at a cost that permits selling them at 15 cents a pound and allows the producer a fair return for his labor and investment.

The fact is that, of recent years, it actually costs close to 15 cents a pound to produce and land good chicken or duck meat in the market, and it sometimes costs more. We don't know what it costs to produce turkeys, but we do know how difficult it is to raise them and do not believe that under the most favorable conditions they can be hatched and reared by artificial means at any less costs than other poultry. Please show us how it is done Doctor.

Poultry Prices and Production Cost.

The Housewives' League and the hysterical sensational newspapers have pretty thoroughly roasted the American hen this winter and have called poultrymen and dealers some unkind names. The excitement about egg prices and the popular clamor for lower prices on eggs and poultry is based on a mistaken belief that there are exorbitant profits in the poultry business.

The cost of production of poultry and eggs has nearly doubled during the past ten years. The cost of living since 1907 has increased an average of 32.2 per cent. Wages for labor during the same period have increased about an average of 12 per cent.

For the past ten years there has been no material increase in the price of market poultry and eggs. In 1905 the average price of eggs for the year in our best large city market was thirty cents a dozen. Last year in the same market the average price of the same quality eggs was thirty cents a dozen. The past season prime fowls, alive or dressed, have been worth about four cents a pound more than they were ten years ago. This has been due to scarcity of fowls, largely because of high cost of grain. Roasting and broiling chickens have sold the past year for about the same values as ten years ago, in some cases at lower values.

A summary of the records of 30 eastern flocks for 1902 shows that the average cost of food for one hen for one year was then $1.08. In 1913 the New Jersey Experiment Station gave the cost of food alone for one White Leghorn hen for one year as $1.79. Reports of 12 eastern flocks for year ending in October, 1913, gave annual food-cost for one laying hen from $1.80 to $2.25. These prices are for food only,—no other expenses figured.

Ten western flocks in 1898 showed an average cost per hen a year of 70 cents for food alone. Last year in the same section it cost $1.50 to feed a hen twelve months. In 16 years the cost of production has more than doubled.

Isn't it about time to try to get better prices for poultry and eggs? While so much publicity is being given to claims of "exorbitant prices charged for eggs and poultry" it might be well to pay a little more attention to actual production cost and to showing that poultrymen are entitled to better prices than are now obtained.

Uncle Sam's statistics show that the average farm hen produces less than 100 eggs a year. It is a good flock on a well-conducted egg farm that will average 144 eggs per hen a year. True, there are 292 and 300-egg hens now, but they are not very numerous. There were 200 and 250-egg hens fifteen years ago, and probably before that. There were then and are today hens that do not lay at all and others that only lay two or three dozen eggs a year.

It is not fair to figure average food-cost per dozen eggs for an entire year as the sole basis of estimating profits. When you have 100 hens they have to be fed whether they lay or not. The fewer eggs they produce the more the eggs cost. In October and November, 1913, on a basis of actual production, expenses for the month divided by eggs laid, the cost of producing eggs was 45 cents per dozen in October and 50 cents a dozen in November (all expenses figured except owner's services). That was pretty close to selling price. (See Frank Jones' article on "Production Cost of New-Laid Eggs.")

Labor, food, and other expenses considered it now costs about an average of $3.00 a year to keep a hen. (New Jersey says $2.79 for Leghorns.) It takes very little mismanagement, or sometimes only an abrupt and severe weather change, to knock a big hole in the egg yield. Thirty-cent eggs nowadays do not give the poultryman a fair and safe margin of profit. He should get not less than 45 cents a dozen f. o. b. farm. Work for it.

An Extraordinary Hen.

Purdue University's Poultry Department has produced an extraordinary hen, and poultry fanciers and those calculating entering the business of raising poultry might well devote some time to a consideration of the record established by her. Miss Purdue, for so the hen has been named, is a White Leghorn, and during the last two years has produced 443 eggs, weighing 41.5 pounds. A register is kept of her performance and the records are beyond any question.

Miss Purdue weighs only 3½ pounds, but in the time mentioned above she produced 11.8 times her weight. She was a gourmand and consumed over 132 pounds of feed, a feat which will surprise a great many people. From every pound of feed, Miss Purdue produced 3⅓ eggs. She manufactured one pound of eggs from every 3.2 pounds of feed. The efficiency of the engine in the body of this small bird is indeed wonderful. She is considered one of the most efficient producers of a finished product from raw material that ever existed. Agriculturists acknowledge that a steer pro-

SCHWAB BROS. BOX 451 IRONDEQUOIT, N. Y.

duces a pound of beef from 12 pounds of feed and that a hog requires 4 pounds before it can make a pound of pork.

It cost $1.93 to feed the little lady for two years, but the value of her eggs at market price in La Fayette, Ind., was $10.11. Every dozen sold for 27.4 cents, but they cost only 5.2 cents to manufacture. If it were possible to find many such hens as Purdue found in this bird, it would be easy to get rich from poultry.

Miss Purdue made a profit of $9. over the cost of feed in two years. Her own value at the start was not over a dollar. Hens are certainly interesting little creatures and money-makers for their owners.

Ferris Leghorns for Winter Eggs

If you aren't getting a good egg yield now when eggs are high, it is time to change your methods, or your stock. In most cases where winter eggs are hard to get, the stock is to blame. No amount of care will make hens produce winter eggs when they have never been bred for eggs. If you have the wrong stock, change now before it is too late. **Ferris' Improved White Leghorns** have been scientifically bred for eggs for thirteen years, and the **laying instinct is bred in the bone.** We trapnest all our breeding pens and breed from no hens that lay less than 160 eggs a year. We select for size, health, vigor, and can furnish you the right kind of stock for egg production—and at low prices, too.

25 First Prizes at 8 Big Shows

Iowa State Fair, Des Moines, Iowa
August, 1913
First and second cock, first cockerel, first and third hen, silver cup for best cockerel in Mediteranean class.

Maryland State Fair, Baltimore, Md.
September, 1913
First and second cock, first and second hen, first pullet.

West Michigan State Fair, Grand Rapids, Mich., September, 1913
First and second cock, first and second hen, first and second cockerel, first and second pullet, first pen.

West Virginia State Fair, Wheeling, W. Va., September, 1913
First and second cock, second hen, first cockerel, second pullet.

Kansas State Fair, Hutchinson, Kansas, September, 1913
First cockerel, first pullet, second pen, second sweepstakes.

Alabama State Fair, Birmingham, Ala., October, 1913
First and second cock, first and second hen, first and third cockerel, first pen.

Georgia State Fair, Macon, Ga.
October, 1913
First, second and third cock; first, third and fourth hen, first and second cockerel, first and second pullet.

Mississippi State Fair, Jackson, Miss., October, 1913
First cock, first cockerel, best cockerel in show.

Prices are reasonable, too. We have thousands of birds to select from, and are in better shape than ever before to furnish exhibition and breeding stock. Hundreds of exhibition cocks, hens, cockerels and pullets direct from our winners, at $15 and up for males, $7 and up for females. You will be surprised at the values we are giving at these prices—big, long-bodied birds with beautiful Leghorn shape, good heads, extra low tails and perfect color. Remember that we can furnish winners for any show in the country and will guarantee them to win first prize.

If you want laying and breeding stock, we have fine yearling hens and pullets at $2.50, $3.50 and $5 each; cocks and cockerels at $5, $7 and $10 each. These birds are all bred from our trapnested layers with records of 160 or more eggs a year, and will make foundation stock that cannot be excelled for egg production. They will lay at least two dozen eggs a year more than ordinary stock, and whether you raise few or many, they will make the foundation stock you need for greatest success.

All stock is sold on a positive guarantee to please you or money refunded. Keep them three days, compare them with others, and if they don't suit you in every way, send them back at our expense. We also ship C. O. D. if desired, in which case you only need send enough to pay express one way. All stock is insured for 30 days—we stand the loss if any die.

St. Louis, Missouri
November, 1913
First cock, first hen and first pen.

Eggs and Day-Old Chicks

We are now booking orders for spring delivery. Thousands of fine hens in our bred-to-lay matings and 15 of the best exhibition matings that have ever been mated. Prices are remarkably reasonable and we replace all infertile eggs free and guarantee safe arrival of chicks any distance. Our capacity of 5,000 chicks a week enables us to ship large or small orders promptly and to quote low prices. Write us for particulars.

GET THIS CATALOG TODAY

Read the complete story of Ferris White Leghorns in the 132 page free catalog, which we will be glad to send you. Learn how we developed the laying qualities so that records of 160 to 200 per year are common, how we improved exhibition qualities until today Ferris Leghorns sweep everything wherever they are shown; how we feed, house and manage our stock. Fully describes all grades of stock, eggs and chicks, and will enable you to get started right at small cost.

Mail a postal today. The catalog will reach you by return mail.

GEORGE B. FERRIS, FERRIS LEGHORN FARM
905 No. Union Avenue, Grand Rapids, Michigan

Moreover, this little pride of the poultry department has produced eight sons and eight daughters, who are expected to be the progenitors of a race of heavy layers.

Mr. Rothpletz Thanks Mr. Haggin.

Editor American Poultry Journal.

Dear Sir: I write to advise you of my receipt of the breeding pen of White Orpingtons given by Mr. Louis Lee Haggin as the first prize in the contest for the best letter in "Why the White Orpington is the best utility fowl." Mr. Haggin has not only followed the letter of his proposition, but has exceeded it. A more thoroughly white pen I have not seen. The birds are unusually good in every way and are much admired. I will have them on exhibition at a show to be held in Birmingham in December or early January and possibly others.

I wish to tender my sincere thanks, both to the committee who so generously considered my article, in awarding me the first prize, and to Mr. Haggin for his liberality.

Needless to say that I hope, and will give my best efforts to secure from the birds results that will help to prove our contention that the White Orpington is the best utility fowl.

Sincerely yours,
F. J. Rothpletz.
Birmingham, Ala.

Dr. Woods' Notes and Comment.

Happy New Year Everybody. May you all find useful work to do, good will, happiness and prosperity in 1914 and thereafter.

* * *

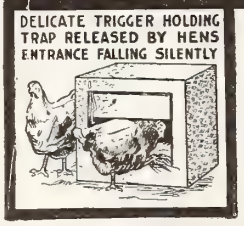
Harry M. Lamon, expert poultryman of the United States Bureau of Animal Industry, Washington, D. C., continues to do good work for the betterment of poultry husbandry in America. We are glad to note progress in educational work through aid of moving pictures. Moving pictures will teach more in two hours than months and months of talks and lectures. The pictures, and the action in them, fix the lessons indelibly in the minds of the audience as nothing else but actual experience ever can or will. It practically amounts to experience, for the audience lives with the moving pictures through real experiences which are designed to be instructive and helpful. We hope our Uncle Sam will devote more time to moving-picture instruction in poultry husbandry and that in time we shall have reels which cover all branches. In an interview given to the Country Gentleman, Mr. Lamon said: "Poultry work—picture reels—moving pictures. * * * We've made a lot of them. * * * You ought to see the way people come to these lectures now that we don't do any lecturing," he grinned. "We used to talk ourselves hoarse and bore the audience stiff with poultry talks. Now that Secretary Houston has gone in for the moving-picture feature as an assistant in this educational work we have little to say. We let the pictures tell the story."

* * *

We haven't been able to learn much about the proposed A. P. A. "Market Standard" other than what already appears in the "proceedings" of the association. We understand that all information is being jealously guarded to protect the copyright of the forthcoming book. Just what is and should be copyrightable in a proposed National Market Poultry and Egg Standard, designed to promote more uniform and better prod-

uce generally all over the land, and the real advantage of said copyright to poultrymen anywhere and everywhere, is a problem that puzzles us. Of course we can see that the association can undoubtedly make certain profits out of some poultrymen and would-be poultrymen from the sale of such a book. There it would be on the same footing as any publishing concern, with some advantages from prestige and presumed official standing, but isn't it the consumer after all who makes the real standard of marketable products?

* * *



We can see how the market standard may perhaps net the A. P. A. a comfortable profit on the appropriation made for publishing it. But, why be peck-sniffery about it? Why not admit that the book is to be published as a business proposition, to be sold at a profit to members and others? Why not decide that the gentlemen who are preparing this work should be paid what their services are worth, instead of assuming that they should give much of their time, often at real money loss, for the benefit of the association and the great good it is to do poultry husbandry in general? So much talk about benefiting the industry makes us a bit weary. There's too much hypocrisy in it and too much attempted assumption that association rules are the law of the universe. Aren't we A. P. A.'s trying to assume more authority than we possess. We don't yet rule the breeders and fanciers, not by a long shot, and in some places we are losing our grip a bit. How can we hope to force rules on the producers of market poultry and eggs, marketmen and consumers? There's no animus in this comment. We simply suggest that we all think this matter over and be honest about it with ourselves. The sale of a copyrighted book is necessarily somewhat slow and limited. If we really want to secure better poultry and eggs, get a national standard that will secure more uniformity in quality, etc., all over this broad land, is the limited sale of a copyrighted book the right way to go about it? Wouldn't it be better to broadcast the information in free bulletins, in public demonstrations, in magazines and newspapers and through the poultry press? Wouldn't such a method do more to secure a national standard for market poultry and eggs that would be more promptly adopted and more universally recognized? A really helpful association of professional men doesn't make a business of patenting and copyrighting all good ideas in order to fat the treasury, it generally broadcasts such helpful matter without cost to all members of the profession, in an effort to do the greatest good to the greatest number. Think it over!

* * *

English fanciers accuse the American fancier of paying a good deal of attention to details, even hidden ones like undercolor, but giving little or no heed to type in the breeding of our exhibition fowl. When one visits the shows and notes the many types to be found in one breed class, the justice of the criticism is brought home. Plumage barred to the skin doesn't make a Barred Plymouth Rock or a Dominique. We have seen owls that were barred to the skin. Type is the ideal representation combining the essential characteristics of the genus,—type is the breed. And three great important essentials of type are: Shape, symmetry and size. Yet, our A. P. A. has banished symmetry. Let's have breed

MOE'S Useful Poultry Supplies

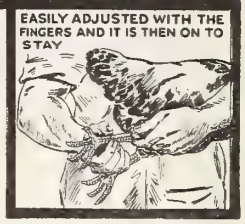
MOE'S NEVER FAIL TRAP NEST

A solution of all trap troubles—for, as the name implies, it never fails.

Lice-proof, fully sealed back and sides, but affording plenty of air when the hen is trapped. Can be placed anywhere in the poultry house. Trap easily removed so the nest can be used as an ordinary one. Set up and ready for use. Each nest packed in its own individual container.

No. 33, 1 foot square, complete 75c

MOE'S SELF LOCKING LEG BAND



You simply push it together to lock it and it can only be removed by destroying the band. A sealed band that requires no sealer.

Every band has its own raised or embossed number,

12 Bands, any size 15c

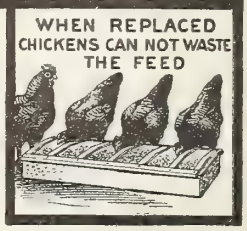
Liberal Discount on Quantities

MOE'S SANITARY BROODER FOUNTAIN

Little chicks can't get wet. Sets in corner of brooder. Takes up little room. Can't be upset.

Manufactured in two sizes:

No. 0, 1 quart capacity 25c
No. 5, 1 gallon capacity 50c



MOE'S SANITARY FEEDING TROUGH

Can be used for feed, wet mash or water.

Made in three sizes:

No. 21, 12 inches long 25c
No. 22, 18 inches long 50c
No. 23, 24 inches long 75c

MOE'S SANITARY POULTRY DRINKING FOUNTAIN

(Patented)

The most popular fountain on the market. Fills from the top.

Dead air space keeps water cool in summer and from freezing in winter. Drinking pen now made square, which does away with spilling when hung up. Can be used for two pens at the same time. Prevents chickens from getting their wattles wet in cold weather.

Manufactured in three sizes:

No. 1, 1 gallon capacity - $1,25
No. 2, 2 gallon capacity - $1.75
No. 4, 3 gallon capacity - $2.25

Also specially constructed for ducks and pigeons.

These are a few of the good things in Moe's line. Write for complete catalogue. If not at your dealer's, write us mentioning dealer's name and we will see that your wants are filled at above prices, your city.

Otis & Moe Manufacturing Co.
2011 Otis Bldg., Chicago, U. S. A.

type first and then try to work for lesser details without sacrifice of type.

* * *

We ought to give more attention to the preservation of breed type and less to the foibles and whimsies of fickle fashion. We recall some fine original type Dominiques at the 1913 Boston Show. We looked them over with their fancier owner and with Judge Drevenstedt. They had a beauty all their own and we were assured that they were just as good as they looked when it came to production and practical qualities. We're not so old fogy that we would want a breed to stand still. A certain amount of evolution is necessary, though gradual. But we would try to preserve breed characteristics and to have uniformity in breed type.

* * *

No comment necessary in this case. The editor of "Mature Medicine" in October 15th number says:

"Nature made certain laws, pertaining to the propagation of the human and other races, ages ago. They were and are perfectly legitimate. Then came along man with his alleged 'moral' code and declared the original law void—with reference to the human family—so that courts 'legitimatize,' or the reverse as prejudice dictates. Bah! Piffle! Double Fudge! Damn! But nature continues to do business in the same old way."

* * *

Dr. Otto Juettner, in an article on mental hygiene in the November "Digest," has the following to say about "cranks":

"I have a warm spot in my heart for that exclusive and ever-interesting class of people commonly designated as 'cranks.' I love a crank because he is a distinct personality. He is different from other people. He is better than the ordinary run of people. He is interesting and is remembered when hundreds of other people are forgotten. 'He is a crank,' which means that he rides a hobby of perhaps two. This fact, in and of itself, suggests individuality and originality. He is looked upon as a 'character,' and is never lost in the crowd of conventional and 'correct' people."

* * *

John A. Gough, in American Fancier, severely criticises the A. P. A. and its lack of real value to the true fancier. It does seem strange that members, who never fancied or bred a certain variety of fowl, often seem to have more weight in the making of the standard for that fowl than the fanciers whose art in breeding has made the fowl what it is. It has been said that the fancier of one special variety makes a poor judge of another dissimilar variety for the very reason that he unconsciously but persistently seeks the type of his own favorites. It hardly seems fair or just for a Wyandotte specialist (for example) to dictate the requirements for perfection in a Plymouth Rock,—or vice versa. There is room for improvement here.

* * *

One considerate reader cautions us concerning our "use and abuse of the English language"; says we "mix metaphors" and are "not always consistent."

Dear Friend and Reader: Our literary (?) style is our own, it's part of us and the blessed thing was "borned in us." So please don't judge us too harshly. If we were a Bard of Avon, a London, or even a Brisbane, we probably wouldn't be doing "chicken talk" for a living. So try to be sorry for us, or grateful that 'tis no worse, and be forgiving.

When you pitch baseball the main thing is to "get 'em over the plate" and to have the umpire say: "Strike three!! Batter up!" When one writes for class magazines the main thing is to "get 'em over," to tell the story plainly and forcefully so that the greatest number of readers will understand and be interested. We try to tell the truth as we see it and to hammer the facts home. Forget the metaphors. Maybe we are not always consistent. "Consistency, thou art a jewel," sometimes, but times change and men and things change with them. Emerson says: "A foolish consistency is the hobgoblin of little minds" and that only fools and cowards are always consistent.

* * *

The editor of the Pacific Poultryman is concerned about the rival claims for world's champion record egg production. He states that an attested record of 295 eggs in one year was made by a White Leghorn hen bred by D. Tancred of Washington six years ago. He also comments that agricultural colleges refuse to accept records claimed by breeders, that such records are disregarded, and that only college and experiment station records are recognized as authentic. His editorial intimates that colleges and stations, in an effort to advertise and get publicity, are quite as likely to lie about egg records as are individual breeders seeking publicity by the same means. And he further suggests that the experiment station tests should "be supervised by a disinterested party."

It isn't practical to supervise the performance of an egg record. It would

Catalogue now on press. Let me send this to you—it tells the story of this line in breedings, winnings, matings, etc. It also describes the birds, with prices and general information. Write today.

C. N. MYERS, Box A, Hanover, Pa.

require the constant daily attendance of one absolutely dependable man on one hen for an entire year. To be absolutely certain he really couldn't leave the hen or her nest and roost either day or night. Then it might be necessary to have some one watch that man.

You can't stop men from lying. You can't stop them from seeking publicity by fair or foul means. And you simply have to trust somebody. There is no reason why the records published to date could not be true. There is ample reason for believing them to be true. Oregon has produced a 291 egg hen and a 302 egg hen, both cross-bred or grade Leghorns. Washington claims a White Leghorn of six years ago as a 295-egg hen. Nova Scotia has produced a 292-egg Barred Rock. Maine has shown by count that any old hen may have within her as many as 3,000 seed eggs, but to date no one has ever produced an authentic record to show that any hen ever yielded above 1,000 eggs in an entire lifetime. The high records are obtained by careful selection, trap-nesting and consequent removal of hen and egg from the nest at one and the same time (a factor in record egg production not to be overlooked), and by extraordinary care of the layers. While it might be easy to fake such records, for attendants to deceive, and for owners to lie, there is no good reason at present for using the "short and ugly word." We are willing to accept these records in good faith, until something to the contrary is proved. If there is any doubt, give the hen the benefit of it. There is no good reason why exceptionally fecund hens, of any of our popular varieties, should not yield 250 to 300-egg records under favorable conditions. We recall Silberstein's Light Brahma hen No. 61 with a record of 234 eggs in 1898. A Utah Brown Leghorn made a record of 257 eggs in 1897. Nearly every popular variety has produced individuals that were 200-eggers or better. "There is honor enough for all." Let's work for better hens and more eggs and not worry about the publicity some other fellow gets.

* * *

Department of Agriculture statisticians estimate that American farm hens laid during 1913 a grand total of 20,814,348,000 eggs. That allows an average of 219 eggs for the year for each and every man, woman and child in the United States. If you have had an egg a day you have had more than your share. In 1905 the estimated egg crop was 20,000,000,000; a per capita production for 1905 or 250 eggs for each and every man, woman and child in the country. A shrinkage of 31 eggs per person in nine years doesn't look much like overproduction. Hard-working American Biddy will have to work still harder if she is to keep pace with our increasing population. Within the next ten years we are likely to need a lot more 200 and 300 egg hens. Bred-to-lay breeders will have to keep busy.

* * *

When eggs are worth four or five cents each it does not take much breakage to turn profit to loss, one or two eggs broken to the dozen kills the profit. Egg boycotters should not forget that. Also, springtime is the natural period of fecundity. In the fall the adult hens are in heavy molt and the pullets may be backward about getting real busy with egg production, but labor and feed bills keep on merrily just the same. Some hens lay right along through the molt, but they are exceptions to the general rule. Fall eggs cost three times as much to produce as April eggs, therefore it is not remarkable that the producer wants to get three times the April price for them.

Scientists have proved beyond dispute that the good and the bad qualities of one individual may become the heritage of thousands in the course of a few generations. Certain ailments and abnormalities may be passed along to many generations of progeny and, in such cases, inbreeding aggravates the original trouble. In half a dozen widely separated locations in the United States there are colonies of persons afflicted with haemophilia (bleeder's disease) and these trace their descent back to one common ancestor, who was one of the early immigrants from England many years ago. Breeders of poultry should study heredity. It is a science which concerns them intimately. One fowl with a serious hereditary fault may ruin not only the strain in which it is bred, but many other flocks through the taint in the progeny. While it is important to breed for standard requirements, it is still more important to always breed for health and for the maximum constitutional vigor.

* * *

Frequently when one of the old guard of fanciers passes away much valuable experience dies with him. The fancy suffers a double loss. We wish that more real true fanciers would make careful notes of their experience and record or publish them for the benefit of others. Some young men are moved to write by the enthusiasm of youth and because they believe they have something new to tell; but the old timer, with a lifetime of valuable experience, does not often write. Perhaps age has made him indolent or he is not willing to publish his experience. 'Tis a great pity. Faithful records of the lifetime experiences of successful fanciers and breeders would be worth more than whole libraries full

of text books. The American fanciers lost a good and true friend in the death of Henry T. Hales and his memory will live long. Yet, he has left us only a very small part of his thorough knowledge of Dorkings and his lifetime experience in breeding winners for the big shows. His mind was stored with a wealth of experience with Dorkings that would prove a veritable fount of knowledge for the fanciers of the present and coming generations. To lose the man is a loss to many, but inevitable; to lose so much of his life work is a loss to many who will come after us. Why not make your experience a matter of record? Nothing that is worth while doing is too trival to be recorded.

* * *

The Thanksgiving turkey crop for 1913 was of about the usual proportion, but in most markets there was a shortage of really good turkeys. Tons of turkeys reached the market in a condition that rendered them unfit for food. In Boston market, on November 25th, the health inspectors condemned over 2,000 pounds of fresh killed turkeys. A great many of these birds had not been properly chilled before shipping and were packed while there was animal heat remaining in the carcasses. Many of them had crops and intestines full of food. Mild weather and lack of cooling facilities on part of many turkey raisers were blamed as the cause of the enormous losses from spoiled turkeys. On the day before Thanksgiving the best turkeys sold at prices ranging from 33 cents to 48 cents a pound. Poorer grades sold at from 20 cents to 30 cents a pound.

On the day following Thanksgiving physicians reported an alarming number of cases of ptomaine poisoning resulting from eating spoiled turkey. Why do turkey growers, and poultrymen generally, ignore the ordinary common sense rules for preparation of dressed poultry for market? Government bulletins, exhibits and lectures, and poultry journals everywhere, have repeatedly furnished instructions for the preparation of poultry for market, yet every day our markets are flooded with poultry meat that is unfit for food because not properly prepared.

Everybody knows, or should know that all kinds of poultry should be starved for at least 24 hours before killing to make sure that the crop and intestines do not contain fermenting food and foodwaste. During this period they should be watered but allowed no food. The birds should be bled by sticking, dry picked, and should then be thoroughly chilled, either in an ice water bath or in a cold room where the temperature is just above the freezing point. The dressed carcasses should not be packed for shipment until all animal heat is out of the body and it is thoroughly chilled all through. If the weather is warm and the shipment must travel over one or two hours' journey to market, the poultry should be packed in ice or shipped in a refrigerator car.

* * *

On November 12, the U. S. Department of Agriculture sent out a warning against "sand stuffed" chickens. Live poultry shippers are accused of "adulterating" poultry by feeding soft food containing a large quantity of sand. Hereafter they are warned to omit the sand. At Brighton market, the same month, several drovers were cautioned to abandon the practice of feeding salted hay and bran to cattle on drive to market, allowing no water until arrival at market and then allowing the thirsty cattle to fill up with water just before driving them in to be weighed and sold by the pound. This practice, it is claimed, secured extra profit to the drover from the added water sold at beef prices. Uncle Sam is determined to discourage such dishonesty. More power to him.

* * *

Arthur G. Duston, White Wyandotte specialist, writes as follows:

"South Framingham, Mass.,
Nov. 14, 1913.

"Dear Doctor Woods:

"I read with interest your article on egg costs, in fact it was good enough to read aloud to Mrs. Duston. I think it's fine. When we could buy corn for 90 cents and oats for 65 cents or 75 cents a bag, hens could be kept for $1.00 a year, but today, feeding only straight grains, I contend that it costs 15 cents a month to feed a hen, and a party who raised birds for me kept a careful account and proved it.

"There has been an increase in the cost of feeding the hens, the cost of producing eggs and in the cost of raising chicks. Especially is this so in raising what we call fancy stock from small selected pens; building houses that would accommodate upwards of 200 layers and only mating up in them 35 or 40 females for special breeding. Then there is the upkeep, which like the poor "we have with us always," and last but not least, the selling cost, with coopage, catalogs and correspondence. I tell you breeders do not figure these things as they should. They think because they have sold a bird for $5.00 that that means they have made $3.75 or $4.00 on it, because they probably could only get $1.00 to $1.25 for it in the market. The same on higher priced stock. I don't "figger" that way. I could go on ad infinitum, but what's the use? If anyone ever met unfair competition it's the better class of breeders today, and if you don't believe it, sit right down and think how many in the game are making a dollar, that is, getting ahead; are not 99 per cent of them just fighting to live?

"J. H. Robinson was riding with a party in an auto and going almost past

Dune-Alpin Poultry Farm, Geo. J. Kerr, Manager, Box 561-J, East Hampton, New York

here so dropped off to see me. I called his attention to your article and he passed such a remark as this: 'If any of them figured in every line just what it cost them, how long do you suppose they would stay in?'

"Yours very truly,

"Arthur G. Duston."

We wrote Mr. Duston asking permission to quote his letter and under date of November 25 he replied as follows:

"I can conceive of no reason why you should not quote me in January issue if you want to. In regard to taking the poultry business too seriously I cannot believe that possible. It's a serious business when thousands are striving in the different branches of the business to get a living and a little more, whether they are placed right or wrong when they start, or if started go right. It is as tough or tougher for the man with a few hundreds to lose out than for the man with many thousands, most of the latter have acquired a standing which makes their brains an asset of value to some concern or other, while the small land owner or poultryman is on his uppers with only a pair of hands to care for himself and family. I think as you do that many times disappointment and failure might be avoided if the beginners only knew themselves, as the good book says, or in other words knew what paid and what did not,—what caused a leak and what made a good return.

"I enjoy your work each month and feel that it is helpful and inspiring. I wish you unlimited success and congratulate you on being associated with a true gentleman.

"Arthur G. Duston."

* * *

Letters like the above from Mr. Duston help and inspire one to keep on striving for better poultry and a better understanding of the truth about the poultry business. We have known Arthur G. Duston for at least sixteen years, perhaps longer. Although he is a thorough fancier and a conscientious judge of exhibition poultry, he doesn't lack sympathy and understanding for the strictly utility man. He has been through the mill himself, has grown prime broilers and roasters for market and supplied a demand for new-laid eggs. He believes that the poultry business should be taken seriously and considered seriously and that is important to get the facts about the business before the people. We have had plenty of fiction from a variety of sources. We have asked Mr. Duston for a story of facts from his experienee and observation and he has promised to write it for us.

* * *

With the Federal Government now actively investigating the price of eggs and poultry, and the causes of high winter prices, it will pay all poultrymen to consider their work more seriously. What are you going to say when you

NIXON'S WHITE WYANDOTTES in their 21st YEAR Boston; Madison Square Garden

The oldest and most reliable of White Dott tribes. They have made good in the thickest of trouble, winning out against the best that could be raked up for the big National Club meet at Albany, N. Y., 1913. There were others, but just fast enough to get beat. Say! Talk about quality. Why, it's better than ever. Big, plump, pure white birds in any number you wish, to win at any show you wish, and to breed the quality you wish. **Eggs ready January 15, 1914,** from the grandest yards I ever mated. Utility eggs in any number from excellent mated pens. Come to the old reliable specialist. No better egg machines in America. Write today. Literature.

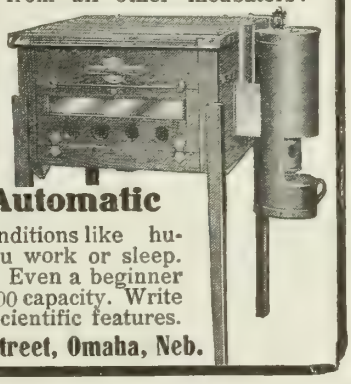
Certainty in Chick Raising

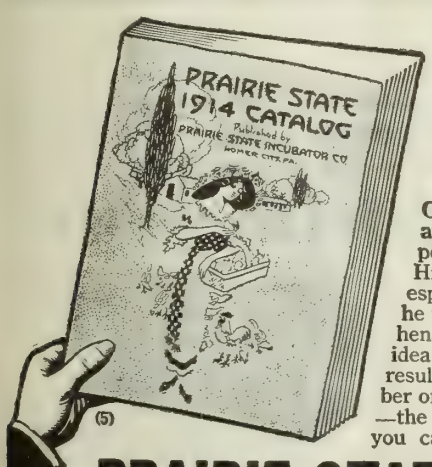


New Automatic Regulator

You get it only in the Mandy Lee Incubator, the machine which does not leave you to guess or experiment, but is operated by plain, simple rules.

Mandy Lee Incubator

One scientific incubating principle distinguishes the Mandy Lee from all other incubators:



The Mandy Lee not only employs heat, moisture and ventilation, as other incubators do, but it recognizes a certain definite relation of the incubating requisites to each other. It ascertains the amounts with certainty. It regulates and adapts heat, moisture and fresh air to each other, creating the ideal hatching condition.

Everything Completely Automatic

The Mandy Lee maintains true hatching conditions like human intelligence—day and night, while you work or sleep. Mandy Lee is the incubator of certainty. Even a beginner cannot go wrong. Convenient sizes, 60 to 300 capacity. Write for latest book explaining the great new scientific features.

GEO. H. LEE CO., 930 Harney Street, Omaha, Neb.

NOW READY

NEW 1914 PRAIRIE STATE CATALOG

One of the world's foremost experts on artificial incubation and the rearing of poultry, wrote this big 112 page book. His advice is worth hundreds of dollars, especially to the beginner. For example—he tells you how, by studying the ways of hens that stole their nests, he hit upon the idea of the moistened Sand Tray and how it resulted in a wonderful increase in the number of strong, vigorous **"chicks that live"**—the profit producing kind—the only ones you can afford to raise.

PRAIRIE STATE INCUBATORS and BROODERS

are used and endorsed by leading Agricultural Colleges and Poultry Experts, the world over. For over 30 years they have maintained the lead and with the many new 1914 features, they are simply incomparable. Beginners will be particularly interested in the new Keystone Model which maintains Prairie State quality with all the new improvements and yet sells for only $9 and up.

Send Your Name on a Postal for FREE Book

Do it today. A delightful surprise will await you for this is more than an ordinary catalog. It contains in addition to full descriptions of Prairie State machines and their exclusive features, about 60 pages of other valuable information on poultry raising. For example—**How to Feed, Rear and Breed for Best Results; How to Grow Green Feed in Winter; How to Build Poultry Houses; How to Treat Diseases; How to Preserve Eggs, etc., etc.**

This big, new 112 page book is FREE if you send now. Write—

PRAIRIE STATE INCUBATOR CO., Box 201, Homer City, Penna.

are asked about the cost of production? Do you know what it costs you to produce April eggs? Do you know what October, November and December eggs cost to produce? Do you know positively what it costs to produce a pullet at age of laying maturity? Do you know what it costs you to put a three, four or eight pound chicken in the market? Do you know what it costs to produce a fancy fowl, fit to win a ribbon in fair competition? We mean actual cost, labor, upkeep and all considered. If you don't know these things, why don't you keep books and try to find out? It is high time that you did.

With all this clamor about "high cost of living" and high prices for food (and goodness knows some of the prices are high), do you appreciate the fact that poultry and eggs have not increased in price the past ten years,—have practically stood still while everything else has kept right on going up? In a few markets there has been a trifling increase, but as a whole the 1913 prices for poultry and eggs are not unprecedented, are not higher than in 1904 and 1905 and the files of market quotations will prove it.

Yet, when food prices come in for investigation the prices of eggs and poultry are the first to be attacked. Because some Kansas farmer's hens keep themselves and lay in stolen nests and he sells the eggs to a collector for about ten cents a dozen, is the modern egg farmer and poultryman to be forced to sell his better-quality, better-fed, pure-food eggs at 25 cents to 30 cents a dozen, regardless of production cost? Think these things over and do a little "efficiency work" in finding out the cost of production. "Chickens come home to roost," and right now some of the highly colored fiction about exorbitant poultry profits is coming home to roost with the chicken man. Get at the costs, run the business as you would any other legitimate business, and we believe you will stay in. We want poultrymen to get in right, to go right and to stay in because there is reasonable and honest profit to be made,—a living and something more.

* * *

During the mild weather just before Thanksgiving many tons of fresh killed turkeys shipped to our large city markets were permitted to spoil in the hands of the transportation companies instead of being taken by dealers and placed in refrigerators. Some of this poultry was tainted on arrival because not properly prepared and not properly shipped to stand the mild weather, but much of it was not spoiled on arrival. It was allowed to spoil because of rotten market conditions. The middleman looks out for himself and he seldom loses. The producer is the poor devil who has to "pocket the loss." A good many tons of fresh-killed turkey were condemned by health inspectors and towed down the harbor to be dumped. Better management of the marketing would have saved the loss to the producer and saved thousands of pounds of valuable food for the hungry. It is getting about time for our Uncle Sam to take charge of the marketing of foodstuffs in this country.

———o———

O. L. McCord, election commissioner of the American Poultry Association and judge, has moved his office from Danville, Ill., to 929-30 Jefferson Bldg., Peoria, Ill.

Notes from the Southwest

Conducted by H. H. Stoddard, Riviera, Texas

EVERYTHING TOPSYTURVY.

IF THERE is any place in this great and glorious country where a newcomer is kept guessing, it is the southwest. A person might go from a northern state to England, France or almost any part of Europe and undertake rural pursuits without so much to be unlearned as in settling here; this remark being especially applicable to poultry matters.

Instead of planting certain vegetables in early spring when frosts are leaving, you plant in early fall, when the coldest weather of the year is approaching. This you can do because, though the air may be considerably cool in winter the ground retains a quite important portion of the heat stored up in summer, and your plants keep on growing till Christmas perhaps, or New Years sometimes, or even the entire winter. Some sorts of vegetables which if planted in September or October would do well; if put in, in April or May would perish in summer, not so much on account of the heat of the air which is less than in Massachusetts or Iowa, but on account of its dryness at midday which parches the leaves, those which are thick and leathery like the orange, cactus, mesquite, etc., excepted; possibly too, the roots of some species cannot stand the heat of the soil.

In climatic contradictions of northern conditions, besides the paradox that here in summer while the air is cooler than at the North, the soil is warmer owing to the approximately overhead position of the sun, making its rays strike the ground with a direct impact instead of obliquely; there is the oddity that when there is a frost, which comes rarely it is not found first on the short grass or other objects near the ground as at the North but on vegetation some fifteen or eighteen inches high; the earth's warmth stored up from summer protecting the short growths.

Another curious thing is that in digging a post hole at the north in early spring after a few sunny days, the top soil having been warmed up a little, the earth is cooler as you dig down; at the southwest at the corresponding season, it is warmer as you go down. At the south there are more wild flowers in winter than in summer. At the north in the winter there are none.

In midwinter there are no houseflies at the north. In midsummer, none at the southwest. Dews occur here in winter heavier and oftener than in the summer. The farmer's rest time is summer here, in common with many species of plants which become dormant then instead of in winter. Even the lightening bug carries his lights in front like an auto, instead of at the rear, as if to keep up the reputation of the district for contrariness.

There are various birds, notably the killdeer, that go flying around by night more than by day and some sing all night long, especially that crowning feature of the bird world, the mocking bird. Here houses are built with reference to having the wind blow freely through as many apartments as possible, while at the north there is much endeavor to keep wind out during a portion of the year.

At the north, cattle and sheep are salted occasionally, especially when on grass. Here vegetation is salted by the seabreezes too much already. There a flock of sheep will run after you to get salt. Here they despise it enough to run the other way. Here the well water is the warmer the deeper the well, instead of being cooler as at the north.

Here, in spite of the dryness of the air, the tires of your buggy do not have to be reset, which fact astonishes you. They grow tighter and tighter. Sometimes they tighten till they dish the wheels owing to the fact that the sand of extreme fineness forced by the high winds combines with the rust occasioned by the sea breezes and enters the slightest crevice between tire and felloes whenever the latter begin to shrink.

Here you turn the vertical parts of the pipe of a wood-burning stove bottom side up, so that the profuse drip from the fumes of mesquite fuel will go down inside the pipe.

And so, on and on, things go by contraries. "Mary, Mary, quite contrary," was undoubtedly born in southwest Texas, and lots of things about poultry have to be unlearned when you come here.

Show birds, cockerels and pullets ready to win at fairs, Fall and Winter shows, bred exclusively from our New York champions, also yearling cocks and hens shipped on approval, satisfaction guaranteed, at prices from $15 to $50. Write for catalogue. Mention American Poultry Journal.

Foxhurst Farm Lime Rock, Connecticut

the mercury has been below 20 degrees at night, but what is that for animals with thick overcoats? Really, it is heat rather than cold, take the year through, that is to be chiefly considered.

Speaking of the thick feathering of fowls, it has seemed to me, though I may be mistaken, that the northers such as may come in spring or summer as well as in winter, take effect on young growing chickens and cause them to become more thickly feathered than would be the case were the weather always warm, or medium, as in the late autumn, the golden time for hatching. That the feathering of adult fowls is also thick on account of roosting in the open instead of a shelter I am pretty well convinced. When, after the late summer moult, the new coat is growing at a time when there are some pretty cool nights, "under the calm moon and the silent stars," Nature sees to it that warmth is provided for against the coming winter by means of a great abundance of closely packed feathers. But be this as it may, the acid test is that fowls certainly thrive under the open air regime and it is a condition, not a theory, which confronts us. The practice of outdoor roosting pretty well to the south will naturally spread farther and farther north, modifications being adopted, of course, to meet the successive new situations, I believe that in time over a wide belt of country the invaluable open front will be on two or three sides of the roosting room instead of one only, in which case tight doors can be arranged to cover, occasionally, the two extra open sides if these happen to be to the windward in stress of weather.

Regarding the thousands of open-front poultry houses Dr. Woods has given to this country, which affords an ocean of fresh air, wide as heaven and deep as the other place, to the myriads of pairs of lungs hungry for it, there is another sanitary boon he has bestowed in the shape of temporary summer roosts in groves, with no shelter except the green boughs. This practice, I am sure, will spread, especially as it is well in line with the "back-to-nature" slogan so popular these days in other matters.

But having preached roofless roosts so insistently, I here and now proceed to take it all back; at least "provisionally." I would have a cheap slanting roof of boards over the perches, not, however, for the sake of the fowls, but to protect the manure, that important asset, the value of which is so generally underestimated.

Fowls hate rain, yet I am far from sure that the 25.6 inches annual average here is not actually good for them. Have often said that were roofs over perches offered me "free gratis and for nothing," I don't know as I would accept so far as the thrift of the poultry is concerned.

A party here has for four years used with success such roofs as mentioned, there being no sides or ends to the structure to impede the fresh air. These roofs were for the fowls, with no thought of the manure. If I adopt the practice the ubiquitous doubting Thomas will doubtless notice it and think I have changed my opinion. But I could tell him that the roof was not for the sake of the animal world, but for a realm of lowly and vile inanimate matter, to be glorified later, however, in the vegetable kingdom.

Of course, the manure can be raked or scraped in piles and carted away to prove fairly good fertilizer even if previously rain-soaked, but the advantages of having it kept dry are too manifest to need explanation. It is a happy correspondence of facts, instead of the perversity of things found so often in this cruel world, that while no rural pursuit needs an extremely potent fertilizer more than ye gentle art of poultry keeping does, since large quantities of lush, tender, quickly grown, fresh stuff are imperatively demanded, here is the fertilizer of the required efficacy.

Now, how about blue bugs, mites and stickfasts, the pests of a structure which screens from sun and rain these dire foes of vermin? Why, of course, you must have it movable; yea, easily,

200 FAST COCKERELS---Carver's Red Farms, Seville, Ohio

PALACE N. Y. SHOW, 1913

WINNING BARRED PLYMOUTH ROCKS

In a class of 213 birds, bred and shown by America's Leading Breeders in one of the largest and best classes ever exhibited, I won **Special First for Best Cockerel,** Mating Pen, Second Pullet Mating Pen, Fourth Exhibition Pen, **First and Third Pullet-bred Cocks,** Fourth Pullet-bred Cockerel, Second and Third Cockerel-bred Hens, Second and Third Cockerel-bred Pullets. **Specials, etc.** A record of merit in all classes.

Palace, New York Show, 1912

In a class of "Royal Merit" my winning First Prize Pullet was the sensation of the entire class. I also won Second Pen, Second Hen, Fourth Cockerel and Specials. At **Madison Square Garden, New York, 1912-13,** I won Seventh Pullet. This line has been bred for years in line and has made records at several shows. Choice stock for sale at all times, selected breeders a specialty in trios and pens, mated to produce superior quality. **Eggs for Hatching** from selected exhibition matings, $10 per setting. Utility mating eggs at special prices of $10 per 100. Write me your wants, I can and will please you. My utility lines are exceptionally heavy layers.

D. G. GENNERICH **MOUNT KISKO, NEW YORK**

Any one can win where the classes are small and competition is not keen, but it takes real quality to win in such shows as Boston and Madison Square Garden, N. Y.

Fairview White Rocks

Have won decisive victories over Boston and Madison Square Garden winners.

At Chicago, 1912, they won 1st and 3d Pen; 5th Cockerel and 1st and Grand Championship on Hen, besides Special for the Three Best Hens and Two Best Pens, competing with the strain that has been winning the cream of the prizes at the Garden.

Again at the New York State Fair, 1913, they won in competition Madison Square and Boston winners, 1st Old Pen; 3d Young Pen; 1st and 4th Cock; 2d and 3d Hen; 3d Cockerel and 1st and 5th Pullet. These winnings, with practically no training or any special conditioning, stamps "Fairview" White Rocks as America's Greatest Strain.

Am offering a grand lot of Cockerels at **$5, $10** and **$15** each, that will surely make a decided improvement in your flock. Do not buy elsewhere until you get a copy of my new 32-page catalogue telling all about "Fairview" Strain of White Rocks. It is full of valuable information and it's free. Send for a copy at once. When writing mention American Poultry Journal.

GUY DAILY BOX A JEFFERSONVILLE, INDIANA

quickly and conveniently movable, so that it can be on new ground where sun and rain have been, these being now allowed their work upon the old site. But what of the perches themselves? Simply have the roof on hinges, like the old-fashioned country cellar doors you used to slide down on, and be sure and flop them over once in a while when the sun is intense. This will serve the top of the perches. The doors being hooked down in the usual position, turn the whole structure over completely to have the sun strike the under side of the roosts.

Some work about this? Well, it will not need to be done very often. It is a detail, like others constantly demanding thought, where you balance one consideration against another. Here is lumber and time against increased strength of a strong fertilizer. If the game isn't, in your judgment, worth the candle, there is no law of heaven or earth to make you play it. One nuisance will prove to be the determination of certain of your flock to roost on the roof. By strict surveillance at the start, at dusk, armed with a bit of cloth tied to a long fishing rod, this trick is very easily cured, for fowls are very intensely devoted to their perches after occupying them two or three or four nights in succession.

Now, the roofs may serve a good purpose in enabling you to bring in a new crop of pullets at a pretty early age sometimes, to be domiciled where they are to stay. Presumably they have never roosted except under roofed coops and are not feathered enough to suddenly do without shelter. There is also another important consideration, which is that you may, if you think best, cover sides and ends of your roosts with wire netting for protection nights and not have any yard at all to enclose your perches. Your method of introducing pullets to the place where they are to stay will have to be different when there is no yard. There are as many ways of moving young birds from the nursery and domiciling them in a new place as methods of killing a cat besides choking it with hot butter.

* * *

A large, complete, ably edited and elegantly printed poultry book has lately been published, a "leading motif" of which seems to be to disparage raising poultry for food as a business. This masterpiece of sophistry is very cunningly gotten up by a writer who gets his living as an advocate of farm poultry and is just about as disinterested and fair as lawyers generally are.

The book starts out by asserting to the effect that the only "permanent" commercial poultry raising will be and must necessarily be as a side line on farms. The way it slurs over the puny commercial poultry efforts at Petaluma, Cal., where only ten thousand dollars' worth of eggs are produced daily, is laughable. When Petaluma, Texas, a new railroad station on the Riviera Beach & Western railroad, gets in full blast, and it and tributary portions of Southwest Texas produce twenty thousand dollars' worth of eggs daily for the Atlantic coast cities and Panama canal trade, will Rip Van Winkle wake up even then? In New Zealand, as every well informed poultry editor knows, five years ago there were but four persons exclusively engaged in food poultry farming for a living, and now there are over one hundred and the number is increasing by leaps and bounds.

A persistent endeavor, cropping out in various places in the book, is to belittle the large commercial poultry farms and at the same time laud farm poultry which is really the most la-

DOUBLE QUICK GRAIN SPROUTER

THE PERPETUAL POULTRY SILO--Grows Green Feed While You Wait

The First, the Original, the Pioneer of All Grain Sprouters. Built in six sizes, from ¼ bu. to 8 bu.; for a few hens to 1,000

The **Double Quick** originates and initiates—others imitate and appropriate. Fully 100 **Double Quicks** to every **half dozen** of all other kinds combined. Now in its **fourth** year—in use in **every** state and territory in the U. S.; in Canada and Mexico; in **eight** foreign countries; **thousands** have tested its value; many large poultry plants use from **one** to **five.**

"On Sept. 16, I ordered your No. 5, Double Quick Sprouter shipped to Maude L. Kaler, Columbia City, Ind. and this one is proving so satisfactory that she wants another one of the same size and therefore you will find draft in payment of this second sprouter."—Milo R. Meredith, Indianapolis, Ind.

"I ordered and received from you last fall one of your 5-tray Grain Sprouters. This works very satisfactory. I want one for 1,500 hens. I enclosed my check for your No. 6 Grain Sprouter."—E. A. Palmer, Providence, R. I.

"I am enclosing my check for **two more** of your No. 5. Double Quick Sprouters. The one I bought some weeks since, is doing fine work."—C. H. Latham, Beauty and Utility Barred Rocks, Lancaster, Mass.

Close-to-Nature Co.
38 Front St.
Colfax, Iowa

mentable failure of any food producing industry in the world.

It is true enough that at the present time, as in the past, almost the entire mass of poultry products are from farms mainly devoted to things other than poultry, and this is likely to be the case for a long while to come, because awkward, uneconomical methods in any industry are always persistent, even to the time when they are ridiculous failures, just as cloth is still woven by hand in portions of the central mountain district of this country; and of all backward callings farming is the worst.

The reason why poultry on the farm is now and will be generally a failure is that however economically eggs may be produced, owing to good range, they will be mostly marketed as grocery eggs, an article of the very lowest rank in their class, as was lately shown in this magazine. Eggs occupy a position absolutely unique among all important articles of food, not because they are perishable, for many other food products are that, but because their quality cannot be determined by ordinary inspection as the quality of meats, cereals, vegetables and fruits can be. This makes it imperative that between producer and consumer there be no third party. Since but few producers on general farms near cities can deliver fresh eggs directly to families of a certain class willing to pay a good price, such cases can never comprise but a small per cent of the whole number of farms. No co-operative system of gathering eggs at farms and selling under one brand can ever reject moderately stale eggs, although it can succeed in throwing out decidedly bad ones.

No system of providing the nation's food that cannot furnish the highest quality is worthy of encomium. The large scale system of raising and marketing by independent operators can and will furnish eggs of this quality.

"Our national incompetence in things agricultural is a disgrace. Leaving out some of the specialists, we are the poorest farmers in the civilized world, excepting the Russians only, notwithstanding the fact that we spend millions upon millions each year furthering farm education. Not a few of the agricultural correspondents and even editors of farm papers have openly sneered at the folly of the United States government sending a commission to Europe to study the highest and most advanced forms of agriculture. To the person coming back from the older countries and seeing in clearer light, the farming of Americans, generally speaking, is enough to make one heartsick." The above was well said by M. A. Schofield in Texas Farm and Fireside.

"But," some may claim, "there is a great activity now in education along farming lines," as the writer quoted says. The state agricultural colleges receive larger and larger appropriations, the ranks of their students are in some cases doubled every three or four years, and thousands of their graduates go back to the farms to practice what they have learned. In the public schools, studies in farming are being rapidly introduced in many states, suitable text books being latterly available, lecturers are abroad in the land, cars of instruction are rolling on some of the most important roads with exhibitions of farm products and "movies" galore, prizes are offered by the Agricultural Department at Washington to farm boys for the best acres of this and that crop, etc., etc.

All this is very good, but for a long time to come only a small part of the farming in this country will be skilled labor or be performed by people that may properly be denominated educated or even intelligent. There are a few specialties where such skill as well educated farmers possess will give paying returns, but so long as hordes of the unskilled peasantry of Europe continue to come here it is unskilled work that they will perform, and this they will find in the mines and on the farms. The superior native-born worker moves on to other pursuits and gives place to the typical "man with the hoe, brother to the ox." The lowbrow, poor devil, he or his wife will produce "farm poultry." The bulk of farm work is a dreary monotony of irksome toil and does not demand skill. There is much of the veriest teradiddle about "scientific farming." For every trained agriculturist there will be a dozen mere human cattle. The proportion of the latter is increasing in spite of the army of votaries of farm science. At the south the rough work will continue to be done by negroes and at the north by emigrants from southwestern Europe, permitted to come here by our shameful laws; because eugenics not having been rife, it has not been hitherto realized that in time they will inbreed with the bulk of our population, and pull towards the depths our otherwise splendid admixture of races. Look at farm life as it is, and will be, and see the sort of "permanent" poultry industry it involves. It is estimated that in the great farming state of Missouri, one egg out of every five is a "bad un," and of the four remaining, three are no better than they should be.

ROUEN DUCKS

Breeding stock of this highly useful and attractive variety at reasonable prices. Eggs for hatching from carefully selected matings.

One-Third Actual Size

The mother in her office, holds the key
Of the soil; and she it is who stamps the coin
Of character, and makes the being who would be a savage,
But for her gentle cares, an honest man.
Then crown her Queen of all the world.

—Old English Play.

A CORRESPONDENT sends us the following plea for the mother:

"A father, in talking to his careless daughter one morning, said: 'I want to speak to you of your mother. It may be that you have noticed a care-worn look upon her face lately. Of course it has not been brought there by any act of yours; still, it is your duty to chase it away. I want you to get up tomorrow morning and get breakfast, and when your mother begins to express her surprise, go right up and kiss her on the mouth. You can't imagine how it will brighten up her dear face. Besides, you owe her a kiss or two. Away back when you were little, she kissed you when no one else was tempted by your fever-tainted breath and swollen lips. You were not so attractive then as you are now. And through those years of childish sunshine and shadows, she was always ready to cure, by the magic of a mother's kiss, the little, dirty, chubby hands whenever they were injured in their first skirmishes with this rough, cruel world. And then the midnight kisses with which she routed so many bad dreams, as she leaned over your restless pillow, have all been on interest these long years. Of course she is not so pretty or kissable as you are, but if you had done your share of the work during the past ten years, the contrast would not have been so marked. Her face has more wrinkles than yours—far more—and yet if you were sick, that face would appear more beautiful than any angel's, as it hovered over you, watching every opportunity to minister to your comfort, giving of her best thought and strength in an effort to save you pain or suffering. Some one of these days she will leave you, and it is up to you, who from the very nature of things are filled with the sunshine of youth and hope, to make these declining days of your mother among the very happiest of her life, and you, better than any other, can do it.'"

Along this line of thought, a recent experience on a day's shopping tour with a mother and daughter may prove of interest. We rode in town together on an early train; we met in several shops during the day; we lunched together at noon, and rode home on the same train in the evening. The experiences of that day told a story of the utmost selfishness of a grown daughter and the almost superhuman patience of her mother.

The relationship of mother and daughter is one that appeals to all of us as one of the sweetest of human ties. It is infinitely good to see a mother training her daughter along lines of useful and helpful knowledge, endeavoring thus to early implant in her offspring a tendency toward those things which make for right living. It is beautiful to see a daughter whose thought for her mother's happiness and comfort discloses the deep underlying love which prompts it. But on the occasion mentioned the daughter had the center of the stage. It was plain to be seen that she felt her importance; that she was conscious of having eclipsed her mother to such an extent that the latter must be delegated to the background, while she, the young and beautiful daughter, should be allowed the privilege of playing to the gallery. The mother, a pretty little mild-mannered woman, graceful acquiesced, though it was plain to all observers that she could say more of real worth in ten minutes than the daughter in her incessant chatter could in an entire year. Aside from this, the daughter, had she been at all observant, could have acquired that rare and beautiful trait—courtesy—first hand from her mother; but she was apparently conscious of but one thing of importance in the universe—that being herself. She overruled her mother in the selection of gifts for the different members of their family; she insisted on seeing the entire stock of whatever line of goods she was about to purchase (and then usually bought elsewhere); at lunch she ordered her own particular fancies rather than her mother's. There was never one apparent thought of the mother's comfort or enjoyment throughout the day. On the way home, she monopolized the conversation with tiresome recitals of the "nerve-wrecking exams." she had "waded through" the previous year at a finishing school; of her dislike of mathematics; her positive hatred of Latin; and to the fact

Carver's Red Sussex were Winners at the Greater BuffaloS how

The Golden Road to Success

ALDRICH CHICK GROWER, a Specific for Bowel Trouble, and BONE-A-TONE, a Bone-Producing, Health-Giving Tonic.

READ CAREFULLY THE EVIDENCE OF AMERICA'S MOST NOTED POULTRYMEN:

Hope, Indiana.

Gentlemen: I wish to state that Aldrich Chick Grower reached us in due time, and I must say it is **without doubt** the Greatest Remedy we ever used along this line, and we have been raising fancy poultry since 1883. It is a frame builder and a body vitalizer. We have never used anything that made chicks grow up so readily as your Chick Grower. I can truthfully recommend to all poultry raisers this **Great Remedy,** and I assure you as long as you manufacture it and it proves the good merit it has this season we will continue to purchase it of you and order more in a few days. I note what you say in regard to BONE-A-TONE. I would like very much for you to send me a quart. It is surely a good Tonic, as you have given size and fast growth to your stock.

Wishing you every success, we remain,
Very respectfully yours, J. C. FISHEL & SON.

Collegeville, Pa.

Dear Sirs: It gives me great pleasure to report that your CHICK GROWER and DIARRHEA REMEDY is one of the Greatest Remedies that the poultryman has ever been able to get hold of. It is surely a wonder. I cannot recommend it too highly. Wishing you every success, I beg to remain,
Yours truly, F. G. BEAN.

NOTE.—Judge Bean judged the pens and females in the White Orpington class last December at MADISON SQUARE GARDEN.

CORDOVA, ALA.

Aldrich Poultry Remedy Co.

Dear Sirs: I have given your WHITE DIARRHEA REMEDY a most thorough test. While I have lost **at least** 50 per cent of all chicks hatched during the last two years by **this scourge, I HAVE NOT LOST A SINGLE CHICK** since using your REMEDY. I DO NOT GUESS about it, for I know it to be both a cure and an ABSOLUTE PREVENTATIVE. To test it I would divide the hatch and feed exactly the same, but give one-half of chicks the Remedy in their drinking water and the other the plain water. **NOT A SYMPTOM** ever appeared in the flock given the Remedy, while in 3 or 4 days the others were all stuck up with white diarrhea. I would put them on the treatment and all chicks that were able to eat and drink QUICKLY RECOVERED, and not another chick became affected, although the sick and well chicks remained together.

I consider your cure **The Greatest Blessing** for the poultry interest of any discovery in 25 years.

Respectfully, POPE M. LONG.
Breeder of Silver and Partridge Wyandottes.

The above evidence is proof conclusive of the merits of THE NEW DISCOVERIES made by Messrs. Rawnsley and Aldrich.

PRICES: **ALDRICH CHICK GROWER, $1.00 per quart jar, enough to raise 100 chicks beyond the danger point.**
BONE-A-TONE, $2.00 per quart.

DON'T LOSE YOUR CHICKS when an ABSOLUTE REMEDY can be secured at a nominal cost

ALDRICH POULTRY REMEDY CO. :: 4045 North High Street :: COLUMBUS, OHIO

that she had every dance engaged for the hop, then two weeks away. Her conversation was monotonous in the extreme, but, worse than that, it was heartlessly selfish.

Such an experience points to a lesson that many parents need to learn. While the daughter was undoubtedly innately self-bound, the parents should have early prevented their daughter from forcing her ego on those about her, by carefully and systematically bringing her to the realization that her status in society as well as her own happiness depended upon her helpfulness; her sympathy for, and interest in, others; and to the extent and worth of her kindness and comfort-giving qualities. These things are not so universally sought after by young ladies of the day as a knowledge of the latest stitches in embroidery, bridge playing, or the new dances—all well enough in moderation, but if acquired under the mother's patient tutelage, would net them far greater returns in happiness.

Along with other marvelous advances, condition in the home are bound to improve. For one thing, we must train the children to have a higher and truer respect for the mother who bore them. That after years of self-sacrifice and devotion to her offspring, she is frequently left alone, or used as a sort of family drudge, is a disgrace to our so-called civilization. That she is using practically the same old-fashioned tools in her housework as used by her grandmother, doing her work as best she can in an inconvenient, poorly lighted and half-equipped kitchen, is not due half so much to unprogressiveness as to the fact that her hands have been too full with, as one writer has said, "creating the human race, taking care of it after its birth, washing it, watching it, nursing it, feeding it, and carrying it around for months before its birth and years after."

Cream Prune Pie.

Stew the prunes until tender and rub through a colander. To each cup of pulp add one cup of sweet cream, the beaten yolks of two eggs and one cup of sugar. Bake with one crust, in a medium oven and cover with a meringue made of the whites of eggs, a teaspoon of sugar and a few drops of lemon juice. Brown in a quick oven.

Syrup.
By Miss C. F.

Place a cup of brown sugar and two cups of water in a sauce pan and allow to boil until it is the consistency of syrup. Remove from the stove and add five or six drops of vanilla. This is a good substitute for maple syrup.

Prune Whip.
By Miss C. A.

Soak the prunes over night and cook slowly until tender. To one cup of the pulp add a tablespoonful of lemon juice, three-fourths of a cup of sugar and the beaten whites of three eggs. Beat all together until light and frothy, and place in a pudding dish in a pan of hot water in the oven for about ten minutes, and serve immediately, with or without whipped cream.

The editor of this department acknowledges the following recipes, contributor unknown:

French Dressing.

Put into a tablespoon one saltspoon salt, one-half pepperspoon pepper, and fill spoon with oil. Mix well together and pour it over the salad; add two more tablespoons oil, and toss the salad thoroughly; lastly, add one tablespoon sharp vinegar. This will be enough for six people, if used on green salad; for cooked vegetables, use twice the measure.

Breakfast Eggs.

Should never be boiled. A thin shell of the white is made hard and indigestible, while the bulk of the egg is barely warmed through. The following is a better way: Put six into a vessel that will hold two quarts. Fill with boiling water, cover closely and set on stove shelf for seven minutes to cook very soft. Ten minutes for medium; twelve to fifteen minutes for very firm. Crumple a napkin in a hot dish and serve arranged in its folds.

Plain Omelet.

Put four eggs into a bowl with half a teaspoonful of salt, one small saltspoon of pepper; beat them vigorously with a fork, and add four tablespoons milk or cream. Put one teaspoon butter in an omelet pan, shake it over the fire until frothy, turn in the eggs and shake over a hot fire until they are firm; turn onto a dish. To make any kind of a seasoned omelet, spread the seasoning over the egg just before shaking it over the fire.

Scalloped Eggs.

Slice six boiled eggs, season with salt, pepper and some chopped parsley or cheese or onion, according to the taste; cover with white sauce made with stock. Sprinkle with a half cup cracker crumbs lightly browned in butter, and set in a moderate oven ten minutes. Or use one cup of scalded oysters to alternate with the eggs, and cover with a plain cream sauce.

SILVER CAMPINES exclusively, I have two hundred grand young birds bred from my Chicago winners to offer. No old stock to spare. If you want something choice in ckls., puls., trios or pens I can please you. Exhibition birds a specialty. Satisfaction guaranteed or your money refunded. **R. H. Cropper, Nora, Illinois.**

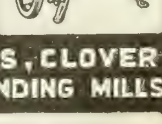
The 3 GREAT EGG MAKERS THAT PAY FOR THEMSELVES IN A YEAR.



CROWN BONE CUTTER $6.50 Has hardened steel knives. Price, like picture, $8.50; for bolting to table, $6.50. For larger sizes see our Book

Unless fed plenty of Freshly Cut Green Bone, with the meat and grissle still sticking to the bones as you get them sweet from the butcher, and Cut Clover, hens can't lay as many eggs as they should. The bone must be freshly cut or it's tainted, and spoils the eggs, and often poisons hens. Clover must be cut into short lengths, or most of it is wasted, and what is eaten is fibry and often clogs the crop. If you don't give hens lots of ground SHELL and GRIT they can't digest properly nor get out of food what they must have to make eggs.

Don't depend on buying cut bone because you can't get it fresh, and dry bone and meat scrap are poor substitutes. The only satisfactory and profitable way is to own these three splendid machines. They 're not expensive, are easy running, not complicated, and built to last a life-time.

GEM CLOVER CUTTER $9 Cuts green or dry clover even and easy. Screw feed & adjustable cutter bar. Blades always square to bar. Price, like picture $9; high legs, $10.

Who Made the Business Possible?

Q. I take half a dozen poultry papers and every now and then I see some reference to "the man who made the poultry business possible." Can you tell me who is meant and something about him? Reader.

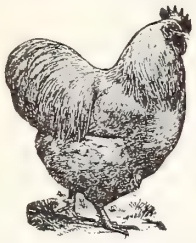
Philadelphia, Pa.

A. We don't know who is meant and we don't know who originated that particular brand of fat-headed conceit. The men who made the poultry business possible lived and died so long ago that history falls us and all we have are our modern breeds of fowl, descended from the flocks of those pre-historic men who first domesticated poultry. There are a good many men in the world today who have helped to make the poultry business what it is; so many we would not attempt to name them, because we might leave out the names of many deserving ones. Those who have done the most are not often those who loudly and persistently proclaim their deeds.

Feather Pulling.

Q. My fowls are almost naked from feather pulling and feather eating. I feed three times a day, allow plenty of food and use 10% beef scrap in their mash. They have a good, roomy house and a small bare yard.

Swampscott, Mass. H. H. C.



A. Feather pulling is a bad habit that results from bad management of the flock. Where fowls are confined in small yards, failure to supply sufficient green food will start feather eating habit quicker than anything else. Stop the hand feeding and use automatic feeders to keep the birds busy. Feed an abundance of fresh raw green food, all they will clean up every day. Not one yarded flock in a hundred gets enough fresh raw green food. Feed cabbage, sprouted oats, waste raw potatoes, apples, mangels or any good clean raw vegetable food that they will eat readily. You will be surprised to note the amount that they will consume. Hens will live and produce eggs on a very limited allowance of green stuff, if otherwise well fed, but they will do better and be in better condition if allowed all the raw greens they want and the hens that have the bulky raw green stuff won't have as many bad habits as those kept on short rations of greens. Also use a little salt for seasoning in your moist or dry mash. Another good way to supply salt is to hang a strip of salt codfish where the birds can pick at it.

Turkeys.

Q. (1) I expect to have this coming season about 12 turkey hens for breeding. Will you please tell me if one gobbler will be sufficient? What is the rule for turkeys?

A. (1) One male is generally sufficient for ten or twelve females.

Q. (2) About a year ago I secured some stock supposed to be pure Mammoth Bronze. This season as many as six pure white turkeys were hatched from eggs from this stock. I have been told that the white turkeys are "sports." Is this correct or is it likely that the stock is not pure? Some of the hens have breast feathers tipped with white, although the gobblers have brilliant bronze plumage on breasts. It seems to me that if the stock were not pure the young turkeys would be mixed in color instead of pure white. There is quite a variation

in the young stock, some being lighter than others, but all are evenly colored and none are blotched. L. H.

Albuquerque, N. M.

A. (2) Male should have bronze breast; females should have edging of white in breast feathers. See Standard of Perfection. The white turkeys are probably sports and not an indication of impure stock.

Ermine Orpingtons Wanted.

Q. (1) Are there any Ermine Orpingtons bred in the United States and who breeds them?

A. (1) Write Wm. Cook & Sons, Box A, Scotch Plains, N. J. Any other breeders please communicate with editor, as correspondent did not sign name.

Q. (2) Are the bulletins published by the Maine Experiment Station for sale and where can I buy them?

A. (2) They are for sale at moderate cost to persons who reside outside the State of Maine. Maine residents can secure them free. Address Director Charles D. Woods, Agricultural Experiment Station, Orono, Maine.

Q. (3) What is the best remedy for a young chicken which seems to be hide bound. O. P. F.

Oshkosh, Wis.

A. (3) Feed all green food and sprouted oats that chicken will eat. Also give chopped raw onion and raw potato. Warm mash of scalded bran containing a little poultry mustard will help.

Worms—Scaly Leg.

Q. I have a Barred Rock cockerel that has a habit of wriggling its neck about and then opens its mouth and yawns like a person. He is very healthy and eats the same as usual.

A. Examine throat and see if piece of dry grass or straw has lodged in gullet. If not, then trouble is probably worms. Let bird fast for 24 hours, allowing only water to drink. Then with syringe introduce the following directly into crop by passing syringe tip down the gullet: Two teaspoonfuls of spirits of turpentine well mixed with two tablespoonfuls of olive oil or sweet oil; give all at one dose. In an hour or so give the bird a rectal injection of a cupful of luke-warm soapsuds.

Q. What is a good cure for scaly leg? J. M.

Carman, O.

A. Get following ointment and apply to the scaly legs daily for three days: Mix fifteen parts of oil of cade with thirty parts each of soft soap and lard; then gradually mix in fifteen parts of sublimed sulphur and ten parts of precipitated chalk. On fourth day scrub legs with hot soapy water. If they do not clean up well, the treatment may be repeated.

Inattentive Males.—Poor Egg Yield.

Q. In early spring of 1912, I bought a trio of White Plymouth Rocks from a reliable breeder. They were nice fowls. From these we raised a small flock of about ten pullets and as many cockerels. Almost every egg hatched. Last January we sent two pens to two local shows and took blue ribbons, as well as red, yellow and pink. The cock won prize as best cock in show and the pullets got first, second, third and fourth in their class. One cockerel got third in one show and

WHAT ONE OF OUR CUSTOMERS DID

First Prize Photo for 1913. Gets 100 Chicks. Raised 50 Very Fine Pullets from 100 W. Orpington Chicks.

Stop 20 1-2, Wickliffe, Ohio, Oct. 8, 1912.

M. Uhl & Co.: I am sending you a few pictures of the 100 W. Orpingtons received of you April 10th. I raised 92, only one died from sickness, the rest from overcrowding. Got 42 cockerels and 50 pullets. They are a fine bunch and I get a great many compliments. Even old chicken raisers said right from the start that they were the best day old chicks they had ever seen. To raise 92 of the 100 was beating their record. It is all in the quality, so I am more than pleased. I sold 35 of the cockerels when two months old for $1.50 each. Photos were taken at about four months old. You will hear from me again in the spring.

MRS. E. C. ELLIOT.

M. UHL & CO. - NEW WASHINGTON, OHIO

was disqualified in another for a feather in his leg.

We bred the old cock bird, then just two years old, to the ten pullets. The pullets were late in starting to lay; began some time in February. Then they laid well and would average seven or eight eggs a day. This they kept up into the summer, gradually falling off until molting. To our surprise these eggs did not hatch at all well and we found that the cock was not as vigorous as he was the previous season. He looked handsome enough and strutted around, but was not doing his duty as a cock. The cockerels were running with the rest of our flock. They, too, though fine looking birds, very seldom served the hens. We had bad hatches and only got about 20% of the chickens we should have had.

The young cockerels we have raised from this bad season are fine looking, as good as the cockerels were last year. We have two cocks left from last year's cockerels. Neither the young nor the old male birds take any notice of the hens.

When the molting season, about September with my flock, came, the cock seemed to get a little sick. We thought nothing of it at first but in a few days he dropped and died. We don't think he was at all sick until a few days before he died.

We are not getting a single egg now (December) from our flock of fine looking hens and pullets and have not had any eggs for about a month or more. Our hens are perhaps a little fat and I know they have a few lice. They have practically free range and are fed twice a day on mixed feeds, corn, milk and table scraps. Have not given much green bone. Fed a little last week that got rotten on hand. This made their bowels a little loose but didn't seem to hurt them otherwise. This is not the season for laying but we should be getting a few eggs. Please tell me why it is that for the past ten months my male birds have cared so little for the hens. Also tell me why I am not getting any eggs. What should we do to remedy this trouble. J. A. W.

Coalburg, W. Va.

A. In the first place you bought line bred show birds that had been bred close and fine to bring out show qualities in greatest degree. Secondly, you gave the birds a pretty severe test of showing; and much time spent in a show room does use up the constitutional vigor of breeding birds. Thirdly, you inbred the birds yourself about as severely as you could. You pruned the constitutional vigor, already strained almost to the limit of skillful breeding, and you overdid the pruning process. It was much as if you had abused a fruit tree by over-trimming and pruning after it had already been girdled to make it fruit better. You can't go on sapping constitutional vigor without getting into trouble unless you introduce new blood to offset the abuse of nature. Fourth, you admit being a bit careless in management and feeding.

You would have been better off to have bred the original trio both seasons and to have purchased other birds to mate with the young stock. Would recommend that you feed your birds as advised in article, "Give the Laying Hen a Chance," in December A. P. J. Don't feed tainted green bone, it is not safe and it does do more injury

than loosen the bowels. Get rid of the lice. Get new and unrelated males to breed to the hens and pullets. Take the best and most promising two males in your present flock and mate them with a few hens purchased from some unrelated flock. If you can afford only a very few new hens from good stock, get a number of cheaper common hens that lay white eggs so you won't be bothered to know which is which. Put both of these males in with same flock of hens, allowing them about twenty females in all. Feed and manage to keep them active and vigorous. Use an open-front house. If birds are healthy and well fed, competition ought to help along the attentive service you are seeking. If the large flock plan is not practical for you:—Give each of the males of your own breeding two or three unrelated females and keep them separated by an open wire partition so that they can view the birds in the other pen.

Poultry House Questions.

Q. (1) Why do you advise no dropping boards in your houses?

A. (1) It saves labor and the house keeps and smells sweeter and is not as damp under the roost as where dropping boards are used. We clean out the houses thoroughly once a year. Five or six times a year we rake out the droppings from beneath the roosts. The hens keep the droppings covered with sand and litter from the floor. No fixed time for raking out. If the droppings get damp and smell or begin to pile up, then they get raked out. If they don't intrude their presence on the house they are let alone. To give droppings boards the necessary attention to keep a house sweet and healthful requires a good deal of costly labor. Under some conditions droppings boards may be useful and desirable.

Q. (2) Where are nests placed in the Woods' house?

A. (2) Dark box nests are used and are hung on side walls.

Q. (3) How can I clean my poultry yards? They contain a great many large stones and rocks and the ground around these gets very dirty. Some of these rocks are 3 to 7 feet in diameter and can't be removed without a considerable outlay of money. Cannot get in to plow on account of rocks.

A. (3) Use a hand plow, a mattock and a spade to keep the soil deeply scratched up around the rocks. After working the soil well, sow oats in spring and summer and rye in fall. Frequent stirring and sprouting with grain will sweeten the soil. If soil gets sour, work in some air slacked lime. Best time to apply lime is in fall or winter.

Q. (4) What do you think of the "Rancocas Unit" system for commercial egg farm flocks? Would it work well with Plymouth Rocks?

A. (4) Large flocks give excellent results if properly housed and cared for. 500 Rocks in flock will yield well, but for both breeding and laying would prefer 100 to 150 females and 5 to 7 males for best results. Large flock colony system is well suited to commercial poultry keeping.

Q. (5) Do ducks have many diseases? Chickens seem to have a good many according to the books on diseases. Some say ducks are easy to keep and easy to raise and some say

SCHULTZ'S BUFF WYANDOTTES ALWAYS WIN WHERE COMPETITION IS KEENEST.

At Hagerstown, Oct., 1913, they won on five entries, 1st Pen, 1st and 2nd Hen, and 4th and 5th Cockerel.

Skylands Farm, Harlo J. Fiske, Mgr., Sterlington, New York

not? I admire Runners most.

A. (5) Ducks like all other animals are subject to diseases. Mismanaged they will give just as much trouble as chickens. If you properly care for fowls or ducks you should not have much trouble with disease. There is no easy path to success with any kind of live stock or anything else. You have to apply yourself to the work, learn to manage it properly and use a reasonable amount of common sense to get results in any kind of business and especially in live stock keeping. Runners are good ducks.

Q. (6) Why are my birds sick? I thought if birds were housed in open-front houses and fed on clean food and a variety, they were seldom sick. I bought my chickens day old from reliable people. Got them in May. Kept in brooders about six weeks. 48 chicks direct from breeder were put in one brooder and when six weeks old I had 39 fine ones to put in colony houses; 54 chicks from a store were given similar treatment but developed "white diarrhoea" and although I used two well advertised remedies all but nine chicks died. I used commercial mixed feeds mostly. I kept the chicks in colony houses with a fair sized run, fed commercial mixed feeds and when run was bare of grass supplied green food. Used disinfectant in water once a week and kept founts clean.

I bought 50 Barred Rock chicks from a farm hatchery the last of June and about the same time 50 more three weeks old chicks from a White Rock breeder. The White Rocks did fine but I lost all but ten of the Barred Rocks with white diarrhoea. What was wrong?

A. (6) The white diarrhoea chicks, if they really had that disease must have come from infected breeding stock. If it was not white diarrhoea the breeding stock may have been lacking in constitutional vigor and possibly there was some mishap during incubation. The White Rocks you had were from open-air bred, open-air reared and open-air housed flocks that possess abundant constitutional vigor, as we know having visited the plant many times. The proprietor attends to the hatching personally and does not allow hired help to run the incubators or to prepare chicks for shipment. That will explain why his chicks gave you good results every time. If there is any lack of constitutional vigor in the parent flock it is pretty certain to show up in late May and June chicks if it is going to develop.

Q. (7) I am having trouble this winter with the birds I raised and am keeping. I have a Tolman house 14x24 ft. In order to keep the birds of different ages separate I have placed a temporary partition lengthways of house. In one half 7x24 ft. I have 7 capons and 18 pullets. Five of the pullets are laying. One was very sick and I killed her and another bird in another house is sick. Some have colds and swelled head and perhaps roup; I don't know what roup is like. The droppings boards in this house are cleaned every day except when the droppings are frozen. I use patent litter and feed on commercial feeds and a grain mixture of wheat, oats and cracked corn fed in litter. Turnips or steamed clover are fed daily. Once a week permanganate of potassium is used in drinking water and once in a while the dropping boards are sprayed

with disinfectant. I had three sick with colds and cured them. A few have had rattling in throat. I have used napcreol in drinking water and have swabbed out noses with dioxogen and water. What do you advise?

Bradford, N. H. W. H. L.

A. (7) It was a mistake to run a partition through the middle of the house. It makes the room too narrow to light and ventilate properly. That and the dirty rocky yards may have helped the development of colds. You don't mention any foul odor from nasal discharge so we do not think that the birds have roup. It is bad practice to dose the drinking water for well fowls. Don't give medicine until there is need for it. It is not advisable to spray the interior of a coop in winter weather, (except under unusual conditions) and in so doing you made the quarters damp, which invited colds. Would get rid of the middle partition. Would clean out and burn all of that litter. On first warm sunny day get all the sunshine and air you can into that house to dry it out. Use automatic feeders for feeding and keep straw litter under these only and use dry sand or earth on balance of floor. If any of the birds still have colds mix two teaspoonfuls of napcreol with a gallon of luke warm water in a small pail and use this solution to dip heads of birds; dip the head with bird's beak held open. Feed an abundance of fresh greens or sprouted oats. After cleaning the dropping boards sprinkle them with dry ground land plaster to take up excess of moisture in boards.

Tonic and Tissue Food.

Q. Have been reading "How to Raise Chicks." Would it be any advantage to use the tonic powder or tissue food mentioned on page 43 in a dry mash, hopper fed, for confined fowl? H. I. H.

Purchase. N. Y.

A. The formula given in book is a good one for a tissue food for breeding or growing fowls to supply needed mineral food. Fowls on wide range do not, as a rule, need it, but it is excellent for fowls in confinement where they can get only what is fed to them. It can be used in dry mash. Should be well mixed in. For adult birds use half a pound in 100 pounds of dry mash. For chickens two to six months old use one-quarter of a pound in 100 pounds of mash.

Housing Turkeys and Geese.

Q. I have read a good many poultry books but failed to find explanation regarding buildings for turkeys, ducks and geese. Would like to know the best sort of buildings for such poultry. J. L.

Leadville, Colo.

A. Open-front houses as used for hens is all right for ducks, but needs no roosts or nests. Simply litter the floor with straw and they will make their own nests in corners. All turkeys require is a reasonably high roost in an open shed. Geese do not care much about being housed. Give them an open front shed or a low shed coop and they will do well enough if floor is kept dry with litter.

How Often Does a Hen Get Broody?

Q. (1) Does a hen sit or get broody every year?

A. (1) Some hens seldom or never

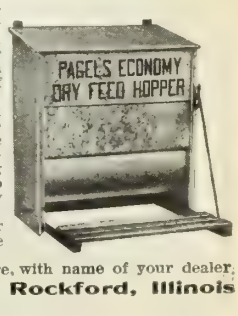
POULTRY INSURANCE

"THE PAGEL POLICY" ON QUALITY GOODS.



Non-Freezing Drinking Fountains, Non-Clog Dry Feed Hoppers, Perfection Chick Fountains, Poultry Regulator and Louse Powders

Our non-freezing fountains are non-freezing without the use of lamps, and by its use your poultry is **"insured"** of pure water before them constantly, at the right temperature the year around. You have no ice to chop, no frozen wattles, no filthy water, no cold, wet fingers, if you use this fountain.

Our Non-clog Dry Feed Hopper, the best feeding device. No wires or screens to injure fowls. Rat, rain and bird-proof. Saves the feed, lessens labor. It's the dry mash constantly before them in a sanitary non-wasting hopper that **"insures"** eggs. It costs less to feed right than it does to feed wrong, thereby **"insuring"** greater profits.

When you buy a quality article you remember the quality for a long time to come. "The Best is always the Cheapest."

Inquire at your dealers, or write direct for prices and descriptive literature, with name of your dealer.

Y., Boston, Chicago, and the greatest shows in America. Write for Circular describing this Wonderful Utility and Beauty Breed.

Sheffield Farm H. B. Hark, Mgr. Poultry Dept. **Glendale, Ohio**

get broody. Some become broody several or many times a season. Plenty of fattening food, little exercise and the nests left full of eggs help to develop broodiness.

Q. (2) How old should chicks be before they roost?

A. (2) It depends upon how rapidly they develop. Usually they will be ready to roost when from 2½ to 3 months old.

Q. (3) What is the best cure for white diarrhoea?

A. (3) Breed only from sound, healthy fowls. White diarrhoea has its beginning in the diseased ovary of the hen that lays the egg used for hatching. The only way to get rid of the disease is to stop using breeding hens that have diseased ovaries. See book, "How to Raise Chicks," obtainable from our Chicago office at 75 cents a copy postpaid.

Good Egg Yield of Large Flocks.

Your editorial in regard to egg records seemed very timely in view of the flood of—well, let us say statistics. Most of them are for a small number of fowls only and where a great record is claimed for a large flock, the conclusion is too often based on the record of a small number of hens taken and multiplied by the total number in the flock.

I thought it might be of interest to you if I sent in some records that have a basis of fact because the daily record of all eggs gathered has been accurately kept. Knowing the men, I have every confidence in the truthfulness of the same. And they have the added value of concerning large units in yarding.

Richardson Bros. of San Gabriel, Cal., placed in one continuous house 1,025 pullets and 25 old hens, making 1,050 in all running in one yard. At the end of the year's laying, from September 1 to September 1, the total number of eggs produced was divided by 1,050 and the result per hen was 166⅔ eggs. You will note there is no allowance for dead hens, but those living made up for those which died.

J. H. Keiffer & Son of Bells, Cal., took 150 early hatched pullets picked from 600, sorting from the flock those moulting late and these 150 running in three yards produced in the next 12 months 201 eggs per hen. You will note this was in some respects the laying of the second year.

In our own experimental work we placed 123 pullets hatched September 2 in one yard. On June 21 these hens had laid 12,319 eggs, or 100 eggs per hen at a little over nine and one-half months of age.

M. A. Schofield.

Gardena Hatchery, Gardena, Cal.

(Note.—We are very glad to have and to publish this report and hope Mr. Schofield will favor us with more information concerning the work with and the yield of large flocks.—Ed.)

Starting a "Fattening Farm."

Q. I am starting what might be called a "fattening farm." My farm consists of a back yard 100x75 feet, with a dozen pens ranged along the northeast fence. These are built against the fence and are 26 inches high in back and 24 inches in front. Have covered all with poultry wire. The back and about half the top are covered with rubberoid roofing. All pens are the same size, 5x5 feet. Are

these properly located and of the right size?

I desire to produce milk fed fryers which I can sell at fancy prices. Please explain the method. Have been told to keep dry mash before them all the time and to feed nothing else but wet mashes, as whole grains would use up too much energy which might be spent in making fat. Is this true?

A great variety of feeds are not obtainable in this town. Here are those I can get and the prices:

Wheat bran	$1.50 per 100 lbs.
Corn	2.00 per 100 lbs.
Cottonseed meal	1.65 per 100 lbs.
Whole oats	1.85 per 100 lbs.
Wheat	2.00 per 100 lbs.
Middlings	1.80 per 100 lbs.
Wheat screenings	1.65 per 100 lbs.
Beef scraps	5.00 per 100 lbs.

Please make me up a good fattening ration. Also give a laying ration for my fowls. All of the fattening stock is bought from range and country grown flocks. Does green cut bone take the place of beef scraps?

A. E. B.

Wixhita Falls, Texas.

A. Not knowing your location and climate we can't say whether your fattening coops are suitable or not. The description does not appeal to us. We would want fattening crates with slat bottoms and set up on legs. Built to be easily movable. Would keep these in an open front shelter that could be sunned easily throughout to keep it clear of fleas and other vermin. Fattening crates are usually made six feet long, sixteen inches wide and twenty inches high; this divided into three compartments by two partitions. Top, bottom and back is slatted lengthways. Front is slatted up and down. Food trough is placed in front. Whole crate sits up on legs at a convenient height. A good ration for milk feeding is to mix 4 parts ground oats (hulls sifted out), 3 parts barley, and one part meat meal. With skim milk make this into wet mash lightly seasoned with salt. Allow the birds water and grit. Feed in trough three times a day the first week. Allow only what they will clean up quickly and then clean the trough. Keep feed trough clean. Feed rather sparingly the first week. Second week feed same, but allow all they will eat twice a day only. Third week give two feedings a day of same mash with a little tallow added. One pound of tallow is enough for 60 chickens. Melt the tallow and make into a paste with meal and add this to the mash mixture. Chickens should be ripe for market in 24 days and should be starved for 36 hours before killing. Crate chickens are popular in some sections, but for our own use we prefer a bird well fatted on a green range. You can crate fat birds on whole grains, with milk given for drink. See article on "Give the Laying Hen a Chance" in December issue for advice on feeding layers.

If you can't get barley, use in its place one part each corn meal, middlings and bran. Don't feed cut bone to fatten stock. Green cut bone if not tainted may be fed your layers in place of more expensive scrap.

56 BREEDS Chickens, Ducks, Geese and Turkeys. Hardy, northern raised, pure bred, of finest plumage. Fowls, eggs and incubators at lowest prices. America's greatest poultry farm. Send 4c for large, fine 19th Annual Catalog and Poultry Book.

DIRECT FROM FACTORY

Silver King, the Wonderful Campine Cock.

There was no entry at the Great Coliseum Show, Chicago, December 12-17, that received more gratuitous advertising than the wonderful Silver Campine cock, Silver King, owned and exhibited by Mr. Frank E. Hering of South Bend, Indiana. This fowl established a record that has probably never been surpassed in any show the size and importance of the last Coliseum show. In 1912 he won the blue ribbon at the Coliseum as the best cock bird exhibited. This year he won the blue ribbon as male in the first old pen of Silver Campines. But another consideration in addition to his individual pre-eminence is the real cause of his fame. Among Mr. Hering's 32 entries were eleven cockerels and pullets sired by Silver King, and of these ten were awarded ribbons. They included first and fourth cockerels, first and second pullets, every bird of the five in the first young pen and the male bird in the second young pen! When one considers that there were 159 Silver Campines exhibited at the Coliseum, probably the largest class in this variety ever shown in the United States, the qualities of Silver King as a sire stand out luminously.

SILVER KING, FIRST PRIZE COCK, CHICAGO, DECEMBER, 1913

This splendid male is the last word in present-day Campine breeding. He has a wonderful eye, a good hackle, splendid station, and the feathers of his back and saddle have the "green sheen" that is at once the despair and the delight of the Campine breeder. In addition he has a tail with sickles that suggest the Leghorn. That he has been able to transmit to his progeny his splendid qualities and markings is shown by the fact that two of his sons—first cockerel and first pen cockerel—are just as fine birds, if not finer, than their father in type and feather markings. Moreover, the first pullet stood out just as prominently as the cockerels, due to her symmetrical barring, her wonderful back and her splendid type. Such poultry artists as Messrs. Sewell, Stahmer and Schilling were enthusiastic in their praise of these birds.

Mr. Hering had eight male birds among the Coliseum Campine winners. In fact, his ribbons numbered more than all his competitors combined. He says that these fowls will be mated for the single purpose of developing his strain along the lines suggested to him by leading poultry judges and poultry artists of the country. Everyone who talked with him at the Coliseum and who examined the various specimens in his exhibit feels certain that he is a valuable acquisition to the ranks of Campine breeders, and that he will be found doing everything that lies in his power to improve his variety.

Among the pleasant features of a talk with him is the remembrance of the frank and cordial credit that he gives to Mr. J. Fred N. Kennedy of Birch Cliff, Ontario, who has served as Mr. Hering's representative in importing Campines from the plant of the Rev. E. Lewis Jones, the great English breeder. It is an evidence of the business courtesy that is coming to exist among our prominent poultrymen to hear Mr. Hering praise Mr. Kennedy for the interest and the manifest good faith shown by him in his business transactions with his star customer. It has done Mr. Kennedy much good; it has made friends for Mr. Hering. Let us have more of such sentiment. It will help the industry.

The "Green Sheen Strain" of Campines are bred on Mr. Hering's plant about one mile west of South Bend, Indiana, where he has as modern an equipment as can be found anywhere in the country. Mr. Harmon Bradshaw, for many years a prominent Leghorn breeder, is manager of the farm. Mr. Leo Brosmer, an authority on color breeding and line breeding, is associated with Mr. Bradshaw. Judging from the interest Mr. Hering has taken in breeding standard poultry during the few years of his activity, and also from his attitude toward competitors and customers, those having business dealings with him will receive the fairest treatment and will be given every consideration within the bounds of reason.

A. P. A. Committee Meeting in Buffalo, November 22.

Forty years after the organization of the American Poultry Association, the special committee appointed at Atlantic City to revise and codify the Constitution met in the city where the association was organized.

Members present: E. B. Thompson, Grant M. Curtis, John H. Robinson, Frank E. Hering, U. R. Fishel and S. T. Campbell. Mr. Reese V. Hicks could not attend and sent recommendations by letter.

The committee worked earnestly and harmoniously for two days and nights.

Mr. John H. Robinson will compile and edit the Constitution. This insures proper construction and perfect diction. The committee will meet again early in March in South Bend, Indiana, to further consider and complete its work. The Constitution as revised will be published in the Bulletin, and presented at the next annual meeting for approval and adoption.

Members of the Association are requested to send the secretary such suggestions or changes for the Constitution as they deem advisable.

S. T. Campbell,
Secretary American Poultry Association, Mansfield, Ohio.

Poultry Notes—1911-1913.

There has recently been issued by the Maine Agricultural Experiment Station a bulletin (No. 216) with the title Poultry Notes 1911-1913. This bulletin is a continuation of the series of bulletins with a similar title which have been issued from time to time in the past. It deals in the main with topics of practical interest and utility to the farmer and poultryman.

The first section of the bulletin discusses the value and preservation of hen manure. Here are given directions for mixing chemicals and absorbents with the fresh poultry manure in such way as best to conserve the fertilizing value of the material, and at the same time put it in the best physical condition for spreading. This is followed by a description with working drawings of a concrete manure shed which has recently been built in connection with the poultry plant at the Maine Station.

In the next section of the bulletin is described a small crematory which has been built in connection with the Station plant to afford a sanitary method of disposing of dead birds and other refuse which is, to a greater or less degree, a menace to the health of the birds on the plant when disposed of in any other way than by burning. The crematory described and pictured, while sufficiently large to take care of the needs of a poultry plant carrying as many as 2,000 birds, is at the same time small enough to be very inexpensive. Next are described some improvements which have been made on the construction of the feed trough used for feeding growing chicks on the range. These improvements are in the direction of saving labor of operation. The next section of the bulletin describes the experience of the Experiment Station in dealing, first, with the natural enemies of poultry, such as hawks, crows, rats, foxes, etc. Following this comes a discussion of the need for and best method of supplying green food to poultry throughout the year.

The final section of the bulletin gives a popular abstract of a piece of technical scientific work carried out in connection with the technical scientific work of the Station. It describes the physiological processes by which the white or albumen of a hen's egg is formed and added to the egg.

A copy of Bulletin 216 will be sent to any resident of Maine upon request to Director Chas. D. Wood, Orono, Maine. To non-residents of Maine the price is 10 cents, which must be sent in coin or other currency. Postage stamps are not accepted.

Pacific Coast Department

Conducted by H. H. Collier, Tacoma, Washington.

THERE is in every state some man who has done just a little more for some industry than anyone else. He is a man that will make many sacrifices in order that the industry that interests him succeeds. When a poultryman can be called the leader in any state, you have said something. The man that can create an interest in poultry to the extent that an exhibition is given, better poultry is bred, and more take up the work, then that man is a benefactor to mankind and a great help to the greatest industry in America. Poultry has lifted more mortgages than most any other crop that is grown in the United States. It has brought more happiness than any calling as far as live stock is concerned. There is no industry in which a man can get started so easily as he can in poultry and no industry is so hard to master when it comes to breeding fowls on a large scale.

The subject of our sketch this month is Elmer Dixon of Oregon City, Oregon. A man that is loved all over the coast where fancy poultry is bred. Mr. Dixon has bred poultry all of his life. He was born in Newark, Ohio and was raised near Galesburg, Illinois. He came to Oregon in 1881. His first love in poultry was White Crested Black Polish which he took as a lad at 14 years of age. He bought English Buff Cochins and bred them for years and from that flock bred White Cochins that came as sports from his Buffs that made a name for Mr. Dixon all over the middle west. He introduced White Wyandottes, Black Javas, Sumatra Games and Silver Campines in the state of Oregon. He bred Barred Rocks for years and that variety has always been his favorite fowl. Recently he joined

ELMER DIXON
Pacific Coast Poultry Judge

the Campine herd of poultrymen and he has a fine flock of that variety at this time.

Mr. Dixon judged his first show at Canton, Illinois, before coming west, since that time he has judged in nearly every hamlet in Washington, Oregon, Idaho, British Columbia and California. He has been a favorite judge here in the coast country for years and he has a reputation for being one of the squarest as well as most accurate poultry judges who ever did work on the Pacific Coast.

Mr. Dixon is one of the old time subscribers to the American Poultry Journal. He first became a reader of the American way back in 1877 and he says that he has read it ever since and missed very few numbers. He is now in the list that recently subscribed for three years and he will be on the list as long as he lives if he keeps his present high opinion of the American.

We have worked in many shows with Mr. Dixon. We both had the honor of being licensed by the American poultry association at the same meeting. At the first election under the new constitution of the American poultry association, Mr. Dixon was a candidate for one of the positions on the executive committee but he failed in the election. Since that time he has supported the writer who was elected two years ago.

To mention poultry in Oregon is to think of Elmer Dixon. He is known to everyone who attends poultry shows and when he is around everything always goes as it should, the right bird wins every time.

greatest in the east, we of the west are wondering what all the trouble is about. Down in the city of Boston the ladies decided that the hens were cheating them. They decided that they must get even with old lady hen by handing her a boycott, which they proceeded to do. They first discovered that there was a large number of eggs in cold storage so they got busy and bought the bunch and sold them on the market for a much lower price than was then ruling. They did this in spite of the fact that they forced to a certain extent the hard working poultryman to take less for his product. The spirit excited in Boston was soon in existance in Chicago and here we find that the cold storage people got rid of all of their eggs and the poor people were able to taste an egg even if it had in some cases been in cold storage for from six months to two years. The spirit that started this movement was a lucky thing for the poultrymen. These women helped the storage men to unload all of their eggs. They made the price of eggs seem low and as a result hundreds ate eggs in Boston and other cities who felt they could not afford them. With thé emptying of the cold storage plant of eggs, came a slump this spring in the poultry business. The man who had hatching eggs for sale found the spring market so low that he could not find buyers for his hatching eggs. Thinking perhaps that the bottom was out of the pure bred poultry business, he in turn sold his eggs on the market, which had a tendency to help lower the price and then he sold his hens in large quantities, which broke the market as far as poultry meat was concerned. The fellow who failed to buy the hatching eggs and the fellow who had them for sale both failed to hatch many pullets during the season of 1913 and as the cold storage plants bucked hot weather in the middle west this summer, the people found themselves eggless this fall and winter. Prices have soared so high that only a very few could eat them and that poultryman who was lucky enough to have early laying pullets got even with that Boston egg party by making them pay dear for breaking the market last spring and winter.

Our women friends, and we all love them, have taken everything in sight, even to votes in Illinois. Out here in Washington we gave them the votes two years ago and it looked for awhile as if they would take possession of everything before they got through, but they woke up. Now the ladies are going to put the people who breed poultry out of business. If you remember they were going to do the same thing to the beef trust. They boycotted meats of all kinds, but if you will look on your monthly meat bill you will find that in spite of that boycott that meat is higher today than it has ever been in the history of America.

Boycotting is a bad word. A word that is un-American and one that should not be used. Boycotting is a two edged sword and generally hits the party that it is not aimed at. In boycotting eggs, the women have only hurt those who make a living from their hens and not the ones that make profit of handling hen fruit.

If the ladies want to get at the right kind of boycott, one that will bring results, let them promise as the Oregon Hotel men did at their annual meeting. Let the ladies agree that under no condition will they ever serve veal on

CARVER'S CUSTOMERS Won in 25 STATES last season

"BE WISE"—BY BUYING WARREN'S AUTOCRATS—S. C. REDS

Why? Because they have the type, color and size. I can sell you a fine Cockerel for Ten Dollars. I won in 1913: 2nd and 3rd Cockerel, Cleveland; 2nd and 4th Pullet, Indianapolis; 1st Pen, Saskatchewan, Canada; 1st Cock, Elkhart; 1st Cockerel, Rochester; 1st Hen, New Orleans. My egg offer for 1914 is great.

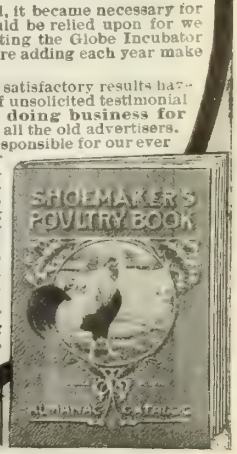
BELL-VISTA FARM -:- -:- MENTOR, OHIO

Poultrymen have confidence in the Globe Incubator because all the value—all the invested money—is put into the machine itself. Send 15c for our valuable descriptive book.

It Is Well Worth While to Consider "the Man Behind"

Before placing your order for an incubator or brooder, it will pay you to get acquainted with the manufacturer. Make sure that you can place your entire confidence in him and his machines. There are too many "dry goods boxes" with cheap tin heating arrangements sold now days for incubators and they are made by people who know very little about the chicken business, artificial incubation and its requirements. They are sold exclusively by "Hurrah advertising" and the manufacturer doesn't care if he ever hears from the customer again.

The Globe Incubators and Brooders



are the best machines on the market and we can prove it.

The most modern machinery and the most skillful workmen that can be found enter into the construction of the Globe Incubator and Brooder, and no machines leave the factory until they pass the most rigid examination, and the great hatches which our customers obtain are the results of our twenty-five years of experience in breeding thoroughbred poultry and making incubators and brooders.

We sell more thoroughbred chickens than any two of the leading advertisers in this country

In order to raise this great number of fowls which we annually sell, it became necessary for us to invent our own machine, one that would do the work and could be relied upon for we had tried all the leading machines manufactured before inventing the Globe Incubator and Brooder. The remarkable improvements which we are adding each year make the Globe the best artificial hatcher on the market today.

WE HAVE SOLD THOUSANDS OF THEM. Such satisfactory results have been obtained from our machines that we have thousands of unsolicited testimonial letters on file open for your inspection. **We have been doing business for over a quarter of a century** and have outlived nearly all the old advertisers. Square dealing and satisfaction to the buyer have been responsible for our ever increasing trade. We want to tell you more about our great factory, our mammoth poultry plant, and our methods of doing business. We have just issued our annual poultry book and guide which has cost us thousands of dollars to produce. It is not a catalog exclusively, but as a text book on poultry breeding in all its branches it is superior to any book issued. It tells about our great poultry farm where we raise and handle thousands of high-grade birds that go to every part of the world each year. But come for yourself and see—we have the goods. Write to any bank or express company in Freeport and they will verify every statement which we have made here. Be sure and send for this book today. Send 15c to cover postage, etc., and if you think that the information on poultry keeping alone, in the book is not worth the money we will cheerfully refund it to you.

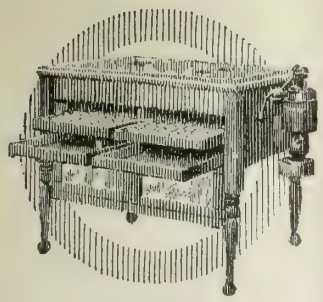
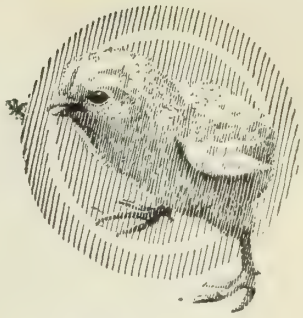
their home table until the price of beef is lower. That they will not eat veal in restaurants or hotels and they will soon find that such a sentiment will grow. The calves that are born will be raised and made into steers and cows and these grown up calves will do more to lower the high prices for meat than all the boycotts on eggs that our good lady friends could ever conjure up.

The poultry show season is now on and there never was a year when things looked more prosperous. The high price of eggs has done a lot to stimulate the industry and people are talking of raising hens who never gave old Biddy a thought before. The interest shown this year in the poultry exhibitions has been one to make all the fanfanciers take up a renewed courage. The big Oakland show has done much to revive the faith in California. At the recent show held in that city there was 3,200 entries. Sixteen hundred chickens and the same number of pigeons and pet stock. San Jose pulled off a great show and the interest was larger than for years. The success of the Oakland show might be credited to Charles G. Hinds, their secretary, who is one of the hardest workers for good poultry in California. It is understood that Charlie has quite a bunch of fanciers back of him for the position of superintendent of the Panama-Pacific exposition poultry show that will be held in San Francisco in 1915.



The great show so far held in the Northwest was that at Portland. This was the best attended poultry show ever held anywhere in this section. One department store purchased ten thousand tickets and gave them away to their customers, but this was not the only attendance, as the money taken on the gate was the largest in the history of poultry shows in Portland. There were all kinds of quality in the Portland show. The awards were placed by George D. Holden of Minnesota, W. M. Coats of British Columbia and Oscar Nelson of Idaho. Mr. Holden, who judges many shows in the middle west and here on the coast, said that the quality of birds shown at Portland could have gone most anywhere and been in the winnings.

So far I have judged one show in British Columbia and one in Washington, and I found the interest in a much better condition than it was last season, and I look for a big revival in the poultry industry during the year of 1914. This week I place the awards at Vancouver, Wash. Here I have a show not so large in numbers, but a very good little show in quality. The spirit shown here is along the line of more and better poultry. Everyone seems to be optimistic as to the future of the poultry industry.



It is always a pleasure to judge in British Columbia. You meet a lot of old-timers from the old country. The Englishman is a good fancier and as a rule a cheerful loser and not a boastful winner. I judged at Vernon, British Columbia, the last week in November. I was surprised to find that many of them were already taking the American Poultry Journal; in fact, the American seemed to be the most popular poultry paper in that section of the country.

WHAT HENS NEED

Feed CRYS-CO, 99% Pure Carbonate of Lime. a petrified shell grit. Hard, sharp and cubical, better than oyster shells, need no other grit, better results, cost 1c per pound. Ask your dealer, write for booklet.
W. A. NEUBITZ & CO., St. Louis, Mo.

Your Grandfather Read It
Your Father Read It
Are YOU Reading It?

The Diary of
A COMMERCIAL HEN

First the breeders, then the egg, then the chicken growing into a hen and laying eggs for market—this is the story of the commercial poultryman's flock. Like a moving picture it will be unfolded to you week by week in this series of articles—always the same flock, till you will almost get to know the birds by name. All the difficulties of breeding, hatching, brooding, rearing and feeding for eggs will be told in words and pictures, and also how these troubles were met. It saves you a weekly visit to the farm of a big, successful egg farmer. The first article will be published in January in *The Country Gentleman.*

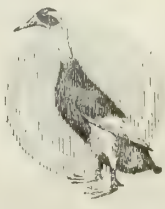
THE BIGGEST PROFIT PAYER IN THE COUNTRY

IS THE LITTLE FARM HEN. She turns out a cash crop worth $350,000,000 at the lowest cost. She pays the grocery bill and keeps ready money in the family purse. Better breeding, feed and care will double the poultry income of the average farm. The utility farm fowl is no longer merely an ideal; every farmer may grow it if he will follow the system of Doubling Farm Poultry Profits, which is the subject of a series of articles in *The Country Gentleman.*

THE MAN BEHIND THE FARM

If you had the money and time wouldn't it help your farm if you traveled about the country, looking at the best farms of their kind in the United States? We propose not only to bring the best farms to you, but to bring to you the MEN behind the best farms and let them tell you the secrets of their successes. The Best Farms I Know is a series of articles written by men who do know. This one series is worth more than the $1.50 (less than three cents a week) you pay for *The Country Gentleman.*

"LOOK BEYOND THE END OF YOUR NOSE"



grandfather used to say. A big Florida fruit grower remarked that he had to go to California to learn that he had been wrong for twenty years. So the cattle growers of Montana get hints from Texas; the dairymen learn how to coöperate from the fruit growers. Here's where the national-farm-weekly idea comes in. If you want to get your long-distance lessons in money-making methods without spending carfare, look beyond the end of your nose and get the national-farm-weekly habit; in other words read *The Country Gentleman.*

THE MARKETING END OF THE FARM BUSINESS—
getting the profit—is the keynote of

The COUNTRY GENTLEMAN

The National Farm Weekly

Five Cents the Copy, of all Newsdealers. $1.50 the Year, by Mail.

THE CURTIS PUBLISHING COMPANY, INDEPENDENCE SQUARE, PHILADELPHIA, PA.

Current News of the Poultry World

by J. F. Shureman

Commencing with the first of January, all live poultry shipped in Wisconsin must be confined in coops the tops of which are covered by wire screen with mesh not exceeding one inch square, to prevent the fowls' getting their heads through the tops of the coops.

The Missouri State Poultry Board is planning to establish at least three co-operative egg-marketing associations in Missouri, as an experiment. One will be located in the southern part of the state, one in the central part, and the third in the northern part. It is not the intention to eliminate any of the dealers or commission men who ordinarily would handle the eggs, but to educate the farmers to produce better eggs at less cost, so that they can make their increased profits at home. If the dealers do not have to figure on a 10 or 15 per cent loss from bad eggs, they will gladly increase the price. In the course of time the egg-marketing feature may be added.

Word comes from Switzerland that Madame Paderewski, wife of the famous Polish pianist, and who several years ago paid an American breeder $7,500 for six White Orpingtons, is in love with the poultry business and spends much of her time with her feathered pets. She has more than a bushel of ribbons, won at the leading European shows during the last few years. She has one of the finest poultry farms in the world, in charge of an English poultryman.

Dr. G. W. McCaskey, a nerve specialist in a Fort Wayne (Ind.) hospital, has purchased a 30-acre estate and handsome home on the Biloxi river, near Woolmarket, La., and will establish a poultry farm thereon with his son, G. E. McCaskey, as manager. The doctor expects to spend six months of each year at this farm and the other six months in Fort Wayne.

A disease—declared by some to be limberneck—is playing havoc with the poultry flocks in Southern Indiana. So prevalent has the disease become that the farmers and poultry breeders have appealed to Congressman Lieb for government investigation.

The first high school in Kansas, and possibly the first in the United States, to install a poultry farm in connection with the school, is the Reno County High School at Hutchinson, Kans. An up-to-date poultry plant has been installed, including all the modern apparatus and equipment, on a tract of land of several acres, and a complete course in poultry culture has been added to the curriculum of the school. Prof. L. C. Christie is the instructor.

Joseph Blase, of St. Louis, was a little shy of exhibition birds and the annual show of the St. Louis Poultry, Pigeon and Pet Stock Association was about to be held. Joseph was determined to show some birds, and being a resourceful sort of chap, he went down on Third street in St. Louis and bought a half dozen birds from a commission firm—market poultry that had been shipped in. He entered the birds at the St. Louis show and the judge pinned a blue ribbon on the cockerel from Third street, which was a White Plymouth Rock. Blase paid $1.50 for the bird and before the show closed he refused an offer of $50 for the prize winner.

The third international egg-laying contest began at Missouri State Poultry Experiment Station at Mountain Grove, Mo., on December 1, with more than 1,000 entries, including hens from all parts of the United States, as well

ROSE AND SINGLE COMB REDS

We have won more prizes in the last three years, in the largest shows of the country, than any other exhibitor. This is not hot air but facts and is easily proven. We are in a position to furnish stock for any show, large or small and are offering some bargains for quick sales. If you want to improve your flocks, our blood lines will do it. If you want to win, we can help you. Our beautiful catalog of 64 pages, printed in three colors, contains many articles on raising and caring for poultry. It will be sent for 20 cents in cash or stamps. We are the largest breeders of Rhode Island Reds in the world, and if you are in need of anything, come to headquarters.

as a number of foreign countries. The most interesting of the containers in which hens arrived from abroad were those of the New Zealand entries. These hens, weighing twenty pounds, came over in a miniature poultry house weighing 300 pounds.

Among the freak entries at the recent St. Louis poultry show was a trio of birds belonging to C. F. Craig, of Florissant, Mo. The male was a common white rooster, the female was a white guinea, and the chick, the offspring of the above mating, looked like a young turkey, but made the petrack call of the guinea. Craig raised two of these freak chicks, but a dog killed one. Who could blame the dog?

The entries at the recent Crystal Palace show in London exceeded all former records and established a new world's record. The poultry entries numbered 7,525. Orpingtons led with 1,000 entries, Wyandottes being second with 795 entries. There were 250 Rhode Island Reds, 209 Plymouth Rocks, 208 Leghorns, 221 Minorcas, and 140 Campines. There were entries from America, Belgium, France, Germany and Holland, and the prize list reached the high figure of over $25,000.

Frank Munger, the well-known poultryman of DeKalb, Ill., sent a 44-pound turkey to Marvin Hughitt, the Northwestern railroad magnate, for the latter's Thanksgiving dinner. Didn't Frank know that railroad passes are tabooed after January 1?

Purdue University (Indiana) has secured the services of a poultry specialist from the department of poultry at Washington, D. C., to assist in the work at the university. His services are available to all Indiana farmers who may have fowls that have disease or who have other poultry troubles. Diagnosis is free.

What do you know about this? It is reported that the "champion" of the recent St. Louis show was a Rhode Island Red cockerel that the judge cut only two points! The owner is said to have refused an offer of $300 for the bird.

Early in December, Bradley Bros., the well-known poultry breeders of Lee, Mass., made three foreign shipments of poultry within a week—one to Japan, one to Moscow, Russia, and one to British South America.

During the past two years, "Miss Purdue," a White Leghorn owned at Purdue University, Lafayette, Ind., has laid 443 eggs, weighing 41.5 pounds. The hen weighs only three and one-half pounds and in two years has produced nearly twelve times her weight in eggs. It cost $1.93 to feed her for the two years, and the value of her eggs at market price in Lafayette was $10.11. If a fellow had a flock of 1,000 hens like "Miss Purdue"—but what's the use?

Colorado consumes $8,000,000 worth of poultry annually, while only one-half of this amount is raised in the state. It is up to the Colorado poultrymen to get busy.

So valuable does J. J. Klein, of Macon, Ill., consider some of his chickens that he has had them insured. "Julius" says it is a little expensive, but he cannot afford to do without it.

A drove of geese numbering 2,400 was driven into Glasgow, Ky., one day recently, to be shipped to Mansfield, Ill., there to be fattened and shipped to the eastern markets. The geese were driven across the country about forty-five miles, several days being required for the trip.

A bulletin just issued by W. J. Swindlehurst, commissioner of the department of labor and industry of Montana, shows that poultry to the value of $1,500,000 has been imported into Montana during the past twelve months, while 150,000 cases of eggs, 30 dozen to the case, and valued at $1,350,000, have been imported, making a total of $2,850,000 that is sent out of the state annually for poultry products.

New York City receives more live poultry annually than all the rest of the cities in the Union together. A con-

U. R. FISHEL'S AD in this issue will interest you. Read it.

KAUP, QUALITY BUFF ORPINGTONS

YOUR SHOW BIRDS ARE READY NOW TO WIN FOR YOU. Are you ready to send for them to be shipped in the pink of condition, just before your show, prepaid?
My 1913 fully illustrated 36 page catalog is the finest published in Buff Orpingtons and is called the "Buff Orpington Guide Book" because it guides the way to satisfaction and shows why I HAVEN'T A SINGLE DISSATISFIED CUSTOMER IN THE WHOLE WORLD. Does this mean anything to you? My trapnested Buff Orpingtons are the grandest fowl on Earth because they are largest in size, beautiful golden color that always stays clean and lay the most eggs in the Winter.
For exhibition I have that low blocky type, sound even golden color and over standard in weight. Hundreds of cocks, hens, cockerels and pullets for sale in singles, pairs, trios, pens and flocks. The above mentioned Buff Orpington Guide Book tells all. Send for your copy now—you will be delighted with it. Address

I have hundreds of yearling hens for sale for from $2 per head up, and the grandest lot of Exhibition and breeding cockerels ever bred.
Remember that you cannot win without my strain. Mating list free.
D. W. YOUNG - - - - MONROE, NEW YORK

servative estimate of the total receipts of live poultry for 1913 is 6,000 cars, valued at $16,000,000. The receipts of dressed poultry are several times this amount. The average price for 1913 was 16 cents per pound, live weight.

A movement is on foot to merge the St. Paul and Minneapolis poultry associations under the name of "The Minnesota State Breeders' Association." If the amalgamation is perfected, it will make one of the strongest poultry associations in the country.

The election of officers for the Illinois State Branch of the American Poultry Association resulted as follows: President, D. E. Hale, Chicago; first vice-president, J. A. Leland, Springfield; second vice-president, J. J. Klein, Macon; third vice-president, J. F. Schureman, Geneseo; secretary and treasurer, Theo. S. McCoy, Golconda; executive board: Harry Shutts, Danville; G. H. Woolington, Monticello, and E. M. Whitney, Chicago; finance committee: O. L. McCord, Peoria; J. M. Rapp, LaMoille, and Theo. Bates, Pittsfield. The next annual meeting will be held in Springfield, January 6 to 10.

PROFITABLE POULTRY.

TO obtain an attractive margin between cost and returns without wrong, is the goal of honest business. In other words, to render service for which men who know values are glad to pay a fair price is the high standard of economic ethics.

The production of choice food stuff is demanding the attention of the consumer as well as those who guard the sources of supplies and develop skill necessary to keep pace with the intensly increasing demand.

A careful survey of the field reveals the fact that very great supplies of wholesome food come from skillful handling of poultry, and that the hen is far in advance of all the featherd tribe in her service to mankind. Since the time of the Pharaos and long before, "Biddy" has more or less patiently furnished the rarest bits for the tables of poor and rich with entire impartiality. She lays no better eggs for one than for the other.

Not every family can be the owner of a cow, or even of a pig, but where population is not too dense, wherever the luxury of a back yard maybe enjoyed, a few hens may be kept, and made to contribute liberally to the table supplies, and that of the best, without adding materially to the general expense.

The question arises: What class of hens have proven most profitable? All poultry keepers of experience agree that the cost of raising to maturity for their flesh so nearly reaches the returns that the actual profit is very small. The real point of contention is: What variety will earn most after maturity? For many centuries the Mediterranean have led the bird world in the per capita egg production, small amount of food consumed, and price of product.

One more inquiry. Which of the Mediterranean excels all others? Three points of excellence are demanded: Early maturity, that income may be reached with the least delay; strong constitution that winter rigors shall not materially check the production of eggs when prices are best; eggs of good size and best quality. Each of these requirements are fully met by Anconas. Many of these pullets begin laying at the age of four and one-half months. The winter checks their laying very little, frequently, not at all. Their eggs are large, weigh on an average of thirty ounces, and are of the best quality. These points put this variety far in the lead as a profitable investment.

The original home of the Ancona was in Ancona, Italy. They were introduced into England in the year of 1852, and to America about 1890. The origin of the Ancona is not definitely known. They probably originated from a cross between the black Valdano and the common fowl of Italy. Some believe they were evolved through years of breeding by the pheasants of Ancona.

Their feathers are black with a white tip. The white portion should be clear and distinct. The defective points most common have been white feathers in tail and wings with light under color. By scientific breeding, these objections have been greatly reduced in many of the better flocks. In fact, splendid birds with dark under color, dark wings and tail are becoming quite common at the larger shows. The ideal bird has every fifth feather tipped with white, which makes it a very attractive bird.

The shape of the Ancona resembles that of the Leghorn although they have a distinct type of their own. They are little larger in size. In some sections there is a tendency to breed them too large. It has been the experience of some of the prominent breeders that the medium size Ancona makes the best layer, and since the profit is in the eggs, we prefer not to breed them too heavy.

H. Cecil Sheppard.
Berea, Ohio.

A poultry department has been established at the Ohio State Institution for the Deaf at Columbus, Ohio, and a course of study in poultry culture has been added to the curriculum of the institution. Among other innovations at the plant that is just completed are bubbling drinking fountains for the chickens.

Carver's Red Farms, Seville, Ohio, Win at the Greater Buffalo Show

American Poultry Association

The poultry industry of this country amounts in the aggregate to one billion dollars per annum. These figures paralize the imagination.

The American Poultry Association is the largest live stock organization in the world and its membership is increasing with tremendous rapidity. On its roll are the leading breeders and representative poultrymen of Canada and every state in the union.

Every breeder, fancier, man and woman in the United States and Canada who is interested in poultry of any kind should join this great organization.

The American Standard of Perfection

The Standard of Perfection is the official guide for the breeding, mating and judging of all poultry. It gives a close and detailed description of every breed and variety of chickens, ducks, geese and turkeys, with illustrations from living models. This book is published by the American Poultry Association at an enormous expense and is the American authority. You can not raise poultry successfully without this American Standard of Perfection. Prices postpaid from the publishers of this paper. Cloth binding, $2; leather binding, $2.50. Send all orders to American Poultry Journal, 542 So. Dearborn St., Chicago, Ill.

On its shoulders rest this gigantic Billion-Dollar Industry.

Your interests will be promoted and safeguarded. You may compete for the association diplomas and gold and silver medals at the shows, and be entitled to all the help that honest organized effort can give you.

You will have a voice in shaping the course and policy of the association. Making it recognized by nations and governments. Your name should be one of the thousands of the honored members of this association. We urge you to write immediately for information and application blank. Address

E. B. THOMPSON, President, Amenia, New York
S. T. CAMPBELL, Secretary

American Poultry Association, Mansfield, Ohio

FANCIERS IDEALS NO. 2

Orpington Shape as Seen by the Leading Fanciers and Judges

By LOUIS A. STAHMER

IT has been said that nearly every idea or thought, every action and every invention has been thought of before by someone with the possible exception of problems in higher mathematics, for the reason that the number of thinkers are limited in this particular science. In the poultry business there is no doubt that every cross has been made and every breed been produced before by someone, somewhere. The breeding of fancy poultry goes back hundreds of years, and as it is the natural desire of a fancier to produce an ideal or originate some new variety, this statement can be accepted with reasonable truth. By proper selection fowls of any shape and any color within the limits of the species can be made. If it is true that all the different varieties of poultry have descended from the original Jungle Fowl, then there is no such thing as a different *breed* of poultry—we are merely breeding varieties of the Jungle Fowl.

Poultry is raised, and will continue to be raised, primarily and almost exclusively for eggs and meat, and, by proper selection and scientific mating, the breeder develops his variety along the lines he desires. The Orpingtons, as originated by Wm. Cook, Kent, Orpington, England, possess utility as well as beauty qualities to a greater extent perhaps than any other variety (at least the Orpington breeders say so) and the ever-increasing number bred each year and exhibited at the fairs and shows seems to bear out their statement. The birds shown this year differ greatly in shape from those imported ten or twelve years ago, and the birds as seen nowadays represent distinctly the type that is desired by the American fanciers, and the old "U," or old English, type is but rarely seen now. It is true that there seems to be a greater difference of opinion among judges and breeders regarding standard Orpington type than there is about many other breeds, and to determine the shape that is desired and if possible instruct Orpington breeders and judges, this article has been written.

IDEALIZED COMPOSITE PHOTOGRAPH OF PRIZE WINNING ORPINGTONS

The above illustration shows how the birds appeared on the blueprints that were sent out to one hundred breeders and judges of this variety. They were asked to mark directly on the print with a pencil the changes they desired in order to make them come up to their ideal. Their criticisms were entered on a score card and whenever 10 per cent desired a change in a particular section we complied with their request and the finished illustration on page 4 is the result.

The finished illustration on page 4 of this supplement shows perhaps better the shape that is wanted in this breed than a mere description of same. In our December issue we explained how we obtained our criticisms on the White Rocks and so satisfactory has been the method that we shall use it on all the different breeds in the future. A great many compliments have been received on this drawing and the criticisms did not affect the shape to a great extent, as will be noted by comparing the large illustration with the picture on this page. The criticisms received on the male were as follows: Back longer, 4; back too straight, 1; more space between saddle and hackle, 1; wattles too large, 7; wattles too narrow, 1; comb spikes too sharp and long, 5; beak stronger and more curved, 3; male head (skull) larger, 3; tail lower, 4; tail fuller and larger, 3; tail smaller, 2; carry tail higher, 1; breast too full, 5; make breast fuller, 3; keel larger, 1; keel too large, 2; shanks too short, 11; fluff too small, 4; fluff too large, 4; and two criticisms bordering on the extreme.

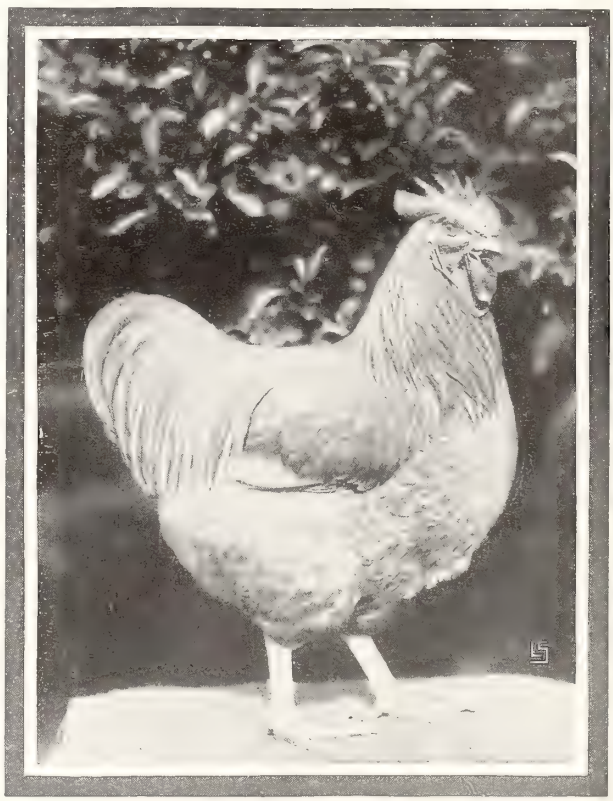
The criticisms on the female were as follows: Back shorter, 1; back longer, 2; angle of back too high, 1; more upward angle of back from neck to tail, 1; make head larger, 5; neck too snaky and small, 4; neck too short, 1; neck too large, 1; spread tail more, 1; make tail fuller and larger, 1; carry tail higher, 1; breast too prominent, 6; keel larger, 1; keel too large, 4; shanks too short, 2; right foot is too far forward, 2; show thigh more, 1; fluff too large, 2; body too deep from back to keel, 1; body not deep enough, 2.

We have tried to carry out these criticisms on the finished drawings as near as it is possible, and invite further criticisms from every Orpington fancier in the country.

The American Standard of Perfection recognizes three varieties of Orpingtons, the Buff, Black and White. Other varieties bred are the Blue, Spangled, Columbian, Partridge, Red, and Jubilee. They all have their admirers and there is no doubt that some of these varieties will be admitted sooner or later. The Blue, Partridge, and Columbian especially are really a handsome variety

BUFF ORPINGTONS AS I KNOW THEM

By A. E. MARTZ, ARCADIA, INDIANA



IF I were an artist in coining beautiful phrases, epigrams, double-jointed alliterations and all those figures of speech the trained orator uses as a vehicle of entertainment to display his histrionic art or toy with them like the finished writer to carry the attention of his reader, I would tell a Buff Orpington story that would be a treatise on the variety and a text book for the breed, that would not be revised even for our children's children.

But I have no such power, no olive oil skin to edit or to vaseline the ragged edge of my sentences, but they come to you just as the rough, blunt chips fly from the woodman's axe. I could not mount the lecture platform and by vehement voice, windmill jesticulations, reach into the rarefied ozone of the ethereal region and with one broad swipe produce a cyclone on the moon; then walk calmly to the opposite corner of the stage, recompose and without tip or warning, pierce the sky with my handy left, barely missing Mars in its wondrous flight, snatching the ring from Saturn and tossing it far beyond the realms of the universe. It is a rare gift to be able to do these things, but it will never come to me. A multiplicity of words that rattle and jingle may be entertaining, but not always convincing.

I did not invent or originate Buff Orpingtons; it was enough that some improvement, such as bungalow shape, Italian color and heavy laying, was left to me. Orpingtons ten years ago compared with our 1914 models would be as a sore-eyed kitten to a Bengal tiger, cabbage leaves to the finest perique, a hobby horse to a gallant charger, an Irish buggy to a traction car, Fulton's Clermont to the Imperator—there has been big doin's in this improvement game and the limit has not been reached.

Buff Orpingtons have the quality to supersede all other breeds or varieties as a farmer's fowl when its many sided utility merits are generally known.

Reason No. 1: Its immense size, featherless shanks, vigor, rapid growth and quick maturity.

A crackerjack young Buff Orpington cockerel photographed a year ago this summer. The beautiful type which is already visible in this young specimen is the result of scientific mating and an endorsement of Mr. Martz's skill.

Reason No. 2: Its table qualities—sweet, juicy and more meat than any other bird of given weight. I mean by this—kill a five-pound Buff Orpington pullet, dress and roast it, and you can pick off more ounces of meat than any other breed of equal weight.

Reason No. 3: The best layers, especially in winter, and color that pleases more people than any other shade.

If weight, flavor, quality of meat and plenty of eggs in January do not appeal to the farmer's wife, then I am mistaken and the Buff Orpingtons will not supplant other breeds as the barnyard fowl, but these things do interest her, and all she needs is to be in possession of these facts, give them a trial and the work is accomplished.

If you are not breeding Orpingtons and are satisfied with the variety you have, think there is none better, are having a profitable business in the sale of stock and eggs, and like what you have and think they are the best "what is," my advice would be—make no change, you are doing well enough, but push your variety to the limit by advertising every good quality they possess.

If you are not getting the business you should, inquiries for stock coming in slowly, eggs almost out of demand, advertising bills hard to pay, quit 'em, take up the popular Buff Orpingtons and behold the change—business will pick up, profits increase, and a bird that will give you the widest range for your fancy and the best utility fowl known to the Standard.

I have raised Buff Orpingtons for many years and have discovered quite a few characteristics of the breed. Nothing has been more interesting to me than to mate them properly and watch them develop from the egg to the matured specimen. I have found my method of keeping eggs for hatching to give perfect satisfaction. It may perhaps interest a few of the readers, so here it goes.

Many people have the mistaken notion that an egg saved for hatching must be rolled over every day and kept in a warm place. An egg should never be disturbed after it is gathered from the nest until it goes into the incubator, but that egg must not be over twenty days old to get maximum results in percentage hatched, vigor and stamina to live. If the egg is kept in a dry egg cellar where the temperature remains almost stationary at 50 degrees Fahrenheit, buried little end downward in dry fluffy wheat bran at a sufficient depth that the air chamber only is exposed, you will have a perfect system, all trouble of turning, consequent breakage and danger of addling before incubation, eliminated. The air chamber in every normal egg is at the big end and here we find the shell quite porous. Why not place the egg, then, little end downward in some good non-conductor of heat or cold that every air chamber be exposed to the atmosphere so the embryo chick can get the oxygen it requires through this porous or ventilating part of the shell? This is no roof garden philosophy but actual results obtained by comparative tests with eggs turned daily and set when five, ten, fifteen and twenty days old with nothing in favor of the old side bar plan of rolling and tumbling the eggs.

This is an ideal plan, especially with eggs laid in winter, but your cellar must not be sensitive to outside changes in temperature or artificial heat must be supplied. We have a small gas burner that we put busy if the thermometer threatens to go below forty-five, which soon chases it back to fifty degrees. This is no new feature with us; we have used this plan for years, both winter and summer, and find it a safe and valuable practice when holding eggs for hatching.

In conclusion I wish to say that there is no other variety of fowl whether large or small that will surpass the well-bred and well raised Buff Orpington for egg production from one year's end to the other. You will notice I said well-bred and well raised, because I am positive that the poorly raised and poorly bred specimen of any variety will not pay its owner for one-half of its trouble, and it will not pay to raise birds at all if proper attention cannot be given to them.

There is no more careful breeder in the United States than A. E. Martz, of Arcadia, Ind. In fact, when it comes to breeding and producing Buff Orpingtons by the thousands, of a type that is as near the Standard as this breed has been produced, we believe he stands supreme. His birds are called the "fashion plate" strain, and that they are well worthy of this title the above illustration will bear out his statement and the thousands of birds and eggs sent out to all parts of the world are further proof.- L. A. Stahme.

The above illustration, painted by Louis A. Stahmer, from a composite photograph of prize winners after criticisms of leading judges and Orpington breeders of this country. The picture shows the type that is desired in the ideal and can be accepted as a guide by the amateur as well as the established breeder.

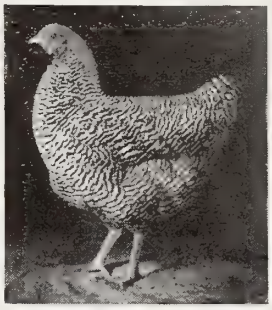
WHITE PLYMOUTH ROCK COCKEREL
HEADING FIRST PRIZE YOUNG PEN CHICAGO, DEC 1913
BRED, OWNED AND SHOWN BY A W HALBACH WATERFORD, WIS

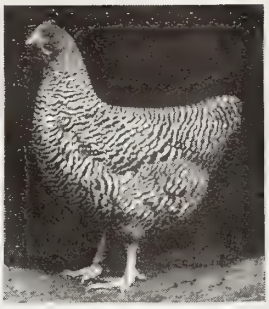
The mere mentioning of first class White Plymouth Rocks brings immediately the name of H. W. Halbach, of Waterford, Wis., in connection with same. There's a reason. He has been at it so long producing "stay white" prize winners that it seems to be second nature with him, and his great winning at the recent Chicago show is merely a repetition of his former successes. The above illustration made from an unretouched photograph of the cockerel heading the first prize young pen shows quality and standard requirements all the way through, and his winning of 1, 2, 3, 4 cock, 1, 2, 3, 4 cockerel, 1, 2, 3, 4 hen, 1, 2, 4 pullet, 1, 2, 3 old pen, 1, 2, 3 young pen stamp Halbach as a breeder "par excellence" of this variety of Plymouth Rocks. L. A. Stahmer.

Unretouched picture of first prize White Orpington pullet at the recent Chicago show. An ideal specimen of the breed, bred and owned by Mrs. J. H. Harnly, Zion City, Ill. L. A. S.

Unretouched picture of second prize Barred Rock pullet at the recent Chicago show. A bird of unusual quality and type. Bred and owned by Luther J. Hall, Kenney, Ill. L. A. S.

H. Cecil Sheppard's, Berea, Ohio, Anconas are rapidly making a name for themselves that entitles them to be classed among the world's best. The above illustration shows the fine type and color that is so much desired in this breed, and of which Mr. Sheppard has undoubtedly the greatest number in this country. His recent winning at the great Cleveland show added to those of Madison Square Garden gives him an enviable string of victories. His catalog is a text book on the breed and is sent free. L. A. S.





Geo. Rudy, of Mattoon, Ill., and his White Wyandottes are world famous. He has given the name of "Perfection" to his strain. How well it fits his birds can be seen in the above illustration made directly from an absolute untouched photograph of one of his birds selected from his beautiful exhibition of fifty birds at the recent Chicago show where Mr. Rudy's exhibit was the center of attraction. Being a stockholder of the great mid-west show he has not been able to exhibit in competition, but the great record of his cock bird "Perfection" that won 14 firsts at 14 shows and the magnificent show record of "Princess Louise," that wonderful female, will long be remembered. His art catalog is well worth sending for. L. A. Stahmer.

When it comes to producing eggs in large numbers, they are in a class by themselves. Midlothian Farms make a specialty of trap-nested, bred-to-lay poultry, and the above are only a few of a large number of birds with high egg records. Write for their catalog.

The Great Chicago Coliseum Show

Held December 12-17, 1913—The Best and Most Successful Show Ever Held in Chicago—Attendance Large

By J. C. Johnston and Leo Brosmer

THE 1913 Chicago Poultry Show has passed into history. The Coliseum was thronged with keenly interested spectators day after day. The weather was in a delightful mood, affording a mildness of temperature altogether abnormal in this latitude, and ending the show with a seasonable clearness and crispness.

The unusual support lent by the city press, the phenomenal fall weather, the necessity, profit and pleasure of poultry raising, all united to make the last show one of the most impressive and convincing demonstrations of the magnitude of the poultry industry.

The appreciative patronage of the public and various exhibits of the breeders' art places the last Coliseum show unsurpassed in its average strength by any preceding show. And though a stripling in its five years of existence it is a mature giant in stature and deeds.

Many of the classes were agreeable surprises in quality and quantity. On the whole, the judging was done intelligently, consistently and artistically. The exhibitors are indebted to the officials for their skillful and satisfying service.

International in character, our Northern neighbors were active contenders in the prize list. Creditable prizes will be carried into nearly every section of our country. Leghorns from California, Barred Rocks from Massachusetts and other varieties from the Southland were received by the Central-West exhibitors with emphatically expressed appreciation.

Good fellowship entered materially into the merry hum which arose at the meeting and departure of the poultrymen. Congregated in little groups could be found anxious beginners listening to the entertaining instruction of some of the world's master-molders of animal form. A true helpful spirit seemed to bring these men of repute in close touch to the needs of the less experienced.

When will our great cosmopolitan poultry shows provide practical demonstrations in poultry culture for the urban people? The eye rather than the ear is the organ best adapted for the acquisition of knowledge. Why not show rather than tell how to mix rations for day-old, month-old, and year-old chickens? Demonstrations attract and hold crowds where lectures fail. Demonstrations are easily assimilated by people of ordinary education. Demonstrations are convincing to perplexed poultry raisers, rouse interest in the hearts of the uninitiated and are helpful to all. Demonstrations preach the gospel of better poultry, spread the discoveries of the new aviculture, encourage country living, foster a love of the outdoors, aid in cheaper production and distribution of poultry products.

OVERHEARD AT THE SHOW.

Deacon Hopkins: "Well, I swan, I gave a feller five dollars on the sidewalk in front of the building and he said he would fix it that my rooster got first prize and here he was disqualified and me paying nigh onto 75c for a setting of eggs to a feller that Theo. Hewes, the feller that runs this show, recommended to me."

Zeke the sheriff: "Yes, I believe that guy is crooked. Just go down one of the aisles here and you will find five or six roosters without any tails at all and he give them first prize. He said they were Rumpless."

It is not necessary that the demonstrator need be a craftsman in the use of figurative language and harmonious expression. Clear, honest, direct "small talk" from some exhibitor is far more interesting and convincing than the multiplicity of words that rattle and jingle.

Double-mating, preparation of show birds, use of trap-nests, comparisons of winners and kindred subjects would make good material to interest fanciers. The standard of the Coliseum Show is clearly apprehended and only those equipped for the stoutest competition venture to exhibit. With the addition of practical demonstration in breeding, feeding, etc., little more could be added.

The Coliseum Show is one of the infallible indexes of the poultry breeding industry of America, and the glories of achievement were never more strikingly reflected than at the show just passed into history.

The immense Coliseum was filled to overflowing and the classes were simply teeming with quality all through. The hall was beautifully decorated with palms and evergreens, display pens were artistically arranged in the center of the hall, in which were exhibited some rare quality. Those represented in these displays were Sheffield Farms, Partridge Wyandottes; Wm. Crede, S. C. Anconas; Riverview Farms, Pekin Ducks; Mrs. M. J. Bergstrom, S. C. Rhode Island Reds; Rockandotte Farm, White Rocks and White Wyandottes; Wm. Pickard, S. C. White Leghorns; C. Wilson, R. C. Rhode Island Reds; Mrs. C. Wilson, White Rocks; G. E. Greenwood, Black Orpingtons; H. W. Sturtevant, Black Orpingtons; Studebaker Farms, S. C. White Leghorns; H. A. Pickett, Rose Comb Rhode Island Reds;

Royal Blue Barred Rocks

CHAMPIONS OF THE EAST AND WEST

For 30 years they have produced the winners at New York, Boston, Chicago and the World's Greatest Shows.

At New York, in 1912, they Made a World's Record

Winning six prizes out of eight awarded on Barred Rock cockerels, including **first prize** and **sweepstakes special** for best cockerel in the show, also special prize for best cockerel mated pen.

At the Chicago Coliseum Show, in 1912

In the largest and best class of Barred Rocks ever seen in the West, 400 birds, they won **four first prizes** and the **sweepstakes championship $100 cup** for best display of Barred Rocks.

A Clean Sweep at Chicago in 1913

Winning **six first prizes** and the **grand special sweepstakes prize** for best display of Barred Rocks, also every special prize offered on this variety, 250 birds competing.

OWEN FARMS' BIRDS

Have Led for Years

EVERY SHOW in the UNITED STATES, CANADA and ABROAD where they have competed, in the hands of our customers or in our own, has demonstrated their SUPERIORITY beyond question.

THOUSANDS OF FIRST PRIZES have been WON at the most IMPORTANT SHOWS by birds sold by us or hatched from eggs laid by our UNEQUALED MATINGS.

OWEN FARMS'

BUFF ORPINGTONS
WHITE ORPINGTONS
WHITE PLYMOUTH ROCKS
WHITE WYANDOTTES and
S. C. R. I. REDS

have demonstrated their merit in the HOTTEST COMPETITION and met and defeated all comers.

You may win without these blood lines, but, you will find it practically impossible if your competitor meets you with Owen Farms Birds.

AS UTILITY BIRDS

these flocks each year have demonstrated their exceptional merit. Wonderful reports of high average egg yields come in from customers. One customer has reported 262 eggs laid in 290 consecutive days by a pullet bought of us, and many other reports are almost as good.

My flocks have perfect health, size, bone, substance, and bodies with tremendous egg capacity. **Treat them well and they will do the rest.**

1914 MATINGS

of all varieties are the best ever made on Owen Farms. My customers for EGGS FOR HATCHING or BABY CHICKS will receive remarkable value this year, as eggs and baby chicks have never been sold from birds of equal quality at prices approaching those I am making for 1914. Many orders are already booked and EARLY BOOKING INSURES DELIVERY AT EXACT TIME YOU WANT THEM.

EGGS from BEST MATINGS in the WORLD
All varieties.
$10 for 15. $30.00 for 50. $50 for 100.

EGGS from CHOICE MATINGS
better than most sold at higher prices.
$5.00 for 15. $15 for 50. $25 for 100.

BABY CHICKS from these MATINGS
$1.50 each in lots of 20 or more at one time.

BABY CHICKS from these MATINGS
50c each in lots of 20 or more at one time.

Send for my new ILLUSTRATED CATALOGUE and MATING LIST and book your order now.

Superb Show Birds to win the January and February Shows and Grand Breeding Birds mated to produce show or utility stock at absolutely fair prices. State your exact requirements, and if possible what you wish to invest, and receive my prompt quotation.

I want your order, and REMEMBER, your ABSOLUTE SATISFACTION means my PERMANENT SUCCESS.

MAURICE F. DELANO

107 William St., Vineyard Haven, Mass.

MAURICE F. DELANO, Proprietor — FRANK H. DAVEY, Superintendent

A. E. Martz, Buff Orpingtons, and F. E. Harrison, S. C. Rhode Island Reds.

There were 252 entries in the Barred Rock class and quality to satisfy the most ardent admirer. Competition was lively, and when the smoke of battle cleared away it was found that A. C. Hawkins had won most of the awards. His winnings were 1-5 cock, 4 exhibition hen, 1-3 exhibition cockerel, 1-2 pullet bred cocks, 1st exhibition pullet, 2nd exhibition pen and 1st cockerel bred pen. W. D. Holterman won 2nd exhibition cock, 5th exhibition pullet, 5th cockerel bred hen, and 4th cockerel bred pen. Luther J. Hall won 2nd exhibition pullet and 3rd pullet bred pen. John W. Yant succeeded in capturing 4th exhibition cockerel and 4th exhibition pullet, also 3rd exhibition pen, 4th pullet bred pen and 3rd cockerel bred pen. W. H. Goddard took 4th exhibition cock. Arthur Irvine was there with his usual quality, winning 1st exhibition hen, 3rd exhibition pullet. Joe Eiden took 2nd and 3rd premium on exhibition hens. G. Earl Hoover, 5th exhibition hen, 3rd, 4th and 5th pullet bred cocks. F. M. Love won 2nd exhibition cockerel, 3rd and 5th cockerel bred pullets and 5th cockerel bred pen. George Dyson made his usual winning, taking 1st cockerel bred pullet, 5th exhibition cockerel and 4th cockerel bred hen. J. J. Klein exhibited one pen, winning 1st pullet bred pen. R. W. Wales took 3rd exhibition cock, Chas. Reed 1st cockerel bred hen, 1st and 4th exhibition pens. Chas. C. Fritz won 4th pullet bred cockerel. G. A. Walker came in for a share of the winnings, taking 2nd and 5th pullet bred cockerels, 5th exhibition pen and 5th pullet bred pen. Pullens Bros. won 2nd cockerel bred pen.

The White Rock class brought out 138 entries of the best White Rocks ever exhibited in the middle-west. The class was sizzling hot, H. W. Halbach taking the lion's share of the awards, with Peter J. Olle, Maple Farms, William Plant, W. N. Graham and Mrs. Solomon Hering finishing in the order named. H. W. Halbach made a clean sweep of all 1st, 2nd and 3rd premiums on single entries, excepting in the pullet class, when he surrendered 3rd place to W. N. Graham. In pens he won 1st, 2nd, 3rd old pens, also taking the same in the young pens. Peter J. Olle succeeded in winning 5th cock, 5th hen and 5th pullet. Wm. Plant won 5th old and 5th young pens. Maple Farm took 5th old and 4th young pens. Mrs. Solomon Hering took 5th cockerel.

Buff Rocks, though not so large in number, were none the less in quality. Competition was keen, no one being able to claim any decided advantage in the awards. Carl H. Spaeth won 5th cock and 2nd hen. Marion H. Culver was an easy winner of 1st cock. Frank C. Cole was there with some quality, taking 3rd hen, 4th cockerel, 1st pullet and 1st young pen. Casper Moore & Son were strong in line, winning 3rd cock, 3rd cockerel, 2nd pullet, 1st old pen and 3rd young pen. Arthur Buening was awarded 2nd cock, 1st cockerel, 3rd pullet and 2nd young pen. Carl Michener won 4th cock, 1st hen. F. C. Shepherd captured 4th and 5th premiums on hens. G. S. Nye, 5th cockerel, Kellogg & Kellogg, 2nd cockerel, 5th pullet. T. J. Perin, 4th pullet, and R. W. Ward, 2nd old pen.

Partridge Plymouth Rocks were a quality class, with about 100 entries of as good quality as was ever exhibited under one roof. Bird Bros. exhibited a splendid line of this variety, winning a very large majority of the awards. Geo. W. Hacket also came in for a share of the ribbons, as did Walter C. Renaker, Roy C. Church and Peter J. Olle. Bird Brothers winnings were 1st, 2nd, 3rd, 4th and 5th cock; 1st, 2nd, 5th hen; 1st, 2nd, 3rd cockerel; 1st, 2nd, 3rd, 4th, 5th pullet; 1st old pen, and 1st young pen. Geo. W. Hackett won 3rd, 4th hen. Walter E. Renaker, 5th cockerel. Roy C. Church, 4th cockerel. Peter J. Olle, 2nd old pen.

In the Columbian Rocks the awards were well divided, no exhibitor being left out of the list. James H. Taylor won 1st cock, 1st, 2nd hen, 2nd, 3rd cockerel, 1st, 2nd pullet, and 1st young pen. Percy C. Meller took 2nd cock, 3rd hen. G. W. Garlock, 1st, 4th and 5th cockerel, 5th pullet. C. R. Deardorff, 1st cockerel, 3rd, 4th pullet.

Silver Wyandottes were well represented, lots of quality showing all down the line. Honors were well divided and exhibitors well satisfied. Wm. M. Swaggart was successful in winning 5th cock, 2nd hen, 2nd cockerel and 5th pullet. C. P. McAndrew took 1st cock, 3rd hen. Clare E. Hoffman took a little more than his allotment of the awards, winning 2nd and 4th cock, 1st, 4th hen, 1st, 3rd cockerel, 1st, 4th pullet, and 1st young pen. Van Winkle & Son won 3rd cock, 5th hen, 5th cockerel, 3rd pullet and 2nd young pen. Aldro Jenks took 4th place in the cockerel class, also 4th young pen. G. B. Stanwood won 3rd young pen.

Golden Wyandottes were a beauty class, many birds showing wonderful type and color being exhibited. Cocks and cockerels were exceptionally good. Julius Sinn came near making a clean sweep of all first premiums, winning 1st cock, 1st

Halbach's White Rocks

Never in the history of Poultry Exhibitions has any strain made such wonderful wins. They hold the world's record by capturing best **Display** at **Chicago** five times. At the

Great Mid-West Coliseum Show, Chicago, Ill.

America's Greatest Exhibition

Unretouched
First Springfield Cockerel

in a class of 140 White Rocks—the best ever got together, they made the marvelous winning of

1-2-3-4 Cock (4 entered)
1-2-3-4 Cockerel (4 entered)
1-2-3-4 Hen (4 entered)
1-2-4 Pullet (4 entered)
1-2-3 Old Pen (3 entered)
1-2-3 Young Pen (3 entered)

45 out of 46 birds placed in winning. A grand total of 153 points out of a possible 157.

This is an astonishing win but not as astonishing as the undreamed of quality of the birds that made the winning. It was a revelation in perfection of type, pureness of plumage and was the wonderment of all.

Hundreds of show birds that will win, at $25.00 to $100.00 each. Breeding pens perfectly mated and from these winners, at $25.00 to $75.00. Get started with this quality. Utility females, $2.00 each. No matter what you want I have it. Send your order.

Place your order today for eggs from my unapproached matings, at $15.00 per setting. Utility eggs $10.00 per 100. Catalogue 10 cents. Mating list free. Mention American Poultry Journal.

H. W. HALBACH R. R. 1 WATERFORD, WIS.

cockerel, 1st pullet, 1st young pen and 4th hen. Simmons Bros. won 3rd cock, 2nd cockerel. J. H. McDanell, 5th hen, 3rd cockerel, 2nd pullet and 2nd young pen. Newton Neusbaum, 5th cock, 1st hen. W. J. Jenck took 4th cock, 2nd, 3rd hen, 5th cockerel, 3rd and 5th pullet. J. S. Pennington, 2nd cock, and J. A. Gates, 4th pullet.

White Wyandottes were strong, both in quality and numbers, being one of the largest classes of the show. Cocks were exceptionally good, 31 being entered in the class, A. J. Smith winning 1st, J. D. Strasburger 2nd and 4th, W. S. Cobb 3rd and Geo. C. Madison 5th. Other awards were: A. J. Smith, 1st hen, 2nd old pen. J. F. Strasburger, 4th and 5th cockerel, 4th pullet, 1st old pen and 2nd young pen. Mrs. W. A. Wright, 3rd hen, 2nd cockerel. F. M. Eakin, 4th hen, 1st pullet, Arthur Riggs, 5th hen, 4th old pen.

4th cockerel, and Ewing J. Eldridge, 1st old pen.

Columbian Wyandottes were out in goodly numbers and showed decided improvement in quality over those exhibited in former years. A. L. Foss captured two blues, winning 1st cock and 1st cockerel. O. H. Miller won 2nd cock. Richard Sawyer took 3rd, 4th and 5th cock, 1st and 4th hen, 2nd, 4th and 5th cockerel and 1st young pen. Carl Jacobs succeeded in taking 2nd place on hen. T. J. Cavanagh won 5th hen, 1st, 3rd and 4th pullet. Leo A. Lee took 3rd cockerel and 2nd pullet, Jerome Leland 3rd hen and 1st old pen.

The Single Comb Rhode Island Red class was the class of the show, with 270 entries and quality to burn. As usual, the excitement was at fever heat and many pulses were beating far above normal. The principal competition was between Fred E. Harrison and B. H. Scranton, the honors breaking in favor of the former. The awards were: F. E. Harrison, 1st and 4th cock, 2nd and 5th hen, 1st and 5th cockerel, 1st, 2nd, 3rd, 4th pullet, 1st, 3rd, 4th old pen, and 1st and 5th young pen. B. H. Scranton, 2nd, 3rd cock, 1st, 3rd hen, 2nd, 3rd, 4th cockerel, 2nd, 5th old pen, 4th young pen. Wm. Etzensperger, 5th cock, 4th hen. J. P. Olle, 5th pullet. E. W. Mahood, 2nd, 3rd young pen. The cockerels were the strongest class, both in numbers and quality, there being 101 of them in the line and of quality equal to, if not better than, any exhibit ever cooped in America. Pullets were second with 40 entries, all of superb quality. The exhibit as a whole did honor to the Red breeders who have been most loyal in their support of the Chicago Show.

Rose Comb Reds, though not as large in numbers as the Single Comb, were not lacking in quality—in fact, theirs was one of the "hottest" contested classes of the entire show, the awards being pretty evenly divided, the fight for honors making a beautiful sight to one looking on from the "outside." Longfield Poultry Farm won 1st cock, 1st, 2nd hen, 5th pullet, 1st old pen and 3rd young pen. H. A. Robinson took 2nd cock, 4th pullet and 4th young pen. W. L. McMillan, 3rd cock, 2nd hen, 1st pullet. James M. Hopkins won 5th cock, 5th young pen, 5th cockerel. H. E. Simons, 4th cock. Carvers Red Farm, 4th hen. J. H. Carpenter, 5th hen. A. D. Berg, 2nd, 4th cockerel, 2nd, 3rd pullet. C. R. Watson, 1st, 3rd cockerel, 2nd old pen, 2nd young pen. Wm. Etzensperger, 3rd old pen. The Jack Poultry Farm, 1st young pen.

In Buckeyes, Eaton C. Mahon won 1st cock, 1st, 3rd, 4th, 5th pullet, 1st old pen. Fred B. Harris, 2nd cock, 1st hen, 1st cockerel, 2nd pullet. H. W. & M. B. Deem, 2nd hen.

E. B. THOMPSON, HIS TWO SONS AND HIS NEPHEW.

Reading from left to right. John R. Thompson, Walter Thompson, Valentine Thompson and E. B. Thompson, president of the American Poultry Association and originator and breeder of the "Ringlet" Barred Rocks.

R. K. Buler, 5th pullet. L. L. Potter & Son, 5th old pen. The Jack Poultry Farm took 3rd young pen and J. H. Jackson 4th young pen.

Buff Wyandottes were small in numbers, but rich in quality. F. L. Waterman and son made a clean sweep of all awards excepting 4th and 5th cock, which went to W. J. Hoebel.

Partridge Wyandottes were a fine class and a revelation in Partridge type and color. Competition was brisk with many of the awards going to Dr. Chas. M. Baskerville, who won 1st, 2nd cock, 2nd, 3rd hen, 1st pullet and 1st young pen. W. H. Millard took 3rd cock, 1st cockerel. A. J. Ehresman, 5th cock. J. P. McIntire, 4th cock, 2nd cockerel. M. J. O'Connor, 1st hen, 3rd pullet, 2nd young pen. R. S. Jackson, 5th hen, 2nd old pen. A. E. Johnson, 4th hen. Frank Jenck, 3rd,

The Light Brahma class was well filled and reminded one of by-gone days to see this grand old breed so well represented. Some grand specimens were in this class, which attracted much attention and comment from old-time breeders. From the display of Brahmas at this show, one would naturally infer that this is not a breed of the past, but very much in evidence at the present day. The awards were Wm. T. House & Son, 1st, 4th, 5th cock, 1st, 3rd, 5th pen, 5th cockerel, 5th pullet. Roy C. Beck, 2nd cock, 4th hen, 2nd, 3rd cockerel, 1st, 3rd pullet. Geo. W. Koos won 2nd hen, 4th cockerel, 2nd, 4th pullet, 1st young pen. Spencer Carpenter won 3rd cock. A. B. Prescott, 1st

cockerel, and E. J. Barker, 1st old pen, 2nd young pen.

The Stately Black Langshans were out in large numbers, arrayed in their greenish black plumage; with their lordly type they made a grand display, a pleasing sight to the many admirers of this magnificent breed. Competition was keen, M. S. Barker winning 1st, 2nd, 3rd, 4th cock; 1st, 4th hen; 1st, 2nd, 5th cockerel; 1st, 3rd pullet; 1st, 3rd old pen; 1st, 2nd young pen. Frank Boyd took 2nd hen, 3rd cockerel, 2nd pullet. L. E. Meyer, 5th cock, 5th old pen. Hewes Farms won 3rd, 5th hen, 4th pullet, 3rd young pen, 4th old pen. Norman B. Wood, 4th cockerel. John A. Rhodes, 5th pullet. John F. Jones, 2nd old pen. E. D. Monilaw, 4th young pen, and Margaret C. Daly, 5th young pen.

The Brown Leghorns, always a favorite class at the Chicago Show, held their own and gained a few points both in quantity and quality at this one. In the Single-Comb Exhibition class Williams Bros. & Brace won 1st, 2d, 5th exhibition cock; 1st, 3d exhibition cockerel; 2d, 5th exhibition pullet; 1st and 3d exhibition pen. Wm. S. Damhorst won 3d exhibition cock. F. H. Farrant, 4th exhibition cock; 3d exhibition pullet. W. G. Warnock, 2d exhibition hen, 2d pullet bred pen; 4th exhibition pen. Dr. C. Schmitt, 1st exhibition hen; 5th cockerel bred pen. Herbert Moeller won 3d, 5th exhibition hen. Thos. H. Wood, 2d exhibition cockerel. Geo. L. Hornbrook, 5th exhibition cockerel. F. W. Miller, 4th exhibition cockerel. H. V. Tormohlen, 1st exhibition pullet; 2d exhibition pen; 3d cockerel bred pen. A. F. Lehman, 4th exhibition pullet. Rosemont Farms, 2d exhibition pen. E. L. Green, 1st cockerel bred pen; 1st pullet bred pen. Moore & Moore, 4th cockerel bred pen. In the Single-Comb

E. B. Thompson's "Imperial Ringlet" Barred Plymouth Rocks

Are the Greatest Achievement in Modern Poultry Breeding

THEY ARE THE PRODUCT OF OVER THIRTY YEARS OF SKILL

First Prize Cockerel and Champion Male and First Prize Pullet and Champion Female at Madison Square Garden, New York, 1913

Early Winning Show Birds

I now offer the finest very early hatched exhibition birds that I have ever produced—grand size and shape, fine heads, even clear blue color, and narrow clean-cut vivid barring to the skin. They are matchless and ready to win prizes for you in any competition in the world. The prices are very reasonable. **You can enjoy the great pleasure of winning silver cups and prizes if you have my birds.**

My Imperial "Ringlet" Barred Rocks Have Demonstrated to All the World a Distinctive Superiority

THEY STAND WITHOUT A RIVAL AS THE LEADING 1st PRIZE WINNERS AT AMERICA'S IMPERIAL SHOW, MADISON SQUARE GARDEN, NEW YORK

A Great Light on the Subject of New York Records

The "Ringlets" exhibited by me personally, have won at New York a grand total of 29 first prizes—this is more than double the number ever won by any competitor—no other Barred Rock breeder in the world has ever won more than 13 first prizes in the entire history of the New York show—mark the difference—these figures are as remarkable as they are conclusive—they inform the public who have hitherto been confused by conflicting claims.

They Mean Something—They Sweep Away at One Stroke All Doubts and Settle the Question of the World's Leadership. Furthermore, these 29 first prizes do not include the firsts won at New York by my customers on birds I sold—remember that.

My "Ringlets" have won first prize on exhibition pens at Madison Square Garden 8 times, no competitor has ever won first but 4 times. I have won both first and second prizes on pens 6 times and no competitor but 3 times.

My "Ringlets" have won at New York 11 first prizes on single cockerels and cocks—including first prize and champion cockerel and first cock at the 1910-11 show, first prize cockerel and champion male at the 1913 show—almost as many first prizes on males alone as any other Barred breeder has ever won on anything. I am the only living Barred Rock breeder who has ever won all the regular prizes on pullets at a single New York show, viz: **1st, 2d, 3d, 4th, 5th and the only breeder who has ever won 1st prize cockerel and champion male and 1st prize pullet and champion female at one and the same show at Madison Square Garden.**

My "Ringlets" have won every Silver Cup and Trophy that has ever been offered at Madison Square Garden to be won three times. In short every trophy on Barred Rocks that has ever been offered and won three times has been finally won by me and is now my absolute property. **Among them are the $100 Challenge Trophy and the $100 Association Cups.**

These winnings tell more of the sterling qualities of the Imperial Ringlets than volumes I might write—They tell what the New York Show says.

The "Ringlet" record for 1913 at the Madison Square Garden, New York Show, is the most wonderful ever made by any Barred Rock breeder since the New York Show was founded. (See ad on back page for this remarkable record.)

The best is none too good for my customers and if you want to show you will find that judges appreciate the wondrous beauty and sharp "Ringlet" barring of my Barred Rocks. Prices are reasonable and thousands of birds to select from.

Elegant breeding cockerels, trios and pens of this greatest New York prize blood for sale, and mated to produce winners if desired. Richly illustrated 70 page catalogue upon application; it is full of pictures of New York winners from life. Address

E. B. Thompson

Lock Box 510

Amenia, New York

pullet bred class Moore & Moore, 3d cock. F. H. Farrant, 1st cock; 1st, 5th cockerel. A. J. Humphrey, 2d cock; 4th cockerel. Williams Bros. & Brace, 2d cockerel. In the Single-Comb cockerel bred class Moore & Moore won 1st hen; 2d pullet. W. G. Warnock, 2d hen; 1st pullet. H. V. Tormohlen, 3d hen; 4th pullet. E. L. Green, 3d pullet.

In the Rose-Comb Brown Leghorn Exhibition class R. C. & R. L. Conolly won 1st, 3d cock; 2d hen; 1st, 2d, 5th cockerel; 2d pen. W. O. Chase, 2d cock; 3d cockerel; 4th pullet; 3d, 4th pen. Wm. Hipkiss, 4th cock; 3d hen; 5th pullet. Albert Yoder, 5th cock. Ed. Roth, 4th cockerel. In the cockerel bred class R. C. & R. L. Conolly won 3d, 4th hen; 1st, 2d pullet; 1st, 2d pen. W. O. Chase, 1st hen; 3d pen. Albert Yoder, 2d hen. In pullet bred class R. C. & R. L. Conolly won 1st cock; 5th cockerel; 2d pen. W. H. C. Chambre, 1st, 3d cockerels; 1st pen. W. O. Chase, 2d, 4th cockerels; 3d pen.

In Single-Comb White Leghorn alley the fever is always high—this time it surpassed all records. The class was unusually large, the quality all that could be desired, and competition was at scrapping point all the time. Flander's White Leghorn Farms carried off most of the honors, winning 1st, 3d, 4th, 5th cock; 1st, 3d hen; 1st, 3d, 4th cockerel; 1st old pen; 1st young pen. Harry A. Muntz won 2d cock; 5th hen; 2d cockerel; 4th pullet. Eugene C. Smith took 2d hen; 3d pullet. Pabst Stock Farm, 4th hen; 1st pullet. N. P. Easling, 5th cockerel; 2d old pen. G. J. Garber, 2d pullet; 4th old pen; 2d young pen. The Willows Farms, 3d old pen; 4th young pen. Fred W. Zipf, 3d young pen.

In Rose-Comb White Leghorns, Morgan Bros. won 2d, 4th cock; 3d, 4th, 5th hen; 4th, 5th cockerel; 4th pullet; 1st old pen. Geo. A. Rigler, 1st cock; 1st, 2d hen; 1st, 2d, 3d cockerel; 1st, 2d, 3d pullet. L. G. Householder won 5th pullet.

In Single-Comb Buff Leghorns, Dr. E. S. Landis won 1st cock; 3d cockerel. J. R. Eriser, 2d cock; 3d, 4th hen; 4th cockerel; 1st, 3d pullet. Leo A. Munger, 1st hen; 5th pullet; 5th young pen. O. C. Wright, 2d hen; 5th cockerel; 2d, 4th pullet; 1st old pen; 4th young pen. James Sylvester, 1st, 2d cockerel; 5th hen; 2d young pen. H. Lester Farnum, 1st young pen. Joseph Burrows, 3d young pen.

In the Rose-Comb Buff Leghorn class the following awards were made: Geo. F. Hoffman, 1st cock; 2d hen; 4th cockerel; 1st pullet. Frank L. Morris, 3d, 4th cock; 1st, 3d hen; 2d, 3d pullet. Wm. J. Coleman, 2d cock. Anton Kakuska, 4th cock; 5th cockerel. H. B. Green, 1st cockerel; 5th pullet.

Single-Comb Black Minorcas were a class showing lots of quality; the awards went as follows: A. Didriksen, 1st, 3d cock; 1st, 3d, 4th hen; 4th cockerel; 1st, 2d, 3d pullet; 1st old pen; 2d young pen. Fred C. Gabriel, 5th cock; 2d hen; 5th cockerel. E. D. Geiger, 2d cock; 5th hen; 4th pullet. A. A. Hartman, 1st cockerel; 2d old pen. E. S. Halsinger, 3d cockerel. Sterling E. Boyer, 2d cockerel; 5th pullet. J. H. Smith, 1st young pen; 3d old pen. W. O. Chase, 4th, 5th old pen.

Rose-Comb Black Minorcas also had plenty of quality and no lack of admirers and the awards were well distributed. Ross Swartout won 1st, 4th cock; 1st, 4th hen; 2d, 3d cockerel; 2d, 4th pullet; 1st old pen; 1st young pen. J. S. Bales, 2d cock; 5th cockerel; 3d pullet. W. O. Chase, 3d cock; 3d, 5th hen; 2d, 3d old pen. H. A. Keister, 5th cock; 2d hen; 1st cockerel; 1st pullet. O. C. Steingrabar won 4th cockerel; 5th pullet.

Single-Comb White Minorcas—Black Point Poultry Yards, 1st, 2d cock; 1st, 3d, 4th hen; 1st, 2d, 4th, 5th cockerel; 1st, 3d, 4th pullet; 1st young pen. H. C. Meiselbach, 3d cock; 5th hen; 5th pullet; 4th young pen. Thomas Brogden, 2d hen; 3d cockerel; 2d pullet; 2d young pen. Mrs. I. J. Lorton, 3d young pen.

Rose Comb White Minorcas. Thomas Brogden, 1st, 3d cock; 1st, 2d hen; 2d, 3d cockerel, 1st, 2d pullet. Ralph Roudebush, 2d cock, 3d, 4th hen; 4th, 5th pullet; 1st young pen. H. C. Meiselbach, 5th hen. H. H. Ruth, 1st cockerel, 3d pullet.

White Faced Black Spanish, all awards to R. A. Rowan.

Blue Andalusians, L. C. Taylor, 1st, 3d cock; 1st, 3d hen; 2d cockerel; 1st, 2d pullet; 2d old pen. Joe Plank, 2d cock. Mrs. L. C. Boggs, 2d hen; 1st cockerel; 3d pullet; 1st old pen; 2d young pen. Mrs. S. H. Brooks, 4th, 5th hen. Peck I. Demlow, 1st young pen.

Single Comb Anconas, Cora B. Garbut, 1st cock, 1st hen, 1st pullet. Geo. Blencoe, 2d cock; 3d hen. Wm. Crede, 4th hen; 2d cockerel. P. L. Rigg, 2d hen, 1st, 4th cockerel; 3d pullet. Waveland Poultry Yards, 3d cockerel, 5th pullet. J. P. Gilbert, 5th cockerel. H. N. Clarke 2d pullet. Chas Hurlburt, 4th pullet.

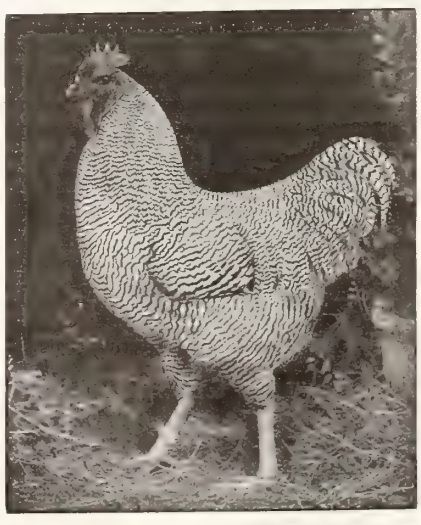
Rose Comb Anconas, J. P. Gilbert, 2d cockerel. Mark Lewis, 1st cockerel, 2d pullet. E. J. Boundage, 1st, 3d pullet.

Buff Orpingtons were a strong class, plenty of competition and quality to

Above All—The Henderson Strain

AMERICA'S FOREMOST

Barred Plym. Rocks for Exhibition and Utility



Madison Square Garden, New York, Chicago and St. Louis Winners

This grand strain is large framed, with wonderful type, has long, deep bodies, broad backs, well spread tails carried low, and that snappy distinct barring to the skin, that wins in the best of competition.

My first prize cockerel and grand champion male at Chicago 1912 in a class of 54 of the best in the world proves that my strain carries the maximum of quality in Barred Rocks today. His type and barring created a sensation among Barred Rock breeders of the world. A number of his wonderful sons will head my 1914 breeding pens.

When you start to make up your breeding pens this year and find that deficiency which you desire to overcome, **remember that I have the strongest lines of breeding Barred Rocks in America**, and can furnish males and females with the quality desired to balance the pen and improve the progeny.

My **Barred Rocks** have won consistently at all the large national shows for the last 20 years in all competition as a result of being line bred and pedigreed. Compare my winnings with those of any other breeder and form your own conclusion as to who has the best producing strain.

First Prize Pullet Bred Cockerel, Coliseum, St. Louis, 1913

For the season of 1914 I will mate 50 breeding pens in both my **Cockerel** and **Pullet lines**, from which I will furnish eggs for hatching at prices quoted in my mating list and catalog which describes each individual specimen that I will have in breeding. These pens will contain my Madison Square Garden, N. Y., Chicago and St. Louis winners and their descendants. The inherent characteristic quality as bred in the **Henderson Strain** both in the Cockerel and Pullet lines, and demonstrated by their public record in the best show rooms in America, enables me to mate for the season of 1914 the strongest breeding pens of **Barred Rocks** in the world.

Write for my new Catalog-Mating-List which minutely describes these pens and **the largest exclusive Barred Rock farm in the world.**

SATISFACTION GUARANTEED

The Mighty Power of Oxygen

YES! THAT'S THE
Ajax Improved Oxygen Vitalizer

"That's the device that puts an END to "dead in the shell" chicks, and White Diarrhoea.
That's the device that brings you a chick from EVERY hatchable egg.
That's the device that will put a MILLION DOLLARS in the pockets of American Poultrymen THIS year if they USE it.

HOW?

Simply by supplying OXYGEN to the egg chamber of the incubator.
You have heard of coal miners being caught in a "gas pocket", and how they are brought to the surface nearer dead than alive from gas poisoning?
The ONE and ONLY thing that brings them back to LIFE is OXYGEN.
That's all there is to the "dead in the shell" chicks. They are killed by Carbon Dioxide Gas Poisoning.

SUPPLIES OXYGEN

The Ajax Improved Oxygen Vitalizer supplies OXYGEN to the egg chamber in just the right amount, and 99½% PURE, so that EVERY hatchable egg produces its CHICK, just as Nature intended.
Yes, I've USED it, and I KNOW. Don't take off a single hatch without it, BECAUSE it MORE than pays for itself EVERY TIME it is used."

DR. J. OREN BEARSTLER,
Pres. of the Pottsville, Pa. Poultry Asso.

These are Dr. Bearstler's words, NOT OURS. His name stands for integrity and ability with the poultry world. What he says OUGHT to make you THINK.

Tried, Tested and Proven

The Oxygen Vitalizer is a tried, tested and PROVEN NECESSITY. It's sold under an OFFICIALLY SIGNED money-back Guarantee that it WILL DO all that Dr. Bearstler says it WILL do. Your losses from "dead in the shell" chicks and White Diarrhoea will NEVER END until you USE the Oxygen Vitalizer. For **$4.00** it will be delivered to your door, complete, ready to use, all charges paid, with full instructions and our Money Back Guarantee.

Safe—Simple—Sure

There's nothing to get "out of order." Can be used on any incubator. Simple of operation. Attached in five minutes, lasts a life time, and EVERY TIME it's used it SAVES MORE than DOUBLE its cost.

The Oxygen Booklet

Our Oxygen Booklet—the most VALUABLE thing of its kind ever printed—is FREE. Please DO NOT ask for it UNLESS you own or operate an incubator. The supply is LIMITED. Send your order TODAY. The FIRST hatch will MORE than repay you.

"Lack of Oxygen Kills More Incubator Chicks in the Shell Than Any Other Cause. Unless Oxygen is Supplied the Chicks Will Die."
Professor C. F. Townsend

Your Money Back If It Fails

Hurrah! Once More! Hurrah!!

Chicago Winners

1911 1912 1913

JAS. W. BELL,
the editor of the American Poultry Journal, in speaking of this particular cut in a letter of Oct. 13th, 1913, says: "We would state that Mr. Stahmer DID NOT in any way retouch this photo. We were just looking at the original photo and there is ABSOLUTELY NO RETOUCHING on it."
(Think this over.)

At these, the greatest Barred Rock shows in all America, in battles with the Giants of the East and of the West, of the North and of the South, in competition with the best birds of the largest breeders of the continent

Aristocrats

have been consistent winners each year. In the show which just closed its doors on December 17, mark the date, seventeen birds of Aristocrat breeding were entered and twelve of these were placed by the judge as winners. Think of it—**Twelve winners at Chicago this year were Aristocrats.**

ATLANTA

undoubtedly the largest show ever held in the South, boasts of Aristocrats among its winners this year. Victory after victory in one state after another is added to the triumphant march of the conquering Aristocrats this season. They are simply irresistible.

I just have a dandy bunch of

JANUARY SHOW BIRDS

now finishing out in wondrous beauty, which will prove **easy winners** in January and February shows. They are so striking in quality, so sensational in color and barring, that the reputation of anyone having Aristocrats will be established at once.

A New Catalogue

of 32 pages, beautiful and artistic, with the best colorplate of Barred Rocks thus far published, is now ready for **free** delivery. The colorplate is suitable for framing. This catalogue is absolutely free to those who write me a letter of their experience with chickens and their future plans, etc. Otherwise the price of this book is 50 cents. Write today.

Every Show Bird Guaranteed

Prince Narrowbars as a cockerel, showing that extremely narrow, cleancut barring for which the Aristocrats are noted. He has now developed into a very full-bodied, magnificent cockbird.

W. D. Holterman, Fancier, Box A, Ft. Wayne, Ind.

spare. Hugh A. Rose won most of the awards on birds that showed splendid type and color, while Frank C. Cleveland won 1st on a pen of old birds that were excellently balanced in type and color. The awards were: Hugh A. Rose, 1st, 2d, 5th cock; 3d hen; 1st, 5th cockerel; 1st, 2d, 4th pullet; 3d young pen. Frank C. Cleveland, 1st hen; 2d cockerel; 1st old pen; 4th young pen. Roseland Poultry Farm, 3d, 4th cock; 2d old pen; 5th young pen. T. W. Rogers, 2d hen, 1st young pen. Miss Jessie F. Gordon, 4th hen; 4th cockerel. E. T. Bemis, 3d cockerel. G. H. Eddy, 3d pullet. P. W. Windle, 5th pullet. H. B. Fletcher, 2d young pen.

Black Orpingtons were one of the greatest classes of the show. There was abundance of quality in the class. Competition was neck and neck and it was whip from start to finish. The ribbons were pretty well distributed and everyone satisfied. Brackenfield Farms won 2d, 4th, cock; 2d, 3d, 5th hen; 1st, 4th cockerel; 3d pullet; 1st old pen. Hugh A. Rose, 5th cock; 1st, 4th hen; 2d pullet; 3d old pen; 1st young pen. Robert H. Wallace won 1st cock; 5th cockerel; 5th pullet. Herrick Poultry Farms, 3d cock; 2d cockerel; 3d young pen. Blue Ribbon Poultry Farm, 3d cockerel; 1st pullet; 2d young pen. H. S. Clark, 4th pullet. Rosehurst Farm, 4th young pen.

White Orpingtons were conceded by all judges and critics to be one of the best, if not the best class in the entire show. Seldom if ever, has a better class of this variety been brought together at one time. Aldrich Poultry Farms won 1st, 3d cock; 2d, 4th hen; 1st, 2d, 5th cockerel; 1st old pen; 1st young pen. Ralph Woolery, 2d cock; 3d cockerel; 2d pullet. Jos H. Fisher, 4th cock; 3d old pen, 3d young pen; 4th cockerel. H. J. Bennett, 5th cock; 3d hen. Brackenfield Farms, 5th hen, 5th old pen. Mrs. J. H. Harnley, 1st pullet. James J. Cooley, 3d pullet. Maple Lawn Farm, 5th pullet. Iowana Farms, 2d old pen, 2d young pen. Jack Poultry Farm, 4th young pen. Clarence W. Tyler, 4th old pen. G. H. Woolenton took 1st hen and 4th pullet.

Dark Cornish—Dr. R. B. Munn, 3d, 4th cock; 2d, 3d hen; 5th cockerel; 5th pullet; 1st old pen; 2d young pen. Studebaker Farm, 2d cock; 1st hen; 2d cockerel; 1st pullet. Dartmore Yards, 1st, 5th cock; 4th, 5th hen; 1st cockerel; 2d pullet. James A. Hales, 3d, 4th cockerel; 3d, 4th pullet; 1st young pen.

Red Sussex—All awards to Carver's Red Farm.

White-Crested Black Polish—Mrs. Emma Swenson, 1st cock; 1st, 2d hen. Frank Kakuska, 1st pullet; 2d cock; 3d hen. G. M. Bender, 4th hen; 1st cockerel; 2d pullet. Chas. Hurlburt, 3d pullet.

Golden Polish, all awards to C. Behensky.

Houdans, C. J. Lancaster 2nd, 3rd cock, 1st, 3rd, 4th, 5th hen, 2nd, 3rd cockerel, 1st, 2nd, 3rd pullet. Harry Gordon 1st cock, 2nd hen. Mrs. Amanda F. Preston 1st cockerel, 4th pullet.

Silver Spangled Hamburgs H. J. Thake 1st cock, 3rd, 4th pullet. F. E. Glover 1st, 3rd cockerel, 1st, 2nd pullet. L. H. Petrie 2nd cockerel.

Silver Campines brought out a class of 140 entries with plenty of quality all through the list, showing clean snappy barring and beautiful green sheen in the ground color. Campine alley was thronged with admiring visitors at all times. Competition was strong especially in cockerels and pullets there being 40 entries

in the former and 93 in the latter. Frank E. Hering won 3rd, 5th cock, 2nd, 3rd hen, 1st, 3rd, 4th cockerel, 1st, 2nd, 5th pullet, 1st old pen, 1st young pen. C. H. Dickinson 1st cock, T. J. Rountree 2nd cock. Studebaker Farms, 1st hen. Gensemer Bros. 4th cock, 5th cockerel. R. H. Cooper 5th hen, 3rd, 4th pullet, 4th young pen. W. H. Bushnell 2nd cockerel, 3rd young pen. H. E. Pierce & Co. 4th hen. Elmer R. Doubler 5th young pen.

Golden Campines. Carvers Red Farm 1st cock, 2nd hen, 1st young pen. Gensemer Bros. 1st hen, 1st, 3rd cockerel, 1st, 2nd, 4th pullet, 2nd, 3rd young pen. John G. Kuhlmann 2nd cockerel, 3rd pullet. Elmer R. Double 5th pullet.

White Favorelles, all awards to C. J. Baker.

Salmon Favorelles, all awards to Chas. A. Bartholomew.

Calumets. Mrs. J. Page, 1st, 2nd hen, 1st cockerel, 1st, 2nd pullet. J. E. Armstrong 3rd hen, 3rd, 4th pullet.

Byers' Strain Orpingtons

BUFF, BLACK AND PEARL WHITE

Communicate with me regarding an advance order for show birds to be delivered, when wanted, in perfect condition and training. A small deposit will insure reservation. I know my standard of service is not excelled by any breeder in the land and your patronage is solicited in view of this reliable assurance. I am especially strong in birds finished and ready for January and February shows. **Wire or write your requirements early,** so I can put the necessary finishing touches on the birds for your particular show date. You will appreciate this service.

C. S. Byers (Orpington Specialist 15 Years) Hazelrigg, Ind.

classic head, good type, needs finishing; females good but trifle open barring, won on maturity. 2nd, grand body, nice colored male with beauty head; females carrying snappy barring. 3rd, nice pen all through, good all over.

Cockerel Mated Pens—Male needs about two weeks, rare color, stylish, grand head, grand type; females good size, nicely matched. 2nd, large, unfinished, strong colored male; large females. 3rd, male little high on legs; good females, unfinished in tails, nice color.

Pullet Mated Pens—1st, male unfinished, clean, good shade of color. 2nd, grand pen, male bright, beautifully colored; females all with snappy color.

Pullet bred males—cock, 1st, clean, strong all though, good head, back and legs, unfinished, extra wing; cockeral, 1st, not as strong as cock, good comb and beak, length of body, good on legs.

Cockerel bred females—hen, 1st, type, shape, good tail carriage, head and legs, narrow hackle. 2nd, even all over, length of body, loses in head shape, loose in plumage. Pullets—1st, extra color, clean cut bars all over, close barred hackle, clean yellow legs, unfinished. 2nd, large, better finished, little high on legs, loses in under color and hackle, and shape of head.

White Rocks.

Cocks—1st, great head, good color, good condition, grand type. 2nd, large, best head, well set, typy, body shape fine, condition of tail prevents from winning first. 3rd, not as large as second, grand head and back, white.

Hens—1st, extra fine condition, grand head, wonderful finish, back and tail superb, pure white. 2nd, almost as good as first, long body, spread tail, pure white, sister to second cock. 3rd, grand type, white, broad back.

Cockerels—1st, perhaps best White Rock male in show, wonderful individual, vigorous; back, tail and profile grand, yellow shanks and beak, many thought best ever seen in Chicago; plenty of bone. 2nd, five point comb, low head, nice under line, sure commer. 3rd, immense deep, well spread tail, good color.

Pullets—1st, long, deep, broad, excellent finish, classy head, white to the skin, yellow shanks, near perfection. 2nd, sweet head, wonderful lines, white, grand profile. 3rd, good lines, nice color, nice long, well spread tail.

Pens—old, male grand type, clean cut head, good comb, perfection back and tail, grand long body, quality White Rock cock in show; females, strong type, good heads, well balanced, quality all there. 2nd, cock good type, length of body, head, unfinished, tail, strong and vigorous, females full quality.

Partridge Rocks.

Cocks—1st, finished, great type, clean striping, correct uniform surface throughout. 2nd, good type, loses in comb, shape of breast, clean uniform surface.

Hens—1st, fine type, good hackle, excellent pencilling, perfection back and tail, red eyes, little coarse in comb.

Cockerels—1st, strong type, back long, good body, shape, good penciliing in neck and saddle, extra good in tail color. 2nd, stronger neck than first, loses in shape and color of breast.

Pullets—1st, sweet type, great head, good hackle, strong pencilling in all sections, extra wing color.

White Wyandottes.

Cocks—1st, good head, wonderful bone, color good, nice bird. 2nd, comb good, grand back and tail, little up on legs, very nice all over. 3rd, well spread tail, wide body, well placed.

Hens—1st, very short back, well spread tail, wide all over, head nice, color white. 2nd, full body, trifle overcushioned, white, curved under line. 3rd, longer body than first or second, cracker-jack profile, a beauty, will be surprised if she does not win shape special.

Cockerels—1st, nice outline, cobby, neat, balanced, Wyandotte all over. 2nd, real nice shape, tail little high, fine bird, well placed.

Pullets—1st, perfection type, well spread tail, nice head, comb exceptional, off color in legs. 2nd, very wide body, tail unfinished and also neck. 3rd, better legs than first, comb good, tail little long, good eyes.

Pens—male, neat head, nice top lines; females three decidedly nice ones, fourth does not match. 2nd, male, good, three nice females, one off matched. 3rd, male small, full of quality, nicely finished, would please Easterner.

Golden Wyandottes.

Cocks—1st, near perfect in type, little coarse in comb, good on legs and feet, clean stripy hackle and saddle, good open centers, strong in under color, breast lacing great. 2nd, unfinished, slight tail pinched, loses in breast shape and color in all sections to first cock.

Hens—1st, little long in type, strong in hackle, lacing good all over.

Cockerel—1st, nice type, unfinished in tail, rather coarse comb, good hackle, breast and back, strong in color. 2nd, undeveloped, promising, unfinished tail, better color all over than first, loses in maturity.

Pullet—1st, nice type, pinched tail, well laced hanckle, strong in wing, clean cut lacing in all sections.

Buff Wyandottes.

Cocks—1st, unfinished condition, good even body, strong under throughout.

Cockerel—beauty, unfinished in tail, soft golden buff color in tail, wing strong colored.

Pullet—1st, good type, little unfinished, neat in head points, strong color.

Partridge Wyandottes.

Cocks—1st, good in type, coarse comb, fine back and tail, good yellow legs, strong wings, good stripe in hackle and saddle, extra tail, easy winner. 2nd, large, unfinished, well balanced, good pencilled hackle, strong tail, loses in under color of back, and color of wings.

Hen—1st, good type, unfinished in hackle and tail, shows good color in hackle and wings, good even surface throughout, strong underneath.

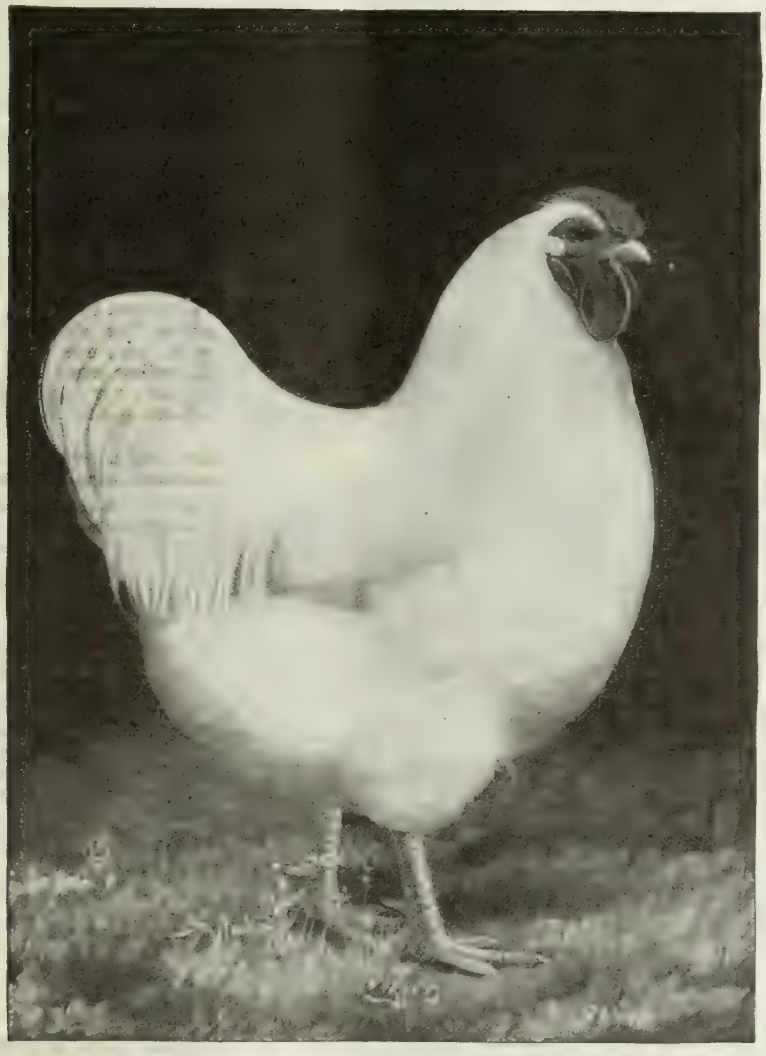
THIS VICTORY IS MOST COMPLETE, and stamps again the exquisite quality of my line of Pullet Mating Barred Plymouth Rocks. **See my other ad.**



C. N. MYERS -:- -:- HANOVER, PA.

Cockerel—1st, unfinished, up on legs, showing good condition, strong hackle and saddle, good under color, neat head. 2nd, good body, slightly undersize, neat head and comb, good color except breast.

White Orpingtons

Cocks—1st, grand top lines with depth of body, breadth and color. 2nd, massive, length and depth of body, good head and comb. 3rd, another grand big fellow.

Hens—1st, good type, great length and depth of body, clean in head. 2nd, nice type, great length of body, loses on finish of neck and tail, strong head, color special hen.

First prize White Wyandotte cock at Cincinnati, Ohio, Dec., 1913. Bred, owned and exhibited by J. C. Fishel & Son, Hope, Ind.

Cockerels—1st, grand head, five point comb, well set on legs, large, grand bird. 2nd, massive big fellow proportioned on correct Orpington lines.

Pullets—1st, good in type and finish with head and comb near perfection, short on shanks, beautiful in lines, well shown. 2nd, little short in type, good spread tail and good body, matured. 3rd, trifle short body, good condition, well spread tail, matured. 4th, grand type showing length and depth with size, unfinished neck and tail, loses on maturity.

Pens, old—Male five point comb, grand back, nicely molded in all sections, well filled out; females a choice quartette.

Pens—Young, cockerel great, finished tail and length of body, pullets full of quality, owner said April hatched stuff.

Black Orpingtons.

Cocks—1st, good head, color, finish, and condition. 2nd, good bird, tail needs covering, looked like choice coloring but locked coop prevented handling. 3rd, a dandy with depth and head. Tail could be improved.

Hens—1st, fills the coop, full feathering, little fluffy on lower sides, fine hen. 2nd, length, depth and width. 3rd, looks like a box car from behind, good.

Cockerels—1st, nobby youngster, head good. 2nd, beauty head, conditioned, good all over. 3rd, decidedly nice youngster. No. 1663, Hugh Rose, unplaced, immense, heavy feathering, deep, wide, stylish, proper length of shanks, let down both fore and aft.

Pullets—1st, nice type, well shown, modern requirements. 2nd, follows English type, full and large, a peach. 3rd, more on plan of first, good all over.

Buff Orpingtons.

Cocks—1st, good type, even balance on good short legs, beautiful golden buff surface, grand under, buff wing and tail. 2nd, good type, coarse comb, clean golden buff throughout, under strong, good running mate for first.

Hens—1st, grand type, head, and comb, length and depth of body, strong, short shanks, good color, shape special. 2nd, good type, unfinished neck and tail, golden buff all over, strong under, color special.

Cockerels—1st, good type, unfinished tail, good on legs and feet, beauty shade of golden buff from head to tail, red eye. 2nd, equal in type with first, heavy shank, strong in color.

Pullets—1st, splendid type, good long body, good on legs, slightly pinched in tail, even golden buff in all sections, strong wings and under. 2nd, not as good type as first, little coarse in comb, good even color all over, loses on type to first.

Pens, old—1st, grand type and color male, females a choice lot with color, substance, etc.

Pens, young—1st, good type and color in this lot.

S. C. Rhode Island Reds.

Cocks—1st, little weak in head, great surface, wonderful under, beautiful tail coloring, fine sweep of color all over, carries breadth of back well, one of best ever seen. 2nd, another good one, well

Manufacturers of Poultry House Appliances

spread tail, tips of comb off, not as good tail coloring as 1st, brilliant back, color hackle under great, decidedly admirable type. 3rd, dandy head, great type, not far behind 2nd.

Hens—1st, color like a pullet, no shafting, all red, combined type and color, classes her among elite, truly a beauty. 2nd, length, beautiful type, color pleasing, sweet hen all over. 3rd, looks like sister to first, same breeder and admirable color.

Cockerels—1st, so good he is hard to describe, over 100 cockerels entered, grand type, well spread tail, long body, under color beautiful surface color one grand sweep, outside of comb and eye would be difficult to better. 2nd, certainly is some red, strong surface, had dozens of admirers, coop locked, could not handle, must be extra all over to win 2nd in such competition. 3rd, beautiful head, color and type, a live bird that pleases the critics, a hot one.

Pullets—1st, best red pullet have ever seen, so good don't know where to fault her. The question is will Harrison ever be able to produce a better one. 2nd, another live red one built from same pattern. 3rd, after handling this bird wonder if three better pullets were ever owned by one breeder, "that's enough"!

R. C. Rhode Island Reds.

Cocks—1st, surface brilliant, even and deep, beautiful finished, plenty of body length, wings correct. 2nd, first cockerel here last year, correct length, red color, beautiful head, grand top and botton lines, one of best types have seen. 3rd, loses in evenness, head and type good.

Hens—1st, beauty in color and length. 2nd, another good one, not quite as even as first. 3rd, fails slightly in wing and tail, nice dark hen, grand surface.

Cockerels—1st, wins both color and shape specials. 2nd, tail looks trifle unfinished, otherwise good, coop locked. 3rd, topper shines like a table top.

Pullets—1st, grand pullet, extra color. 2nd, coop locked, looks great from outside. 3rd, coop locked, slight contrast from outside.

Silver Campines.

Cocks—1st, seven-point comb, nice hackle, tail rather high, rich snappy bars, nice lobes, rather close to ground. 2nd, frosted comb, poor wattles, nice type, well barred, pretty hackle, high tail. 3rd, comb over, has length of body, low tail, sensational green sheen, size, most beautiful type in class, loses on condition. 4th, poor head, good breast, well barred. 5th, small with green sheen, firm comb, best breast in class, low tail.

Hens—1st, beautiful snappy surface color, strong in color all over except trifle light in wing and breast, good win. 2nd, best type in class, beautiful long body, low tail, strong color, wings and tail fine. 3rd, best sheen, racy type, good top, wonderful head points. 4th, another good one, tail trifle high, pretty good surface. 5th, pretty fair bird.

Cockerels—1st, beauty male, easy winner, white hackle, wonderful head, lovely sweep of color, possessing length of back, low tail, profusion of barred coverts and sickles, top lines correct, selection met approval of majority—in fact, all the judging in this variety was exceptionally well done. 2nd, firm comb, fine head, nicely barred tail, body well barred, grand bird. 3rd, long body, extra low tail, type like Leghorn. 4th, young, needs age. 5th, very good all over, color bright, round shanks.

Pullets—1st, snappy clean-cut ringy color, type suggestive of Leghorn, tail barred and well spread. 2nd, true breed curves on top and under bottom lines, sister to first pullet, fine color. 3rd, beautiful head, best hackle in class, color light. 4th, not unlike third. 5th, young, needs age, a comer.

First old pen headed by noted male, females extra good.

First pen young, male brother to first female, very similar, pullets good, evenly matched. 2nd, males son of first pen male, females even.

Golden Campines.

Cockerel—1st, a beauty, extra in both type and color, a very hard bird to beat on this side of the water. 2nd, pretty fair bird.

Pullets—1st, a dainty little miss with type and color, wins easy. 2nd, very good all over.

Hens—1st, nice type and color, well spread tail. 2nd, very good hen.

Pens—1st, nice type and colored male, fine head, extra lobes, females very good. 2nd, nice lot of females. 3rd, male here better than male in second pen.

White Leghorns.

Cocks—1st, firm five-point comb, pure white, grand condition, good type, tail well spread, nice body but trifle heavy if anything, lobes good. 2nd, grand tail furnishing, beautiful back, modern approved type, favorite with many. 3rd, smaller comb than first, attractive type, well set up.

Hens—1st, white, grand type, body line pretty, well shown. 2nd, stylish type, distinctly Leghorn line, favorite with many. 3rd, up standing, nice tail, trim body.

Cockerels—1st, neat head, stylish, good all over. 2nd, head not equal of first, yellow shanks, very nice all over. 3rd, long from point of breast to sickles, low tail, sweeping curves, trim shape.

Pullets—1st, good head, fine body, tail not evenly spread, yellow legs. 2nd, leg color not equal to first, head fine, dandy female. 3rd, a choice pullet from start to finish.

Brown Leghorns

Cocks—1st, nice finish, grand condition, good head, clean ear lobes, good in body, tail well carried, strong saddle and hackle. 2nd, good, carried well up on legs, decidedly nice bird.

Cockerel—1st, grand finished head, lobes and general type, low well spread tail, graceful lines, strong in neck and hackle, stripy beautiful tail and color, one of the best shaped and color birds ever exhibited.

Pullet—1st, perfection back, well

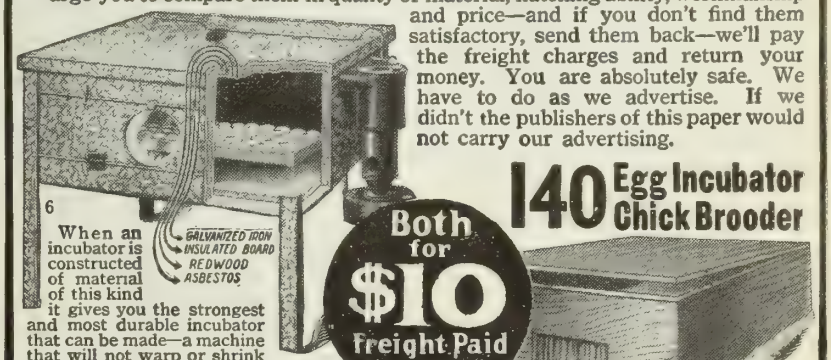
Ironclad WINS In The Two Biggest HATCHING CONTESTS Ever Held

TRADE MARK

THE Hatching Contests conducted by Missouri Valley Farmer and Nebraska Farm Journal are the Biggest Hatching Contests ever held in the world. The Ironclad Incubator is the only incubator that has for two years in succession won in these Big Contests. The last contest was won by Mrs. C. F. Merrick, Lockney, Texas, with her Ironclad Incubator. Read sworn and witnessed statement below:



IRONCLAD INCUBATOR CO., Racine, Wis. Lockney, Texas.

Gentlemen:—I am writing to let you know that I won in the Big Hatching Contest held by Missouri Valley Farmer and Nebraska Farm Journal. I placed 148 eggs in my 140-Egg Ironclad Incubator and hatched out 148 strong chicks. I also took off two more perfect hatches during the season and I wish you could see my chicks, they are doing splendid. My success has been perfect. I have examined quite a few incubators and I like none so well as the Ironclad.

Respectfully yours, MRS. C. F. MERRICK.

We Give 30 Days Trial—10 Years Guarantee

You have nothing to risk. We will send machines—let you use them 30 days—urge you to compare them in quality of material, hatching ability, workmanship and price—and if you don't find them satisfactory, send them back—we'll pay the freight charges and return your money. You are absolutely safe. We have to do as we advertise. If we didn't the publishers of this paper would not carry our advertising.

Don't class this big all-metal-covered dependable hatcher with cheaply constructed machines.

Ironclads are not covered with cheap tin or other thin metal and painted like some do to cover up poor quality of material. Ironclads are shipped in their natural color—you can see exactly what you are getting. Don't buy any incubator until you know what it is made of. Note these Ironclad specifications: Genuine California Redwood, triple walls, asbestos lining, galvanized iron covering. Galvanized iron legs. Large egg tray, extra deep chick nursery—hot water top heat, copper tanks and boilers, self regulator, Tycos thermometer, glass in door and many other special advantages fully explained in free catalog. Write for it today or order direct from this advertisement and save time.

Pullets—Bird Bros., 1-2-3-4-5.

Old Pens—Bird Bros., 1; Peter J. Olle, 2.

Young Pen—Bird Bros., 1.

COLUMBIAN PLYMOUTH ROCKS.

Cocks—James H. Taylor, 1; Percy C. Miller, 2.

Hens—James H. Taylor, 1-2; Percy C. Miller, 3.

Cockerels—C. R. Deardorff, 1; James H. Taylor, 2-3; G. W. Garlock, 4-5.

Pullets—James H. Taylor, 1-2; C. R. Deardorff, 3-4; G. W. Garlock, 5.

Young Pen—James H. Taylor, 1.

SILVER WYANDOTTES.

Cocks—C. P. McAndrew, 1; Clare E. Hoffman, 2-4; Van Winkle & Son, 3; Wm. M. Swaggert, 5.

Hens—Clare E. Hoffman, 1-4; Wm. M. Swaggert, 2; C. P. McAndrew, 3; Van Winkle & Son, 5.

Cockerels—Clare E. Hoffman, 1-3; Wm. M. Swaggert, 2; Aldro Jenks, 4; Van Winkle & Son, 5.

Pullets—Clare E. Hoffman, 1-4; C. P. McAndrew, 2; Van Winkle & Son, 3; Wm. M. Swaggert, 5.

Young Pens—Clare E. Hoffman, 1; Van Winkle & Son, 2; G. B. Stannard, 3; Aldro Jenks, 4.

GOLDEN WYANDOTTES.

Cocks—Julius Sinn, 1; J. S. Pennington, 2; Simmons Bros. 3; W. J. Jenck, 4; Newton Nusbaum, 5.

Hens—Newton Nusbaum, 1; W. J. Jenck, 2-3; Julius Sinn, 4; J. H. McDanell, 5.

Cockerels—Julius Sinn, 1; Simmons Bros., 2; J. H. McDanell, 3; J. A. Gates, 4; W. J. Jenck, 5.

Pullets—Julius Sinn, 1; J. H. McDanell, 2; W. J. Jenck, 3-5; J. A. Gates, 4.

Young Pen—Julius Sinn, 1; J. H. McDanell, 2.

BUFF WYANDOTTES.

Cocks—F. L. Waterman & Son, 1-2-3; W. J. Hoebel, 4-5.

Hens—F. L. Waterman & Son, 1-2.

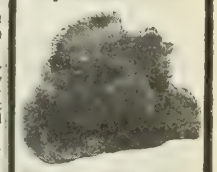
Cockerels—H. J. Wiegand, 1-2.

Pullets—F. L. Waterman & Son, 1-2.

Old Pens—F. L. Waterman & Son, 1-2.

Young Pens—F. L. Waterman & Sons, 1-2.

$2.00 Back for Every $1.00 You Spend



NO other one thing, since the invention of the modern incubator, pays the poultryman such large dividends as a reliable grain sprouter—**The Reliance.**

And, if there is one time more than another when every poultryman absolutely needs a Reliance Sprouter—not only for the profit it brings, but for the chicks it saves—now is the time, during the cold days of January, February and March.

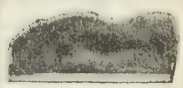


Figure it up for yourself and you'll see that for every dollar you spend for a sprouter the Reliance will make and save 2 to 3 times that much for you every month.

If your feed bill is high—**Reliance Sprouted Oats will cut the bill in half.** If your hens don't lay and your egg yield is below average—**Reliance Sprouted Oats will keep them laying all winter and increase the yield over 50%.** If your hens are not thriving—**Reliance Sprouted Oats will make and keep them healthy, sturdy** and **promote growth.**

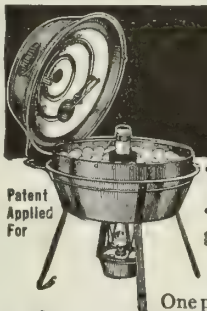
Reliance Sprouted Oats

Taken from photo of 3 bu. tender, juicy sprouts. All from 1 bu. of oats placed in a Reliance Sprouter on Monday and taken out on Saturday morning. Think of the cheap feed you're getting and the extra eggs.

Taken from photo of tray full of sprouts before feeding a flock of hens. Note the tray is **not wood** — but heavy galvanized iron with double locked and riveted frame which can not rot or wear out like the wooden ones. Other superior features in our literature. Send for it.

Reliance Grain Sprouters

Are Sold Direct from Factory at Low Bargain Prices



In November and December we cut the price on all four sizes way below competition. We will adhere to that low price for the rest of the season. Better values you can get nowhere else.

The Reliance is Not Only Cheaper—But BETTER

It has double walls, double insulation, extra galvanized iron linings, galvanized trays, (not wooden), strong screening. The lumber is of the highest grade, the heating system is better, the ventilating system is faultless; besides the front contains more glass which induces larger quantity of sprouts. Write for literature and low prices. We ship same day order is received. Safe delivery guaranteed.

Reliance Incubator Co., Dept. 62, Freeport, Ill.

Manufacturers of Grain Sprouters, Incubators, Brooders

Patent Applied For

NEW—NEW—NEW—

SHEER'S Latest Production

FRIEND Poultryman, this incubator gives results. No other incubator you have ever seen has the design and features of this. No other incubator you have ever used has given the high percentage hatches day in and day out this is giving. **Its marvelous price is just $6, delivered to you.**

More than 11,000 ordered before one line of advertising appeared. One poultryman, after test, ordered 50. One man, inexperienced, cleared $150 with one little hatcher in 5 months. **Results** — that's the answer. This is the first practical **all metal,** fireproof, everlasting machine ever produced. The **first** machine of its size with a perfect heating and heat distributing system.

Peerless-60

$6 DELIVERED

Round Like a Nest. Eggs heated **from above** with the patented triple wall heat radiator. All heat is used. Regulation of heat, ventilation and moisture is all automatic. Equipped throughout with the famous Sheer fixtures. Wonderful Sheer Wafer Thermostat Regulator **automatically** turns lamp flame up and down to meet temperature in egg chamber. Overheating impossible. Uses less oil than any other incubator on earth per dozen eggs. I am ready to prove these facts.

Let Me Send You a Sample Incubator

Let me send you one of these machines so you can see for yourself, upon the absolute guarantee of results or your money back. This is a fair, square offer. It means money in your pocket. Write me today.

BUFF AND WHITE ORPINGTONS THE ELMWOOD STRAIN
THE STRAIN OF LEAST RESISTENCE

BUFF ORPINGTONS. Cockerels that are blocky, broad, deep and massive, full of vigor, strong in under-color, strong in head points and type, and a rich, even, lustrous shade of buff, as soft as moonlight. Won more points at the New York State Fair than any other exhibition. Almost a clean sweep at Albany. They always win. It's in their breeding.

WHITE ORPINGTONS. Some very high-class cockerels to spare. I know we've got what you want. I know, too, you can pay more elsewhere than I ask, but you can't get better blood lines, or quality. Book your order early for eggs at 50c each. A few baby chicks also. I guarantee to please.

SILVER WYANDOTTES
THE BEAUTY & UTILITY BREED
THE BEST WINTER LAYERS
STOCK FOR SALE AT ALL TIMES
NO EGGS NOR BABY CHICKS
A. E. TARBOX, BOX A, YORKVILLE, ILL.

They are going fast—our utility Silver Wyandottes. Only a few females left below $4.00 each, but we have about 50 utility Cockerels at from $2.00 to $4.00 each. If you want some, let us have your order soon; they will help the laying quality in your flock. We have a fine lot of choice breeders and exhibition birds yet in Cocks, Cockerels, Hens and Pullets at prices that are right. Let us supply your wants.

SILVER CAMPINES We have about 125 Cockerels and Pullets to spare in pairs, trios or pen of 1 male and 4 females. They are a fine lot and will please you. Send for Wyandotte catalogue or write your wants. No Campine catalogue, but will be glad to quote prices.

White Rocks and Silver Campines

My White Rocks are Winners at such shows as Quincy, Ill., Illinois State Fair and Illinois State Show, Springfield, Ill., 1912-1913.

I have been pedigree breeding this variety 10 years for heavy egg-production and standard excellence, and can supply winners for any show.

My Silver Campines are the Best Obtainable

My 1914 matings are each headed by a son of a winner at the 1912 Crystal Palace Show, England (the world's greatest show), mated to winning females.

A few fine White Rocks for sale. Eggs from special pens of either variety $5.00 per 15, $9.00 per 30. Circular free.

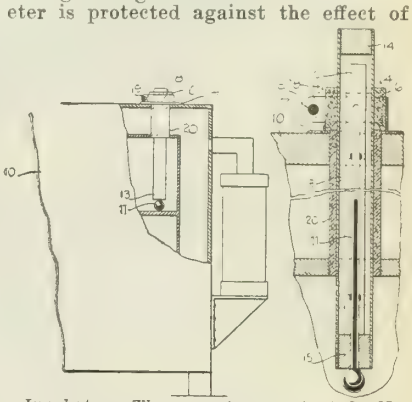
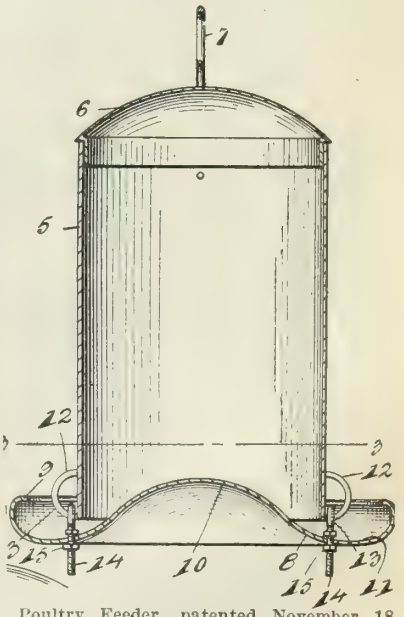
Recent Inventions for Poultrymen



By Lester L. Sargent, Patent Attorney, Washington, D.C.

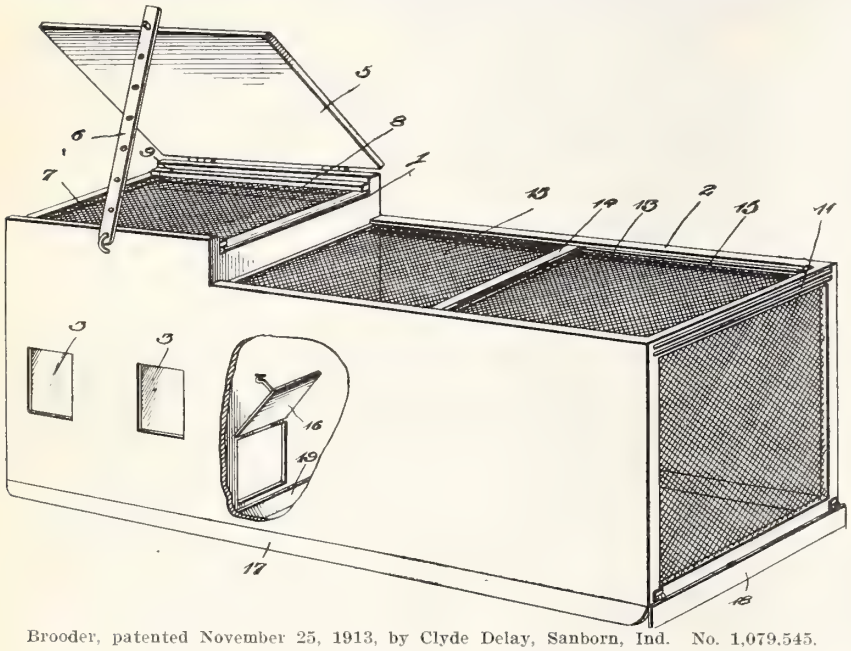
AN Electric Regulator for Incubators is the poultry device which stands out as the most unusual of any patented during November. The usual casing and egg trays are provided. The heating means consists of a tube disposed in the lower portion of the casing. This tube is supplied with hot water from a boiler. A thermostat in the casing controls an electric switch, which in turn actuates electrical devices for turning the heat on and off, by means of doors in the casing which are automatically opened for the ingress of air when the hatching temperature within the casing exceeds the normal 103 degrees. When the temperature falls below normal, the thermostat then makes connection with a contact rod and an electrically operated alarm is sounded. The operator in charge is thus warned to remedy the defect by increasing the temperature of the source of heat supply. The inventor claims that the advantage of the electrical regulator over other automatic means is that heretofore in practice it has been found that when the heat supply is wholly or partly shut off the temperature within the casing increases for a short time, to the detriment of the hatching process, while with his improvement the incubating temperature is controlled independently of the temperature of the heating medium or the surrounding air. The electrically actuated doors open when the temperature reaches 104 degrees F. and close when it reaches 100 degrees F. within the casing, the temperature of the heating means being practically constant at all times at 104 degrees F. Here is the way the electrical device operates: Suppose the temperature of the incubator rises above normal; it will cause the thermostat (which consists of one copper and one iron bar) to contact with a contact rod and thus energize a solenoid and cause its core to exert a pull on a link which operates an arm that turns a trunnion, or cylindrical projection, that moves swinging doors into a partly open position. The doors are then moved by mechanical means—a ball and cylinder—into a completely open position, to admit outside air. An insulated arm mounted at right angles on the swinging door has its end engaged with a segmental contact plate and travels along this plate to keep the solenoid energized. When the arm finally leaves the first of two adjacent segmental plates, the circuit is broken and the solenoid de-energized. This occurs when the swinging door has reached its partly open position and the ball in the cylinder starts to roll outward. The incoming air, when it has lowered the temperature sufficiently to influence the thermostat, causes the energizing of another solenoid which actuates devices to close the swinging door, practically reversing the operation of the various devices. The inventor is Curtis C. Carter, of Chapin, Illinois. Patent No. 1,079,213.



Electric Regulator for Incubators, patented November 18, 1913, by Curtis C. Carter, Chapin, Ill. No. 1,079,213.

An "Incubator-Thermometer" is the invention of Clara Roberts, of Newberry, Mich. It is housed against the effect of the exterior air and may be conveniently withdrawn to determine the temperature without the danger of any cool air from outside gaining access to the egg chamber. A guide tube forms a passage from the exterior of the incubator into the egg chamber. A transparent tube is slidably fitted into the guide tube. A thermometer is inclosed in the transparent tube, and a stop is adjustably mounted upon the transparent tube, limiting its insertion through the guide tube. The thermometer is protected against the effect of the low temperature in the air space between the double walls in the incubator by the asbestos of which the guide tube is constructed. Patent No. 1,079,724.

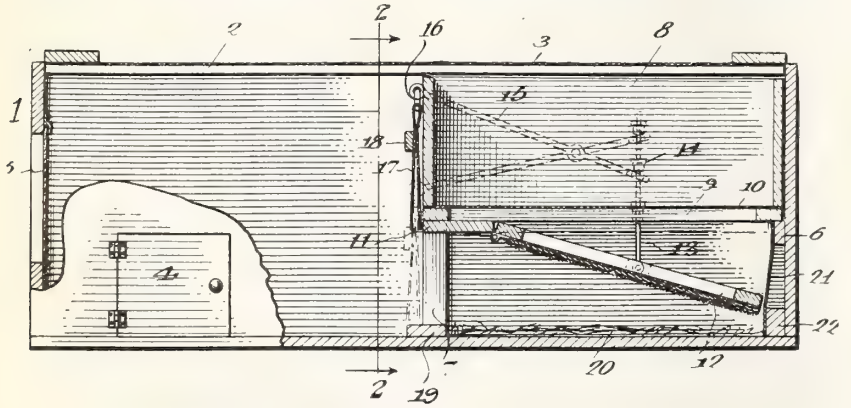
Incubator Thermometer, patented November 25, 1913, by Clara Roberts, Newberry, Mich. No. 1,079,724.



George W. Heath, of Stonington, Conn., has patented a poultry feeder designed to prevent the wasting of feed from overflow or billing by the poultry. Another object is the provision of a hopper or container and a tiltable trough associated with it, adapted to be moved by the fowls for

Poultry Feeder, patented November 18, 1913, by George W. Heath, Stonington, Conn. No. 1,078,853.

the automatic supply of feed from the container into the trough. The inwardly turned flange of the trough is advantageous in preventing feed from being scattered by the fowls. Patent No. 1,078,853.

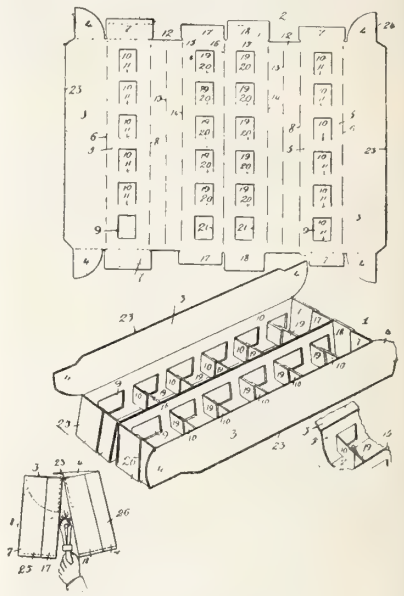


Three new brooders have made their appearance. Their construction and operation is fairly obvious from the accompanying illustrations. Clyde Delay, of Sanborn, Indiana, is the patentee of

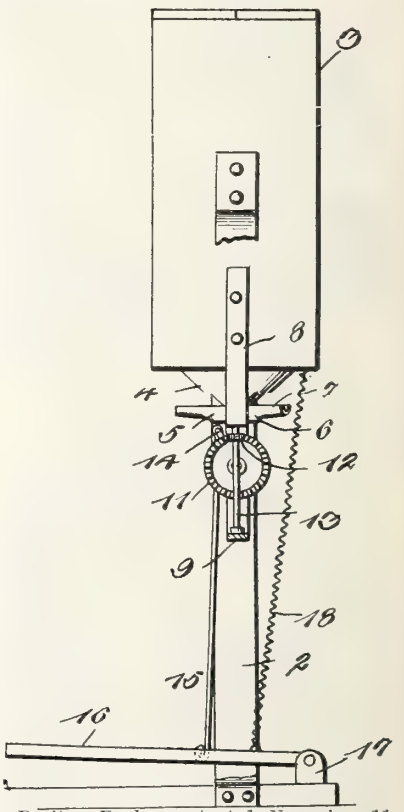
Brooder, patented November 25, 1913, by Clyde Delay, Sanborn, Ind. No. 1,079,545.

a Poultry-Brooder which is a sanitary and inexpensive structure, comprising a combined screened inclosure and housing. Patent No. 1,079,545.

James A. Gardner, of Northshade, Mich., is the inventor of a new Brooder in which the ventilation is regulated by the chicks within the brooder, their instincts and habits being taken advantage of for the operation of the brooder. A movable hover member or



Brooder, patented November 11, 1913, by James A. Gardner, Northshade, Mich. No. 1,078,344.

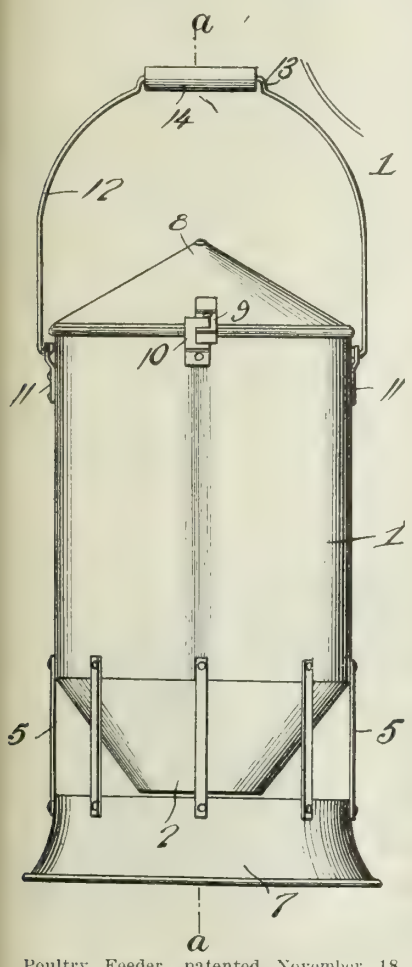


fleece-lined cover for the chicks is arranged in the hover chamber to permit the backs of the chicks beneath it to come in light contact with it, and having the means, including a counterweight and curtain connected with and balancing the fleece-lined cover, for closing or decreasing the ventilation opening as the cover is lowered or raised. In other words, the brooder acts similarly to the mother hen. When chicks creep under her and press against her body to get warm, she will lower her wings and inclose them. The invention is particularly useful in connection with so-called fireless brooders. Patent No. 1,078,344.

A new Egg-Carton has been patented by Edward F. Ward, of Trumansburg, New York. It may be used as a package in which the eggs are delivered or as a package in which eggs are candled to determine their condition. And the candling may be accomplished without removing any egg from the carton or the handling of any egg. The candling is done by placing the carton over a light so as to straddle it, and then the eggs may be examined through the holes in the sides of the carton. The invention comprises a pair of similar cartons arranged side by side and having adjacent sides flexibly united along one edge directly to each other, and having the opposite edges of their open sides provided with flaps extending across the junction of united sides when closed, tongues extending from the sides of the pockets and interengaging over the bottoms of the receptacles. Patent No. 1,077,322.

Still another brooder is the invention of James W. Morris, of Oakland, California, one-half of the patent rights having been assigned to Richard W. Sweet, of Oakland, California. What is claimed is a hover including two telescopic portions, one having a bottom and the other a top, these portions being disposed to permit ingress of air to within the hover, and means for snugly engaging the chicks within the hover. In the daytime the chicks have the free run of the entire area; at

Egg Carton, patented November 4, 1913 by Edward F. Ward, Trumansburg, N. Y. No. 1,077,322.



Poultry Feeder, patented November 11, 1913, by Max H. Hinkle, Blackhawk, Colo. No. 1,078,094.

night the inner hover is rotated so as to close the opening and inclose them therein. Patent No. 1,078,547.

Max H. Hinkle, of Blackhawk, Colorado, is also the inventor of a poultry feeder that exercises the fowls. George E. Fritz, of Blackhawk, Colorado, is

the assignee of a half interest in the patent rights to this invention. In this feeder the rotatable distributer at the mouth of the hopper is operated by a vertical shaft carrying a pinion which meshes with a gear wheel having a lug on its outer periphery, which in turn is connected to a rod extending to and connected with the lever on which the fowls must alight to operate the feeder. A coil spring having one end secured to the hopper and the other to the lever tends to rotate the distributer back to its original position after it has been spun around by the fowl alighting on the lever and setting the device in operation. Patent No. 1,078,094.

Poultry Feeder, patented November 18, 1913, by John M. Franklin, Hatfield, Pa. No. 1,079,231.

John M. Franklin, of Hatfield, Pa., is the inventor of a new poultry-feed hopper designed to prevent poultry from wasting feed, such as dry mash, by preventing the overflowing of the feed pan. Patent No. 1,079,231.

Try Crisp-As-Ice Lettuce

This is the most beautiful Lettuce known, leaves are so tender and brittle as to suggest its name. It cannot be over-estimated or over-praised; for use early in spring or summer, or late in fall.

OUR OFFER. We will mail any reader of this paper 1 packet Crisp-As-Ice Lettuce in a COUPON ENVELOPE if 2c stamp is enclosed. When this COUPON ENVELOPE is returned you may select one packet of seed FREE — any kind offered in our SEED BOOK. Our Big Seed and Plant Book for 1914, offering the best Seeds and Plants at Bargain Prices will be mailed FREE to all.

MILLS SEED HOUSE, Box 30, Rose Hill, N. Y.

THE GREAT PALACE NEW YORK SHOW.

"The Lucky Seventh" a Brilliant Exhibit of Rarest Quality, the Beautiful Palace Building Being Filled With Entries From Every Section of the country—Great Classes in Barred Rocks, W. Wyandottes, Reds, Buff Orpingtons, Leghorns, Etc.—Nearly 5,000 Specimens Exhibited in All Classes—A Record-Breaking Attendance With Perfect Management.

Written by H. P. Schwab, Eastern Representative A. P. J.

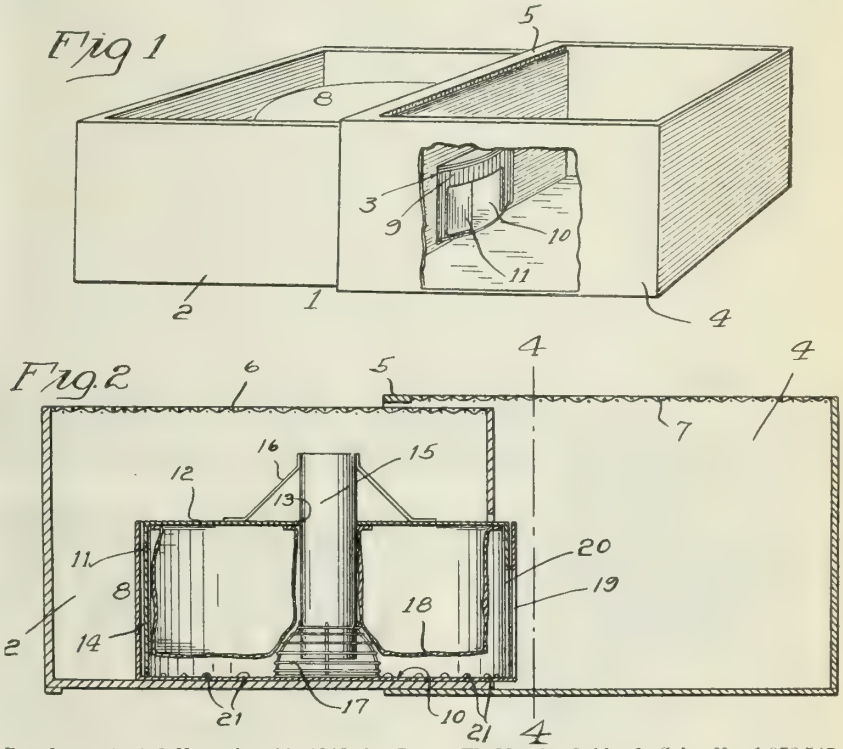
THE members of the Empire Poultry Association have every reason to feel proud over the success of the "Lucky Seventh" better known a the New York Palace Show which has just closed its doors on one of the largest and finest shows we have had the pleasure of attending. It was a brilliant display and a brilliant success from every viewpoint, the classes were well balanced and varieties of every known kind were seen in numbers and quality to admire.

The single entries numbered 2,477. Pens 229 of 1,145 birds. Pigeons 601. Pet-stock 213 and displays 200, making a grand total of 4,636 entries. The class of Barred Rocks numbered 213 birds and was sizzling with the quality we can expect at New York shows and other classes were in proportion with figures to be given later.

The Palace banquet as is usual again proved a feature of the entertainment offered by the show management. Here the two secretaries of the two great New York shows were brought together and most of those attending had a chance to speak their little piece. Uncle George Weed was toastmaster and some toaster he is, but others like myself will have our day to play even at the Boston feast as Billy Atherton has promised to set him way back in Bean-town.

Everything connected with the show seemed to be in perfect working order and while we would single out President Robert Seaman, Secretary Howell and Superintendent Hearsfield for special mention, we can't help but feel that particular credit is also due to every member no matter what his minor position was, for the entire show was run with smoothness that was good to see, perfect harmony was the great and important factor and in the general success of this great and most beautiful exhibit there is glory enough for all.

We would like to write more of this show in a general way but our time is limited and we are anxious to tell our readers of the exhibitors there and the birds seen and the winnings.



The exhibitors and the birds:

Plymouth Rocks.

The great class of 213 Barred Plymouth Rocks were cleverly handled by Judge C. H. Welles. There was quality in every class of the highest merit and many sales of note here.

Mr. John D. G. Gennerich, Mt. Kisco, N. Y., won well here last year and came back for more honors winning Special first cockerel mating pen, second pullet mating pen, second and third cockerel mating hens, special first pullet mating cock and second and third cockerel mating pullets with fourth pen. His entire exhibit was one of rare quality and his winning pullet-bred cock a bird of superior quality and worth. In the line of cockerel mating pens his winner stood out strong, such breeding is bound to tell and we look for more results from this line next year and in the future.

A new Barred Rock star appeared in the person of J. D. Harcombe, Grand View, N. Y. He winning first cockerel, first pullet and second pen and several specials. Mr. Harcombe has been breeding but a year or two and this was

Brooder, patented November 11, 1913, by James W. Morris, Oakland, Cal. No. 1,078,547.

his first exhibit. His birds have the marks of quality and were easy winners.

First cock, fourth cockerel and third pullet was won by P. Canavan, and Mr. Frank D. Hamm won first pen, third hen, and second pullet.

To make the record complete we are obliged to give our own winnings here (Schwab Brothers) which were: First hen and special for best hen in the entire show, second cock, second cockerel, fifth pullet, special first pullet mating pen and special firsts on both cockerel-bred hen and pullet with the Spratts cup for best general display.

White Rocks numbered 97 birds and were a class of quality shown in wonderful condition. The Rancocas Farms, Browns Mills, N. J., here made a show record by winning cock 1, hen 1, cockerels 1 and 2, pullet 1, pen 1, and all specials. In condition and in quality as well it is hard to imagine better birds than these were, for in size and shape they were of the best, with nothing lacking. This line has been winning for years and as seen here and at their home are all we could wish for.

The Waldron Poultry Yards, Ogdensburg, N. Y., won well with cock 4, hen 2, pullet 3, and pen 2.

Other winners here were P. G. Springer, R. A. Racine, F. W. Hopkins, A. L. Russell, B. R. Smith, J. D. Koons, etc.

Buff Rocks a good sized class of fine birds with the leading winners as follows: J. H. Vincent, W. J. Wiberly, Rox Bar Farms, Billheimer and Kratzer, Wm. J. H. Goetz, etc.

Columbian Rocks numbered 70 birds and was a contest between several well known breeders, Mr. F. G. Bean, Collegeville, Pa., winning cock 1 and 4, hens 1, 2 and 4, cockerel 1 and 3, pullet 5 and pen 1.

Colonel L. Paul Graham, Collingswood, N. J., winning cock 2, cockerel 4, pullet 1, and pen 3.

Others winners here were S. W. Bradley, F. W. Otte, Buttonwood Farms.

In Partridge Rocks the class was rather small with fine quality and the winners were W. F. Presgrave, Anderson and Prussy, and I. W. Mole.

Silver Penciled Rocks, one of the best quality classes we have seen to date, we wish in particular to refer to first pullet, and believe her to be the finest specimen we have ever handled of this variety. The Bonaparte Park Poultry Ranch, winning cocks 1 and 3, hens 1 and 2, cockerels 1 and 2, pullets 1 and 2, and pens 1 and 3. With Mr. John McKay in charge these yards loom up strong.

Wyandottes.

In White Wyandottes 188 birds were seen making one of the five largest classes at the exhibit. Evenness and good quality was the one great feature throughout. Onlya Farms, Florham Park, N. J., made a very select winning here and by winning first pen won final ownership of the pen cup on which they had a previous win. They also won hen 4, cockerel 4, pullet 2, and pens 1 and 4.

Their first pen was a marvel in mating and beauty, the females matched to perfection and the male without question one of the best in the show, fine heads with the best of form and carriage are the great features of this valuable line.

Mr. Geo. H. Pollard, Greenbush, Mass., won cock 1, cockerel 5, on rare birds well shown.

First and second cockerels were won by Havemeyer Bros., with the wizard Jimmy Glascow in charge. He also won other places in the class but his win on cockerels is enough to give at any one time. They were a great pair of birds beautifully shown.

Silver Wyandottes were a large and very select class, just the kind we like to see for this old-time favorite has always had a warm place in our make-up. Here our old friend Geo. W. Weed won cock 1, hen 4, cockerel 2 and 3, and pen 2.

Other winners were F. S. Hubbard, W. E. Samson, J. Reepmeyer, H. M. Puder, Dr. H. M. Kalvin, J. F. Hughes, etc.

Golden Wyandottes a small class, but with quality that would win in a large and strong class, the females particularly fine.

Buff Wyandottes a large and beauty class, birds well shown. The winners were L. W. Winner, S. A. Howland, T. S. Hewke, A. J. Gies, H. A. Pratt, Mrs. J. D. Koons, C. E. Coffin, J. E. Burt, etc. First cockerel shown by Mrs. Koons a bird of rarest type and soundest of color with nice head and well finished.

Black Wyandottes a very fair sized class and a very good one, the type of birds was particularly fine and heads good.

Partridge Wyandottes a good class of fine quality birds, well shown. C. B. McEwan winning cock 1st and 2nd, hen 3rd, cockerel 5th, and pen 1st. Mr. P. W. Doll winning hens 2nd and 5th, cockerels 1st and 4th and specials.

Silver Pencilled Wyandottes all awards to H. Havemeyer.

Columbian Wyandottes a beauty class of 80 birds with birds in very good con-

THE GREEN SHEEN STRAIN

BEST BY TEST

dition The Wilburtha Farms, Trenton Jct., N. J., winning cock, 5th, hen 5th, cockerel 1st and 4th, pullet 5th, and pen 2nd, with several specials. Their winning cockerel was a bird of unusual beauty in type, markings and fine head points.

Other winners here were L. A. Ayers, Dr. J. S. Rittenhouse, G. H. Baker, G. E. Nichols, Columbian P. Y., Horseshoe P. Y., etc.

Rhode Island Reds.

We consider that the great classes of Reds were in a measure at least due to the popularity of Judge Hicks, for Mr. Hicks handled these classes before and the breeders have unlimited confidence in him. The Schenley Heights Poultry Farms, Pittsburg, Pa., again made a very clever win here in this great class of 155 single combs by winning cock 2nd, hen 3rd, pullet 1st, pens 1st and 2nd, with specials for best Red shown, best display, etc. The winning pullet was a charmer in color and the best possible form, fine head and well shown. The two winning pens were of the highest quality and so well and evenly mated it was difficult to tell them apart, the males in pen were among the very best in the show, grand birds of highest quality. It was a noble win in a beauty class of birds.

First prize cockerel went to Mr. Ernst Underhill, Morris Plains, N. J., on a wonderful specimen of the richest of color, with choice head, fine wings and tail, and marvelous under-color and with very fine form. We had seen this bird before, and as a great winner in a good show and know him to be one of the kind that is always a good one. Mr. Underhill bred this bird and others like him and has a line of unusual worth, with which we wish him the best of success.

Mr. Ellis S. Shelly, Williamsburg, Pa., one of our old reliable breeders made a choice record by winning hens 1st and 4th, cockerel 7th; we consider that a heap in this class. First hen a charmer of fine form and rich even color.

Mr. E. M. Dutton, Newfane, N. Y., fresh from his great win at the Buffalo, N. Y., show also did fine here, winning cock 1st, and in Rose Combs, pullet 1st and pen 1st.

Other winners in S. C. were Maplecroft Farms, A. S. Bailey, Wyebrook Farm, G. W. Tracy, Gilbert Wright, G. D. Clark, W. M. Gorsuch, M. B. Griffing, Orchard Farm and G. C. Hollister.

In Rose Combs 103 birds were shown, the Schenley Heights Farms winning cock 4th, hen 2nd.

Mr. Lester Tompkins, Concord, Mass., winning cocks 1st and 3rd, hens 3rd, cockerels 3rd and 5th, and pen 2nd. His winning cock was the sensation of the class, a bird of rare type and wonderful color and markings, this line all through showing unusual character and the best of breeding qualities.

Other winners here were Orchard Farms, A. M. Anderson, Wright & McCormick, Jenkins & Park, C. Mackenzie, G. Z. Foland, E. Sachs, J. A. Ferry, S. Smith, etc.

The F. L. Poultry Farm, Verona, Pa., won pullet 5th.

Orpingtons

Buff Orpingtons were one of the banner classes of the show with 173 birds competing, it was a rare class all through with general high grade quality the feature and birds well shown. The winners looked particularly good and others also very fine, but then all can't be winners when but 25 prizes are allowed. The

PALACE
New York Show

Second Edition of Our 1913 Winnings in

S. C. R. I. Reds

They are unbeatable. Competing with the "World's Best" in a class of 155 birds, we won **First Pullet and Special for best Red in Show;** Second Ck.;First, Second Pens; Display and Specials.

At Allentown's Great Show

Our winnings stand as a Show record for at this great 1913 Show with the largest and best entry ever recorded, **we won first cock; first and second hens; first and third cockerels; first pullet; first pen;** first display; $60 cup for best Rhode Island Red; **the sweepstake for best Red male or female,** etc., etc. This is a **modern record** made by our **modern up-to-date line.**

This Stupendous Sweep

Is but a **repetition** of **our last year's winnings** when they led all others at **Philadelphia, Cleveland and Pittsburgh** by winning **13 out of a possible 15 first prizes** competing in the largest and strongest classes of the year. (Look up these records.)

At Phila., Cleveland and Pittsburgh

Our First Prize Cockerel Was Awarded the Championship Sweepstake Special for

The Best Male In The Entire Show

This Record Stands Alone and Unapproached by Any Breeder and of Any Line

Our Allentown winnings prove again we have the winning quality for any show. Having 1,300 youngsters ripening with an evenness of color and highest merit, we are prepared to fill **your wants to your perfect satisfaction** in either old or young. We offer early birds fit to win now. Selected breeding birds mated for best results; a specialty in pens, trios or in larger lots. Write your wants please. It is no trouble to quote you prices and give any desired information.

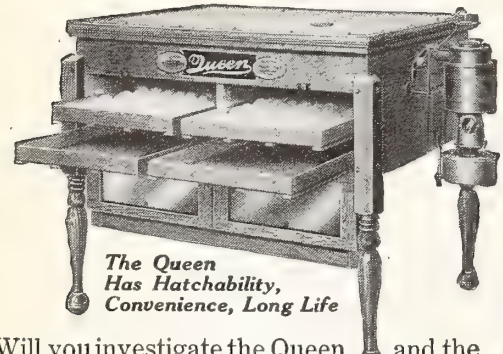
I Stand on the Record of the Queen Incubator



READ the extracts from letters below. What better platform could I have to stand on? These people wrote me voluntarily. They tell of things you are interested in. What you want, above everything else, is a machine that will give you the best possible hatches. You are interested in the great big question of

Read the 5 Short Letters Below

What the Queen Will Do for You

The Queen has not made exceptional records for these few people only. It is doing just as well for thousands of others. It will do as well for you. I guarantee that the Queen Incubator, if you follow my instructions, will give you more livable chicks than any other incubator made—no matter what price it sells for. Livable chicks grow—into money.

The Queen Has Hatchability, Convenience, Long Life

Will you investigate the Queen and the Queen records? If so, let me send you my Poultry Guide and Catalog, free. It tells what many users say, gives names and addresses and is finely illustrated. Write me for it today.

P. M. WICKSTRUM
Queen Incubator Man
Box 4, Lincoln, Neb.

Pratt Food Co.
Eastern Distributer, Philadelphia, Penna.

I hatched 77 chicks out of 83 fertile eggs. The thermometer in the room went down to 28 many nights.
M. E. WEBBER, Winchendon, Mass.

No trouble to run the Queen. I can go to bed and sleep sound, knowing that the Queen will take care of itself.
MRS. J. W. KLINEFELTER, Weiser, Idaho.

I put duck and turkey eggs in my Queen, and a week later put in some chicken eggs. Later I put in some quail eggs. All fertile eggs hatched except one quail and one turkey egg.
MAUDE COLEMAN, Cypress Grove, La.

With my Queen Incubator I out-hatched a $45 machine (other make) last spring by 25 per cent.
CHAS. SUNDBERG, Schaeffer, Mich.

Have just taken off my second hatch this morning. 94 per cent. of fertile eggs, all strong, healthy chicks.
R. GOLDEN, Navasota, Texas.

Joe-Pye Orpington Farms, Norwalk, Conn., again made a record here of which they can well feel proud. They won cocks 1st and 2nd, hens 4th and 6th, cockerels 1st and 5th, pullet 7th, pens 2nd, 3rd and 7th. They also won special for best display, best shaped male and female, best colored male and a medal for best Orpington in the show. Their winning males first cock and first Cockerel were noble birds well worthy of all they received, with nice heads and rare form. They have a sound and even color good to see. Their entire exhibit was one of quality and worth.

Sunswick Poultry Farms had sold for this and other shows, and as Mr. Delafield put it, were just showing the leavings with which they won cock 4th, hens 2nd and 3rd, and pen 4th, the Joe-Pye Cup and other specials.

Here again a new farm, The Lucknow Farm, Darien, Conn., made its first exhibit, winning cock 3rd, hen 1st, cockerel 6th, pullet 1st, and pen 1st, also several specials, including best colored female, and others of worth. This was a classy line of birds with which we wish the owner every success. They also exhibited Leghorns and ducks.

Other winners here were Palmetto P. Y., F. B. Crawford & Co., B. S. Fry, A. Goetting, W. C. Fallon, Hillside Farm, J. R. Seitz, Inglesand P. Y., Nitram Buff Orpington Farms, etc.

For some unknown reason the classes of White and Black Orpingtons were very small. Blue Orpingtons also small, but good birds.

Leghorns.

The S. C. White Leghorns were the banner class of the show. It was one of the two or three best classes we have ever seen brought together, throughout it was one of highest quality and it took the best to win. Judge Punderford handled this great class with rare skill, and to him every credit is due.

The Dune-Alpin Poultry Farms, with a large and wonderful display of quality in every department, won cocks 2nd, 3rd and 4th, hens 1st, 2nd and 5th, cockerels 1st, 2nd and 3rd, pullets 1st, 3rd and 5th, pens 2nd and 3rd. Special mention is due every one of these birds, but as we put this question up to Judge Punderford and he wrote up the class for us, we refer the reader to his report to be found elsewhere in this issue. For ourselves we wish to commend this display, for it was a most worthy one and shown in finest condition.

The Skylands Farms, Sterlington, N. Y., were exhibiting here to help make this class what it was, one of the best ever seen and their birds were a great credit to them, they winning cocks 1st and 5th, hens 4th, cockerels 4th and 5th, and pens 1st and 5th. There were 24 pens competing and to win first in this class was some honor indeed. This pen was grand in mating with all females just alike and with the best possible heads and a beauty male. Here, again, we refer you to the judge's report for a better line on the quality seen.

The Elm Poultry Yards, Hartford, Conn., won second hen and Mr. Stewart Haddock, Poughkeepsie, N. Y., won 4th pullet and 4th pen.

S. C. Brown Leghorns a fair sized class with Rockfellow and Hubbard, New Haven, Conn., winning cock 1st, hens 1st and 2nd, cockerels 1st and 2nd, pullets 2nd and 3rd and pen 1st.

R. C. Browns a large and fine class with general rare quality. The Gale Place Farms, Hampden, Conn., winning

cocks 3rd and 5th, hens 1st and 2nd, cockerels 3rd and 4th, pullets 1st and 3rd and pen 1st.

Other winners here were The Firefly Farm, S. W. Briscoe, B. Coggins, W. Hipkiss, J. Crawford, Maplewood P. Y.

S. C. Buff Leghorns also a very large and fine class with W. F. Lindorff winning cocks 4th and 5th, hens 4th and 5th, cockerels 3rd, pullet 3rd, pens 1st and 2nd.

The Monmouth Farms, Freneau, N. J., showing in young birds, won cockerels 1st and 4th, pullet 1st, and specials.

Royal Farms, cock 1st and cockerel 2nd.

The Lucknow Farms, cock 2nd, hen 3rd, pullet 2nd, pen 3rd.

Dunrobin Farms, Red Bank, N. J., hen 2nd, cockerel 5th.

R. C. Buff Leghorns a very large and fine class with the following winners: A. Grether, F. Bertram, W. J. Peck, H. C. Stender, M. H. Willis.

Minorcas.

The S. C. Black Minorcas were a class of 50 birds with some very good quality seen. The winners were F. W. Silcock, N. J. Cole, Elm Poultry Yards, Stuart & Magee, H. R. Winans, Chas. Bauer, H. H. Lott, J. B. Gotthold and C. F. Morehouse.

R. C. Blacks also a good class with Single and Rose Comb Whites also seen in very fair numbers and nice birds.

Andalusians.

A large class with many very fine specimens in line. The winning cock and cockerel shown by E. D. Bird, birds of finest quality.

Anconas.

There was a great and beauty exhibit of these birds with 115 in line. We had expected a special report on this class but it failed us, and we made no particular notes of our own. The winners were: E. P. Hicks, G. Walz, J. O. Somers, F. W. Mains, W. S. Rathbun, Mrs. A. Guetter, E. C. Loper, U. C. Kay, W. J. Thayer, P. Y. Blythwood.

Campines.

Silver Campines formed a class of 60 birds, and a royal fine lot they were, with the general quality very high.

The Schenley Heights Poultry Farm, Pittsburg, Pa., winning cock 1st, hens 2nd and 3rd, cockerel 1st, pullet 2nd and 5th, and pen 1st.

In Golden Campines these farms won cock 1st and 2nd, pullets 2nd, 3rd and 4th.

Other winners in Silver and Golden were R. D. Reider, Dr. J. C. McPherson, F. Schebe & Sons, J. H. Kales, S. T. Pearson, F. A. Clark, W. J. Trembath, Short & Tripp, W. L. W. Darnell, etc.

Houdans.

A good sized class of grand birds, the winners particularly fine.

Buttercups.

This was a Buttercup show and strange as it may seem this was the largest class in the show with 251 birds exhibited. They say the quality was good, and likely it was, but as we don't claim to be an expert in this line we would not wish to say. There was to our notion little similarity in color or markings, but from what was seen I feel that we can hope for them, as they are in good hands and a little time will no doubt show evenness and give desired results. We wish them well.

Other Varieties.

Hamburgs and Polish were seen in all varieties and in good numbers, making a fine display.

Bantams, a large entry of fine birds in both ornamental and all game varieties.

Ducks and all water fowl, a very large and fine entry, with the best of quality in every variety and class.

Pigeons are favorites here and as usual the display was complete and of a high character.

This entire display, from first to last, was very complete; it was well shown, with birds in rare condition, and we feel the exhibitors are deserving of special comment for their stock, the condition in which it was shown, and for the general good feeling that prevailed between all throughout the entire show.

Secretary Howell and those connected with him did their duty well and the industry has been greatly benefited by the wonderfully fine and beautiful show. It may well be called the Lucky Seventh, but we can now say the Lucky Eighth is already in view and the loyal breeders will again strive to make that greater and better. To this end let us all bend our efforts, for Poultry's sake.

The S. C. White Leghorn Class at the New York Palace Show.

BY J. C. PUNDERFORD, JUDGE.

A small book could be written on this wonderful display, the grand quality and superb condition that was presented to the poultry fraternity at this show; and yet I can sum it all up in a few words, and I am simply voicing the consensus

Use Trapnesting Methods

and produce hens like **"LADY SHOW YOU"** the $800 White Rock formerly owned by J. A. Bickerdike

Mr. Bickerdike has produced many fowls that were blue ribbon stock and has an enviable record among poultry raisers of the East. His stock is noted for both fancy and utility purposes. His latest book,

Pedigree Poultry Breeding

will be ready for delivery February first. It is a volume of information compiled from practical experiences gathered by Mr. Bickerdike and carefully portrayed in a simple language for poultry raisers. His success is due to the **Trapnesting** and he will tell you how it is done, besides telling

How to make hens lay in the Winter time when eggs are high; How to feed for eggs and vigor; How the breeding of "Lady Show You" made it easy to sell her for $800. "Lady Show You" is the result of Trapnesting.

This method is being used by thousands of poultry raisers throughout the United States. Whether you are breeding for show or utility, trapnesting is the method you will eventually use for results.

PEDIGREE POULTRY BREEDING

By J. A. BICKERDIKE, explains all these things and many more.

To introduce our Trap to the readers of this journal we will send one of the Bickerdike Traps, complete with directions and right to make and use, together with the book **Pedigree Poultry Breeding** for a limited time for only $1.00. Either ordered separately will be sent, charges prepaid, for $1.00. If you are using a trapnest it will pay you to investigate the Bickerdike Trapnest.

Address all orders to

MEDFORD TRAPNEST CO. - - Dept. A1 - - MEDFORD, OREGON

of opinion of every judge and expert who attended the Palace, that this class was the grandest lot of S. C. White Leghorns ever brought together in this country: 26 cocks, 30 hens, 38 cockerels, 33 pullets and 24 pens; a pretty class numerically, and as to quality I never hope to handle such a superb lot again. The day I judged this class each and every bird was in the pink of condition, and the wonder was that bird after bird showed the expert washing and conditioning in every section. It was truly wonderful. The cock class was a grand lot; first cock finished in every section, fine eye, just a bit off in comb, snow-white and beautifully rounded in breast, with fine concave back and tail fully furnished and a great flow of lesser sickles. Second cock a beauty, but lacking just a bit in tail finish; third cock a grand bird and would have given first cock a close rub, but was lacking badly in wing finish, but it was impossible to place him lower. Fourth and fifth great males. There were many good ones left out, but they lacked finish, which they will have in a few weeks, which would have made them close contenders for honors.

Hen class a beautiful lot. First, a grand old hen which has won the past two years at the Palace; fine type, has beautiful sweep to back, and having sixteen main tail feathers and carried well-spread. Fine head, comb not quite out enough and dead white in plumage. Second hen, lacking only in tail carriage. Third, fourth and fifth hens, beautiful specimens, but not having quite the finish of the first and second.

Cockerel class: Here was a class of clinkers, a class which would do the heart of any Leghorn man good to look at. First cockerel stood out above all others, in fact I think he was the finest cockerel I have ever seen, and this is the opinion of many judges who handled him. The only place this male could be cut was on breast, and he only showed this small defect at odd times. He did not round quite enough, although when judged he carried himself perfectly. Wonderful head, deep bay eye, arched neck and superb back, with great tail carriage and always at the same angle. Well up on his legs and with that racy, alert air, which we so much desire in a male. Second a dandy, but lacking a bit in color and condition; third, the same fault, with fourth and fifth cockerels grand specimens, the fourth lacking a bit in eye and fifth not quite as good in lobe and finish. A great lot were left, some not quite ready and others lacking in minor points, but still of grand quality.

Pullets, a sweet lot, and I have never handled such a class showing the perfect condition and grand head points these females had. First pullet a really wonderful bird in color and type, taking Best Pullet in the show. She was in the pink of condition when judged and showed to perfection. Second a beauty, taking Best Headed Female and Best Shape, but lacked in eye and was just a bit out of condition. Third, fourth and fifth all splendid birds in color, type and finish. This class was a marvel.

Twenty-four pens and the picking was indeed hard, so close did they run. First had the best balanced lot of females I have ever seen, every one conforming in color, type and condition, with wonderful head points. The cockerel was also a beauty, with a grand head and fine sweep to back, with tail fully furnished and deep yellow shanks. Second pen, a grand lot, but one pullet slightly unbalanced the other females by being a bit high on her legs and a little angular. The cockerel in this pen was a grand fellow in every way. Third pen, a great collection, but females not quite as well mated as first and second. Fourth and fifth pens both fine, but males not as choice as the others. Many really grand pens were unplaced on account of not paying close enough attention to the general balance of the females, some being a bit too young and others passed showing, but all of undisputed quality.

We fully realize that there is a certain time when a Leghorn female is at her best and the winning pens contained hens or pullets which had attained the height of perfection.

In closing, all I can say is that it was the misfortune of every Leghorn breeder who did not have a chance to thoroughly inspect this magnificent collection.

NOTE—In this great class of Leghorns we noted special quality and requested Judge Punderford to write this special report to get the exact views of the winners as placed by him for our readers. We believe he did excellent work with this class.—H. P. Schwab.

LYLE'S PARTRIDGE ROCKS

are the kind that will win for **you.** High-class Exhibition Specimens for sale at **very reduced prices.** We are offering our flock at an exceedingly low price on account of having to move. Write for information to

Chick Chats

by A. P. Schwab

A Happy New Year to all and wishes for a prosperous year.

* * *

After all, this life is just what we make it. Make yours an ideal and thereby help to make that of others better and worth while.

* * *

May those now love who never loved before,
And those who always loved, now love the more.

* * *

Bargain seekers don't get rich as often as the bargain sellers.

* * *

It is evident from every point of view that the greatest poultry year ever known is right ahead of us.

* * *

The exhibitions are larger and better than ever, the quality of surpassing value and the breeders full of hope, with buyers ready to pay the price. Sales reported at the shows indicate the growing demand for high class stock and are many times greater than ever known before.

* * *

The increased demand for eggs for hatching is most noticeable also. It is the popular way to improve and to introduce new blood, and no doubt one of the very best.

* * *

The Canadian White Wyandotte Club will soon hold its first exclusive White Wyandotte show. With a large line of cash and special prizes, they expect to make this an annual feature show. Mr. Sid Saunders, Ingersoll, Ont., is the secretary.

* * *

Note Judge J. C. Punderford's report of the S. C. White Leghorns at the Palace, New York, show. It was a large and beauty class well and most satisfactorily handled by Mr. Punderford.

* * *

We lately spent a day with Mr. John S. Martin, Port Dover, Ont., and in our next will tell our readers what the "Regal" White Wyandottes really are, as seen at their home. Since his winnings at the New York State Fair, Mr. Martin has sold over 1,000 birds and still has about 2,500 on hand from which to breed and to sell.

* * *

We have never seen better S. C. Brown Leghorns than those at the shows this year. At Ridgway, Williamsport, New York Palace, Guelph, Buffalo, etc., all had superior classes in numbers and quality.

* * *

President Robert Seaman and Secretary L. D. Howell, backed by a strong association, have placed the Palace New York show in the very front as a classy and most valuable exhibition. Their late show was a wonder in beauty and quality and of exceptional value to the industry.

* * *

The banquet of the Guelph, Ont., Poultry Association, given to the exhibitors at the Winter Fair, was attended by about 200 exhibitors and was an affair of international importance. The speakers included President Moore of the Buffalo Poultry Association, whose address was one of the best efforts we have heard. Messrs. Urban, Baldwin, McNeil and others also spoke, with each side praising the other for the poultry work they are doing.

* * *

Mr. McAlpin of the Dune-Alpin Farms, whose S. C. White Leghorns made such a great record at the Palace New York show, was indeed a pleased man. The success of this line in the hands of Mr. Kerr has been great and worthy.

* * *

"Fleas" are hatching every day and large classes were formed at Williamsport, Buffalo, Guelph, etc. Even Uncle Billy McNeil has joined and was properly branded by Brother Dick Oke, B-S Flea.

* * *

The Williamsport banquet again was a feature of that great show, with Flem Allen as toastmaster, and a dozen eloquent speakers, and with many noted breeders present it was an affair that will long be remembered.

* * *

The Palace New York banquet also had its features. Most prominent were the addresses of Messrs. Cleveland and Howell. These two secretaries of the great New York shows are broad-minded leaders whose example of harmony and faith in one another bids well for the future.

* * *

We spent two days at the Buffalo show.

WHITE FAVEROLLES AND GOLDEN AND SILVER CAMPINES

The product of over 3,000 eggs raised on twenty-five farms. Great bargains for early buyers. Show cockerels of high quality, $5 up.

AUG. D. ARNOLD — BOX 777 — DILLSBURG, PENNSYLVANIA

PROOF that Parks' Strain of Bred-to-Lay Barred Plymouth Rocks are producing the world's phenomenal egg performers.

Mr. O. F. Mittendorff, Lincoln, Ill. hen Liberty Bell, record 271 eggs in one year.
Miss Lillian C. Adams, Boonton, Mo., pen that won Golden Egg cup in Missouri Laying Contest.
Rev. H. W. Hale, Savannah Ga., hen No. 141-B, laid 605 eggs in three years, 229 eggs 3rd year.
J. A. Titus, Popular Ridge, N. Y., flock aggregating 100 averaged 170 eggs.
A. W. Bell, Ogden, Utah, hen Bell laid 101 eggs in 118 consecutive days.
A. E. Waby, Enderby, B. C. Can., pen that won silver cup, International Laying Contest.
Dr. A. Winton, Franklin, N. C. pen of 14 hens averaged 242 eggs in one year.
S. M. Monks, New Hartford, Conn., hen No. 107 laid 236 eggs in one year.
F. W. Mattison, Washington, D. C., hens Narcissus and Iris laid 242 and 238 eggs in one year.
Customer from Buffalo, N. Y. Forgot to sign name. Sends photo. Hen No. 75, record 263 eggs in year.
H. W. Blasey, Pemberville, O., hen No. 9, laid 257 eggs in 329 consecutive days.
Parsons Chicken Ranch, El Paso, Tex., 22 hens with records of from 200 to 245 each.
J. D. Diehl, Wapello, Ia., hen Madam X, 183 eggs in 10 months. Now owned by O. F. Mittendorff.
E. F. Lovell, Jr., Savannah, Ga., sends photo of Anna, laid 70 eggs in 72 consecutive days.
Dr. Vallie Hawkins, Fawn Grove, Pa., pullet commenced laying 4 months, 11 days, 21 eggs 21 days.
P. R. Chaddock, Elgin, Ill. Won Elgin show laying contest beating Chicago by 15 per cent.
D. R. Morgan, Port Allegheny, Pa., Miss Wonder laid 231 eggs in year. Laid 148 eggs in 148 consecutive days.

Get interested in the breed that the Breed Booms don't feaze. Write to any of the above. They breed and perhaps have a little surplus stock of the strain that put the Lay in the Barred Rock Family.

I still have a few pedigreed breeders for foundation stock. Also a fine selection of **Cockerels** at $3 and up. **Cockerel Circular Free.** Am booking orders for Eggs and Chicks. Circulars free. Large 40-page catalog after February 1st.

J. W. PARKS, Box J, ALTOONA, PA.

It was the best ever. Secretary Drevenstedt and those with him have our congratulations; the entry was very large and the decorations appropriate and beautiful. President Moore and Mr. George Urban, Jr., were very much in evidence and the exhibitors a happy and contented lot.

* * *

Over in Canada they refer to Prof. W. R. Graham as "Our Dick." He deserves well of the breeders in general, and his work has brought results the world over, and we highly appreciate him personally.

* * *

Quality tells, and never before more than now. At the late Trenton Fair we saw a fine S. C. Red cockerel placed first for which tempting offers were refused. At the Palace New York Show this same bird won first prize for its owner and breeder, Mr. Ernst Underhill, Morris Plains, N. J.

* * *

W. B. Atherton and J. H. Drevenstedt have locked horns in journalism and their efforts so far are pleasing. The American Fancier and Stock Keeper is the result. If these gentlemen will but produce the equal of the old American Fancier, then every breeder will have good cause to feel real happy again.

* * *

Williams Bros. and Brace, Fullerton, Cal., exhibited a cock and two cockerels of S. C. Brown Leghorns at the Buffalo show and won first cock and second and fifth cockerels, a fine showing for birds traveling thousands of miles. The Mr. Brace of this firm is our old friend, Mr. W. F. Brace, formerly of Victor, N. Y., who for years won at New York and other great shows east and west. We wish him and his associates success.

* * *

Urban Farms, Pine Ridge, Buffalo, N. Y., have a classy line of White Rocks that were again big winners at the Buffalo show, the same as in years past. Black Langshans also are a favorite with Mr. Urban.

* * *

The average man's ambition is to do something he can't.

* * *

Woman is not satisfied to boss ordinary affairs if she can boss the boss.

* * *

The early shows, like Buffalo, Williamsport, Ridgway, etc., are well established and have come to their own. More big breeders are supporting them year by year and they have come to be known as the Sales shows. The sales made this year at Buffalo alone amount to thousands of dollars and Williamsport for years has been noted for sales made.

* * *

Houdans are more popular than ever this year and nice classes have been seen at all shows attended.

* * *

With 213 Barred Rocks at the Palace New York show this class looms up very strong as a compliment to Judge Charlie Welles. The quality was of great value and the winners without exception fit to win any show.

We were pleased to again meet Mr. M. F. Delano (successor to Owen Farms) at the Palace show. He reports doing a big business. Those who know Mr. Delano have a warm place in their hearts for him and wish him every possible success.

* * *

Your place may be a little nook,
But your success will not be slight
If always you can bravely look
Your conscience in the face at night.

* * *

Mr. Albert Vierheller of Pittsburg (breeder of Buff Rocks) had the time of his life at the Williamsport banquet. We hope to see him there as an exhibitor next year. Your speech, Al, won the boys.

* * *

We regretted to miss the Buffalo banquet. The boys say it was on a par with their great show, and we know something of the capabilities of President Moore, Secretary Drevenstedt and the only George Urban, Jr., as entertainers. Hope we may never miss another.

* * *

The Winter Fair at Guelph, Ont., was a most successful affair and with about 6,000 entries in the poultry department. Barred and White Rocks and White Wyandottes were the largest classes, where quality of the very best was seen. Buff Rocks, while not so large in numbers, were a beauty class, as were also all Leghorn and Minorca classes.

* * *

The Canadian breeders are liberal exhibitors on this side of the line and I

CLEAN SWEEP AT ST. LOUIS

Showing at both shows the same week in the one city, we won 9 Firsts and 8 Seconds out of a possible 10 in each class. This record has **never been equalled** in Black Orpington history.

would like to see more of our breeders showing over there with them. They have a great country and are liberal buyers, but to get them we must show them. Bear this in mind for next year.

* * *

The law forbids all lotteries
And games of chance, 'tis said.
Why isn't marriage then tabooed?
It comes under that head.

* * *

Some day the visitors to New York will find a handsome monument erected at the corner of Broadway and 26th street to commemorate a recent event. The inscription will explain all.

* * *

There's life alone in duty done,
And rest alone in striving.

* * *

The great Madison Square Garden show will be on by the time these lines are read. Mr. Cleveland has worked hard and from reports received this promises to be the greatest show ever held.

* * *

Boston follows after Baltimore and both of these are sure to be events of the season. The Boston banquet will be held as usual on Tuesday evening, and as Atherton has promised to muzzle and shackle Hamburg Bill we have agreed to sing a little song entitled, "I'se Agoing to Get Well."

* * *

Looks as if we will soon have another excellent artist on the A. P. J. staff. The Xmas cover of the journal is a beautiful piece of work.

Barred Rocks have a new breeder and exhibitor in J. D. Harcombe, Grand View, N. Y. He landed with a rush at the Palace show and had the real goods with him. Keep it up, Doug.; we want more like you.

* * *

Again we congratulate Mr. Punderford —we have met the missus.

* * *

The annual Barred Rock Club meeting will be held at Indianapolis, Ind., February 2 to 7, 1914. Mr. C. R. Milhouse, secretary. We look for this to be the greatest show of Barred beauties ever held. The special prizes are liberal in cash and cups. Get a list and enter your best.

* * *

Eggs have reached a record price this year never before known and meat is high and going up almost daily. Raise more poultry; prices are bound to keep good and profit is assured.

* * *

How things have changed! The time was when our legislators placed a duty on imported eggs to insure a profit-paying price for eggs to our poultry raisers; but now we find that during the past year we have exported thirteen million dozen of eggs to Canada alone, and that is where the cheap eggs used to come from. What a change!

* * *

It must be evident at this time that the poultry business can't be overdone, for the demand increases faster than the supply, and year by year higher prices are had. With modern methods of raising and growing chicks, profit is assured as never before, so start now and help supply the demand for more and better poultry.

* * *

Start right and you will succeed. The variety you like best will do the best for you. Start with standard-bred stock, for quality and evenness are first in demand and bring the best prices and most profit to you.

* * *

From the most reliable breeders we have the facts that from $1.25 to $1.50 per year per hen is a very low estimate of profit that can be made. These are dependable figures and do not include selling breeders at fancy prices; these profits are within the reach of all that will try.

* * *

Look to the country for a home, with a few acres in fruit and poultry; life will prove a greater satisfaction for you and yours.

* * *

We were pleased to meet Captain Griffin at the Palace show and find him enjoying the best of health. He is still active in the management of the Garden show, and we hope ever will be. We were told that Mr. Crawford was also there, but we regret we missed seeing him.

* * *

The poultry world owes much to these two men, and we will always respect them for what they have done.

GENSEMER BROS. 161 MAIN ST. CRESTON, OHIO

RED SUSSEX AMERICA'S LATEST IMPORTATION.

Their Fancy and Utility Features—By H. H. Coburn.

RED SUSSEX are now in the limelight on two continents—"The Breed of the Hour." After careful research, we find they have been successfully bred for a number of years in England. To quote Mr. E. W. Bunney (of England, in response to toast) "Red Sussex Poultry is making its way into every country, and not only that, but in foreign parts as well, and he believed they might say they were taking such a lead, that they were fast becoming the most popular breed in this country." Judge Clem Watson says practically the same thing in the "Feathered World." Sussex county is the premier county for Sussex. The great stir they are now making in poultrydom is of recent origin, and this great manifestation of their popularity is due to their own merits, never having had any big promoters. When a new breed begins to make itself felt across the pond, the alert American, who is ever on the job for the latest thing, and something new and entirely different, to satisfy his pleasure and help him grab off the dollars quickly grasped the possibilities of the Red Sussex. So the boom is on, and for a number of years, at least, Red Sussex are a gold mine to those who are wise enough to get in on the ground floor. If any question pertaining to the great poultry industry is asked more than others, is—What is the best breed for an all purpose fowl? And we conscientiously think, that Red Sussex comes as near the correct answer as any breed of given popularity, for in Red Sussex we find the very embodiment of all requirements both from the fancy and utility standpoint. We will first consider them from the fancy angle. Bear in mind they have created a demand for themselves and all nations are awake to the fact. We will begin with their beautiful rich dark red color. S. C. Shape, Hon., Sec. of the English club, also Poultry Instructor of the Agricultural and Horticultural College Uckfield says: "This variety has improved considerably in color during the past year and some fine specimens were staged. One can see how at most of the large shows the real deep Red; such as we see in Sussex cattle, and this is the color we try for—the rich deep red, which will not fade nor grow yellow after the first season showing." There is no under color problem to face, and this means much to the fancier, so dot it down—rich red shading to chestnut hackles striped with glossy, green black—tail medium length and green glossy black—the females are the same dark rich red, tails green black and hackles striped. These sharp black points and especially the hackle striping make them strikingly beautiful and put on the finishing touch. We will next consider the type so decidedly classy and distinctly its own—The English Standard used to read "Cobby Compact," but now calls for graceful erect, showing long back—the back, broad and flat-chest, broad-shanks, short and stout. Comb, single, medium in size fitting closely to head—eyes, bright and full, red or brown in color—lobes, red—wattles medium. If you can conceive a mind picture, you will agree with me as to their striking classy type. Now for the general utility side—The Red Sussex is a large fowl, cocks weighing nine pounds and upward, females, seven pounds. They grow much larger, however. One market fowl breeder in England who resorts to crosses (as is customary in England) to produce weight, says he finds it unnecessary to cross Red Sussex—and breeds them pure—and has made a pair weigh 24 pounds before seven months old. They have the frame to take the meat and they are the quickest grower known to-day, outstripping and surpassing all previous records of other breeds. S. C. Sharpe says, "poultry keepers who breed chickens for early market purposes do not know the Red Sussex sufficiently well, or there would be more male birds used for crossing. I have been introducing this variety in many parts of the country during the last two years to the farmers and small holders, who have mated the cockerels with their ordinary cross bred hens and the chickens proved most successful." He further states that Red Sussex are very good winter layers, which are of good color and uniform in size. Red Sussex being such quick growers makes it possible for pullets to begin laying very young. The flesh of the Sussex is white and white is the color demanded by epicures. Again referring to Mr. E. W. Bunney. He said he could speak from experience as to the general utility of Sussex. It is without doubt the finest table fowl they could possibly rear. To the beginners, or small breeder, who could do more business

Red Sussex Farm

—Importers and Distributors of—

ENGLAND'S BEST RED SUSSEX

Large importation ready for re-shipment March 1st. Red Sussex are the latest demand of the poultry public. Get in on the ground floor and be a Big One. Red Sussex, the best breed, from every angle. The fancier's opportunity. Grand in its distinct type, beautiful in its dark, rich, red color, fine striped hackles, green-black tails, neat single comb, red or brown eyes. Like all English breeds, shanks and skin white. Red Sussex meet every requirement from the utility side—very large, quickest growers, smallest eaters. Epicures favor white meat, Red Sussex can meet their wants. Greatest winter layers of large eggs, uniform in color.

Pullets begin laying very young, and keep it up during severest weather. Red Sussex have come to stay, and head the list in popularity. Be wise and get in on that February importation of England's Best. Booking settings from grand pens—England's Dairy and Palace Show-winning strain, headed by large typy, dark red males, strong in hackle and shape, black points, fine head points, snappy, healthy, vigorous birds; pullets are even lot, in dark rich red, strong in hackles, tail and wings. Hens dark, rich, stay-red color; type and head points the finest. These pens are as even in quality as we could make them.

EGGS $15.00 PER 15 STRAIGHT

Book now, from this ad., and deposit $5 with order.

RED SUSSEX FARM - - MARYSVILLE, MICH.

under present circumstances.—Red Sussex is his opportunity. To the large breeder, who takes them up as a side line—they will bring highest prices, on their repulation already established in the journals and show-room. Referring to Mr. E. W. Bunney for the third time—He says they had kept nearly every breed that could be kept. He had tested Sussex with them and was bound to confess, and to boast, if necessary, that there was no bird that could compete with them as a winter layer. The Sussex poultry club of England was organized nine years ago and now has a membership of over 300. It is the largest club in their country. An American club is being organized, reports from which we will hear of later. There was a goodly number shown at New York, Buffalo and Chicago this year and every available bird will be grabbed up. Here is hoping for all those who wisely adopt Red Sussex.

—o—

THE GREAT WILLIAMSPORT SHOW.

The Sixth Annual Exhibition of the Williamsport, Penn., Poultry Association, the King of the Early Shows—Prominent Breeders Exhibiting—The Great Classes of Barred Rocks, White Wyandottes, Reds, Etc.—The Banquet—Notes of the Breeders, Etc.

Written by H. P. Schwab, Eastern Representative A. P. J.

The Williamsport Poultry Association has held its Sixth Annual Exhibit, which, like each of its predecessors, was "better than the last." For years this has been the one big early show of the East, and we have noted its progress with much interest and with pride as well, for the "boys" are a royal lot, true to themselves and to the industry they so nobly represent. Thanks to their efforts, for in this show there is credit enough for all. That Williamsport awards have a value is evident from the list of noted breeders found exhibiting there, including Mr. Henry D. Riley, the Semswick Poultry Farm (Buff Orpington), R. J. Walden, S. M. Goucher, W. A. Smith, C. F. Webster, E. H. Lichtenwalter, W. F. Presgrave, L. W. Winner, L. W. Maxson, Rose & Tilton, G. J. Hanks, and many others of national reputation as breeders and exhibitors.

The annual banquet is a feature here; with good things to eat and with song and music you are made to feel at home and cannot doubt the sincerity of the welcome extended.

Great and strong classes were seen here in the leading varieties, and particularly in the Rocks, Wyandottes, Orpingtons, Reds, Leghorns, etc. It is a well balanced show of merit, and as in the past we owe our compliments to Secretary Dawson, President Drinkwater, Superintendent Whitehead and all other officers and members, not forgetting Jim Huston, Eddie Gage and Buster Bill Bailey.

The order of the "Flea" held two sessions here and initiated many new members, with Brothers Oke and Bailey doing the heavy work.

The Exhibitors and Their Birds.

Barred Rocks with 142 birds shown were the largest class at the show, and no doubt one of the strongest and best in general quality, Mr. Henry D. Riley, Strafford, Pa., winning cock 3, hen 2, cockerel 1-3, pullet 3, pen 2, cockerel-bred pen 1, cockerel-bred pullet 1-3, and specials. First cockerel was a wonder in barring and color and of exceptional style; first cockerel-bred pen a beauty fit to win any show; male, strong, clear color and barring; females, snappy, choice handlers, and of grand form, with fine eyes and heads.

Mr. S. M. Goucher, Moorestown, N. J., breeder of Barred Rocks and winner for years at prominent shows, won cock 2, hen 4, cockerel 2-5, pullet 1-4, pen 1, cockerel-bred hen 1, cockerel-bred pullet 4, cockerel-bred pen 2, and specials. First pullet a most striking bird with beautiful contrast in barring, fine shape and at her best. First cockerel-bred hen a beauty in type and clean cut, strong barring; this line was well shown.

Mr. Robert J. Walden, Middleburg, Md., has made many records on his line of Barred Rock, but never one of more merit or greater value than here. His winnings were cock 5, hen 1-3, cockerel 4, pullet 2-5, pen 3, pullet pen 1, pullet-bred cock 2-3, pullet-bred cockerel 1-2, cockerel-bred hen 2, pullet 2 and several specials. The winning hen was the gem of the class, finely barred, and of the best of form and condition. Mr. Walden exhibited several beauty pullets, with three of them out of condition, being overheated in express car during shipping. This line of females have been winners at Baltimore, Philadelphia, New York, Hagerstown, and many shows of great worth.

Mr. Jas. T. Huston, Williamsport, Pa., one of the younger breeders, was also exhibiting in this great class and won cock 4, pen 4, pullet-bred cock 1, and specials. This winning cock has made several records and is a most worthy bird.

In White Rocks, Mr. C. F. Webster, Girard, Pa., with his New York champion line, won cock 1-2, hen 1-2, cockerels 1-4, pullet 1-4, and pen 1, making a general clean-up. His first hen won special for best hen in the entire show.

Buff Rocks were a class of 50 fine birds of grand and even quality, E. H. Lichtenwalter, Girard, Pa., winning cock 1, hen 1, cockerel 1-3, pullet 1-2, and pen 1. This line has a record for winning from New York to Chicago.

Mr. R. F. Allen, Williamsport, Pa., was a prominent exhibitor here, winning cock 2-3, hens 2-3-4, pullet 5, pen 2.

Partridge Rocks, a beauty class, with Mr. W. F. Presgrave, Salisbury, Md., winning hen 1-4, cockerel 1-2, pullet 1-2.

S. C. Buff Orpingtons were the best class we have seen at the early shows, with the best of quality evident in every class. The Sunswick Poultry Farm, South Plainfield, N. J., with Mr. Delafield in personal charge, winning cock 2-3, hen 1-2, cockerel 1-2, pullet 2-3, pen 1, and several specials, including special for best pen in the

Carver's Imported Royal Red Sussex won at Chicago 4 FIRSTS

WHITE ORPINGTONS

Remember that

Russell Cave White Orpingtons

Layed more eggs than any other pen of Orpingtons, all varieties competing, at the Missouri National Egg-laying contest, besides winning the cup for the greatest number of eggs during the month of February, against all breeds.

My winnings this year are as follows: The Great Hagerstown Fair, 1st and 3d hen, 1st and 2d cockerel, 1st and 3d pullet, 1st pen—no cock shown—special for the best hen in the show. Augusta Poultry Show: 1st and 2d hen, 1st and 2d cockerel, 3d, 4th and 5th pullet, 1st pen and specials. **Cocks, Hens and Pullets at $5 and up. Express prepaid. Satisfaction guaranteed.**

Russell Cave Poultry Yards, Add. Louis Lee Haggin, Prop., P. O. Box 1025, Lexington, Ky.

show. First cockerel was one of striking beauty. Mr. Delafield has shown many fine ones before, but never one better than his winner here, sound in color and of the best possible type.

Mr. C. H. Drinkwater, Williamsport, won first cock on a noble old winner, and A. H. Renninger first pullet.

In S. C. White Orpingtons, 80 birds were shown, with Mr. John C. Peifer & Son, Danville, Pa., making a clean-up record of cock 1-2-5, hen 1-3-5, cockerels 1-2-3, pullet 1-2, pen 1-2. With this record they won the North American cup and special for winning the greatest number of points at the show.

S. C. White Leghorns were a large class of better-than-usual quality, the cockerels being unusually strong, Louder Bros., South Williamsport, winning cock 1-2-5, hen 1-2-3-5, cockerel 1-2, pullet 2-4, pen 1-2; first cockerel also winning special for best cockerel in the show.

S. C. Reds were nearly 100 strong, and in the main well shown. Here Mr. L. W. Maxson, Scranton, Pa., won cock 1-4-5, hen 1-4-5, cockerel 3-4, pullet 1-2, pens 1-2, and specials. This line is strong in rich red color, free from extremes, and good head points; first cock a bird of exceptional value and both pens as good as we expect to see.

Other prominent winners here were Rose & Tilton, T. E. Seasoltz, Chas. E. Fanning, John Ehringer, B. W. Harding, etc.

White Wyandottes formed a class of 100 birds, and as usual here were well shown, and a hot lot all through, with the leading winners J. R. Heim, J. A. McMahan, Clyde Kemp, C. E. Henninger, R. C. Browning, John R. Sims, Will F. Thomas, E. N. Crumbling, W. W. Bohn, etc.

Buff Wyandottes a rich and beauty class, with L. W. Winner, Milton Springer, G. O. Harman and W. E. Ritter leading winners.

In R. C. Reds, Rose & Tilton, Scranton, Pa., won cock 1, hen 1, cockerel 2, pullet 1-3-4.

S. C. Black Minorcas were not the size class we like to see of this grand old variety, but those shown were of the best quality and the kind to win in any competition. The Metuchen Poultry Farm, Metuchen, N. J., won cock 1-2, hen 1-2, cockerel 1-2, pullet 1-2, pen 1. This line has won for many years at our best shows and their quality as seen here assures their value.

Silver Campines a nice lot, with Mr. E. F. Dean, South Williamsport, winning cock 1, hen 1-2, cockerel 4-5, pullet 1-2, pen 1.

Other prominent winners were G. M. Hebe, M. B. Prutzman, C. A. Konkle, etc.

In Golden Campines, Mr. Dean won all prizes offered, making a clean sweep on a beauty line of birds.

A quality class of Houdans was shown here. These old favorites have many champions in this section.

Anconas also proved their popularity, Mr. Geo. J. Hanks winning cockerel 1-2, pullet 1-2-3-4, hen 2-3-4, pens 1-2. First pullet a beauty; there are few of her equal seen.

Hamburgs, Polish, Cornish and Games were classes well represented, with good quality birds.

Single and Rose Comb Brown Leghorns and S. C. Buff Leghorns were all quality classes. In S. C. Browns the cockerels were of particular merit, the first winner a real beauty.

Bantams, pigeons and a large display of ducks and geese completed this display, which was complete in every department and an exhibit of value and credit to the industry. This association has set its mark high; they strive for and attain big things, and we shall look to their future efforts with every confidence, for they are true and worthy.

PARSONS' S. C. WHITE ORPINGTONS

Winners at *Cleveland,* 1912; twice winners at *Cleveland,* 1913; *Toledo,* 1913. *Show birds* of *exceptional quality.* Also First-Class *Breeders* and *Utility Stock* at *reasonable prices. Grand Pens* mated for egg trade. Limited number of *Baby Chix.* State your wants plainly.

Wisconsin Wins In Big Hatching Contests Every Year

Winner 1910-1911-1912-1913

Mrs. J. McMahon, Veedersburg, Ind., won in Missouri Valley Farmer Hatching Contest, hatching 125 chicks from 126 eggs.

Mr. C. B. Armitage, Atwater, Ohio, won in Successful Farming Contest, hatching 181 chicks from 181 eggs in two hatches.

Mrs. J. W. Mize, Vaughn's Mills, Ky., won in Successful Farming Contest, hatching 208 chicks from 209 eggs in two settings.

Mrs. F. H. Lewis, Montrose, Pa., in 1913 won in Successful Farming Contest, getting 96 chicks from 96 eggs in one setting.

These contests were open to all makes regardless of price and prove beyond question that the famous Wisconsin machines are the **best for the money in the world.**

I stand ready to prove to you that Wisconsin Incubators are the best built and best equipped machines in the world for the money. You can't get bigger or better hatchings even if you pay twice the price. I build the outer walls of my incubators of Genuine California Redwood—costing 4 times as much as materials some manufacturers use. If you will write for my catalog, I will gladly mail you a sample of the lumber so you can see the quality and compare it with others. If you do this I know you will order a Wisconsin. One hatch will pay for your machines and more. If you are not perfectly satisfied, simply write me—send the goods back and I'll not only return your money, but pay the freight charges and charge you nothing.

ORDER DIRECT FROM THIS AD

130 Egg Incubator Chick Brooder

Both Machines For Only $10

Freight Paid East of Rockies

You can send in your order direct if you wish and save time. Money back if you are not pleased. I have been advertising in this paper for years. The publishers know me and know that I do just as I agree. I am undoubtedly making the readers of this paper the most remarkable offer on high grade incubators and brooders that has ever appeared in the paper. You take no risk. I give

30 Days Trial and 10-Yr. Guarantee

Why Take Chances

Get This Free Book

Find out what an Incubator is made of before you buy.

Write for Free Catalog and we will send you a sample of the Redwood our Incubators are made of.

Wisconsins are bigger, better, more value than ever—no increase in price. Incubators have hot water heat, double walls, dead air space between, double glass doors, copper tanks and boilers, self-regulating. Nursery under egg tray. Incubator and Brooder shipped complete with thermometers, lamps, egg-testers, all set up, ready to use when you get them. Incubators finished in natural colors showing high grade California Redwood lumber used—not painted to cover inferior material. If you will compare our machines with others we will feel sure of your order. Don't buy until you do this—you'll save money—it pays to investigate before you buy. Money back if you are not satisfied.

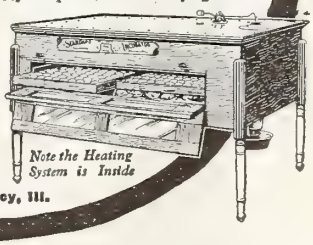
WISCONSIN INCUBATOR CO., Box 76 , RACINE, WIS.

My 1914 Price Sets a New Standard of Incubator Values

Do not buy an incubator anywhere until you have received my 1914 prices on the good old "Reliable" and the facts about incubators which I will gladly place in your hands. **You can't afford to take chances this year** with costly eggs, in cheaply built machines. **Get the facts.** For over 32 years I've been building the best incubators experience, knowledge, finest materials and workmanship can produce. Experienced poultrymen know the "Reliable." I have established new standards of value in incubators this year which will give **you** better hatches and bigger profits—**not by** making **cheaper quality** but because I have the largest incubator factory in the world. My values this year will be the sensation of the incubator industry.

Get My 1914 Prices—Get the Facts

Get down to brass-tack facts and this incubator question is as simple as A-B-C. No incubator in the world offers so much quality for so small a price as the "Reliable." Let me tell you why the "Reliable" is the safest to buy and why it **insures** you against failure. *Don't take a chance this year.*



The Reliable Incubator

is made of the best seasoned, beautiful, everlasting Red-Wood, with top and bottom tongued and grooved. Has double heating system throughout, thoroughly insulated—accurate regulator—tanks of cold-rolled builder's copper—all metal safety lamp—metal chimney—government standard tested thermometer, and all thoroughly inspected before shipment. Hatches any egg that can be hatched—in any altitude—regardless of weather.

The Reliable Brooder

is built on the same thorough principle and is of the same excellence of construction as the Reliable Incubator. Either hot air or hot water heating. Four sizes—80—120—220 or 300 chicks.

Note the Heating System is Inside

Send Today for Prices and my big catalog. A postal card brings all.

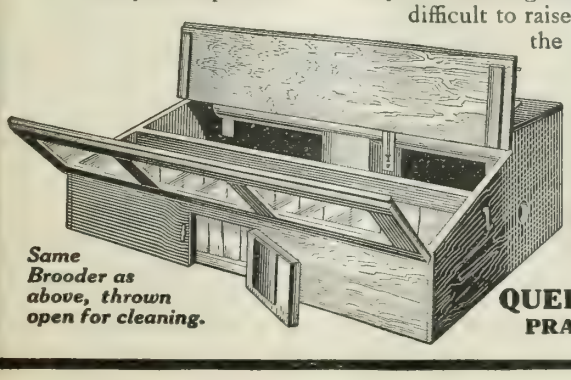
The "Queen of Missouri" strain win where quality reigns supreme. Exhibition birds of highest quality bred from my New York, Boston, Kansas City and St. Louis winners. At the State Brown Leghorn Club meeting, held at Chicago, December, 1913, I won 2nd pen on three entries. Write for prices.

ELMER V. SHULTZ **Box 500** **WEBSTER GROVES, MO.**

What % of Chicks Hatched Do You Raise?



"I hatched 73 chicks from 75 eggs and raised 71 of them in a Queen Brooder."
FRANK C. SPAID, Waukomis, Okla.

The above letter is not an exceptional one. I get dozens of them just as strong. One before me right now says: "With my Queen Incubator and Brooders I hatched between 90 and 95% of all fertile eggs and raised nearly all the chicks—even more than the hens can raise." All the letters tell the story of success and satisfaction with

Queen Indoor and Outdoor Brooders

What is your experience? Are your brooding arrangements satisfactory? Undoubtedly you find it more difficult to raise chicks than to hatch them. A Queen Brooder will solve the problem of chick raising for you. All Queen Brooders, whether indoor or outdoor, lamp-heated or lampless, embody latest brooding principles. They are the result of many years practical experience of successful poultry raisers. The same study, care and fine workmanship that go into Queen Incubators go into the Queen Brooders. You cannot go wrong in the purchase of a Queen Brooder; it is simply a matter of choosing the style. Queen Outdoor Brooders are suited to use indoors, Indoor Brooders can be used outside. Queen catalog shows various styles and sizes of Brooders and a full line of poultry supplies. Write for copy. It's FREE.

Same Brooder as above, thrown open for cleaning.

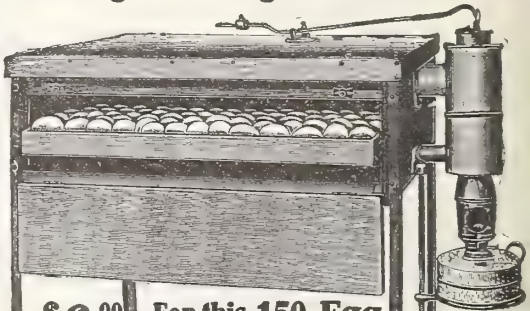
$8.50 Buys 150-Egg Incubator And 150-Chick Brooder



Just Think of It!—Why Pay More?

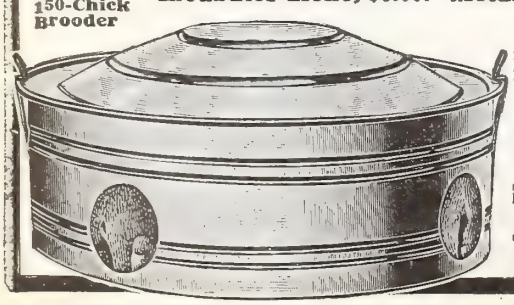
Here Is the Most Astounding Offer Ever Made for Chicken Raisers

Here is an offer you simply cannot afford to miss. This gives you everything you could want in a reliable hatcher at a price *never* quoted before for a machine fully guaranteed—shipped *ready* to use—no extras to buy. We charge only for actual cost of material and labor with one small profit, and depend upon enormous production.

Low buying prices, our modern factory methods and our direct to you plan cuts the price. Stop! Think of what this means! Where else have you ever heard of such an offer?

The machine has the *best* regulator; dependable thermometer; strong, well built egg trays; all metal safety lamp with bowl stamped out of sheet steel; best lamp bracket; steel legs; best egg tester. Write for this wonderful proposition on

THE ROCKFORD Incubator and Brooder



$6.00 For this 150-Egg Incubator

It comes to you all set up (not in knock-down form). Just fasten the legs and lamp bracket and start the hatch.

Money-Back Guarantee

$3.00 for this 150-Chick Brooder

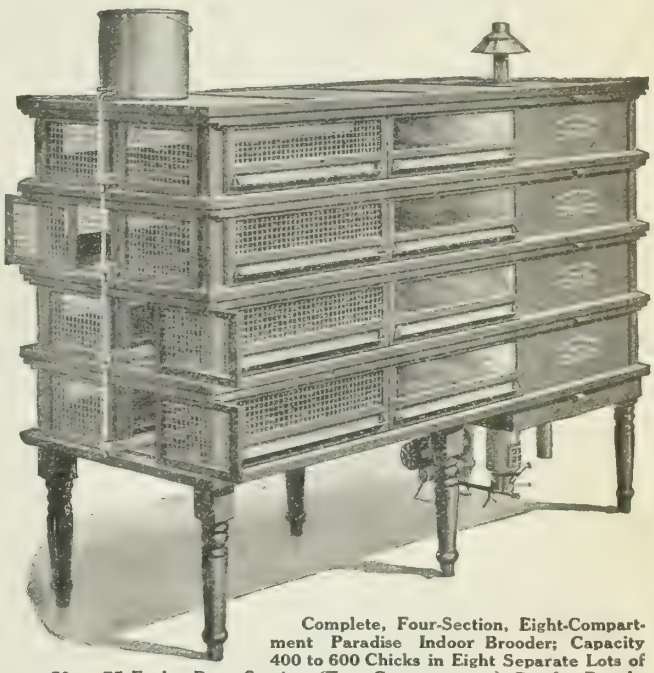
Incubator alone, $6.00. Metal Brooder, $3.00. Both Incubator and Brooder, $8.50

You could not ask for better quality—to pay more is needless.

It is heated with *warm pure* air. Foul or impure air is carried off. No chance for lamp fumes to enter egg chamber. All parts are heated evenly. Side walls and top are made of 1 inch lumber and lined with heavy deadening felt and again lined with ½ inch lumber inside. Heat cannot get out—cold cannot get in—fuel is saved.

The Brooder is water heated—fire proof and weather proof—easily handled.

Write at Once for Full Facts



Don't let anything keep you from this remarkable proposition. The quality is so good—the guarantee so strong and the price too low to let anybody miss it. We guarantee the incubator to satisfy you in hatches and also guarantee the metal brooder to raise chicks to satisfy you or we return your money.

Write us at once so we can lay the whole proposition before you. Address—

The Rockford Incubator Co., Box 15 Rockford, Ill.

"EARLY BROILERS AND EARLY FALL LAYERS"

THE BIG, VITAL POINTS in favor of the use of PARADISE BROODERS in the raising of chicks—*especially early chicks,* are, FIRST, no special houses or coops ***are needed*** and chicks can be raised ***in any living room;*** SECOND, the chicks are under ***full control*** of the caretaker ***every minute;*** THIRD, they are ***up off the floor,*** away from cold, ***dangerous drafts;*** FOURTH, they cannot chill, cannot overheat, ***cannot wander away*** and get lost or be destroyed by rats, cats, etc.; FIFTH, by the use of this type of brooder more chicks, ***four times over,*** can be raised with ***safety and success*** in any given amount of room, than by ***any other method*** known to poultrymen; SIXTH, is the money-saving economy of time, labor and fuel—of ***expense in every form.***

Complete, Four-Section, Eight-Compartment Paradise Indoor Brooder; Capacity 400 to 600 Chicks in Eight Separate Lots of 50 to 75 Each. Base Section (Two Compartments) Can be Bought and Used Separately. Later One or More Uppers Can be Added. Heated at all Times by one Blue-Flame Safety Oil Stove.

HERE IS EVIDENCE: Please read the following ***recent sample reports*** from "men who know"—from customers of ours who have bought PARADISE BROODERS and have used them, season after season, with ***chick-saving, money-saving results:***

Valcour, N. Y., February 26, 1913.

Cyphers Incubator Co., Buffalo, N. Y.—

The two Paradise Brooders that we purchased last year proved entirely satisfactory and we found that they **almost entirely reduced our losses of baby chicks.** We raised about one thousand chicks successfully, keeping them in these brooders **until they were six or seven weeks old.** We operated our brooders in a living room 13 x 16 feet. The sanitary arrangements in the Paradise Brooders are **excellent**—in fact we do not see how they could be better. We especially like the arrangement for **supplying fresh air** to the chicks at all times, also the ease with which the chicks can be fed and the food troughs kept clean. We shall buy and use more of these brooders next season.

CLOVER CREST FARM,
P. H. BILLINGS, Mgr.

Norwood, Mass., March 1, 1913.

Cyphers Incubator Co., Buffalo, N. Y.—

I am glad to add my testimony to the success of your Paradise Brooder. I used it last season and **had extremely good results with it,** running about 1,200 chicks through it. My first test was to put 422 chicks in it on March 16th. They were **left there for eight weeks,** at which time I took out 407, losing but fifteen in that time. My Paradise is in a shed 12 x 14 feet, which has single walls of matched boards and stands on posts. It is **not an ideal location** for the brooder, as the changes in temperature are apt to be extreme. In cold weather I have a small coal fire in this room. The Paradise, with its **accessibility, modicum of attention and certainty of results,** was a great relief to me. I have found it to be **altogether the best brooding device I have ever used** and in principle I don't think it ever will be excelled. It is giving me the same good results this season as last.

C. M. JEWETT

Petaluma, Cal., July 14, 1913

Cyphers Incubator Co., Buffalo, N. Y.—

In the spring of 1912 we purchased from your Oakland Branch House one four-section Paradise Brooder, and **had such good results with it** that last winter we **installed three more,** giving us a total capacity of 1,600 chicks at one time. We have **used these brooders continuously** from January until May, brooding about 6,500 chicks **during that time,** with a loss varying from two and one-half to six per cent., the larger loss being met with the late hatches. The Paradise Brooders **are without doubt the very best on the market for taking care of young chicks up to a month old,** and we can highly recommend them to any one wanting brooders. They are **easy to take care of** and the chicks are **before you all the time,** so that you can see what they are doing.

HAMILTON FARMS,
By C. H. HAMILTON

EACH YEAR—every season, we receive reports like these, and we ask ***every interested reader*** of this advertisement to send for a FREE COPY of our latest 1914, large-size circular, which explains and illustrates "When, Where and How to Use Paradise Brooders to Best Advantage." It is free for the asking, sent by us postpaid, and will tell you ***how to raise early broilers,*** with the minimum expense and loss, also how to manage the EARLY CHICKS that are to make next fall's ***earliest layers,*** the kind of pullets that must be relied on to produce October, November and December new-laid eggs that now retail each season at ***four, five and six cents per egg.***

LOOK INTO THESE PROFITS, READER—doing so at our expense, BECAUSE this special Paradise Brooder, early-broiler, fall-layer circular is FREE. All you need to do is to ask for it. Address our place of business nearest you.

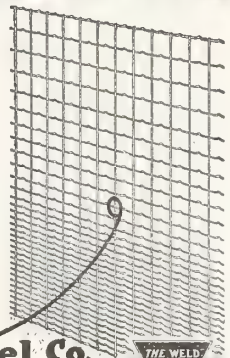
"PITTSBURGH PERFECT" CHICKEN AND RABBIT FENCE



Prepare for the coming *little chicks*, by stringing proper fencing *now*. "Last moment" fence generally proves an expensive "make-shift" and bother.

Seventeen line wires at the bottom of "Pittsburgh Perfect" Chicken and Rabbit Fence are only 1 inch apart—no chick can get through this. The heavy, well galvanized Open Hearth steel wires in the fabric are

Welded by Electricity

at every crossing point into a *one-piece* fence of real strength and durability. Prowling animals are barred out. Easy to erect. No top and bottom boards required. Fewer posts needed. Best looking, most economical and satisfactory fence made.

SOLD BY DEALERS EVERWHERE

ATSATT Is The MAN Who PUTS PROFIT into Poultry Raising

IF YOU WANT IT, READ THIS NOW

The practical poultry owner learns by experience. After he has cooked hundreds of chicks in the shell, and got tired of low hatches because of faulty, smoky, bound-to-run-up lamps, he pitches them all out and uses nothing but the **"ZERO" SAFETY INCUBATOR & BROODER LAMP** made on a special Atsatt design. **It's Safe, Clean and Reliable**—Safe because the oil cannot get heated; Clean because it never smokes; Reliable because it cannot run up and the temperature must remain uniform. Notice the double jacket. All metal. Fits any incubator or brooder. At dealers, $1, or mailed anywhere on receipt of 15c extra.

ATSATT'S SANITARY SAFE FOUNTAIN for brooders can't wet or drown chicks, is easily cleansed and filled, holds a quart and fits any brooder. Heavy galvanized iron. Try it and you'll never use any other. 25c at stores, or mailed for 8c extra.

ATSATT'S CHICK FEEDER is the only chick feeder that absolutely stops waste. Lots of room for chicks to get their food, but they can't get into it, stand on top of it, or scratch food out. The top removes instantly for filling and cleansing and springs back into place. Best galvanized iron, so can be used for wet or dry feed or water. 10x4 inches—just right size for brooder. 25c at dealers, mailed on receipt of 8c extra.

We make a full line of metal fountains, feeders and lamps, and every one of them has merits over all similar supplies made by anyone else. Those who try Atsatt's are never satisfied with anything else. They save their cost many times over in a season.

Flanders Strain S. C. White Leghorns

VICTORIOUS AT CHICAGO

Just Look at These Winnings:

1st, 3rd, 4th and 5th Cock.
1st, 3rd and 4th Cockerel.
1st and 3rd Hen.
1st Old Pen.
1st Young Pen.
Special for Best Shaped Male.
Special for Best Colored Male.
$50 Silver Cup for Best Display running four times as many points as nearest competitor.
$10 Gold Special for Best Display.
Swiss Gold Watch for Best Exhibit.
And Sweepstakes.

Guess that's going some.

It has taken eight years to make that sensational cleaning at America's greatest show—and against what judges declared was the best class of S. C. White Leghorns ever exhibited this side of the Atlantic.

Eight Years Ago Robert Parmenter, then a student at Knox College, started with a carefully selected trio consisting of a cock and two pullets.

He Had Very Definite Ideas as to what constituted an ideal White Leghorn. He selected his foundation stock and then bred consistently toward his goal.

Parmenter Never Fooled Himself—he never came to a show with a second rate bird hoping to win just because it was his bird. He did the eliminating before he left home. We have today 500 birds that would almost win at Chicago—that would sweep everything before them at most shows. But Parmenter didn't take them to Chicago.

He Began to Win in 1908, and has been one of the most consistent winners every year since. Not a cleaning like this year—but one year he had first hen; another, first cock; again, first pen and cockerel, etc., and from these he has kept on breeding toward his goal.

And This Year showed the culmination—the splendid reward for his years of effort.

About a Year Ago Parmenter formed a connection with Walter E. Flanders, whose farm and herd of thoroughbred Holstein cattle are famous. This gave him a plant built to his heart's desire and range—250 acres of range. The best equipped and one of the largest plants in the world.

Because of The Fame of the Flanders farm and to avoid confusion the name of the strain was changed to "Flanders."

Now You Know the history of this strain, that, by the winnings at Chicago has, in effect, been proclaimed tne leading strain of S. C. White Leghorns in America.

You Can Start where Parmenter left off—you can start with a bird bred from, or that is akin to those perfect ones that won so many honors—that showed such splendid consistency at Chicago.

Next Month we'll publish photographs of the winning birds and our mating lists and prices.

Hold Up Your Orders 'till you see our double-page announcement in next issue.

Meantime, if you want birds guaranteed to win in any company, write

FLANDERS LEGHORN FARM

Robert Parmenter, Mgr. **Orchard Lake, Mich.**

INTERNATIONAL EGG-LAYING CONTEST.

Report for Month Ending November 30, 1913.

THE third annual International Egg-Laying Contest, conducted under the auspices of the Connecticut Agricultural College and the Agricultural Experiment Station, opened November 1 at Storrs, Conn. The birds in this contest numbered 820, not including those pullets sent as reserves or substitutes in case of loss in the competing pen. When the reserves are counted there are more than 900 birds in the competition and all of them are being trapnested. It has not been customary heretofore to furnish the breeder any record of his reserve bird unless she substituted for one of the regulars, and even then the record only began at the time the extra bird went into the regular pen. As it is now, however, the owner gets a complete record of every individual sent to the contest.

These 900 birds have come from twelve different states and from England. Space will not permit a description at this time of every pen in the contest. It is desired, however, to make particular mention of the experimental work which is being conducted in connection with the enterprise and which it is hoped will make the laying competition of more value. In the first place, the Storrs Experiment Station has entered ten pens; five of White Leghorns and five of White Plymouth Rocks. One pen of the Plymouth Rocks is being fed the regular ration given to the birds in the competing pens. The second pen is being fed this same ration with the addition of thick sour skim milk which we will hereafter refer to as the sour milk ration. The third pen of Plymouth Rocks is being fed the sour milk ration without any green food. The fourth pen gets the same ration without any fish or beef scraps, and the last gets the sour milk ration without either beef scraps or green food. The experimental Leghorn pens are being fed in exactly the same way. In other words the experiment is being run in duplicate and the rations tried on two different breeds. The regular ration to which reference has been made is the same as has been used in the earlier contests. The management did not feel warranted in making any radical change in the rations in view of an annual individual production of 154 eggs in the first competition and an average production of 156 eggs for each bird in the second competition. This ration is made up as follows:

DRY MASH.

	Lbs.
Coarse wheat bran	200
Cornmeal	100
Gluten feed	100
Ground oats	100
Standard middlings	75
Fish scrap	30
Beef scrap	30
Low grade flour	25

SCRATCH GRAIN.

Cracked corn	60
Wheat	60
Heavy white oats	40
Barley	20
Kafir corn	10
Buckwheat	10
Coarse leaf scrap	10

The Experiment Station here was prompted to try out more or less thoroughly the matter of feeding sour milk to hens because of the tremendous advantage it found in the use of milk for growing healthy chicks and in combatting white diarrhea. The progress of this chick experiment has recently been reported by the Storrs Station in its Bulletin No. 74, and the results of the past season's work along this same line are now being prepared for publication. It is understood, of course, that the experimental pens in the contest do not in any way compete for any of the prizes. On the other hand, it is interesting to note that at close of the first month one of the Leghorn experimental pens was among the ten leading pens. These ten birds were fed as described under No. 4 above. That is to say, they received the sour milk ration without the addition of any beef or fish scraps.

Another particularly interesting pen in the contest is the experimental pen of White Leghorns entered by the Heneta Bone Company. This pen is being fed the Heneta rations strictly, including the Henola mash and the Succulenta tablets.

Yama's "Jack Horner." Headed sixth pen at Madison Square Garden Show, Dec., 1912-13. Second cock, Buffalo, Jan., 1913. Owned by Yama Farms, Napanoch, N. Y.

In addition to these there are five pens entered under the name of "Hens." One of these five is entered by H. W. Collingwood, editor of the Rural New Yorker, who knows nothing about his birds except that they were selected by an expert and were chosen from a large number of birds shipped into New York about the time of the Jewish holidays. These birds were selected on the theory that layers can be picked by type without any knowledge of their previous breeding.

Two pens of "Hens" are entered by Daniel Hines, of Eastford, Conn. Little or nothing is known of the ancestry of these two pens. As the name of the owner might suggest, they have probably been crossed some fifty-seven different ways. The other two pens of "Hens" are all pure bred birds entered by Profitable Poultry, Boston, Mass., but they are not all of the same breed; that is to say, Leghorns, Orpingtons, Plymouth Rocks, etc., are all mixed up together in the same pen.

There are three club pens entered in

TAYLOR'S WHITE ROCKS

The Stay White Strain in keen competition at the Great Ill. State Fair, Oct. 3-11, 1913, won 2d pen; 3d-5th pullet; 4th cock; 5th hen, no cockerel entered. 150 to select your exhibition and breeding stock from.
H. E. TAYLOR, PETERSBURG, ILL.

Single Comb White Leghorns

At the Illinois State Show, 1913, in the keenest competition ever seen at this show, my Leghorns won 1st cockerel; "champion male;" shape and color specials on male; also 3rd cock; 2nd hen; 2nd and 5th pullet; 4th pen. Cockerels of quality from trapnested line bred stock at right prices.
A. D. TAYLOR, : R. 5, Springfield, Ill.

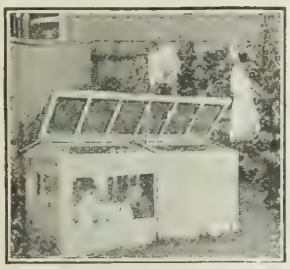
T. CADWALLADER, Box 1402 Salem, Ohio



Corning Feed Mixer

The most thorough, quickest. Mash and Grain Mixer made. It whirls the materials around, and back, and forwards, so that every particle is thoroughly mixed. Absolutely no other mixer to compare with the "CORNING" in any way, 3 sizes—HAND POWER, capacity 12 quarts, $15.90; HAND or POWER, capacity one bushel, $50.00; two bushel capacity POWER MIXER, $75.00. Every breeder of any size needs a real mixer, a Corning Mixer. It saves time, feed and money, and gives so much better results from your flock than you can secure in any other way. ILLUSTRATED CATALOGUE FREE. Write today.

WILSON BROS., Dept. C. C., Easton, Pa.

A $ Spent *NOW* May Save You Many

Dear Sir:— Vancouver, B. C., Canada.
We have been trying your System for the past year, and although we only started with six hens and bought all our hatching eggs, we have come out decidedly on the right side at the end of the year, and hope to do very much better next year.
Yours truly,
MRS. W. F. SCOTT.

Dear Sir:— Mt. Hope, N. Y.
I consider the Philo System wonderful in producing results, our chickens being exactly twice the size of those raised by careful neighbor in coops with runs, and the quality of meat is not to be compared.
Very truly yours,
MRS. M. B. MINGAY.

Dear Sir:— Evansville, Ind.
A couple of years ago I adopted the system and can say that it is surely all you claim for it. The chickens grow nicely and the pullets lay early and steady through the winter. Yours truly,
EDGAR L. FENTON.

Dear Sir:— Odenton, Md.
We find that through following your system that we can get eggs while our neighbors are not getting any. We have only eleven pullets but are getting from six to nine eggs per day, while our neighbors have large flocks and no eggs, and are coming to us every day for ours.
Very truly yours,
MRS. A. HEATH.

Dear Sir:— Nashville, Tenn.
I have had your system now for one year and I question if there is anything better for the progressive poultryman. Last February I put 30 day-old chicks in a fireless brooder and had no trouble in raising them.
Yours truly,
PAUL R. ULRICH.

Dear Sir:— Denver, Colo.
I have been using your system for the past nine months and am well pleased with it. I now have five Economy coops and one colony coop. Am raising Orpingtons with success. Yours very truly,
J. M. HOUKE.

Dear Sir:— Marion, Ala.
My birds under your System are weighing two pounds at two months and three pounds at three months. I never could get them up to that when they ran at large, and besides they are as white as puffs of snow. I am highly pleased with my efforts in the use of your system and will never use anything else.
Very truly yours,
CHAS. B. CARTER.

Five New Philo System Bulletins

No. 1. The New Philo Utility Coop.
Reduces labor to the minimum, and has advantages for the poultryman who wishes to keep 50 hens or more. Working drawings and specifications are included.

No. 2. Care and Feeding to Produce Market Eggs at Lowest Cost.
Detailed instructions for preparation of food. Exact quantities to use, when and how to feed, showing how eggs were produced at 7c a dozen.

No. 3. The Shortest Road to a Successful Poultry Business.
Tells the best way to make a start in the poultry business; how to buy stock that will increase in value; the most common mistake, and how to avoid it; how many fowls to keep; the profits to be expected from the utility poultry business.

No. 4. The Philo System Breeding Chart.
This plan is the outgrowth of years of investigation and practice by E. W. Philo.

No. 5. The Greatest Profit from Farm Poultry.
A new plan of farm poultry keeping that reduces the expense of installing and operating from 25 to 50 per cent.

Are you getting the most from your poultry?

Read these letters from other poultry keepers, telling how they have profited from the new System of poultry keeping.

In the past five years thousands of such letters have been received, and

Here is the Reason:

The Philo System is unlike all other ways of keeping poultry, and in many respects is just the reverse, accomplishing things in poultry work that have always been considered impossible, and getting unheard-of results that are hard to believe without seeing.

The new System covers all branches of the work necessary for success from selecting the breeders to marketing the product. It tells how to get eggs that will hatch, how to hatch nearly every egg, and how to raise nearly all the chicks hatched. It gives complete plans in detail how to make everything necessary to run the business, and at less than half the cost required to handle the poultry business in any other manner.

TWO-POUND BROILERS IN EIGHT WEEKS are raised in a space of less than a foot to the broiler, and the broilers are the very best quality, bringing here three cents a pound above the highest market price.

OUR SIX-MONTHS-OLD PULLETS are laying at the rate of twenty-four eggs each per month in a space of two square feet for each bird. No green cut bone of any description is fed, and the food used is inexpensive as compared with the food others are using.

DON'T LET THE CHICKS DIE IN THE SHELL. One of the secrets of success is to save all the chickens that are fully developed at hatching time, whether they can crack the shell or not. It is a simple trick, and believed to be the secret of the ancient Egyptians and Chinese, which enabled them to sell the chicks at ten cents a dozen.

CHICKEN FEED AT 15 CENTS A BUSHEL. Our book tells how to make the best green food with but little trouble, and have a good supply any day in the year, winter or summer. It is just as impossible to get a large egg yield without green food as it is to keep a cow without hay or fodder.

OUR NEW BROODER SAVES TWO CENTS ON EACH CHICKEN. No lamp required. No danger of chilling, overheating, or burning up the chickens as with brooders using lamps or any kind of fire. They also keep all the lice off the chickens automatically, or kill any that may be on them when placed in the brooder. Our book gives full plans, and the right to make and use them. One can easily be made in an hour at a cost of twenty-five to fifty cents.

Our book, "The Philo System of Progressive Poultry Keeping," gives full particulars regarding these wonderful discoveries with simple, easy-to-understand directions that are right to the point. Instructions are given for building the colony coops, and other appliances of the system. For some of these we have U. S. Letters Patent, and patents are pending for others, but purchasrs of the book are given the right to make and use these appliances. This system is especially adapted to the beginner, requiring a very small initial outlay, and admitting of increase as rapidly as the poultry keeper learns the work. It is the small unit plan that expands as readily as the "sectional bookcase." Each season since 1907, thousands of Philo System poultry plants have been established, and are wonderfully successful. Whether you intend to make poultry keeping a business, a recreation, or to provide an addition to the present income, this system will solve your problems. In less than six years, eighteen editions have been printed, nearly half a million copies.

This system will be demonstrated to you, or to anyone, at the Elmira plant of the Philo National Poultry Institute, where over 500 chickens are raised on less than a half acre of land.

THE POULTRY REVIEW

Monthly. A progressive poultry magazine, edited by E. W. Philo, with able assistants. Devoted to the most practical and economical methods of keeping poultry for profit, especially in small flocks or units on city or town lots. The Poultry Review is printed on a poultry farm where the editors have every opportunity to keep in close touch with actual poultry work under all conditions. It is edited for the practical poultryman; no theoretical articles are published, but many theories are carefully tried out in our own yards, and results published in The Review.

A FREE APPROVAL OFFER

You run no risk in finding out for yourself what this book will do for you. Send no money. Simply write a postal saying, "I accept your approval offer," and we will send the book, and one copy of The Poultry Review on approval. After reading the book you can send us $1.00, and we will enter your subscription to Poultry Review one full year—twelve issues—and give the book as a premium, or you can return the book in ten days and no charge will be made.

If you prefer to save us bookkeeping expense, send $1.00 for the book and Review one year, and we will include the set of five Philo System Bulletins. Satisfaction guaranteed or your money back. SEND YOUR ORDER NOW.

E. R. PHILO, Publisher, 701 North Ave., Elmira, N. Y.

this contest, viz., the National Columbian Wyandotte Club, the American Buff Wyandotte Club and the White Laced Red Cornish Club. The first of these, the National Columbian Wyandotte Club, is owned by eleven different breeders residing in the following seven states: Connecticut, Rhode Island, Massachusetts, New York, New Jersey, Pennsylvania and Kentucky. The Buff Wyandotte Club was sent to Storrs from Connecticut, Rhode Island, New Jersey, New York, Ohio and Minnesota.

It was not perhaps unusual nor unexpected to find some few colds among this flock of 900 hens that had come from such widely separated points and had been transferred from heated express cars to chilly station platforms. In view of these facts every precaution has been taken to maintain the excellent health and vigor these birds possessed on arrival. Potassium permanganate has been used in the drinking water from the very first as follows: An ounce or more was dissolved in a quart bottle of water. This was, of course, too strong to give to the hens, but was kept at the source of the water supply. Then as a pail of water was drawn with which to fill the drinking vessels, just enough of the stock solution was added to give the water a good wine color. If colds are already started in one's flock it is a good plan to withhold the "permanganated" water until nearly noon each day; thus the birds being more thirsty, will dip their heads deeper and in this way make the treatment more effective.

Make nests that **show** which hens lay. Superior to any trap nest. Send 25c for plan.

ANDREW DeSMIDT

R. 4, RACINE, WIS.

Miss Hooker's Orpingtons, Blues and Buffs.

The Blue Orpingtons are increasingly popular—great layers and very large, vigorous birds—eggs any time, now—cheaper than later. Good breeding Males for sale.

My Buff Orpingtons, as you know, have a national reputation. Have just received the award of best female in the show—all classes competing. Good breeders for sale, very low in price, considering quality, both in hens and well mated cockerels.

Watch my December show record.

Henrietta E. Hooker, South Hadley, Mass.

MADISON SQ. WINNERS

Over 43 prizes and specials in the Garden. 4 firsts on Rose and first on Single Comb Brown cock in one year.

The two best strains of Browns bred. They win. They are large and lay up to 242 eggs to a pen. Large eggs.

Breeding and show stock. Egg $2, $3 and $5 per 15.

Rose Comb White Leghorns—Large white birds, large eggs, 244 eggs to a pullet best record. Winners.

Single Comb Whites—236-egg strain. Plenty of white low-tailed cockerels.

White Wyandottes — Duston and Regal. Cup winners.

Barred Rocks — Bradley. S. C. Reds — Tompkins. Catalog.

W. W. Kulp, Box 70, Pottstown, Penna.

ALMENDINGER'S ROSE COMB LEGHORNS

White and Black, win at the Greater Buffalo show, 1st and 2d ckls., 1st and 2d hens, 2d cock, 3d and 4th pullets, 3rd pen. Silver cup for best display. Stock for sale. A. F. Almendinger, 61 Inwood Place, Buffalo, New York.

Tom Barron, the English breeder, who has become so widely known in this country on account of the wonderful production of his Leghorns, not only in the egg-laying contest at Storrs but also in the National Egg-Laying Contest at Mountain Grove, Mo., has sent two pens to the present competition; one of White Leghorns and one of White Wyandottes. Neither pen has yet been able to obtain the lead, but both are among the first ten pens. It will be remembered, of course, that his Leghorns won first place with 1,190 eggs in the contest which closed October 31. In regard to these Mr. Barron writes under date of November 17 as follows: "I have got the winners back here again, all right. * * * The birds received are in perfect condition, not a little bit too fat, but just right to make the best breeders for 1914, and I must congratulate you on the feed given these birds—it must be almost perfect."

The blue ribbon, or first prize for the month of November was awarded to Francis F. Lincoln, Mt. Carmel, Conn., whose White Leghorns produced 135 eggs. The red ribbon or second prize for the month was awarded to Neale Bros., Apponaug, R. I., whose White Wyandottes produced 132 eggs. The third prize was awarded to Tom Barron, Catforth, near Preston, England, whose White Wyandottes produced 117 eggs.

The total production of all pens for the month was 2,361 eggs and 80 per cent of the pens are producing some eggs.

Individual honors for the month were shared by the Wyandottes, Reds and Leghorns, with the heavier breeds holding first and second place. The following are the best individual records for the month:

Pen.		Eggs.
14	White Wyandotte, No. 5, England...	23
17	White Wyandotte, No. 6, Rhode Isl.	22
33	R. I. Red, No. 1, Massachusetts.....	22
33	R. I. Red, No. 5, Massachusetts.....	21
17	White Wyandotte, No. 5, Rhode Isl..	21
68	White Leghorn, No. 7, England.....	20

The ten leading pens for the month were as follows:

Francis F. Lincoln, Mt. Carmel, Conn., White Leghorns	135
Neale Bros., Apponaug, R. I., White Wyandottes	132
Tom Barron, Catforth, near Preston, England, White Wyandottes	117
Merrythought Farm, Columbia, Conn., White Wyandottes	96
P. G. Platt, Wallingford, Pa., White Leghorns	77
Pinecrest Orchards, Groton, Mass., S. C. Rhode Island Reds	75
Tom Barron, Catforth, near Preston, England, White Leghorns	73
Chas. N. St. John, Greene, N. Y., White Leghorns	72
Windsweep Farm, Redding Ridge, Conn., White Leghorns	63
Jos. J. Linehan, Hingham, Mass., White Leghorns	61

Railroad Rates for the Panama-Pacific International Exposition.

The Transcontinental Freight Bureau has announced special rates on all live stock to be exhibited at the Panama Pacific International Exposition.

Some young Barred Rocks on the farm of C. N. Myers, Hanover, Pa.

These rates provide that all exhibit animals on which freight rates have been paid to San Francisco shall be returned free of charge provided they are returned over the same route and within ninety days after the close of the Exposition. The rates also provide that on any animals which shall have been sold at the Exposition a rebate of 25 per cent of the freight charges will be made by lines over which the shipment was carried. This is the most liberal concession that has ever been made by the railroads of this country to any great exposition and will afford exhibitors of live stock an opportunity to combine their shipments at some central point like the capital of the state or its chief commercial city and have them carried through to their destination on the exposition ground in San Francisco under the direct charge of the Transportation Department of the Panama-Pacific International Exposition. If such concentrated shipments amount

SIMPLEX

PERFECTION METAL FEATHER

BROODER

50 CHICK SIZE

Simplex Perfection Feather Brooder, showing Brooder with Curtain and Rat Guard Removed.

Both Only $10 Never before have you been offered such wonderful values.

The Simplex Perfection Feather Brooder raises chicks nature's way—under natural feathers, no fire, gas, fumes, leg weakness, crowding and smothering of chicks where these Feather Brooders are used.

PEERLESS 60 INCUBATOR

The brooder is made in three sizes: 50, 100 and 150-chick. It is guaranteed to raise strong healthy chicks. The body is made of galvanized iron; the feathers within can be raised and lowered by means of a thmub screw. Each brooder is equipped with a felt curtain and rat guard. It is positively the best fireless, least bothersome, most satisfactory brooder made.

Never before have you been offered such remarkable value.—The Peerless 60 is the latest word in artificial hatching.

The incubator is made in one size only—60 egg capacity; it is guaranteed to hatch every hatchable egg, is made entirely of metal, beautifully enameled, raised off the floor by means of four iron legs. No wood to warp, crack and decay. No complicated fixings, just plain common sense consolidated with modern appliances and 25 years of incubator research.

This is an introductory offer

We want every small and large breeder to take advantage of it and find out how chickens can be hatched and raised with least cost and best results. That's why we are advertising these two indispensable poultry necessities at the rediculously low price of **$10 for the two.** We allow freight charges.

GET CATALOG TODAY

Don't class these articles as **cheap appliances.** The price is cheap, but quality unexcelled. Get our complete catalog today and find out all about them as well as our other poultry appliances. They are guaranteed to please or money refunded.

SIMPLEX SUPPLY HOUSE, PONTIAX BUILDING, CHICAGO, ILLINOIS

to ten cars or more, special train schedules will be arranged so that rapid transit is assured and animals will come through in the best possible condition. Ocean liners have also granted special concessions in shipments for the benefit of foreign exhibitors, and negotiations now pending when completed will afford the exhibitor the greatest opportunity possible in the cheap, safe and expeditious handling of his live stock.

SOME GOOD OLD VARIETIES.

By Plummer M. McCullough, Mercer, Pa.

WE often think that if some of the old fanciers of thirty or forty years ago could see today the different varieties as they are bred in this country and could also see where some of their old favorites have dropped to, they could hardly believe their own eyes. Those were the days of the Brahmas, the Cochins, the Hamburgs, the exhibition Games and many other old useful as well as beautiful varieties.

The American Dominique was also very popular at that time. Today we see men working themselves to death in making new varieties and new breeds, and while it is perhaps all right, it always looked to me that if they would spend as much time in trying to improve some of the old and tested varieties that we already have they would be much farther ahead. I also believe that the average beginner would do a wise thing if he would take up one of these old varieties instead of taking up something that will take him half a lifetime to get his name properly before the public as a leading breeder. By taking up one of the less popular varieties he could in a couple of years' time be among the leading breeders as far as quantity of stock advertising is concerned. I am quite certain that any intelligent young man could climb to the top much quicker than by taking up a variety that is already very popular

Someone says that the old varieties are not as good as the new varieties. To such people I want to say this—that while many of the new varieties make great records for the first year or two of their existence, they do not by any means hold on to these records year after year. It is my opinion that the old varieties are equally as good as any of the new varieties considering the chance that they have had. For instance, where will you get a better new variety today than the good old American Dominique? If you know of any I would like to hear of them.

As layers the Dominique will hold its own with most any variety—even the Leghorns will be kept very busy if they lay more eggs in a year than the Dominiques. They are a very active fowl and for the farmer will make a splendid fowl, being able to do a lot of foraging. While not as large as the Plymouth Rocks, they will average up with the Wyandottes pretty well and, of course, you will have to admit that they will make fine market fowls with their yellow shanks and skin.

I am glad, indeed, to see that the breeders of this grand old variety are pushing them to the front. They deserve to be more popular, and I hope that the breeders will do all in their power to boost this good old variety along. Every breeder of Dominiques should join the American Dominique Club and coöperate in boosting the Dominique. Not only is the Dominique a good old variety, but there are many others of the old varieties that are worthy of special attention. Take the Hamburgs, of which there are six varieties. Where will you find six more beautiful varieties? Not only are they beautiful, but they are very profitable if properly handled. They are splendid

"TYCOS" CUP won by the Belle City

Write Today for My Free Book "Hatching Facts"—It Means More Money to You

GET the whole story of these Championship hatches with the Belle City. Get the stories of thousands of men and women who are getting 100% perfect hatches. Satisfy yourself. This great book is free. Write for it today. No other incubator made—not even the highest priced—approaches this amazing record of my Belle City. I have the letters of owners to prove it. Many of these letters are printed in this book "Hatching Facts." They tell you how Belle City owners are making *the most money* in the Poultry business. You certainly want this book. A postal gets it.

When You Buy from Me You Get an Exact Duplicate of the Prize Winning

Eight Times World's Champion Belle City

I send you an exact duplicate of the hatching outfit used by Mrs. Alta Hamlyn of Indiana, who joins the Belle City's list of World's Champions with TWO 100% hatches scored by her Belle City Incubator in Successful Farming's 1913 contest. Mrs. Hamlyn says: "I can hatch every fertile egg in my Belle City and regard your honesty the keynote to success." I send you an exact duplicate of the Belle City Hatching Outfit used by William C. Schott of Iowa, who shares the 1913 honors. His 100% hatch, 140 chicks from 140 eggs, won another World's Championship for the Belle City in Successful Farming's 1913 Contest. Mr. Schott writes: "The Belle City is the best incubator made—has given much more satisfaction than high-priced machines." I send you an exact duplicate of the Belle City Outfit used by each of the other world's champions whose pictures appear above.

The Kind "Uncle Sam" Uses

I send you an exact duplicate of the Belle City machines chosen by the U. S. Government. The Department of the Interior is one of my customers. The department asked for prices on 300-egg sized machines, but ordered my 140-egg Belle City machines, because even "Uncle Sam" wants to have Championship hatches, too.

I send you an exact duplicate of the Belle City Hatching Outfits used by leading agricultural colleges.

I send you an exact duplicate of the Belle City Hatching Outfit that won the gold lined silver "Tycos" Cup and the Championship for Mrs. Osman.

A Postal Brings You the Big Portfolio, "Hatching Facts"

In addition to the facts about the 90 to 100 per cent hatches, it tells you how the Eight-Times World's Champion Belle City Hatching Outfit is made—illustrates it in actual colors. Shows that it has every thing worth having in and on an incubator, yet it is the lowest priced.

My Eight-Times World's Champion Bell City Incubator has Oakes double disc self-regulator, correct hot water heating system, copper tank and boiler, safety lamp, double walls and double door and dead air space all over, with roomy nursery and strong egg tray. Of course, the thermometer is right: I use the "Tycos." I also supply egg tester, Edw. Miller sun hinge burner, funnel, everything you need, including valuable instruction book on operating, hatching and care of chicks. The book tells you all about my world famous 140-Chick Belle City Brooder—the only double-walled, hot water, top heat brooder made, guaranteed to raise largest percentage of chicks every time—a fitting companion to my World's Championship Belle City Incubator.

Be sure to write for this book

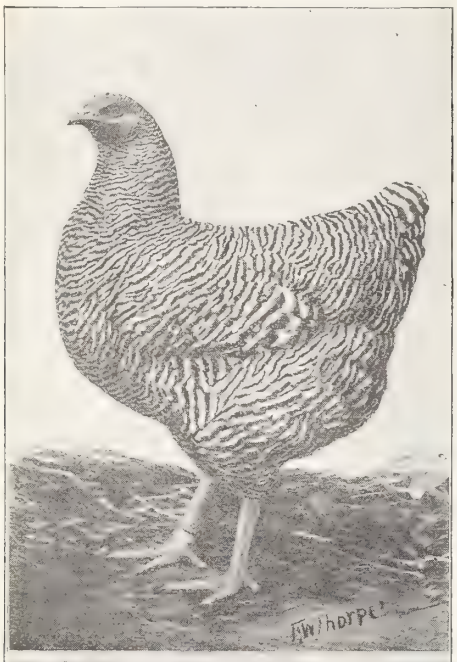
Ask for My Low Price

I will show you why I can send you my Belle City Hatching Outfit at half or less than half what others cost you! You buy direct from me. You pay no agents' or dealers' profits. I have prepared to build fifty thousand Belle City outfits to supply the demand for this season. This big volume enables me to cut my profit down lower than anybody else can afford to take—and I prepay the freight to all points east of the Rockies and allow it that far to points beyond.

Don't turn this page without either writing to me or else tearing out this advertisement as a reminder. Whether you order or not, you get all my valuable World's Championship "Hatching Facts" absolutely free! But be sure to write to me today. Just say, "Send World's Championship 'Hatching Facts.'" Address Jim Rohan, President.

Belle City Incubator Co.

Box 27 Racine, Wis.



neighborhood that makes more clear money from their flock of farm poultry. The Red Caps are excellent layers of large white eggs and a very beautiful fowl to look at. Anyone taking up the Red Caps and giving them decent care will find them just as good a variety as many of the newer varieties that is talked so much about. I could go on naming a number of other old varieties such as the W. F. Black Spanish, Black Leghorns, Black Wyandottes, Black Javas, Mottled Javas, Silver Duckwing Leghorns, Brahmas, Cochins, Golden Wyandottes and many others which I do not have space to mention. All these are good and worthy varieties, and if the right man would spend some time and money, as well as some business sense, on some of these old varieties, they would repay him many times in return.

It does not seem right to see these old varieties shoved away back out of prominence. They should not be kept in the background forever, and I hope that the breeders of these old standbys will rally to the support of their old favorites and again bring them prominently before the public.

Write about them, tell all about their good qualities, and send this experience to your poultry papers. Let the people know that you are a live wire and that your variety is worth talking about, worth reading about and worth keeping.

Do not wait for someone else to write in about your variety, for if you do you will have a long wait of it; but get busy and help boost your variety yourself. It is just such boosting by such men as Fishel that has helped to put the White Rocks where they are today. It is just such boosting that has put the Barred Rocks where they are today by men like Thompson, Hawkins, Bradley Bros., Latham and a few others. A few men such as J. C. Fishel, A. G. Duston, John Martin, Keeler, Owen Farms and a few others have boosted the White Wyandottes till they are among the most popular varieties of today. Now, why can't you and why don't you help boost your old varieties like these men have theirs? It is chiefly the fault of the breeders that these old varieties have fallen to their present level. Breeders, you can boom some of these old varieties yet if you only will.

It all depends on what you are willing to do for them, so it's up to you.

DOWN TO DATE IN POULTRY CULTURE.

G. R. Smith, Malvern, Pa.

IT IS a business that moves rapidly. The man who keeps up with it must work with wide open eyes. Every year marks a mighty stride forward. Not only adjustment, but readjustment, must be kept constantly in view. Every week of every year some new thing in poultry culture is placed before the public. Many of the new things are eminently worth examining. Some of them are revolutionary in character, and within a few years will change the face of the poultry business of the continent. The man who neglects to note quickly and carefully these new discoveries will soon find himself in the rear. The man who falls in line with this "age tendency" is bound to achieve success. It's a wise man who lays hold upon the findings of genius and adjusts them instantly to his own advantage.

Poultry culture today is a man's job. Yesterday it was a child's play. This year it ranks with many of the giant industries of the continent,—two decades ago it required the courage and the convictions of a reformer to make any large ventures in it. The men who followed closely in the tracks of Watt and Stephenson, Morse and Edison and Marconi, have been the winners of the biggest business prizes during this last and greatest century since the creation of the world. The same principle will hold true in this great modern discovery of poultry culture. Take every tide "at its flood" in this rapidly moving business and its biggest prizes will be yours. Light is dawning from every point of

American Poultry Journal Publishing Co., 542 So. Dearborn Street, Chicago, Illinois

the compass. "Down-to-date" should be the slogan all along the line.

The wisest verdicts from every quarter of the globe are in favor of ample quarters. Give them space! An animal can't do its best in cramped quarters. Fowls go in flocks instinctively; but the flocks must have room sufficient if the best results are to be expected. If you wish to play poultry culture cram a three by four cage full. They will make nice pets and may lay you a few eggs. If you wish to develop a business that will give you a favorable rating, get out into the open. The large things are being done where there is not only an abundance of foot space, but an equal abundance of building space. The poultry farm should mean a poultry farm. The backyard business is interesting; but the down-to-date man knows that he soon gets to the end of that. Room is the first finding for the man who has large things in view.

Things have moved rapidly in this respect. The mammoth hatching machines have revolutionized things recently. A man may hatch a hundred chicks or a hundred thousand. The sitting hen is out of a job with the man who is down-to-date for a big business. She is a thousand times too slow and uncertain. While she is coming to a conclusion as to whether she better, or better not, sit on 13 eggs, the strictly modern poultryman has filled his machines with a hundred or ten hundred, "clutches" of eggs,—and the artificial method is more dependable for results than the natural. Is your brooding system the best that can be found? If not, there is need for re-adjustment. The best chicks in the world will wilt under a defective brooding system. Many a man falls into the pit of failure just here. Do your chicks go "down on their legs?" Once down they never will come up again. They'll be rickety and rheumatic degenerates forever after. It's the brooding that makes them or breaks them. Find out the best and install it,—or the poultry procession will leave you far in the rear this coming season. What about your green food equipment? They must have the green stuff to do the best. To keep you down to date they must do the best. Study "sprouted oats" at close quarters. Nothing better has been found "to date!" Are you houses as well equipped as they ought to be for the most convenient and safe and rapid feeding and watering of the fowls? Better to save one man's work than to save one man's wages. Adjust and readjust till you have perfected a system of efficiency.

Some keep six in a flock, some keep a dozen, some keep fifty, some keep five hundred and some a thousand to fifteen hundred. The man who plans to do the big things must keenly discriminate just here. "There's a difference." Some men have the genius to carve beautiful little faces on cherry pits—others have the larger genius of hewing a colossus out of a rock. The world is in need of men of large mold and of expansive ideals. One who trades in pins must handle a good many if he would keep his business on a paying basis. A chicken is not a large thing. They must be handled by thousands if the largest success is to be realized. The poultryman who is not down to date in his understanding of the different schemes of operation in use by the most successful men in America today is seriously handicapped. Come to an intelligent and definite conclusion as to which scheme of operations is the best; then bring your business as quickly as possible to correspond to your new ideals. Life is short. The curtain of eternity will soon drop. Now is the time to do things.

Do people know that you are doing business? Has the tremendous importance of advertising fully dawned upon you? It must,—or the moss will soon be growing on your back. If you have just the kind of goods that a hundred thousand people want, and only one hundred people know that you have them, you are at a most serious disadvantage in your business. The display ad is king today in every American business worth naming. You must take your chances with the rest. Get the ears and the eyes,—the attention,—of the public, or the other fellows will and you will be left alone with your glory. You may have just as good goods as another man; but if he cultivates his advertising abilities, while you neglect yours, he will win hundreds while you are winning tens. He is "down-to-date." You are not.

They must be at your command. The "front line" man must be able to consult the highest authorities on any important phase of his business within thirty minutes any time of day or night, winter or summer. A six-foot shelf of books is worth as much as a sixty-foot hen house to any poultryman who has a large program of achievement before him. Half a dozen of the biggest and best poultry journals from as many different sections of the country should come to his office regularly and be read studiously. His library should be growing every month. His standing as an authority on all poultry subjects should grow daily. The times demand it. Competition is relentless. Brawn may win in the prize-ring; but brains must win in this business. Science in poultry culture has come to stay. The men who sneer at it have not come to stay. The down-to-date captains in this rapidly expanding and nation-wide industry are the men who know. They know the egg, and the chick, and the hen, and the market, and the food problems and the advertising problems—they see the whole thing in perspective. Their eyes are open wide to every new and true thing; and they seize upon it instantly and make it an added asset in their business. Therefore, they are in a "front line position." And their number is annually increasing. The secret is out. The antique man and the antique methods are becoming fewer each year. The "down-to-the-minute" poultryman is the one who wins out, and will continue to win out.

Eggs for Hatching in Any Quantity, Prepaid

Shipments guaranteed to reach destination safely. All dead chicks replaced. Book your order now. Our equipment includes the highest priced machines on the market backed by our twenty years' experience in hatching and breeding enables us to furnish you chicks that are well hatched, vigorous, strong and healthy. Hundreds of satisfied customers. Our aim is to furnish you the Best chicks, not the cheapest in price. Poorly hatched chicks always prove expensive items. Start right by sending for our chicklet catalogue today.

Our Show Record Includes Chicago, New York and Indianapolis Winners

Many first prizes have been won by our birds at these National Shows in the past. Our breeders are placed in condition for producing strong, healthy, fertile eggs by December 1, consequently for the present we will not exhibit, but can furnish you Baby Chicks that will grow into winners for you. Our chicks are well hatched and we can quote you extremely low prices on them. Be sure and get our catalogue. Sent free upon request.

GOSHEN POULTRY FARMS Route 7 GOSHEN, INDIANA

Tremendous Saving If You Can Use Any of These Odd Lots

ROOFING
AT HALF PRICE

Galvanized Steel Roofing Is Fire, Water and Lightning Proof

$1.25 Per 100 sq. ft. Buys Best Steel Roofing

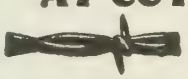
Here's an odd lot of **Corrugated Iron Roofing** which we were fortunate enough to buy at a price which enables us to sell it for only $1.25 per square—just about half what it is really worth. Is brand new, perfect, first class in every respect, but light weight. Not galvanized but black steel roofing. Sheets are 22x24 ins. by 1¼ in. corrugation. Specify Lot No. BB-700. Price is f. o b cars Chicago. Write for our Special **Freight Prepaid Prices** on new galvanized roofing. Our prices lowest ever offered in the roofing business. Only roofing $2.50 per square and up. Anything you want in metal Roofing, Siding or Ceiling.

62c Per 108 Sq. Ft. Buys Best Rubber Surfaced "Ajax" Roofing

This is our one-ply "Ajax" brand, guaranteed to wear as long and give as good service as any rubber surfaced roofing on the market. Put up in rolls of 108 sq. ft., containing 3 to 4 pieces to the roll. Price of 62c per square is f. o. b. Chicago and includes necessary cement and caps to lay. At 75c per square **We Prepay Freight** to any point east of Kansas and Nebraska and north of Ohio river provided order is for at least 8 rolls. Write for prepaid prices to other points. Other grades of ready roofing fully 30% below regular quotations. Send for free samples and roofing catalog.

Previous Price Records B-U-S-T-E-D WIDE OPEN!

We're always smashing prices—and it sometimes happens that a lucky purchase enables us to smash them a little harder than usual. This is one of those out-of-the-ordinary occasions. There isn't another firm on earth that occupies the unique position in the commercial world that we do. Our enormous buying power represented by our ten million dollars capital makes it possible for us to buy for spot cash, entire stocks at manufacturers' and jobbers' forced sales, receivers' and sheriff's sales, etc., that are beyond the reach of ordinary buyers. Often our purchases enable us to sell the goods for actually less than manufacturing cost—and usually for about half what dealers ask for the same goods. Mind you, this merchandise is brand new, and exactly as represented. The prices here quoted tell their own story of **your** saving. These are odd lots we're offering and to move them quickly **we've cut the price to the limit.** It would be nothing short of business suicide for any other firm to offer this quality of merchandise at such ridiculously low prices, but, owing to our method of buying, we can easily afford to do so. Can you really afford to pass up a chance like this? Remember your saving is from one-fourth to one-half.



No Money Down

You can buy a carload of material from us without paying us a cent in advance. All we want to know is that the money will be paid us as soon as the material is received, unloaded and checked up. We certainly would not dare to do this if we furnished anything but strictly first-class material. Our building material is right, and our terms more liberal than that offered by any other concern.

GUARANTEE

This Company Has a Capital Stock of Ten Million Dollars. Its honesty and upright methods have been known for 20 years; we have thousands upon thousands of customers who have yearly taken advantage of our special sales. We say to you, that no matter what you buy from us, if you fail to find the material absolutely satisfactory and according to your requirements and expectations, then we will take back such unsatisfactory material, refund your money and pay the freight charges both ways

Architectural Service

Personal Service. That's what we mean. Personal service in every sense of the word, either by mail, or if you come to Chicago We have an Architectural Department that is developed so far beyond the attempts of others, that there is simply no comparison. In this department we offer you service of a character that is bound to appeal to you.

If you have not formed a particular idea as to just what kind of a building you want, tell us in your own way, what your general ideas are, and if possible send us a rough pencil sketch.

This Will Cost You But Two Cents and we will reply promptly, giving you the information that will be worth one thousand times the 2c. You can sit right down in your own home, and see your plans developed step by step from crude ideas into a practical, architecturally correct and perfect design. Our charge for such service is so reasonable, that in the end it is absolutely **free,** for the reason that we refund such charge when your material is ordered from us. We will make you a proposition that will mean the cutting out of all preliminary worry and expense and which will show you how to proceed, point for point, with the work in hand.

COME TO CHICAGO

If you have time. Bring your sketches and ideas with you. Our architects, expert estimators, plumbing and heating engineers will quote you while you wait, and give you much valuable information on the subject of architecture and building. Remember our business extends from coast to coast. We have taken the best ideas from all the land, have assimilated them into high quality, modern, up-to-date homes.

Save ½ On Heating Plants

Most up-to-date hot-water, steam and hot air heating plants manufactured. Send sketch of your floor plans, size of rooms, etc., and we will make estimate on plant best suited to your building that will save you fully half. No experience needed to install—we furnish blue print drawings, specifications and full instructions so that you can install plant without aid of steam fitter. Plants guaranteed.

Axminster Rugs, 75c

We bought at New York Auction an enormous stock of high grade, brand new rugs and floor coverings. 75c buys Axminster Rugs of extra grade. This is a sample of our money saving bargains. Write for our complete free Rug Catalog, showing actual colors and designs.

Bathtub Complete $13

This is the white enameled cast iron, one piece, heavy roll rim bathtub; fitted with the latest style nickel plated trimmings, including Fuller double bath cocks for hot and cold water; nickel plated connected waste and overflow, and nickel plated supply pipes It is 5 ft long and is good enough to answer the needs of any man. Lot 5-BB-101

DON'T BE AFRAID

Sometimes people seem to be afraid to send their orders because they think it is impossible for us to sell strictly first class merchandise at the ridiculously low prices which we quote. We want to tell you emphatically that such fears are absolutely groundless. We freely admit that our low prices often do appear to be altogether out of reason; but just consider, please, in what vast quantities and in what manner we buy our stocks and it must be perfectly plain to you that our low price quotations are fully justified and that there is REAL QUALITY behind every article we sell. Our guarantee is so broad and binding that you take no chances when you deal with us. Your money back, including freight charges, if not satisfied

NOTES FROM ENGLAND

CONDUCTED BY

MISS CAREY, TOYNTON RECTORY, SPILSBY, ENGLAND

THE PALACE SHOW.

ONCE more the great event of the English Poultry fancy is over and gone—probably the greatest show the world has ever known with a grand total of 14,000 exhibits, all well staged without crowding, and all redelivered to their owners with the usual prompt attention.

Among the breeds that seemed most in public favor was the good old Orpington (a bird very hard to beat). Breeders wander away at times tempted by booms and noise of money, but a year or two finds them back again with one or other variety. This year the entries came up to 1,064 in 56 classes; White, Buffs and Blues putting up the best, though the Blacks still hold their own and show some very good young stock. Entries in Blues showed the variety to be going steadily ahead, notwithstanding the difficulties and drawbacks attendant on breeding, while Jubilees, Spangles and Reds make little headway.

Faverolles were going strong and the Whites seem especially popular this year and there was a grand display of the new variety of Buffs—a most charming addition to the breed but as the whole of this stock belongs in my yards, they were not put up for competition. They did, however, attract a great deal of attention.

Another breed that showed marked advance were the Sussex classes, especially in the Spangles and Reds interest was wide awake. This fine old breed is well worth taking up, the birds being hardy, vigorous, splendid layers, and very attractive, especially in the Speckled variety. Visitors to Atlantic City may remember the handsome pen imported by Dr. Parker, which I brought over with me to that show, and the attention they aroused.

The birds carry very much the Rock type, being altogether higher on leg and lighter framed than the Orpington. Occasionally one sees a specimen of low down Orpington build and when this is so it usually denoted a cross with the Jubilee Orpington and should be avoided as the nearer the Rock, the better the type. Unfortunately English breeders have evidently for some years not been paying sufficient attention to detail of head points for many birds in these classes showed bad combs and side sprigs, and several breeders were commenting on the frequency of the fault in their progeny so that in importing stock it will be necessary for American buyers to select with care, as it seems to be a defect of little moment on this side, several leading winners carrying well defined side sprigs.

There has been a good demand for Sussex, both the Red and the Speckled, from America this year, and the importance of head points is one of the greatest difficulties to get breeders to consider.

I hardly know at the moment which variety is likely to take the lead, at present the popularity seems about equal, some favoring the deep mahogany shade of the true Red, and others the bright attractive markings of the Speckles, but both have a great future ahead.

Turkey-headed Malines were also arousing some talk and they certainly are fine handsome birds, though the Blacks at present are the only ones that make much show—the so-called Blues struck me as altogether too washed out to be classed as that color, while Whites were absent entirely and seem unobtainable in England although the single headed White Maline is fairly common. The Turkey Head, however, gives a character to the breed that will never be touched by the single comb varieties.

Sicilian Buttercups made a good showing but it does not strike one as a fancy that has come to stay though it may always have some adherents.

Campines put up a good display, and size seemed rather better than at some of the earlier shows, although in a large number of entries one would like to have seen a more robust frame and build. Barring was good but there is still a lot to be done, especially in tails, by Campine breeders. Hackles at present are sadly wanting in clearness, and it is a pity more attention is not paid to this feature since it is one of the most attractive points in the breed.

Wyandottes came up to 795 entries in 50 classes, showing no increase on last year; the Laced, Golden and Silvers made an excellent show and many considered it was the best lot of Wyandottes ever staged.

Old English Game turned out in fine form and what a pity it is that these varieties are not more taken up abroad for they are certainly very attractive. Indians showed only a slight increase over last year and yet it is not long ago that they were one of the great features of the Palace show.

ANNOUNCEMENT

THE
American Poultry Journal
YEAR BOOK
FOR 1914 READY SOON

Place your order for this book today—it's still bigger—better—more thorough than the 1913 Year Book which has been pronounced one of the greatest, most valuable books for poultrymen—everywhere.

It will contain complete show reports for the season—many valuable articles—charts—poultryman's calendar—almanac—colored illustrations, etc. In short, it will be the boiled-down-to-the-minute cream of information you are looking for.

READ WHAT THEY SAY ABOUT THE 1913 EDITION

Alexander, N. Y., May 26, 1913.
American Poultry Journal.
Dear Mr. Bell: When you first made announcement of your intention to prepare and present to American poultrymen your first Year Book, those of us who have had occasion to know the real value that invariably attaches to anything coming from the Journal office, had some idea of the scope and value of your work. Having received my copy and given it careful examination, I feel it safe to say that nothing of like character has ever before been presented to our American poultrymen, and that no book of recent years possesses so much of usefulness to the poultry fraternity. Let me congratulate you upon the excellence of the book itself, and the scope and real merit of the whole work. Yours very sincerely, Reliable Poultry Specialty Co., by Eugene W. Harrington, Gen. Mgr.

Buffalo, N. Y., June 7, 1913.
American Poultry Journal.
Gentlemen: Your 1913 "Year Book" has been received and carefully inspected. We find it to be a most complete and comprehensive work. We realize full well the effort necessary to place such a volume in the field and sincerely trust it will be received in full worth by the breeders at large. We will be very glad to remember you editorially and will no doubt use the volume in our fall subscription campaigns. Very truly yours, National Barred Rock Journal, per Leo T. Robinson.

June 11, 1913.
Mr. J. W. Bell.
Dear Sir: I congratulate you upon the 1913 Year Book. It is a much better work than I expected, and is a credit to you and assistants. It is the result of a fine idea well expressed. I wonder why some publisher did not attempt it here before. It will be a great help to many breeders, and commendable every way. Very truly yours, Mrs. Denton Cole, 23 Dickson avenue, Binghamton, N. Y.

Quincy, Ill., May 31, 1913.
Editor American Poultry Journal.
Gentlemen: While we have just glanced through the book we hasten to congratulate you upon such a fine piece of work. It is nicely gotten up and full of good things and we feel sure that it will meet with a large demand. Very truly yours, Reliable Poultry Journal, D. E. Hale, Associate Editor.

West Newton, Pa., June 9, 1913.
American Poultry Journal.
Gentlemen: Received the Year Book of 1913, and must say that I'm more than pleased with the same. I think this a great book for amateurs. Yours truly. R. P. Schneider.

American Poultry Journal.
Gentlemen: The Year Book has reached me and more than fulfills my expectations. It is worth waiting for. Very truly yours, Edwin R. Fraser.

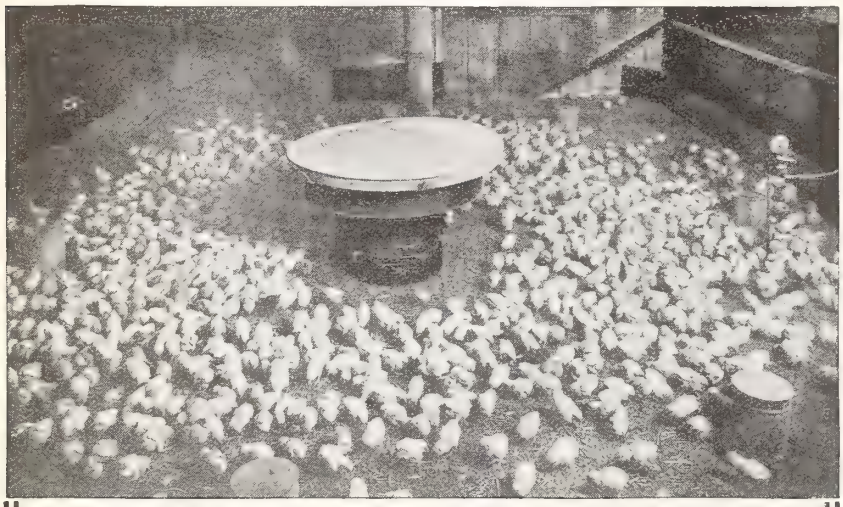
The 1914 Edition will be still better—order today. Paper Bound, 50c; Cloth Bound, $1.00

AMERICAN POULTRY JOURNAL PUB. CO., 542 S. DEARBORN ST., CHICAGO, ILL.

Cochins showed up well in the Buff and White classes. What huge specimens they are! Each bird absolutely filling his pen.

Bantams were well represented and several of the more modern varieties are going ahead well. The staging of the Belgian section which shows the little birds to such splendid advantage is one that might be copied by every show. These little open wire pens about three feet square, laid on turf and separated from each other with ferns and plants always attract a crowd while the owners seem to do good business judging by their regular attendance each year.

Water fowl, Turkeys and Geese filled a wing at the Palace by themselves, and the exquisite coloring of some of the varieties of ducks were most beautiful and fascinating to the crowds. Indian Runners turned out strong in all varieties and seem to be forging ahead if the demand that comes in from abroad is any guide.



It was a pleasure to see American birds coming over to compete in large numbers and to see that some were going back with honors and we hope each year will bring a stronger contingent for there is nothing that stimulates an industry more than open competition between nations, and nothing is more likely to bridge the gulf between the varying Standards of many nations than International exhibiting—a sure and certain step to International Standards in the yet far distant future.

The Simplex Brooder Stove By Day

A postal will bring our main catalog with users testimonials

A SIMPLEX will bring MORE CHICKS TO MATURITY than any other METHOD. STRONGER, BETTER LARGER, MORE PROFITABLE CHICKS.

The Simplex is the sure preventative of White Diarrhoea. How many dollars of your valuable Chicks do you lose yearly from this terrible scourge. A Simplex will save them.

The Canadian Government has adopted the Simplex for use on Government Experimental Stations after a year of exhaustive tests. There is a reason. A postal.

Have you ever thought what it means to save 90 per cent of your labor, 75 per cent operating expense and raise 20 to 50 per cent more chicks. These matters surely must appeal to you. Make us show you. We can only ask the chance.

Our Catalog is BRIM FULL of new UP-TO-DATE INFORMATION worth DOLLARS to YOU? Do not hesitate. A postal will put all this in your hands. MAY WE SEND it? Broods any number from 200 to 1,500.

SIMPLEX BROODER STOVE CO.

220 FOURTH ST., N. W. GRAND RAPIDS, MICH.

POULTRY SUPPLY MEN AT THE CHICAGO SHOW.

By J. Willard Bolte, Director Agrl. Dept., Shuman-Booth Company Adv. Agency.

The displays of poultry appliances and supplies at the Chicago Show, taken as a whole, made a rather unfavorable impression upon the writer. Possibly this was due to my having but recently inspected the Dairy Show and the Land Show, both of which were staged in a very spectacular and impressive manner, but the fact remains that many of the commercial exhibitors at the Chicago Poultry Show failed to use their space in as profitable a manner as it could be used.

Space costs money and you pay to get the crowds into the exhibition and to get your goods and your salesmen on the spot. Why not arrange those goods in that space, so as to interest and stop the greatest possible proportion of those crowds at your exhibit? A few dollars more for decorations and lights will make your original expense several times as profitable. An exhibit at a poultry show costs a great deal more than a page advertisement in a poultry magazine and it is usually seen by fewer people than the advertisement would be, yet, if one is to judge by effect, some one certainly puts more time and brains into the advertisement than ever went into the show booth.

I admit that exhibits are harder to handle than advertising space, because you have to fit the actual articles to the space. But if you are going to exhibit at all let it be a good job, both for your sake and the sake of the show itself.

Strive to have your booth so laid out that it looks as if it grew there, instead of giving the impression of having fallen off a passing wagon. Put the small articles toward the front and the larger ones back, to give the effect of perspective and a larger display.

Cover up the packing cases and bare planks, to overcome that temporary, circus-like effect, for it gives your goods the same reputation in the mind of the observer. And remember that the final success of the exhibit depends upon the man in charge.

He must be aggressive, pleasant and persistent. Don't send your cheapest man—send your best, for you will need him.

The writer walked through every exhibit on the floor twice, and I was hailed by only six salesmen out of the whole crew yet know it was not because I looked poverty-striken, because they almost held me up and frisked my watch in every booth at the Dairy Show.

Treat every visitor as if he were a sure enough buyer, and don't leave him

in the middle of your story to grab some other fellow who starts away.

The most striking large exhibit was the Albert Dickinson Company layout, with its huge revolving globe covered with a coating of various colored grains representing the map of the world. They were talking "Globe Brand Poultry Foods," two or three men working at once, and they always seemed to have company.

Edwards & Loomis had a fine display of poultry feeds, but I could not find anyone to tell me the kind of hen it was that laid a cut glass egg every minute, and I had to go across the hall and look back at the top of the exhibit to learn that they call their foods the "Red Comb Brand."

It is a corking name and a fine line of feeds, but they would do better to put that big electric sign on the wall at the back of the exhibit.

The Hall Mammoth Incubator Company, of Little Falls, N. Y., showed a new model of their famous "orphan chick factory" and it is a dandy. Their new method of raising and lowering the trays especially appealed to me. They also showed a new coal heated colony brooder that looks good. It would pay them to make a big canvas chart of testimonial letters and hang it on the wall.

Vaughan's Seed Store made a dandy display, and it drew more people than the Barnard Seed Store booth, because Vaughan placed some handsome fowls in coops at the rear of their exhibit, and live birds always draw more attention than still objects.

The Barnard boys were making the most noise though, and were getting their full share of the business. Vaughan showed the Prairie State Incubators in their assortment and Barnard had the Mandy Lee line.

The Miller Anchor Co., of Norwalk, Ohio, showed a self-feeder in a wire pen with a dozen Leghorn cockerels doing the work. There was no bally-hoo man on the job when I got there, but two of the birds were pulling off a swell fight and all the sports in the Coliseum were cheering them on.

In addition to their regular line of express and parcels post returnable egg carriers, the Star Egg Carrier Mfg. Co., of Rochester, N. Y., showed a new 12 egg package for grocery men to deliver eggs in. You can't break the eggs, and when the housewife gets them she can hold them up to a Star tester and pick out the "rots and spots."

Innes-Speiden Co. showed "Milk Albumen" and "Licene," and they were too busy to tell me about them.

Fred Schwalge, of Elmhurst, Ill., had on exhibition an imposing hot air Mammoth incubator that we believe is going to be heard from. Its chief advantage lies in the rapidity with which a cool chamber can be raised to the proper heat, in our estimation.

Cyphers was on hand with a fine display of machines and poultry supplies. Their exhibit was cut into two sections, which was unfortunate, from the standpoint of impressiveness. And they needed more men on the job at 11:30 a. m. Saturday, December 13th.

Howard Gross had a little booth in which he had his hat, one satchel and 3 Duplex oil burning colony brooder stoves—these and about all the visitors that could crowd in. He did not need bunting or music, for his magazine advertising made every one want to see the Duplex. The name of his concern is the Duplex Brooder Stove Company, Freeport, Ill.

Mr. S. L. Smith came all the way from Duluth to show his new trap nest. It is a wonder and you don't have to release the hen because she goes out of the back door into the "pen where the good layers go."

The Close-to-Nature Company, of Colfax, Iowa, showed several sizes of "Double Quick" Grain Sprouters and were doing a nice business.

Best of all the small exhibits was that of Otis & Moe. It was a small white booth with a roof and lots of color and light. The salesmen were penned inside where they could not escape, and there was a crowd of people in front all the time. They make good fountains and feeding devices, and I wish I had the opportunity to try to make their magazine advertising as good as their show exhibit was.

BUFF ORPINGTONS

At Girard, Ill., last month we won **1st cock, 1st cockerel, 1st and 3rd pullet, 2nd and 3rd hen, 1st pen, also silver cup for champion male bird in show,** all classes competing, and **silver cup for best hen in show,** all varieties competing. **Lots of young birds for sale. Tompkins' R. I. Reds

Why They Win Year After Year

THIS strain of mine was started in little old Rhode Island by my father over 40 years ago. He was among the first to do consecutive selective breeding of R. I. Reds, and was just hard headed enough to keep to his own picked stock and breed straight down the line.

I have followed in his ways. Tompkins Reds **are Tompkins** Reds. They are not birds of mixed strain.

I have never aimed to reach that point of success where Tompkins would just "oversee his business," and not give personal attention to those hundred and one things that are so vital in keeping up a strain standard. As a result I know practically every bird in my flock.

They are graded as Utility Birds, Near Silks, Top Notchers and Special Top Notchers. Their grade names tell you just where they belong.

Year after year my birds have walked away with coveted prizes. You who know Rhode Island Reds know that.

Every year, before the big shows, I am approached by some of the leading Red men to sell out my string to them. They know full well that Tompkins birds, like his word, can be absolutely depended on.

Although I am never so rash as to guarantee my birds will win—still it is a well-known fact that the Tompkins Strain walks away with the good things at the shows. Come to Concord and see my flock. Pick out just the birds you want.

Prize Pullet at the last Madison Square Show

Let me send you a list of our winnings. My new catalog is on the press. Send in your name and secure one of the first copies.

I have some specially choice selected pens this year ranging from $15 up to $150.

My near silks come pretty close to being All Silk. Let us price some to you.

LESTER TOMPKINS

Tompkins' Rhode Island Reds

CONCORD, MASSACHUSETTS

The Science and Art of Poultry Feeding.

THERE are so many fads and theories regarding poultry feeding and so many elaborate feeding rations, that if we were to try them all, I think we would be feeding something new in the world to come. But there is no more one best ration for all breeds in all climates and conditions, than there is one best diet for all men.

One should understand both the science and art of poultry feeding in order to obtain the best results. As yet science has much to accomplish before we may entirely dispense with art, and, in fact, many successful feeders know but little of the science of feeding. However, to neglect to inform one's self upon the science of the subject is to be unable to analyze the result of feeding experience or experiments; and to often feed a much more expensive ration than is necessary.

It is surprising that so many poultrymen fail to appreciate the benefits of good feeding. It requires a certain amount of nourishment to repay the wornout tissues and maintain heat and energy in the bird's body, and any surplus that is assimilated goes to make eggs or increase the size or weight of the bird.

A pen of white leghorns entered by a breeder in England are leading the Missouri egg laying contest by a wide margin and there are some who would have us believe they are the result of a better understanding of the laws of breeding for egg-production than the fanciers on this side of the water possess. Undoubtedly their phenomenal production is due in a measure to the stimulating effect of a change of climate, but with that exception I believe it is simply the result of generations of special feeding and care.

The English Poultry Club has decided that the man who hatches and rears a bird has as much right to claim to be the breeder of the bird as the man who mates and cares for the birds that produced the egg. In one way this is right, as no matter how fine the bloodlines one may purchase in a sitting of eggs he will have to give the chicks hatched an abundance of proper food or they will develop nothing but culls. Furthermore the feeding of one generation will have its effect on the character of all following generations by "natural selection on the survival of the fittest."

To balance a ration by studying the chemical analysis of the foods to be used is impossible, as there are many elements, some beneficial and others injurious, that are not shown by the analysis, and what might be a balanced ration for one bird would be very poorly balanced for another. Different birds require different rations at different seasons of the year, and if given a chance they will balance their own rations more satisfactorily than their owner can balance them for them.

To properly balance her ration a hen must have access to feeds having large proportions of the necessary elements, as feeds with high-protein contents, and feeds containing large amounts of carbohydrates, mineral matter, oil, etc.

All animal foods except dry bone are protein foods, green cut bone contains a large amount of fat, and grains (except some by-products of grain), are generally composed mostly of carbohydrates. Much more carbohydrates are needed than any other element as carbohydrates and fat are used to produce heat and energy in the body and to make the yolks of eggs. Fat has 2¼ times the feeding value of an equal weight of carbohydrates. Grain and dried meat products do not contain sufficient oil especially for young chicks and moulting hens. The larger amount of oil in the grain the easier it is to digest and assimilate. In feeding green bone one must be careful not to give too much fat to birds not accustomed to it. Green bore with plenty of adhering lean meat and grizzle is preferable to beef scraps, but it must always be perfectly fresh and free from taint or serious results will follow.

Cereal and vegetable foods contain only a small amount of ash or bone-forming material. Milk, oats, bran, clover and wheat if fed in liberal quantities will generally supply enough mineral matter for making bone in young chicks, but with laying hens in winter a little green or dry bone will be needed unless one is feeding beef scraps that contain ground bone. The muscles of and tissues of the body are worn out and replaced seven times as fast as the bones.

Beef scraps are the staple food for supplying protein, always available and convenient to feed. Under many conditions milk and green bone will give better results if obtainable. Beans, peas, oil meal, cottonseed meal and gluten meal also belong to the protein

300,000 "Better Hatched" Chicks for 1914

It is not now a question of whether to buy chicks, but where to buy them—you want quality, vitality, quick and efficient service, with prices that are not unreasonable. We have hatched and delivered chicks for four years, beginning with a capacity of 8,000 eggs, until now we can accommodate 95,000 eggs at one time. We have not advertised extensively; our customers come back each season with increased orders. There is a reason—it's the "BETTER HATCHED" chicks that people demand; we use no coal or lamps for heating, our hot-water boilers are all heated with natural gas, assuring a uniform temperature; no prematurely hatched chicks, no delayed hatches, every chick hatched in pure air and out on time; they are the ones that can travel 2,000 miles, grow every mile of the way, arrive strong and healthy and continue to thrive.

The 10,000 pure bred hens that lay eggs for this plant are all on free range, healthy, strong and full of vigor. If you desire chicks from this kind of stock, with a strong guarantee behind them, in lots of 25 to 2,000, send for our free catalog, describing our plant and the following varieties of fowls:—**S. C. White Leghorns, S. C. Brown Leghorns, S. C. Buff Leghorns, Barred Rocks, White Rocks, S. C. and R. C. Reds, S. C. Black Minorcas, White Wyandottes, S. C. White Orpingtons, S. C. Buff Orpingtons.**

We quote wholesale prices in lots of 500 and over. We make a specialty of White Leghorns and Barred Rocks in thousand lots. Deliveries begin March 1st. A hatch each week.

The Co-Operative Breeding and Hatching Co., Box A, Tiro, Ohio

CONKEY SAYS—Don't be "Too Late!" You have seen your fine birds moping, sneezing, coughing, with heads swollen and eyes watering. You have seen them fight for breath and die. That's R-O-U-P. It's humane to relieve them—it's dollars saved to cure them.

Conkey's Roup Remedy does the work. 25c, 50c and $1.00 sizes. Sent anywhere prepaid if your dealer does not have it in stock. Easily given in the drinking water, so that the fowls take their own medicine. A fine preventive also.

Always treat colds and roup promptly, or you may lose your whole flock. Don't wait; don't be "Too Late."

Send dealer's name and 4 cents and we will send you a copy of Conkey's 80 page Poultry Book.

THE G. E. CONKEY CO.,
CLEVELAND, OHIO
Dept. 18

class of foods. Besides these three main elements of feed (carbohydrates, protein and ash), there are many other elements, such as acids, earth salts, coloring matter and live cells of animal and vegetable food which are all necessary and which are not shown by the ordinary chemical analysis. To aid in supplying enough of these elements we divide the different feeds into three classes; cereal, animal and green vegetable. It is possible to balance a ration by chemical analysis and use nothing but cereals. The common grains would supply the carbohydrates and ash, and by-products, such as oil meal, bean meal, cottonseed meal and peanut hearts would supply the protein. But such a ration would soon result in a worthless, unprofitable flock, as all attempts to feed high-protein grain foods in large quantities have resulted in deranged liver and digestive disorders. One hears a great deal about leg weakness in brooders chicks and chicks in confinement and editors of "questions and answers" departments generally say it is caused by a lack of bone making food. Most rations contain sufficient bone-forming elements, but often they lack the acids necessary to digest these elements. These acids can be supplied by sour milk and live cell vegetable foods. Corn, wheat and oats are the staple grains for feeding poultry. Hard sound corn cured in outdoor cribs is probably the best grain feed, it contains oil which makes it easily digested.

Wheat is an excellent grain especially for laying hens in winter, it contains more ash than corn and the protein in wheat is of the same nature as that of an egg. The manner in which the ration is fed is of as great importance as the feeds of which it is composed. The latest fad is to keep each kind of feed in a separate box and let the hens balance their own rations. The Missouri experiment station is feeding a test pen by this system, using twenty-eight different kinds of feed, each in a separate box, but now the leading exponent of this system comes forward in a recent issue and claims that 28 kinds of feed is too much liable to confuse the hens as they are not able to descern between so many kinds of feed. There should be but two or three kinds of carbonaceous feed and the same of distinctly proteinous feed (corn and Egyptian wheat for carbonaceous, beef scraps and wheat bran for proteinous), says this writer.

I wonder he limits himself to four or six articles of diet, as he further claims that each man and animal of whatever species is perfectly capable of balancing his or its own ration. Do not wild birds balance their rations from a multitude of different weed seeds, worms, bugs and flying insects, fruits and green vegetables, galore? They certainly do, and so will every man eat just the right amount of pure foods (those not containing drugs and condiments), if he does not prevent his instinct or distroy his appetite through ill use of his "higher intelligence" or power to think which is not possessed by the lower animals. But, to go back to the system of keeping all feed in open boxes or hoppers, what is the advantage? It saves labor, and where birds have free range and there are no rats, mice, squirrels or sparrows it will work very well. In regard to rats and mice, better investigate, if there are any within a mile of you, an open hopper is very apt to be found by them, and then look out for a colony of rats. They will be sure to take up their abode under the nearest building. Where the birds are confined, keeping the feed in open hoppers does not work well. They will eat for pastime or because they have nothing else to do, until they are either out of condition or their appetites dulled and their digestive systems clogged, until they will not eat enough to be profitable.

Keeping the feed before the birds all the time tends to dull the appetite anyway and in feeding dry mash from hoppers it is found necessary to change the composition of the mash frequently to keep the appetite good.

With regard to the practicability of keeping twenty-eight different kinds of feed, each in a separate box or hopper,

BIGGER BARGAINS THAN EVER FOR JANUARY PEERLESS EXHIBITION WHITE LEGHORNS

On December 1, I had on hand, after close culling, about 400 cockerels and 600 pullets. In December I sold about 100 of each and still have as grand a lot of birds to select from as one could find anywhere. I feel absolutely certain that for vigor, size, activity and productiveness there is not a better single flock of birds living. To substantiate this claim I will **SHIP BIRDS ON APPROVAL, C. O. D., if preferred.** and if you are not more than pleased with my selection, return the shipment promptly at MY EXPENSE for expressage one way. I know I can please you, because I am just about giving cockerels away, and my pullet prices are at least one-third less than I ought to get—especially with fresh eggs as high as they are now. Just look at these prices for cockerels! Remember, I have culled very closely and every bird is A 1 in every particular.

A $2.50 bird for $1.50; a $5.00 bird for $2.50; a $7.50 bird for $3.50; a $10.00 bird for $5.00; a $20.00 to $25.00 bird for $10.00. Read what a December customer has to say: "Bentleyville, Pa., Dec. 13, 1913.—The cockerel received from you on the 3d is a No. 1 bird, and everybody thinks he is a dandy. I was offered twice what I paid for him and the man would have paid the express charge. I would not take four times what he cost me unless I knew you would supply another. Please quote me prices on hens, etc., etc. G. M. Andrew." Just write or wire your order and I will ship C. O. D. You will be just as well pleased. Birds have been reared on free range and fed Spratt's patent foods. You can't beat them for bone, muscle and stamina.

PULLETS $1.50, $2.00, $2.50 EACH. All splendid birds and nearly all laying. A cockerel free with an order for a dozen or more pullets. Although the price would not indicate it, the birds offered in this sale are backed by an immediate ancestry of New York and Chicago blue ribbon winners. I haven't adequate winter quarters for so many birds and am COMPELLED to sell.

EXTRA SPECIAL: A few cockerels and pullets equal to Crystal King and Peerless Belle, blue ribbon winners at Chicago and Minneapolis, at prices you can afford. I will ship you a winner at your own price C. O. D. I have them with low, well spread tails.

Special prices for eggs in 50 and 100 lots for delivery before March 15.

A word to beginners: Before investing your good money in new varieties, demand facts. White Leghorns have clearly demonstrated their superiority as layers in the various laying contests throughout the nation.

LEON C. HUNTINGTON, State Vice-President National S. C. White Leghorn Club. : BOX 12-B : OMAHA, NEBRASKA

CONKEY SAYS—Your fowls will look better, act better, do better in every way during the long winter months if you sprinkle a little of Conkey's Laying Tonic in the mash feed once a day.

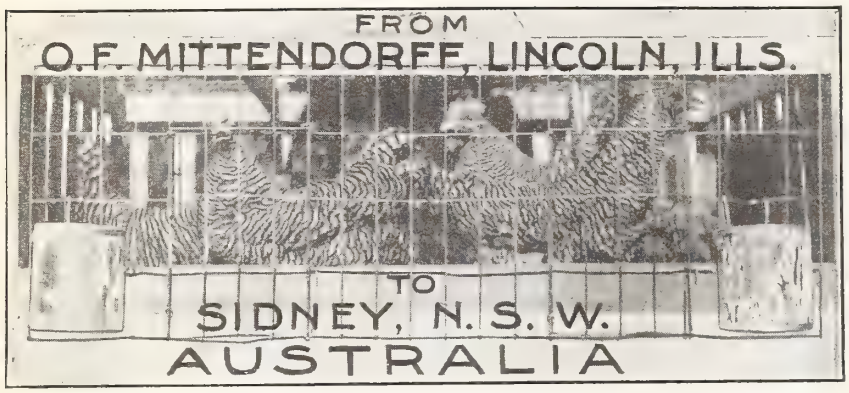
It is a conditioner and tonic that improves the ration and turns the high priced feed to egg production. WINTER EGGS bring the big profits.

We also recommend this for use with breeding stock, to improve fertility. For sale by all poultry supply dealers on plain guarantee. Your Money Back if Not Satisfied in Every Way. 25c, 50c and $1.00 sizes. Pails, $1.60 and $3.00. Sample mailed for 4 cents postage.

If not handled by your dealer, send his name and your order for any size above $1.00, and we will prepay transportation east of Kansas City.

THE G. E. CONKEY CO.,
CLEVELAND, OHIO
Dept. 18

I am afraid some of us would have to enlarge our houses to make room for the feed boxes and to secure twenty-eight kinds of feed would generally mean paying a very high price for some of them, which might make market egg-production unprofitable. But so far as results are concerned, number of eggs laid and condition of the birds, many kinds of feed would give better results than only five or six.



In most cases the ideal way to feed whole grain is from an automatic feeder. The grain is always dry, varmint proof and out of sight of the birds. The bird whose system calls for grain, will instinctively peck the bale bar, bringing down a dozen or more grains scattered in a circle three feet or more in diameter and then the fun begins. Other members of the flock that are hungry will run to pick up the grain, and probably no bird will get more than two or three grains from one shower of feed, which keeps them exercising for sometime before all are satisfied. Where the flock is large and on free range the feeder can be set to let out the grain in more liberal quantities, but in winter when the birds are confined, the flock should be large enough and the feeder set so as to keep them busy in the early hours of the morning and an hour or two before roosting time.

In the matter of exercise, there is an economic average, it is not necessary to keep them "always busy;" they need time to range after insects and hunt for tender vegetables and weed seeds in season and to bask in the sun in winter or wallow in the shade in summer.

It is an easy matter to balance the grain ration when feeding from the automatic feeder. Add any new feeds in what you consider the correct proportions and when the birds are feeding, notice what grains they pick up first, and then mix your feed accordingly. The larger the variety of grain the better, but I do not believe it pays to use the higher priced grains. When wheat is not much higher per pound than corn I always feed it liberally, but when there is a poor crop and the price is 35 cents to 40 cents per one hundred higher than corn I consider wheat too expensive to feed to poultry for market eggs and meat. Of course, this would depend somewhat on the price one is getting for market eggs and the price of wheat bran and middlings to take the place of the wheat.

Mash in some form has held its place in the feeding systems of most poultrymen for sometime. It used to be one feed per day of wet mash; but now most poultrymen use the dry mash, kept in open hoppers so the birds can help themselves at will. But many other poultrymen, among them some of the largest egg farmers and greatest breeders, have found that dry mash feeding does not work so well in practice as in theory and have gone back to the wet mash. For growing chicks on free range and for laying hens dry mash fed from open hoppers will generally give quite satisfactory results. But for chicks under six weeks old, and breeders kept in small flocks, the wet mash will give more satisfactory results.

At the Cornell Experiment Station wet milk mash and baked Johnny cake were found much more satisfactory for young chicks than dry mash. The flocks having dry mash and grain showed greater mortality, lighter weight and poorer condition, than those fed wet mash and grain. Personally I find I get more satisfactory results from wet mash for chicks of all ages. Small chicks in confinement will over-eat of

The above is an illustration of a shipment of Barred Plymouth Rocks to Australia made by O. F. Mittendorff, Lincoln, Ill. The cockerel in this shipment is a son of "Liberty Bell," that has a record of 271 eggs in one year.

dry mash if it is kept before them all the time and chicks on free range will have no time to make use of the range if they eat much dry mash.

When it is necessary to close the hopper every night to keep out the rats and mice, it is not such a labor saving system after all.

Much has been written about the "labor of mixing," wet mashes and never to mix them too wet or soggy. If enough coarse feed is used it will not matter if the mash is rather wet and then the mixing will be easier. Plenty of wheat bran and ground oats will lighten up the mash and make it easily mixed and more digestible, as the hulls make the mash easily penetrated by the digestive juices. Wheat middlings, reddog flour, and buckwheat middlings should only be used in very small amounts, if at all, as they tend to make the mash sticky. A dry mash containing large quantities of these feeds would be eaten a little at a time, a little mash, a little water and a little grass and being mixed with the grass in the birds' crop would be digested better than if mixed with water and at one time allowing the birds to fill their crops with the sticky mash. But a dry mash containing sufficient coarse feed would give better results, especially in winter when the birds could not get grass. The fowls crave a certain amount of coarse fibre and if confined in bare runs and not supplied in their rations they will eat the straw used for litter to supply their demands. My own system of feeding consists of grain fed from automatic feeders, wet mashes of five measures of dry feed (principally wheat bran, ground corn and oats, and fine beef scraps), to four measures of buttermilk, mixed in the morning and fed at noon, butter-milk or coarse beef scraps fed separately and green fodd given in the morning when not available on the range. Some flocks I can let eat all they want of the mash, but with others it is necessary to allowance them. This depends much upon the breed and strain and the manner in which the birds have been previously fed.

The theory of the hen being able to balance her own rations is all right if we remember that artificial conditions and artificial feeds are liable to develop artificial or abnormal appetites. Mash in any form is not a natural food. Milk is a great conditioner and should be much more extensively used for poultry feeding as it is generally a cheap source of protein. About 89 per cent of milk is water and the balance is protein (casein and albumen) and earth salts, butter fat, and milk sugar. The butter fat is nearly all removed in the skimming and when the milk sours, the milk-sugar is changed to lactic acid. This lactic acid adds to the value of the milk (except for feeding in cold weather) as it destroys injurious germs in the bird's digestive organs and aids in the digestion of the ash and bone-making elements in the feed. Buttermilk contains more nourishment than skim milk and will keep in a good condition for feeding longer. Buttermilk to drink and whole wheat fed three times a day is the ration used for young chicks on free range, by one of the largest and most successful egg farms.

Green food is always necessary for growing chicks and breeding stock and for all other classes unless sour milk is used. It supplies earth salts, coloring matter, juices, which aid digestion, and "live cells" that destroy other cells or germs that are injurious.

Dry alfalfa and clover meal are green only in color. Potatoes that are too small for market are a convenient green food for winter. They should be fresh ground every morning. Cabbage is also excellent but harder to keep. If buried on high ground with the heads down and the roots extending above the soil, they will often keep several months and are an excellent change from the potatoes.

For summer feeding when the grass is dry, melons, tomatoes and rape are valuable in the order named. Melons may seem like an expensive poultry

MADISON SQUARE GARDEN, N. Y., CHAMPION

WHITE PLYMOUTH ROCKS

They Have Won and Improved Year by Year

NOW THEY ARE BETTER THAN EVER We can please you with exhibition stock so if you wish to win write us and let us make you a proposition which means money to you. Grand cocks and hens and a great lot of choice young that will meet any demand made upon them. A few more selected breeders to sell. Write your wants and let us tell you what we can do for you. Mated trios and pens a specialty. We will please you if you are interested.

Remember This "Champion" Line

Made its records and reputation at America's greatest show, Madison Square Garden, New York. For several years at Cleveland, Ohio, Philadelphia, Williamsport, Chicago, etc., color and shape specials have been won at all exhibits and we have won five championship specials for best bird in entire shows. Consider this and write us your wants. Absolute satisfaction assured.

Webster Farm, Box A, Girard, Pennsylvania

Lichtenwalter's Quality Buff Ply. Rocks

They have won at more prominent shows the country over than any other line. Last season they were prominent winners at Madison Square Garden, New York, Springfield, Illinois, (Club Show), Philadelphia, Cleveland, Williamsport, etc. I have birds of quality in old and young and can sell you exhibition birds and selected breeders, assuring satisfaction.

E. A. Lichtenwalter : Box A : Girard, Pennsylvania

feed, but if they are well fertilized with poultry manure, a very little ground and a very little labor will raise a large number of water melons and attention to these little details in feeding pays especially well when one is trying to produce prize winners.

Chas. A. Simmonds.

Camp, Point, Ill.

Notes of Interest to the Raisers of Farm Poultry.

MOST of the farmers of the Mississippi valley keep from fifty to five hundred head of chickens on their farms to live, and maybe thrive, upon what feed would otherwise be wasted. In most cases the breed or variety of fowls kept could hardly be determined even by an expert. The "groundwork" of a decade or more ago was probably Barred Rock, to which has been added, year by year, new blood—a mixture of Reds, Silver Wyandottes, Buff Orpingtons, White Leghorns, and perhaps Black Langshans and others. As there has been no fowls marked nor breeding record kept, there is no way to distinguish between the yearling hens and those eight years old, and hence all are kept till the most ancient pass to the hereafter. This "non de script" flock of hens contain most of the primary colors besides black and white, are small in size, ill-shaped, not noted for their beauty, and returning no profit to their owner. Usually the mature fowls are not fed anything at all, except perhaps during the coldest part of midwinter, when they are thrown a few ears of corn, and there is never any provision for their water.

During the spring months there is some thought and planning on the part of someone on the farm, usually the housewife, concerning the hatching and rearing of a few chicks, sufficient to replenish the old flock, and perhaps to have a few surplus cockerels for market, or to grace the table for Sunday's dinner. The mothers are taken from their nests with their baby chicks and placed in coops near the house, where they remain for a few days or weeks to be fed on cornmeal, sometimes wet and sometimes dry, when they are given their liberty. They return to the coops only to roost, and perhaps to get a feed at night; but from early morning till night they must hunt for what feed they get. Perhaps three hundred are hatched and cared for in this way, but to the owner's surprise, when the day of reckoning comes (about Thanksgiving time) she is fortunate if she can count one-third that number. This decrease is due chiefly to the ravages of "cholera infantum," rats, hawks, etc. Through the lack of care in feeding and housing during the fall and winter, these pullets do not commence laying till March or April of the coming spring. In a month or so the round begins again to repeat itself through the year.

Rather than introduce new blood into this flock by the purchase of male birds during the winter, there are two other lines of action which I would prefer open to the owner. The first is the purchase of a pen of ten or twelve young hens and a male bird of his favorite variety of some reliable breeder at a price ranging from ten to twenty-five dollars. These should be kept by themselves in a small house and well cared for by some member of the family who has a liking for that kind of work. The eggs from these birds in the spring should be set and hatched to a number sufficient to replace

the entire farm flock. In the fall when the young birds can be distinguished from the original farm fowls, the latter should be loaded up, "teeth and toenails," and hauled away to market. All poultry buildings and yards should be thoroughly cleaned, disinfected and repaired before the young flock is placed in them. By keeping males only of the first quality and buying new ones of the same variety every two or three years, an excellent flock of pure bred fowls may be maintained.

The second method would be to dispose of all male birds before Christmas, and permit the females to live in "celibacy" during the entire year. The eggs laid by such hens would be superior to fertile eggs. They might remain exposed to the sun for several days, or even be in an incubator for a week and still be fit for food. Before the hatching season begins the farmer should bargain for all his setting eggs for that year with some local breeder for fowls of a variety suited to his fancy. These eggs should be delivered through the season as the farmer could use them, and they could be hatched either in an incubator or by his own hens. These chicks should be cared for in the best possible manner and handled the same as those in the first method.

This plan is preferable to the former for several reasons. Suppose a farmer keeps 150 hens. Should he wish to introduce new blood he would need to buy about ten males, and suppose he could get them from a neighbor at $1.00 each. During the season he would need to use about 600 eggs to produce 150 pullets fairly well developed at Christmas time. Six hundred of his own eggs could be sold on the market for $9.00. The cost of keeping the ten male birds at $1.00 each for the year would be $10.00. The initial expense in producing the 150 pullets would be as follows:

Male birds, cost	$10.00
Feed for same	10.00
Value of eggs used	9.00
Total	$29.00

At the close of the season the male birds could be sold for $5.00, leaving $24.00 as net expense. If the farmer had bought the 600 eggs at $3.00 per hundred the total expense would be $18.00. By this plan he would be $6.00 ahead, and would have a flock of pure bred fowls for the following season. By the plan of buying male birds, although they should be pure bred, the chicks derived from such mating would be only half-breeds, and practically no better than scrubs. It has been proven that pure bred birds, and even those of show quality, are more profitable from a utility standpoint than are cross-breds or scrubs. Pure bred fowls should be kept if for no other reason than that of their uniformity and beauty, and the pleasure the owner will have in caring for them.

One other point I wish to make before concluding and that is the breeding pen.

No raiser of stock would think of using his entire flock of females for breeders. Why should he set the eggs laid by his culls and sports as well as those laid by his better birds? By selecting twelve or fifteen of his best hens and pullets, and mate with them a male of superior quality, birds could be produced which would be fit to grace any show room. Each year by selecting the large, thrifty, well-marked and early maturing pullets, and every second and third year purchasing one extra fine cockerel, in a short time there will be a flock of fowls of superior

BARRED PLYMOUTH ROCKS

Good breeders at bargain prices. Cockerels and pullets that will win for you, they do for me.

TYWACANA FARMS POULTRY CO.

A. E. Wright, Supt. Box 53 Farmingdale, L. I., N. Y.

TYWACANA FARMS POULTRY CO.

If I Buy Baby Chicks Will They Mature Into Pullets Like These?

Will they grow into birds that I can feel proud of and that will lay Winter eggs in quantities, or win the blue ribbons for me, or will they be just scrubs, that's the question before everyone who buys day-old chicks. It is not the first price that counts—but will they be right at maturity ?

Caldwell's White Plymouth Rock (Fishel Strain) "Baby Chicks of Quality"

From Utility Matings

Will mature into long backed, well made birds, pure white in color, that will be the secret of "Winter eggs." Every utility breeder is descended from known good layers that have been bred that way.

From Exhibition Matings

Will mature into blue ribbon winners. Every exhibition pen is made up of birds with good combs, of good type and chalk white in color, possessing the rich blood lines of generations of Fishel blue ribbon winners. Our birds were among the principal winners at the Indiana Fanciers' Show, Indianapolis, 1912.

Our Flocks are Vigorous

All Fall our flocks have roamed meadows and woods accumulating health and vigor. They are now in Winter quarters so full of life and vitality that their chicks will be strong and sturdy.

Here is the Caldwell Selling Plan

We are now booking orders for "Baby Chicks of Quality" for Spring delivery. We never have been in such fine shape to handle orders of any size. Our fine plant is fully stocked with the finest birds we ever owned of both utility and exhibition quality. An early placed order enables us to so arrange our hatchings that we save money. By your faith you are entitled to that saving so we will allow you discounts for early placed orders, the earlier the greater the discount. Safe arrival of chicks is guaranteed.

A New Catalog Is Now Ready

One of the finest ever issued by any breeder. It tells just how "Baby Chicks of Quality" are produced and describes every grade of stock that we have to sell with prices. A copy is ready for you.

quality. Not only this, but the balance of the hens not used in the breeding pen will produce infertile eggs which will be worth from 2 to 4 cents per dozen more during the summer than fertile eggs. One state in the Mississippi valley loses $1,000,000 every year in marketing hatchable eggs for food purposes.

The farmer who tries this for a few years could not be persuaded to go back to his old plan. J. T. Fackler.

Mt. Vernon, Iowa.

Standard Low-Cost Brooding Devices.

On page 9 of this issue of American Poultry Journal will be found an advertisement of the All-metal, Self-regulating Portable and Adaptable Hovers, manufactured by Cyphers Incubator Company, Buffalo, N. Y., and for sale at this company's six places of business—Buffalo, N. Y.; New York City; Boston, Mass.; Chicago, Ill.; Kansas City, Mo., and Oakland, Calif. Following are two sample reports from Cyphers Company customers telling of the good work done by these brooding devices:

Birchmont Poultry Farm.
Montvale, N. J., July 18, 1913.

Cyphers Incubator Company,
Buffalo, N. Y.:

I have used several makes of hovers and after a thorough trial find the Cyphers Company's portable the most desirable. I am especially pleased with the self-regulating feature, which avoids the necessity of visiting the hover several times a night to see that the temperature is not too high or too low, as is necessary in using hovers that depend for regulation on the raising or lowering of the wick. Being portable, or "movable," this hover can be placed in a room, colony house or other poultry building, and will work satisfactorily. Should I at any time require additional hovers I certainly shall get the Cyphers Portable.

C. BULLINGER,
Buckton, Mo., July 19, 1913.

Cyphers Incubator Company,
Buffalo, N. Y.:

Our Cyphers Adaptable Hovers have proved themselves to be all you claim for them. We have tried them out in cold, rainy weather, with lots of wind, and the temperature was more regular even than the temperature of a small incubator we had in the house. We can cheerfully recommend the Cyphers Adaptable for use in any and all places where it is safe to brood chicks. It is all that the name "Adaptable" implies. We have not lost over 5 per cent of all chicks put into them. We have a 244-egg Standard Incubator about eight or ten years old, and it is still doing good work. We have the best of feeling for all Cyphers Company goods. W. WALTER HARMAN.

Reader is requested to look up the Cyphers Company's full-page ads of this issue of American Poultry Journal.

IS WHAT H. CECIL SHEPPARD OF BEREA, O., ACTUALLY MADE BY KEEPING CHICKENS FOR PLEASURE

Mr. Sheppard was a city man; he lived in Cleveland for a number of years, but being in poor health, he was obliged to move to the country in order to prolong his life. He knew nothing about the chicken business when he moved to Berea in 1906, but he was an apt pupil. He discovered mistakes when he made them and was continually on the lookout for improvements. He started with a small flock and increased this with his knowledge of the business, and incidentally increased his business from $160 the first year to $9,500 the sixth year. In submitting the manuscript for his book, Mr. Sheppard wrote:

"Several parties have come to my place and sought information regarding my methods of conducting my chicken business. Some have told me they would pay $5.00, others as high as $25.00, if I would tell them how I run my business. I have told them that I have no secret, but it would take considerable writing and time to give them a detailed description of my methods. I decided to write it up and put it in a book so that anyone can have it for a reasonable price."

In his book, Mr. Sheppard clearly describes every detail of his business; the start and progress; the care of housing, feeding and mating the birds; the secrets of his success are explained in plain English. What a poultryman says about it:

"Mr. H. Cecil Sheppard, Berea, Ohio. Watervliet, New York, January 26, 1913.
Dear Sir:—I wish to compliment you upon your book, "How I Made $4,223.00 in One Year on a Town Lot with Chickens." I read it through very carefully and am pleased to say that anybody purchasing a copy of it will get many times the value of the small sum you sell it for. I found it full of excellent poultry advice and while I have handled poultry for years, and found therein things I already knew, I still found plenty of advice that will help anyone make a success with poultry if they will only do as your book tells them. Yours respectfully, EDWIN G. GLASS, Manager Arsenal City Poultry Yards."

BE INDEPENDENT

Keep chickens as a side line. Follow the footsteps of successful poultrymen like Mr. Sheppard and make good.

OUR OFFER: This book, "$4,223.00 in One Year on a Town Lot," and American Poultry Journal, one year **$1.50**

(Canadian subscribers add 25c a year for postage; foreign, 50c)

American Poultry Journal is the one great poultry paper of America, established in 1874, published monthly, contains an average of 150 pages to each issue, and is profusely illustrated. The Doctor's Side of It.

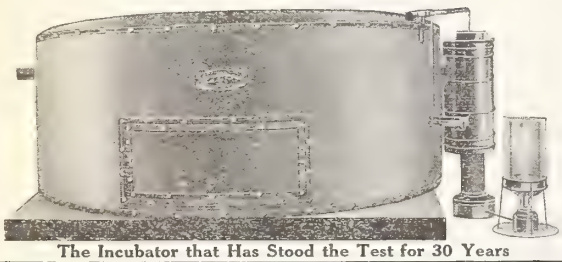
Laugh, if you like, at the doctor's mistakes—
And I reckon we all make a few—
He's giving the universe more than he takes,
Which is more than the most of us do!

Feather your arrows with humorous chaff
And tip them with satire and bile,
But don't ask your target to join in the laugh
He's entirely too busy to smile!



For General Practitioner, Army of Health,
Is fighting the terrors you fear,
While you are discussing his "ill-gotten wealth."
(Most likely, a thousand a year!)

He's saving you sickness and giving you strength,
And it's easy to laugh when you're strong;
But one of your terrors may get you at length
And alter the pitch of your song!

Then you will remember the jests you have made
And scorn his assistance, no doubt!
Or you will entreat him to fly to your aid
With the skill you have jested about?
—C. H. Mackintosh, in Judge.

Interesting Item.

Mrs. E. L. Rowland, 629 Longfellow avenue, says she has no trouble in making her rose comb Orpingtons lay in the winter. Some of them have begun to lay at seven months, and kept at it through the cold weather and well into the early summer. She gives a variety of food to her layers, not by an unvarying schedule, but according to her judgment as to what they need. Wheat, corn, oats, bran and dried clover lawn clippings, together with raw carrots, beets and cabbage, and all the potato parings from the table boiled, are the winter rations. A slightly warmed wet mash of the corn, oats and bran is a favorite egg-potion used by Mrs. Rowland, and she always gives slightly warmed water in cold weather. Last winter Mrs. Rowland was called away from home suddenly, and was absent during the greater portion of the winter, which prevented her showing at the fall or winter poultry shows. This fall she expects to go into the interstate fair with several of the best birds she can produce from two matings this season, and also to put a few individuals in the Inland Empire show. An incubator is now running with 130 eggs.

A Remarkable Winning.

J. C. Fishel & Son of Hope, Ind., the well-known breeder of the "World's Best" White Wyandottes, made a grand winning at the late Cincinnati show where they won as follows: 1-2-3-4-5 cock, 1-2-4 hen, 1 2-3-4 cockerel, 1-2-3-5 pullet, 1 old pen, 1-2-3-4 young pen; special for best cock in the show and special for best pen in American class and all White Wyandotte specials. Theo. Hewes, judge. This was the largest show ever held in Cincinnati. Considering the number of birds and quality Mr. Fishel is to be congratulated on the grand winning he made.

The firm issues a very beautiful catalog which gives prices and particulars about their stock. Also much valuable information in regard to feeding, mating, etc. Send for copy and mention American Poultry Journal.

Warner the Coopman.

Warner the Coopman, Allegan, Mich., is so rushed with orders and has been rushed for three months past that he cannot get caught up. The show coop trade is growing rapidly and shipping coops and day-old chick boxes nearly covered him up all last winter and spring. His trade on egg boxes holding from three to thirty dozen for choice eggs for setting and fancy egg table trade was the best it had ever been. Repeated orders are what count, and he gets lots of them.

WARNER'S EXHIBITION COOP.

The reason for this is the goods are their own advertisement. Mr. Warner thinks the best is none too good, and puts the best labor and material into his goods. We would make special mention of the Warner Feed and Water Cups, egg boxes and leg bands. Do not forget that he carries the best grades of everything for the poultryman, and we take pleasure in recommending Warner the Coopman and his supplies.—H. H. Coburn.

Parsons' Poultry Plant.

Parsons' Poultry Plant is located at Avon Lake, Ohio, and makes a specialty of breeding S. C. White Orpingtons and R. C. Rhode Island Reds of the higher quality, and is one of the most up-to-date and practical plants in Ohio. The buildings are practical and kept rigidly sanitary, and the young stock is range raised. Both natural and artificial means are practiced for hatching chicks. Last spring's matings produced some excellent young stock and many favorable reports were received from customers. This show season has opened with Parsons' S. C. White Orpingtons and R. C. Reds well represented and they are winning wherever shown. The Parsons are formerly of England, and ought to know what a good Orpington is and how to mate birds to produce correct Orpington type; therefore, the type of their Orpingtons is second to none. The "Major," with three ribbons to his credit, first at Toledo, 1913, in a large class, and winning third and fourth at Cleveland, 1913, shows him to be a bird of exceptional quality. This bird was placed at the head of their best pen last spring and among the females mated to him were such fine birds as 1-3 Toledo hens, second Toledo pullets and third and fifth Cleveland hens. The young stock from this great mating proved all that was expected and more. This wonderful sire has a straight, neat, fine point comb, red eyes and pink shanks, so his cockerels are as fine as grow; great big healthy fellows and very white.

F. A. MARSHALL

203 Bancroft Ave. - - Reading, Mass.

The pullets are simply superb. Many of the cockerels and pullets can land the blue in fast company. Two other great sires were their second Toledo, third Cleveland cockerel and fourth Toledo cock.

Much of the Parson's Rhode Island Red Stock has been purchased from Kaufman & Windheim; among them "Bill-Salome," a son of Bill Taft, Jr., and "Salome," Kaufman & Windheim's celebrated winners, and is a full brother of their first and second Madison Square, 1912, cockerel. Of course a long price had to be paid for a bird of such ancestry and superior quality. This "Bil Salome" has a wonderful type and has the most even surface and under color possible to be obtained. He was mated to Kaufman & Windheim hens and some of his own pullets, and the cockerels offered by the Parson's Poultry Plant in this issue are sired by him; they have quality all over all the time. The son of the Governor's first Cleveland cockerel, 1911, is a wonderful bird in type and color, and his young stock is excellent. At the Cleveland show, December 5-7, 1913, the Parson's Poultry Plant S. C. White Orpingtons won on three entries and in swift company, fourth cock and fourth pen. The pens will be mated in January for the egg and baby chick trade and will be stronger in quality than last year. Of course, the great sires mentioned here will again be used and the females mated to them will be strong in quality. Their prices are reasonable and they give great value for your money. Address Parson's Poultry Plant, Avon Lake, Ohio.

Ira C. Keller.

When we made our annual rounds we visited at the Brookside Poultry Farm owned by Ira C. Keller, Prospect, Ohio, breeder of Golden, Silver and White Wyandottes and Seabright Bantams. The general fine quality of the stock greatly impressed us; of course we expected them to be on the gain in quality, knowing a man of Mr. Keller's caliber would not and could not stand still. When it comes to mating Laced Wyandottes and Seabright Bantams Mr. Keller is in a class by himself, and when it comes to strict adherence to type it takes Mr. Keller to stick religiously to it. My attention was especially drawn to a golden laced hen whose lacing was nothing short of marvelous, equal to that of his best silver laced hen. The way he produces this fine lacing is by using males especially bred for that purpose. His laced Wyandottes are laced all over, fluffs especially good; that most desirable round open, clear lacing with well striped top color of the males and bright hackles of females, with good black and sunny color; the Silver Laced and Goldens are of that uniform clear oval lacing; all sections strong; hackles well striped and saddles with clear open diamonds so much sought for, and that clear rich golden bay color that glistens like the sun.

Mr. Keller has had over thirty years' experience in producing this high quality of lacing and there are no large flocks that can touch his uniformity. His White Wyandottes are of exceptional quality; the snow white, stay white kind with ideal Wyandotte type; neat combs, bay eyes. Mr. Keller has constantly in mind the utility side and the egg production has gradually improved; one pullet has a record of 243 eggs in ten months, and forty hens and pullets laid an even 4,000 eggs in five months. There are at least 100 yearling cock birds ready to win in any show room. It will be remembered that Mr. Keller has one of the largest poultry farms in the country, that is he has capacity to house thousands of birds and does everything on a large scale. He has a complete miniature mill on his farm and grinds all of his feed.

His Seabright Bantams are as choice as grow. He has won at Madison Square Garden for years and has shipped Wyandottes to all parts of the globe safely. He is reasonable in prices and can fit out anyone for any show and has hundreds of first-class breeders for sale. He will mate them right for you. Write for prices and circulars. Address Ira C. Keller, Prospect, Ohio.—H. H. Coburn.

The winnings of Ralph Woolery's S. C. White Orpingtons at Columbus, Ga., was a record breaker. The class of 175 birds was the largest in the show, with quality all down the line. Mr. Woolery's winnings were as follows: 1-2-3 cock, 2 hen, 1-3-4 pullet, 1 pen; first for best display and a number of specials and cups. The pure white of the cockerels and pullets and the perfect type made this exhibition the admiration of the show. He has a lot of the same breed to offer for other shows. Address R. W. Woolery, Bloomington, Ind.—H. H. Coburn.

"Get right on Poultry Supplies." Before spending another cent for equipment, write Otis & Moe Manufacturing Co., Otis Bldg., Chicago, for latest catalogue. They manufacture Moe's line of useful devices invented by a successful breeder for his own needs and they are what you want.

The Pagel Poultry Supply Company, Rockford, Ill., are manufacturers of Pagel's Sanitary Fountain, Economy Dry Feed Hopper and other poultry supplies, including Pagel's Perfection Sanitary Chick Fountain and Feeder, Pagel's Poultry Regulator and Pagel's Louse Powder, all of which are sold on their merits and at prices anyone can afford to pay. Write for descriptive circular and price list to Pagel's Poultry Supply Company, Box 211, Rockford, Ill.

Wiebke's Brown Leghorns.

We always enjoy visiting the W. H. Wiebke's S. C. Brown Leghorn farm in the suburbs of Ft. Wayne, Ind. As a business man Mr. Wiebke stands high in the esteem of the Fort Wayne people and to the poultry public this estimation runs high, for his dealings are decidedly on the square. He has given his best efforts, both in study and labor, as well as financially, in production of S. C. Brown Leghorns, and has succeeded beyond all expectations. It is his skill in mating that has crowned his efforts with success. This year he has a flock of the most uniform colored cockerels he ever had the pleasure to raise; every one models in type and not a high tail among them; the color is exquisite green black in the black sections and free from purple. Heads and combs just what will make the Leghorn men sit up and take notice. The striping is what he always has, because it is in his birds. Mr. Wiebke says he doesn't see why some complain of culls, he never has any. He uses the double mating system, like all good Brown Leghorn breeders. The Wiebke Brown Leghorns have won 50 firsts at New York, Chicago, Indianapolis and Fort Wayne, besides winning in all parts of the country for customers. Line-breeding, coupled with a thorough knowledge of the requirements of the variety, is what produces these top notchers for him. His first Chicago cock, 1910, has proven himself a great sire of exhibition males; the first prize Boston cock is remarkable for his fine point comb, shape and color; there never grew a better Leghorn with better stripes in hackle and saddle and no Leghorn can approach him for style. Mr. Wiebke's catalogue shows cuts of these birds and explains his way of doing business; get into correspondence with with him and improve your flock with one of his males.—H. H. Coburn.

Golden Campines.

Gensemer Bros., Creston, Ohio, were among the first to realize the great possibilities in Silver and Golden Campines, when the boom was at its zenith, and are now ranked among the largest and most successful breeders of the wonderful little egg machines. They are well fixed financially, and this enabled them to start right and to import some of the best Campines in England, among them Crystal Palace Winners, descendants from the great Silver King. The Golden pen they first imported proved wonderful producers and bred some of the finest hen-feathered males we ever saw. Hen-feathered males are hard to get, and it takes experts like the Gensemer Bros. to produce them. The Silvers produce a greater percentage of them than the Goldens.

The Gensemer Campines are responding most satisfactorily to their expectations, both from the fancy points and egg-producing proclivities. They are special mating to produce larger birds, and this season's young stock shows a decided gain. In Belgium, their native country, they had to be kept in very cramped quarters and range on poor land, but in America they have got room to expand and breathe; the general conditions are more conducive to larger growth. Last year at Cleveland they won the following prizes: On Goldens, 1st pen, 2-3 cockerel, 2-4-5 pullet; on Silver, 1st cockerel, 3rd pullet, 2nd pen. To anyone desiring high-class exhibition Campines or first-class breeders we take pleasure in recommending Gensemer Bros., Creston, Ohio.—H. H. Coburn.

Rocky Run Farm.

The Evergold Buff Wyandottes, exhibited by Rocky Run Farm, Northfield, Ohio, certainly manifested their superiority in the most convincing manner at the Cleveland show, December 2-7, 1913. The class was large and competition keen. The uniformity of color, which is that beautiful soft, golden shade, was featured in the great pen winnings. Evergold won 1-2-4-6 pen, 1-3-4-5-6 cockerel. This ought to make anyone chesty but the modest Gerald Williams, the manager of poultry interest at Rocky Run, and to whom much credit is due for bringing them out by his expert mating system and conditioning. They also won 3-5 cock and 4 hen and Ohio state championship. Determined to have Rocky Run Wyandottes lead the world, and not considering the cost, they bought all of F. W. De Miner's Madison Square Garden and Cleveland winners. This places them in a position to mate up the strongest pens for the egg trade ever mated by any Buff Wyandotte specialists. In looking over and handling the Evergolds, we found them buff to the skin, ideal in type and grand in head points. Rocky Run is offering some top notch cockerels for sale. —H. H. Coburn.

Better read that back inside cover right now. Its a sure base hit

SINGLE AND ROSE COMB RHODE ISLAND REDS

Better than ever, with type and color galore is the least we can say of the hundreds of youngsters developing on our ninety-acre range. Grand exhibition and breeding stock for sale, both young and old. Your money's worth or your money back and you to be the judge. Send for cat.

IDLEWOOD POULTRY FARM, -:- AVONIA, PENNSYLVANIA

Reds** that will **win**; that fill the bill with **type, color and size?** Will give grand bargains in eggs for 1914, that will hatch, and hatch winners for the big shows. Won at Kingston, December, 1912, 2-5 cock, 1-4 hen, 4 cockerel, 4-5 pullet, 2 pen; Lawrence, December, 1913, 1-2 hen, 2 specials, silver cup for best exhibit—both combs competing in the keenest of keen competition. **J. L. MORRISON.**

CHICKS AND EGGS

Holtzapple's S. C. REDS

Have won at Cleveland, Columbus, Toledo and Ft. Wayne. Orders booked for Spring delivery of chicks. Send for catalogue.

OSCAR HOLTZAPPLE, Box 48, Elida, Ohio

$5.75 Buys This 150-Egg Incubator

With Brooder $8.25

IF there's a poultryman anywhere in United States or Canada who is in the market for an incubator, here's a chance to get a **1914 Reliance** and save $10 to $15 in the bargain.

Nothing like this has ever been offered before. You not only save $10 or $15 that you can put into prize fowl, chick feed, etc., but you get an incubator that **practically runs itself, requires very little oil** for a big hatch and **hatches every hatchable egg put on the egg tray.**

Guaranteed To Hatch as Many Chicks as any $15 or $20 Machine

Fully Equipped

No Extras to Buy

1914 Reliance Incubators and Brooders

Read What the People Say About the Reliance

600 Chicks from Four Hatches

"The machine you sent me last Spring gave entire satisfaction. Had fine luck. I set it 4 times and got about 600 chicks. I want to get a couple more this year, possibly three. Please send me latest catalog."--Wm. Lingl, Rochester, N. Y.

Orders Another Reliance

"I received incubator and brooder and am perfectly satisfied with same. I am much delighted with both machines and the prices, and I will send you an order for another incubator and brooder."—A. Hartman, Houston, Mo.

Sold Two to Neighbors

"Received my incubator all O. K. Have 1 hatch off. Got a 90 per cent hatch. The incubator and myself have sold two more for you to my neighbors. We are all very much pleased."--Mrs. Chamberlain, Albany, Wis.

136 Chicks First Hatch

"I received the incubator some time ago and have taken off 1 hatch with 136 chicks. I am more than pleased with your incubator. I have shown the machine to all my friends and they will surely send you their orders. I will get another incubator next season, and you may be sure it will be the Reliance."--Harrison Furman, Hasbrouck, N. Y.

The time is just right for making big hatches—big money. Start now with a Reliance; get an extra hatch in before season is over. Every extra hatch means just that much more profit for you. Order direct from ad or get literature.

The Reliance will give you satisfaction. Why not order a 70 or 150-egg size—now? You're safe in sending money, as we guarantee satisfaction or refund purchase price.

because of their perfect construction and improved regulator systems, are sure to become the hatching sensations of the year.

Beginners can be as sure of succes as old-timers. All without lessons to learn, books to study, or endless attention and hard work required by old models.

You can't go wrong with the 1914 Reliance. It is so nearly automatic in action, that a boy or girl—in fact, anybody who has never seen an incubator—can get best results—even to 100 per cent hatches—by merely following the simple directions sent with each machine.

Here Are the Prices That Will Win Your Order

No. 1. 150-Egg Incubator, Guaranteed, - **$5.75**
No. 2. 70-Egg Incubator, Guaranteed, - **$3.90**

No. 3.		No. 4.	
150-Egg Incubator,	$5.75	70-Egg Incubator,	$3.90
150-Chick Brooder,	3.00	70-Chick Brooder,	3.00
	$8.75		$6.90
Both for $8.25		**Both for $6.25**	

You can't go wrong buying a Reliance—either size, or in combination with brooder.

The 1914 Reliance is made of best lumber. Side walls and top are made of three thicknesses—cold can't get in, heat can't get out. Equipped with best regulator, thermometer, egg tester, lamp, egg trays. Beautiful finish, handsome steel legs.

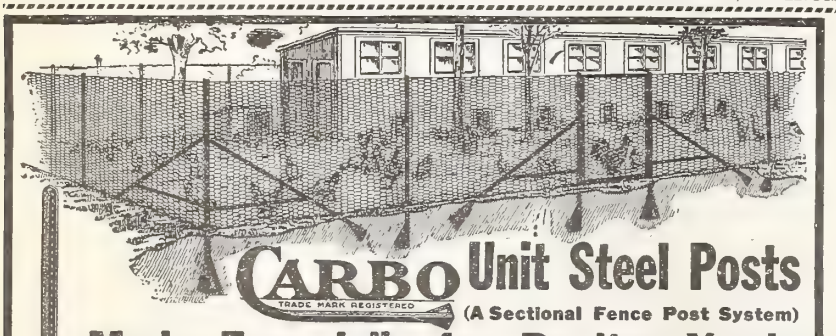
The Reliance is guaranteed to make chicken-raising pay big profits. No losses, no repair bills, no extras to buy, no waste of oil. Better order yours—incubator and brooder—or both—right now from this ad. You'll never get any other such offer.

If you want particulars, write for our literature. We send just a plain circular, but it's filled with Reliance Incubator facts and reasons why we can sell better than a $15.00 hatcher for only $3.90 or $5.75.

Orders filled same day received. Address

Reliance Incubator Co., Mfrs. of Grain Sprouters, Incubators and Brooders
Dept. A 2, Freeport, Ill.

Order Direct From Ad and Start Early This Season



Schoof's S. C. Buff Orpingtons.

Early last fall the writer had the pleasure of visiting Walter Schoof's farm and handling his classy S. C. Buff Orpingtons. Mr. Schoof has some wonderfully fine birds and last spring, wishing to introduce new blood, he purchased eggs from A. E. Martz, and that, too, from his best pens, and he certainly got young stock that showed up their ancestors. The Imlay City Fair is one of the best in Michigan, and the poultry exhibit of high class. Mr. Schoof's Orpingtons won 1-2-3 cock, 1-2-3 cockerel, 1-2-3-4 pullet, 1-2-3 hen and 1-2 pen.

Mr. Schoof showed good business sense by starting right and making haste slowly with quality in view rather than quantity. He can now offer some of the best S. C. Buff Orpingtons in the country. At the present writing he is getting a strain ready for the State show at Detroit. Many breeders run strong in quality in one sex only, but Mr. Schoof's are about equal. I can highly recommend Mr. Schoof and his S. C. Buff Orpingtons. Look up his ad in this issue and get his prices.—H. H. Coburn.

Rose Comb Black Minorcas Made a Clean Sweep

at the Illinois State Fair, 1913, **winning 1st, 2nd, 3rd and 4th cockerel, 1st, 2nd, 3rd and 4th pullet.** No old stock exhibited. I can furnish you winners for any show. Write your wants and get my prices. **J. S. BALES, :: SPRINGFIELD, ILLINOIS**

Free Book Tells How To Save All Your Hatch

Count Your Chickens

—not before they're hatched; it isn't safe; you may be disappointed. But it's safe to count them as soon as they're hatched, providing you have installed the Duplex Colony System of Brooding. If you can hatch fifty chicks at a time you cannot afford to use any other system.

This modern system raises even the weakest chicks, helps them thrive and become strong. It brings cripples to maturity. It saves every chick not suffering from organic defects.

Our book on "Colony Brooding" tells all about this system which not only **raises all chicks to maturity,** but **positively saves three-fourths labor and fuel expense.**

Duplex Combined Brooder Stove And Ventilator

Made in Three Sizes

50 to 300 Chicks
100 to 800 Chicks
500 to 1500 Chicks

This system of Brooding can be installed with less expense than any other system in use anywhere. It raises enough more chicks out of the first hatch to pay for itself. It is efficient and economical. It costs less for fuel and is dependable at all times, raising chicks as successfully in mid-Winter as in May or June.

Fresh air is the secret of successful brooding. The Duplex Combined Brooder Stove and Ventilator keeps the air perfectly pure and warm at all times without holes in the walls or ceilings; therefore, there's no possibility of a draught.

All the fresh air comes into the brooder house through the stove and is heated before it can pass into the room.

All the poisonous gases from the breath and droppings of the chicks are taken up off the floor and leave the room through the stove, with the air on the floor. The circulation is complete, and perfect ventilation is secured without the loss of a single heat unit. Burns cheapest kerosene, natural or artificial gas.

Every Chick Saved is a Dollar In Your Pocket

FREE Book "Colony Brooding" tells how to **save chicks, save dollars.** Send for it. Book also explains all features of Duplex Brooder Stove and describes all different sizes. Will quote you low price upon postal request. Get the book; it's FREE.

Duplex Colony Brooder Co., 482 N. Avon St., Rockford, Ill.

Walker's Barred Rocks.

G. A. Walker, Polo, Ill., the well-known breeder of Barred Plymouth Rocks, showed a few of his birds at the late Coliseum show in Chicago, and in one of the largest classes ever exhibited at Chicago, he won, 2-5 pullet bred cockerel, 5 exhibition pen, and 5th pullet mated hen. He also made a strong winning at Davenport, Ia., where he won 1st cockerel bred hen, 1st exhibition pen, 1st pullet mated pen, 2-3-4 exhibition cock, 2 pullet bred cock, 2-3 pullet bred cockerel, 2nd exhibition pullet, 3rd cockerel bred pullet, 2nd cockerel bred pen. $25.00 cup for best display in the show. American Barred Rock Club cup and two cups on pens. Mr. Walker has a number of very choice cockerels and pullets to spare and ships all birds on approval.

W. F. Zimmerman, whose R. C. Reds won at Cleveland, 1913, will again be ready for the next Cleveland show, Jan. 5-10, 1914. Mr. Zimmerman is the breeder of some of the best R. C. Reds in Ohio. He is a strong advocate of Ideal Rhode Island Red type, and in consequence his birds are very fine in type. He also thinks fine head points are a very essential requirement, as they are about the first thing noticed when the purchaser peeks into the shipping coop; so the Zimmerman R. C. Reds have very neat combs and bright bay eyes; they are also noticeable for their long backs and low tail carriage. He has the mating of Reds down to a fine point and is a close adherer to very dark birds, never using any other color. He has just finished a fine poultry house and has about 200 range-raised R. C. Reds to sell, and these were bred from his Cleveland winners; he also has a few S. C. pullets to spare, as he intends breeding only the R. C. Reds in the future. His 1914 pens will be the best he ever mated, and purchasers of eggs can be assured of fine stock and a great percentage of show birds. Address W. F. Zimmerman, Willoughby, Ohio.—H. H. Coburn.

Fred H. Poertner, Berea, Ohio, distinguished himself as well as his S. C. Buff Orpingtons at the late Cleveland show, by winning silver cup for best display, all varieties of Orpingtons competing; also landing the following ribbons: 1-4 cockerel, 1-3 hen, 2-3-4 cockerel, 1-2-4 pullet, 1-3 old pen, and 2 young pen. The competition was strong and the above is a capture to be doubly proud of. We have seen the Wingolds at Mr. Poertner's farm and handled his Cleveland exhibit, Dec. 2-7. The type of these birds is nothing short of the ideal; head points as fine as ever seen, and when it comes to soft golden exhibition Buff, the Wingold Buffs are second to none. He received many flattering testimonials that bear out the above statement. He is in a position to furnish first-class exhibition and breeding males to anyone desiring to improve their Buff Orpingtons and Buff Wyandottes. His matings in these two varieties will produce young stock that will make them all go some in any show room. Write for prices and catalog.—H. H. Coburn.

Bird & Son, East Walpole, Mass., makers of Neponset Waterproof Building Products, the best known of which are the roofings, building papers and wall board, have recently started to manufacture a shingle.

They have just had printed a booklet called "The Greatest Roofing Development of the 20th Century," and also a folder containing a sample of the shingle, and anyone interested in this new product will do well to obtain a copy of one or both of these pieces of advertising matter.

Neponset Shingles possess all the good features of wooden shingles and none of their defects. They will outlast wooden shingles and will not catch fire from sparks and embers as wooden shingles do. In appearance they are unusually attractive. These shingles are made with a thick butt end and are shipped in bundles and laid like ordinary wooden shingles.

Ernst Birkholz, Willoughby, Ohio, a very noted S. C. Rhode Island Red fancier, has some of the finest type, long back, low tail carriage Reds to offer he ever raised. These Reds are raised on range with good mother hen and this speaks for their health and vigor. In color they are very rich, deep red, and there are five-point combs galore. The Birkholz S. C. Reds have a fine show record to their credit and at the last Cleveland show in December won 3rd cock and 2nd pen. To get a place at all among this Waterloo exhibit is a great honor. He has some very choice cockerels to spare and is mating up some excellent pens. I take great pleasure in recommending Mr. Birkholz and his S. C. Reds to anyone wishing good ones at reasonable prices.—H. H. Coburn.

Russell Cave Poultry Yards.

Russell Cave Poultry Yards have for years been recognized as one of the leading White Orpington Farms. This year, however, they have made a higher standard and have made a mark that will be almost impossible for their competitors to reach. For years, Louis Lee Haggin, the owner of the farm, seeing the danger of breeding alone for standard requirements, has been endeavoring to improve the laying qualities of the great flock of show birds. How well he has succeeded can be easily seen in the record his pen of ten pullets has made at the Missouri National Egg-Laying Contest, under the auspices of the Missouri Experiment Station. These ten pullets were selected out of a flock of young March hatched pullets and sent to Mountain Grove a year ago. In selecting these pullets the one point Mr. Haggin cared for was that they were to be typical Russell Cave White Orpingtons. Unfortunately, they were not sent early enough to get accustomed to their new quarters before the contest started and, therefore, did not begin to settle down to laying until December. In February this pen won the cup for the greatest number of eggs against all breeds, showing without doubt the great utility powers of this flock. At the close of the year, Russell Cave White Orpingtons, not only led all White Orpingtons, but all varieties of Orpingtons, besides, after the contest closed, these ten females won first premium for the best pen of White Orpingtons, so there is no question that these birds not only laid right, but are right in regard to standard requirements. White Orpington breeders who are anxious to improve the fundamental qualities, namely, egg-laying, of their strain, can not find a better opportunity than securing stock from this farm. At all shows made this year, their winnings are as follows: Hagerstown, 1st and 2d cockerel, 1st and 3d hen, 1st and 3d pullet, 1st and special for the best hen in the show. No cocks were shown. Augusta, 1st cock, 1st and 2d hen, 1st and 2d cockerel, 3d, 4th and 5th pullet, 1st pen and numerous specials. They have at the present time about four hundred early hatched cockerels and pullets from $5.00 up, and a great line of hens and cock birds at the same price. These birds are ready to go into the breeding pen and can not but help improve the quality and egg-laying power of any flock. This year they are selling eggs at prices that are so low that they are attractive to the smallest breeders; eggs at $10.00, $5.00 and $3.00 a setting of thirteen eggs, and are now booking orders for early delivery.

Six Remarkable Hatches.

We publish herewith a letter from the Buckeye Incubator Company, which refers to a question that has been argued pro and con for a great many years:

Springfield, Ohio, Dec. 1, 1913.

American Poultry Journal:

You will no doubt be interested to learn the results of six different hatches that were made simultaneously in six different parts of the country with six Buckeye incubators of exactly the same type.

This test was made during the most unfavorable part of the hatching season, and resulted as follows:

Albion Poultry Yards, Bangor, Pa. Hatched 149 chicks from 150 fertile eggs. All chicks strong and healthy.

N. F. Hewes, Gulfport, Miss. Hatched 109 chicks from 110 fertile eggs. All chicks strong and healthy.

Maplewood Poultry Farm, Cheshire, Conn. Hatched 98 chicks from 98 fertile eggs. Operator never used an incubator before. All chicks strong and healthy.

Shady Oak Poultry Farm, Hendricks, W. Va. Ninety-five chicks from 102 fertile eggs. All chicks strong and healthy.

W. H. Jones, Philadelphia, Pa. One hundred and one chicks from 101 fertile eggs. Hatch made in a store under very unfavorable conditions. All chicks strong and healthy.

L. C. Poling, Parsons, W. Va. Ninety-eight chicks from 102 fertile eggs. All chicks strong and healthy.

The results of this test convince us that artificial moisture is entirely unnecessary when the incubator is properly constructed to provide moisture in the natural way—and should set aside any further argument as to the necessity of using artificial moisture in incubators.

Of course there are any number of incubators that cannot be operated successfully without artificial moisture, simply because their system of heating and ventilating demands it, but under the improved system of heating and ventilating used in the construction of the Buckeye incubators, they can be operated with equal success in any climate and under any conditions. We just had a communication from

CHERRY REDS are Winners at Cleveland, O., December, 1913

a customer in New Mexico (which is admitted to be the most difficult climate for artificial incubation) advising us that during an entire season's hatching with his 110-egg Buckeye, he had but two dead chicks in the shell all season.

We know that you will be gratified to have this old argument settled conclusively, and if any of your readers should want any information on the subject in question, we would be very glad to have you refer them to us. Yours very truly,

The Buckeye Incubator Company,
By George Cugley, President.

Efficiency and Economy.

Everywhere conservation of resources is being heralded as a necessary factor in the economical management of affairs.

The result is seen in the reclamation of the arid wastes by irrigation; in the invention of powerful labor-saving farm machinery and implements; in the building of the highest type of roadways, and the employment of power trucks for marketing the products.

But conservation is not confined to large agricultural interests alone. The small farmer has come to recognize that to gain efficiency in the conduct of his farm he must follow this same principle of husbanding his resources, not by mere stinting, but by provident care of all his possessions.

He, too, uses the latest scientific farm and garden tools, and sooner or later is sure to find a remarkably effective agent of conservation in the use of natural asphalt.

He begins by using it in the form of ready roofing to cover not only his house, but every other building on the farm, also. He sees in natural asphalt roofing the unmistakable economy from first to last, as it does away with constant repairing and gives lasting protection.

Then he looks to his foundation walls that need waterproofing, and uses natural asphalt there. He learns, also, of the value of natural asphalt as a wood-preserver, and uses it in his fence-posts, under-pinning, troughs and bridgings. He finds out that it staves off the corroding of iron, and uses it on his fencing and metal work. He goes on from one discovery to another and finds innumerable uses for this inexpensive and everlasting waterproofer of nature, natural asphalt.

Bell-Vista Poultry Farm.

Bell-Vista Farm lies in the little suburban town of Mentor, Ohio, a few miles from Cleveland, and is called the home of Cleveland millionaires; also is the home of James Garfield. Here the scientific breeding of the Reds has been carried on extensively for years.

Mrs. Warren has an up-to-date poultry plant and a grand flock of about five hundred Reds, all farm raised, large, rangy birds, and great hustlers. She has been working for the last nine years to build up her autocrat strain of birds. They have the best blood lines in the world. Progress is her watchword. In selecting her birds for her pens, type comes first. This season she will have ten fine pens, all headed by prize winners. Her birds have that long-back, low-tail, glossy black and color that dark, even brilliant red from heads to tail, clean, rich red under color. She gives some extraordinary egg offers for 1914.

The demand for her birds are steadily increasing, and she is shipping birds to every state in the union, while she is receiving scores of letters from satisfied customers telling of birds purchased from her last season and this winning the blue.

Moses Griffing, of Shelter Island, N. Y., writes Mrs. Warren that he raised a pullet from the "trio" he purchased from her last January that he won the blue on, also the special silver cup for champion bird of the show at Hempstead, L. I., show this month. All her birds are sold on approval. Why not take a chance with her birds?

How to Solve the Moisture Problem.

One of the most perplexing problems of the incubator operator is how much moisture—if any at all—should be placed in the egg chamber during incubation. Unless one has some accurate instrument for determining the varying conditions in the egg chamber from day to day, there is great danger of supplying too much or too little moisture. This results in many drowned or suffocated chicks in the shell, or chicks hatched with weak, crooked legs. A large percentage of the chicks from such a hatch are stunted and they are always more susceptible to disease. Those that do finally survive mature very slowly. The right amount of moisture in the egg-chamber of your incubator means bigger hatches of strong, lively chicks with hardy constitutions.

If you would determine the actual moisture requirements in your hatcher, use a "Tycos" Incubator Hygrometer. This instrument indicates accurately the amount of moisture in the egg-chambers so you may correctly regulate the supply. Every operator of an incubator should have one or more "Tycos" Hygrometers.

W. J. Campbell, the Single-Comb White Leghorn breeder, West Greenwood Poultry Yards, Nashville, Tenn., says:

"The 'Tycos' Hygrometer has proven entirely satisfactory, and I don't see how anyone can run an incubator without it. The difference in the number of chicks in one hatch will more than pay for it.

"It solves the moisture question, which is the main cause of so many chicks dying in the shell. Any time I can recommend either the 'Tycos' Thermometer or Hygrometer, I will be only too glad to do so."

Another breeder, A. M. Becker, the Single-Comb White Orpington specialist, of Atlanta, N. Y., says:

"I would not take a great deal for my 'Tycos' Hygrometers. They give me at least 25 per cent better hatches of larger and stronger chicks."

The "Tycos" Hygrometer is made by the Taylor Instrument Companies, Rochester, N. Y., manufacturers of the well-known line of "Tycos" Incubator and Brooder Thermometers. Their booklet, "Thermometer Facts Worth Knowing," gives full description of "Tycos" Hygrometers and Thermometers and tells how they are made. It will be sent free to any reader of this paper. We suggest that you write for a copy of this valuable little booklet today.

"Oculum."

The H. I. Co., Salem, Va., have a novel method of demonstrating the exceeding merit of "Oculum." They buy sick turkeys, ducks and chickens, cure them with "Oculum" and resell them. There's no fake in this method. They buy fowls with Cholera, Roup, White-Diarrhea, Canker, Black-head, Sorehead, Gapes and Leg Weakness. In their ad in this issue on page — they offer to send for a dime either a 50c or $1.00 bottle to anyone on trial.

Try "Oculum" and you will be agreeably disappointed with results.

"Get right on Poultry Supplies." Before spending another cent for equipment, write Otis & Moe Manufacturing Co., Otis Bldg., Chicago, for latest catalogue. They manufacture Moe's line of useful devices invented by a successful breeder for his own needs and they are what you want.

Save Money on Poultry Fence.

Our readers who have had dealings with the Brown Fence and Wire Company will be glad that we are giving this additional publicity to a worthy concern, and those of you who are not acquainted with the advantages offered by them will be glad of this brief introduction. The Brown Fence and Wire Company make the famous Double Galvanized Brown Poultry Fence. It costs no more than common chicken netting, lasts many times as long, requires no top or bottom boards and about one-third as many posts. The peculiar and exclusive method of double galvanizing the wires makes Brown Poultry Fence rust resisting until long after "cheap" fencing is a tangled mass of broken-down wires. The heavy top and bottom wires make running boards unnecessary, while the extra weight and strength necessitate the use of comparatively few posts. There is no question in our minds as to the quality of the products manufactured by this company. For 32 years Mr. Brown has been in the wire and fence business and is held in highest regard by all who have ever had dealings with him. The guarantee of quality is the fact that nearly 500,000 farmers are on his books as customers, who have purchased over 25 million rods of fence from him. Our readers who are, or will soon be in the market for fence, will do well to write a postal for the new catalog issued by the Brown folks. In addition to poultry and farm fence of every size and style, they carry a complete line of farm gates, self-raising gates, lawn fence and lawn gates. They sell direct from factory, prepay all the freight wherever you live and guarantee perfect satisfaction in every way. Address them as follows: The Brown Fence & Wire Company, Dept. 3, Cleveland, Ohio, and their latest catalog, containing their lowest prices, freight prepaid, will come to you by return mail.

The Automatic Sanitary Trap Nest.

A new and enlarged advertisement of the Automatic Sanitary Trap Nest Company appears in this issue of the Journal, which it is important to look up and see just what practical poultrymen say about the merits of this new and useful invention. An exhibition of the nest, showing its practical utility by hens operating the same, was given at the Minnesota State Fair and at the recent great Coliseum Poultry Show in Chicago, and will be given elsewhere at poultry shows during the coming winter. Simplicity, durability and practical utility are the features of the nest which justify the company in exhibiting it to the practical poultrymen at these large shows. The nests are metallic, vermin proof, automatic, and are operated exclusively by the hens, no watching, removal of the hen or resetting of the nest being required. It automatically selects the layers and culls out the drones. A neatly gotten up booklet full of authentic trapnest information valuable to every poultryman has been issued by the company and will be sent free to everyone applying therefor. Address the Automatic Sanitary Trap Nest Company, Duluth, Minn.

Getting Plenty Eggs During the Winter.

That's the problem that faces every poultry raiser—hens have a knack of taking it easy during the winter when egg prices are away up.

Dr. Gilbert Hess, one of the foremost veterinarians in the United States, has solved the problem. He makes his biggest profits from his hens during winter because he sees to it that the egg supply is plentiful.

The doctor states—and rightly so—that hens, being cooped up, deprived of exercise and the lack of green stuff, will not lay in the winter. The egg organs become dormant—inactive—and the hen consequently puts on fat instead of turning her feed into eggs.

Being a poultry raiser of considerable success, Dr. Hess himself delved into the winter egg question many years ago. He was a veterinary scientist and a doctor of medicine also, and therefore was fully capable of finding where the trouble was and applying the remedy.

He compounded a number of bitter tonics and well-known correctives, proceeding on the idea that hens must have a tonic during the winter to tone up and invigorate the dormant egg organs and keep them healthy. His now famous preparation is known as Dr. Hess' Poultry Pan-a-ce-a and is sold by over 28,000 dealers throughout the United States.

Dr. Hess stands behind his Pan-a-ce-a with the most liberal guarantee we ever heard of. His message to you states that his dealer in your town will supply you with enough Pan-a-ce-a for your whole flock, and if it does not make them lay and keep in healthy condition he has authorized that dealer to refund your money.

In view of such a liberal guarantee, we urge our readers to put Dr. Hess' Poultry Pan-a-ce-a to a test. The doctor informs us that the use of his preparation is very economical—a penny's worth being enough for thirty fowls per day.

The Kind of Incubator You Want.

If you haven't any incubator, you are behind the times. In these days you must beat the hen to get profits. An incubator spells speed and efficiency; and in the race of competition old mother hen is left behind. She is reliable, all right, but she is too slow.

Old hen doesn't get broody until May or June, and you want Winter hatches if you are going to make money in the poultry business. A hen will hatch about twelve chicks, but a good incubator will hatch anywhere from 85 per cent to 100 per cent of the fertile eggs you put into it.

The average poultry breeder doesn't need too large an incubator. He requires either a 70-egg or 150-egg size. For unless one has a large flock of chickens it takes too long to save enough eggs for a big machine.

Furthermore, the average poultry breeder doesn't want to invest too much money at the start. The big incubators are expensive. And certainly anyone who is not a large poultry-raiser should begin on a small scale.

The natural conclusion is to get a 70-egg or 150-egg incubator, well made, strong, well equipped; one that had had just as much care expended on its construction as the larger machine. It is a mistake for anyone to think that all the care and skill should be put into the large machines, and the little ones made any old way. The 70-

PRIZE WINNERS

The kind of birds the fancier loves to raise. I won 1st on cockerel, 3d on cock, at the Boston show, 1907; 2d and 5th cockerel, 3d and 5th cock, 3d and 6th hen, Boston, 1908; 1st on cock, 3d on pullet, at Madison Square Garden, 1905; 1st cock, 2d and 3d on cockerel, 1st on pullet, 1st on pen, and 10 special premiums at Chicago show, 1905, winning fifteen prizes on eight birds. At Chicago, December 1909: 1st and 2d cock, 1st and 5th cockerel. First cock, 1st cockerel at the Great Chicago Show, 1910. A choice lot of show and breeding stock now ready for delivery. Circular showing my winnings free. Write now.

W. H. WIEBKE Box A 348 FORT WAYNE, IND.

egg machine is just as important to the small breeder as the 500-egg machine is to the big fellow.

Let the poultryman be sure of the following points: The machine should be airtight, so as to let no cold in and no heat out. The material should be strong and the legs firm. More than one hatch has been spoiled by wobbly legs. Look to the thermometer, lamp, ventilation system, egg trays and egg tester. Get an incubator that stands high enough from the floor so that you don't have to break your neck to look at the thermometer. You want a machine that will allow you to look into it without getting down on your knees.

It is safer to buy a machine like the Reliance, a machine with a guarantee behind it, than one that hasn't. You are entitled to all you can get for your money. You don't want to pay more than you have to, nor more than the machine is worth, nor pay for wasteful methods of manufacture or excessive selling and advertising costs.

It will pay you to write and find out more about these machines. This concern is located at Freeport, Ill., and also manufactures bargain Grain Sprouters and Brooders. When writing for literature address Reliance Incubator Company, Freeport, Ill., and mention this paper.

Plan Now for That Strawberry Bed.

Don't neglect to set out a nice bed of strawberry plants this coming Spring.

A small patch of ground will produce plenty of this delicious fruit for your own table and a good surplus to sell at a fine profit. It does not require a lot of work to grow big, luscious strawberries if you set out plants selected from healthy, vigorous stock. A few moments' work with the cultivator occasionally will keep a large berry patch free from weeds and make the plants thrive and grow luxuriantly.

W. F. Allen, of Salisbury, Md., is a grower who has had nearly 30 years' experience in raising strawberries. He grows true-to-name plants of all the standard varieties—early and late strains—and takes special care to ship only healthy, thrifty plants from carefully cultivated, prolific bearing stock. All shipments are correctly packed so the plants will arrive in fresh condition.

Mr. Allen has over 120 acres devoted to growing strawberry plants in his nurseries, besides many acres in blackberries, raspberries, currants, grapes and other small fruits. He has a new 1914 Berry Book which tells how to plant and cultivate small fruits, and which lists and describes the many different varieties he grows. This book is full of valuable information for the farmer, gardener and fruit grower, and we advise our readers to write for a copy. Address W. F. Allen, 106 Market St., Salisbury, Md., and he will send a copy of this book free.

The Sanitary Poultry Yard.

Poultry raising has advanced to the state where it must meet the problem of every great industry.

In the old days when all the chickens were raised in the farmyard and had the run of practically the entire farm, death among the flock was a rare thing. But with our modern, driving, American way of doing things we cannot afford to let the flock run. We no longer let the hen hide her nest and spend most of her energy developing leg muscles. We want eggs, and fat heavy birds for the market.

All of this had led to concentration of the whole business of poultry culture. On a fifty-foot lot we now raise more and more profitable poultry than our forefathers raised on a hundred-acre farm. And just as the growth of the modern city has raised up the problem of sanitation among humans, the whole world of poultrymen is now interested in the sanitary poultry yard. Poultry must be kept sanitary if it is to make profits. To further this end and to carry it out to the last degree, the Kentucky Stamping Company in Louisville, Ky., has put on the market a line of specially made poultryware called "Kentuco."

The articles of the "Kentuco" line are especially sanitary because they are first shaped, formed and finished before galvanizing. They are made strong and sturdy, and then the heavy coat of galvanizing, put on after making, closes up every little crack, making the drinking fountain, or whatever the particular piece of ware may be, exceptionally strong and easy to clean and keep clean.

If you are raising chickens to make money it will pay you to get some of the literature on "Kentuco" ware. It is pleasing to note that this extraordinarily built poultryware costs no more than the articles in other lines intended for the same purpose. Therefore, it behooves you to get in touch with the Kentucky Stamping Company, 104 N. Fifteenth St., Louisville, Ky., if you want to get the most for your money.

A. A. Anderson, Macon, Illinois, starts his advertisement of Buff Orpingtons with this month's issue of the American Poultry Journal.

With 250 Buffs in competition Mr. Anderson won 1st old pen, 1st young pen at the meeting of the National Buff Orpington Club at the Peoria show, 1912. With 70 entries in the strongest class of pullets ever cooped in Illinois, he won 1st and color special. At the great Illinois state show, 1913, he also made a winning, taking 1st young pen, 2nd and 3rd old pen and 5th hen. It is a pleasure to recommend to the readers of American Poultry Journal Mr. Anderson and his Buff Orpingtons. —J. C. Johnston.

Carver's Red Farms made their first showing of Red Sussex at the Greater Buffalo Show in the strongest class of Sussex ever shown in America, competing with both lights and Speckled Sussex, winning first on champion cock, 2nd pen, 2nd cockerel, 4th hen, 5th pullet. The Sussex were one of the strongest classes in the show and were conceded by all to be the great new coming fowl for the American fancier. A meeting of Sussex breeders took place on the floor of the Buffalo show, forming a Sussex club for America and A. A. Carver was appointed secretary pro tem.

Monmouth Farms' Buff Leghorns Win at the Palace Show, New York

On 5 entries of our S. C. Buff Leghorns in the recent Palace Show, New York, we won—First and Fourth Cockerel, First Pullet, Third Hen and 9 Specials. These recent winnings with our record at Madison Square Garden for the past five years—winning First Prize Pen each year—and our record at Philadelphia, Boston, Atlanta and Hagerstown, makes Monmouth Buff Leghorns unsurpassed.
Monmouth White Leghorns are of the same high standard—awarded prize for champion Cock of the show—and 20 other prizes on entries at Atlanta in 1912. Many other winnings in hot competition.

Don't waste time and money on stock you know but little about when you can obtain Monmouth White or Buff Leghorns at the following reasonable prices:
S. C. White Leghorns—Yearling hens, $1.75 each; in hundred lots, $1.50 each. 2-year-old hens, $1.50 each; in hundred lots, $1.25 each.
S. C. Buff Leghorns—One- and two-year-old hens, $1.75 to $2.50 each.
Choice male breeders, both varieties, from $5 up, according to quality.
Send your name for beautiful 1914 catalog (with colored insert), which will be issued about February 1.

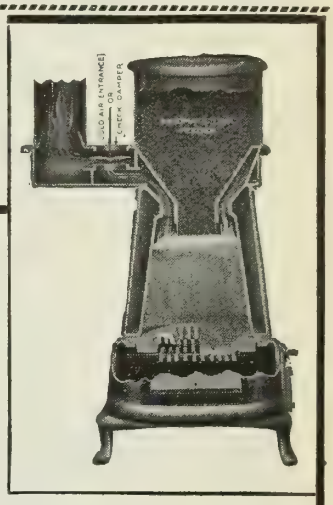
A. A. Carver Making Good.

Among the many Rhode Island Red farms of America and the lesser lights in Europe the Queen quality Reds has pronounced individuality. When Mr. Carver bought his farm it did not look much like it does at the present time—what was once a wilderness now blossoms like the rose. His home is modern and pleasant and his buildings, which are chiefly of the colony house type, are very practical. His colony houses are about the neatest looking ones we have seen, being shingled on the sides; there are a great many of them in the orchard and cornfield and every year he adds new ones. This year he has built a lot more of an English type. His large conditioning building is always well filled, as he ships Reds the year round, and was so busy last year that he was unable to take any vacation other than short spins in his automobile with his family.

Mr. Carver began in a small way, and with Mrs. Carver's indispensable help has grown with his business, which has become very large. He shines in another direction—a direction where many fanciers

M. M. GENSEMER.
Manager Carver's Red Sussex Farms, Seville, Ohio.

fail—in that he is a good salesman and letter writer. He makes himself very clear and gives a correct description of his birds, not overdrawing them. He lands a greater per cent of sales, and when the Reds reach their destination the purchasers are happily surprised. The hundreds of letters from egg customers reporting fine hatches and winnings with the birds hatched from Queen quality eggs is indeed very flattering. When were at Seville he had 15 selected hens that cannot be beaten among the thousands of Reds raised all over our country; many breeders can pick a few such hens, but 15 out of one's breeders is a pretty hard thing to duplicate. His Reds are all farm raised; he put out many eggs among farmers and in September he had about 2,000 on the farms. This method is becoming more and more popular each year among the large breeders. It is a labor-saver and a great building economizer. The hens mentioned above are especially fine in back and tail carriage; their color has to be seen to be appreciated, as they are one even shade, a dark, rich red throughout; hackles beautifully ticked; the under color rich red, without a suggestion of smut. These hens have no money value, as Mr. Carver would not part with a single one. He has one hundred cockerels from them that are the finest he ever raised. The sire of them is a wonder in surface color, with rich under color and type to burn.



Visitors are always welcome and pleasantly entertained. Write for prices and address A. A. Carver, Seville, Ohio.—H. H. Coburn.

———o———

The large annual catalog of the famous Old Trusty Incubator and Brooder, manufactured by the M. M. Johnson Company, Clay Center, Neb., is now ready for distribution. Mr. Johnson's story of the ups and downs of an inventor in his own language is well worth reading, to say nothing about the vast fund of other valuable information contained in this catalog and dozens of beautiful illustrations made from unretouched photographs of scenes of poultry farms and hatches made in the Old Trusty. This catalog contains 120 pages and cover, printed in two colors, and will be sent absolutely free to all readers of American Poultry Journal upon request. Mr. Johnson distributes annually about 135,000 copies of this catalog and this year is anxious to increase this number, and we therefore ask our readers to send for one today. Address M. M. Johnson Company, Clay Center, Neb., and mention American Poultry Journal.

Elsewhere in this issue appears the advertisement of the Nabob Remedy Co., Box A, Gambier, Ohio. They make the following statements about their new discovery, Prescription No. 4, and they agree to back up these statements with the guarantee that if the prescription does not do as they advertise, they will refund the money: It has stood the acid test of five years' thorough trial by one of the fore-

Coal Feeds Automatically

Present and prospective operators of giant incubators should carefully consider the importance of this great improvement. The coal magazine holding a supply of fuel sufficient to last forty-eight to seventy-two hours under average conditions solves one problem which has long been troublesome.

It insures a steady, even fire at all times, which, of course, keeps the water in the heating system at an even temperature, thereby avoiding fluctuations in the egg-compartments.

No danger of the fire being smothered by a surface coating of ashes. No waiting for the fire to come up after adding a supply of fresh fuel. No chance of the fire burning out during the night. Just fill the magazine occasionally and remove the ashes. The heater, with its powerful automatic regulator, does the rest.

This is only one of the exclusive features of the

NEWTOWN GIANT INCUBATOR

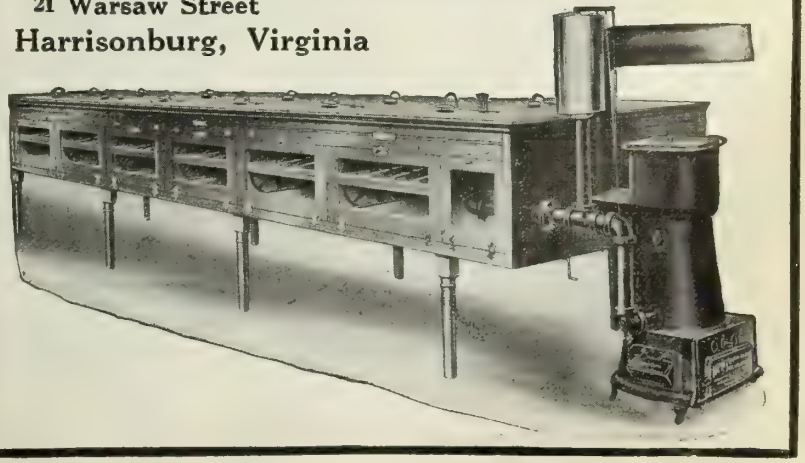
In addition, this machine possesses many unique improvements which are not found in any other giant incubator. Consider the following:

The One-Minute Egg Tray Turner, which enables the operator to turn in a few seconds all the eggs in the machine, regardless of its capacity. This saves hours of labor every day.

The Single and Double-Deck Construction, the latter doubling the capacity of the incubator room or cellar.

Automatic Regulators of Heat and Moisture, which control conditions of temperature and humidity in every compartment separately.

The Automatic Alarm, which infallibly sounds a warning when for any reason the temperature varies unduly.



The Newtown Giant Incubator is the safest and most convenient hatching apparatus on the market. It produces the heaviest, the most husky and vigorous chicks in the largest numbers. It is the machine demanded by the man who wants results.

Write to-day for your copy of our attractive new catalog. It's free!

Newtown Giant Incubator Corporation

21 Warsaw Street

Harrisonburg, Virginia

most breeders and fanciers in America and he says of it, "Prescription No. 4 is the only scientific laying stimulant I know of. It does not in any way injure the vitality of the finest breeding stock. It absolutely makes eggs faster; enables you to get a hen's full life crop of eggs in two instead of five years." Dealers who have your interest at heart and are informed will recommend to you No. 4 rather than take your money for oyster shell, mustard and pepper preparations, and charcoal, which are money eaters or hen killers. No. 4 is the first real egg maker that furnishes the elements lacking in grains and mashes. Insist on your dealer getting No. 4.

The Ideal Coal Stove Brooder, which is now being advertised in these columns, is being recommended very highly by some of the foremost breeders in the country. H. H. Knapp, manager of a large breeding and hatching company at Tiro, Ohio, has the following to say about this brooder stove: "I have been trying out the Brooder Stove for the past two weeks with 234 White and Buff Leghorn chicks and up to date have lost but seven chicks, which were naturally weak when I put them in. Thus far they are free from any disease and the liveliest bunch you ever saw. This goes far to demonstrate the fact that the system is right."

A. E. Martz & Son, Arcadia, Ind., has just issued their 1914 Orpington Fashion Plate Book, which is without doubt the best ever put out by any Buff breeder in the country. This book contains a very beautiful picture of a pair of Buff Orpingtons in colors painted from life by Louis A. Stahmer, the well-known poultry artist. Everyone interested in this beautiful variety should secure a copy of this book. Address A. E. Martz & Son, Arcadia, Ind., and mention American Poultry Journal.

Sheppard's Famous Anconas.

At the Cleveland Fanciers' Club Big Show held in Cleveland, Ohio, in December, 1913, we are pleased to note that Mr. H. C. Sheppard of Berea, Ohio, was successful in carrying off all the first prizes in both Rose and Single Comb classes, and all the second prizes with the exception of one. This is the seventh consecutive year that Mr. Sheppard has won more than three times as many first and second prizes than all his competitors together.

His first prize Rose Comb cockerel was pronounced by some Ancona experts as the best Ancona they ever saw. His exhibit was very much admired and he received many flattering compliments on the quality of his birds.

His late superintendent, Mr. Wm. Freshley, informs us that during his last visit to Mr. Sheppard's poultry farm he saw hundreds of birds that are practically as good as those on exhibition at the Cleveland Show.

A Clean Sweep.

U. R. Fishel makes a clean sweep at big Cincinnati Poultry Show in strong competition, and again maintained his record as being the breeder of the "Best In the World" White Plymouth Rocks. His winnings were as follows: First, 4th and 5th cock; 1st, 2nd, 3rd, 4th and 5th hen; 1st, 2nd, 3rd and 4th cockerel; 1st, 2nd, 4th and 5th on pullet; 1st, 2nd and 3rd on old pen; 1st, 2nd and 3rd on young pen; specials on best display in show; special on best display in American class; won championship cups on cock, hen, cockerel and pullet; premium money to the amount of $200; in all ten cups.

All 1sts and 2nds on Indian Runner Ducks, and all prizes on White Cochin Bantams were won by U. R. Fishel, Jr.

On a recent visit to Lincoln, Ill., we had the pleasure of visiting O. F. Mittendorff, the veteran breeder of the bred-to-lay strain of Barred Plymouth Rocks. Mr. Mittendorff has been breeding the bred-to-lay strain for over twenty years and by careful trapnesting and breeding from only his best egg producers he has established a strain that are second to none in egg production. At the Illinois State Show, 1913, his "Liberty Bell" won the Champion Challenge Cup for the best egg record in Illinois, with a record of 271 eggs. This is only one of the many wonderful records made at this farm. While there we saw many hens with trap-nest records, running from 200 to 265 eggs. Some of them were in the midst of the moult and laying right along. The equipments of this plant are ideal and the stock at time of our visit were in splendid growing condition. Mr. Mittendorf has about 2,000 head of young stock for early disposal and his terms are very reasonable. We heartily recommend the bred-to-lay strain of Barred Rocks to the readers of American Poultry Journal. —J. C. Johnston.

W. R. Curtiss & Co., Ransomville, N. Y., says they raised 450 out of 486 chicks placed under the small hover, which shows a record of 90 per cent. Other breeders are reporting equally as good. Anyone figuring on installing a brooder system should write the Liberty Stove Company, Philadelphia, Pa., for their catalog on the Ideal Coal Stove Brooder, and mention American Poultry Journal.

Before you place your orders for Mating Lists, Letter Heads, Envelopes, etc., it would be well to consult Thos. E. Clark & Co., Dept. 33, Michigan City, Ind. They have a special outfit offer to those who do not wish to order in large quantities. They are in a position to give first-class service and prompt delivery.

Mr. Wm. Freshley has resigned his position as manager at Sheppard's Ancona Farm at Berea, Ohio, and has gone in the poultry business for himself. R. Skedden succeeds Mr. Freshley as manager and F. Skedden has been secured by Mr. Sheppard for superintendent of his plant.

"Get right on Poultry Supplies." Before spending another cent for equipment, write Otis & Moe Manufacturing Co., Otis Bldg., Chicago, for latest catalogue. They manufacture Moe's line of useful devices invented by a successful breeder for his own needs and they are what you want.

EASTERN BREEDERS NOTES.

By H. P. Schwab, Irondequoit, N. Y.

To extend our service to advertisers and friends and to keep the public posted on special doings, we inaugurate these columns. Please feel at liberty at all times to send us news and items of interest.—H. P. Schwab.

* * *

The Urban Farms, Pine Ridge, Buffalo, N. Y., White Rocks have an established record; for three years they have won the Sweepstake special for best bird at the Buffalo shows. With a large stock on hand, they offer at special prices a selected lot of cockerels. Write for prices.

* * *

Mr. M. F. Delano, owner of the Owens Farms, Vineyard Haven, Mass., met us at the Palace show with much news of interest regarding his stock. That the breeders have confidence in Mr. Delano was clearly demonstrated by the orders handed him there. One we saw was a $1,000 check for a pen of birds. In Orpingtons, White Rocks and White Wyandottes this farm stock has made many of the greatest records ever made. We know of a man who last year paid him $50 for eight S. C. Reds and bred from them winners at the largest shows held to date. In this we can see value and just cause for Mr. Delano's success.

* * *

That was a wonderful win made by the Dune-Alpin Farm S. C. White Leghorns at the New York Palace show. Three first prizes in that great class of 240 birds is worth crowing over. The birds were in wonderful condition and Manager Kerr has proven his quality and worth. They have a very large flock of birds to sell of the kind that can win for you.

* * *

The Rancocas Farms White Rocks won all five first prizes at the Palace show; here quality and condition again demonstrated their worth. This farm has made three records this year and I believe are after more.

* * *

C. H. Welles, Stratford, Conn., says he now has nothing to do but to breed Barred Rocks of the "Fluffy Ruffles" standard. This blood is found in the best females of today, and we are pleased to know that Mr. Welles has finally decided to devote all his time to breeding in the future as this stock is in great demand and he has never been able to fill half of his orders. This year he has but a few choice cockerels and pullets to offer. Better write for one.

* * *

In looking for Houdans, don't forget the "Jimcrack" strain bred by Mr. Harry Taylor, Toronto, Ont. His winners at Guelph were the class.

* * *

The great Leghorn Farms of Henderson and Billings, St. Marys, Ont., breed all varieties and have been prominent winners at Buffalo, Guelph, etc. Their Single and Rose Comb browns in particular are very strong in quality. The winning Single Comb cock at Guelph was a screamer.

* * *

Webster Farm White Rocks have been a favorite line for years. They have again made a record at Williamsport. If you wish quality stock write them at Girard, Pa.

* * *

The Barred Rocks of Mr. Henry D. Riley, Strafford, Pa., keep on winning in the hands of his customers. This year again we have been pleased to place birds hatched from his eggs at several shows. Mr. Riley writes us that he has the finest line of stock ever and that he can supply winners for any show. Write him your wants and remember this line in egg season.

* * *

We know of no breeder who is more interested in his customers than Mr. Delafield of the Sunswick Farms. This line of Buff Orpingtons has made more marks at Allentown, Hagerstown and Williamsport, also at the Palace this year, and his customers have won at as many other prominent shows. This kind of breeders and stock stand for better poultry.

* * *

Note the advertisement of Mr. C. N. Myers, Hanover, Pa. He is offering a selected line of pullet-bred cockerels from his "Lady-Beautiful" strain of Barred Plymouth Rocks. Lady Beautiful won first prize hen at the last Madison Square Garden New York show, and this line has been winning for years at Philadelphia, Hagerstown, etc.

* * *

The Schenley Heights Farms, Pittsburgh, Pa., S. C. Reds are out to equal their great record of last year at Philadelphia, Cleveland and Pittsburgh, and this year have made records at Allentown and the Palace New York show. We visited these yards lately and will tell our readers of their line as seen at home. They have the quality to win and a line that breeds true to type and color, and we look for them to repeat.

* * *

The winnings of S. M. Gouchers' Barred Rocks (Moorestown, N. J.) at Williamsport were a show feature. By winning three of a possible nine first prizes they established a record in this great class. Their first pullet was a charming beauty seen at her best and their first exhibition pen a marvel in quality and mating.

* * *

At the "Ontario," held at Guelph, Ont., last week there were 256 White Wyandottes shown on the single classes (no pens are shown there), and Mr. Sid Saunders, Ingersoll, Ont., won cock 8th; hens, 1st and 7th; cockerels, 2nd, 7th, 8th and 10th; pullets, 2nd, 3rd, 4th, 5th, 6th, 7th and 9th; with two cups and several other specials, including best display. This is a win of particular note in this great class.

* * *

At the same show Mr. Jno. Pringle, London, Ont., won all four first prizes on Barred Plymouth Rocks. His first cockerel also winning the sweepstake special for best male bird in the entire show. We were delighted to see this special placed by all the judges on this wonderful bird; he was worthy, but for some reason we seldom see the parti-colored birds honored as they should be in this way. Mr. Pringle was also a prominent winner in White Wyandottes and in S. C. Reds.

* * *

Mr. R. J. Walden, Middleburg, Md., makes a specialty of breeding the pullet line of Barred Rocks and has been for some years a leading winner at Baltimore, Williamsport, Hagerstown and other good shows. This year he has made notable records at Hagerstown and Williamsport; at the latter he won three first prizes and under a handicap of having three of his best pullets put out of condition by being shipped in an over-heated express car. His exhibit of pullet-bred males at this show was sensational to say the least.

* * *

The Joe-Pye Orpington Farms, Norwalk,

J. F. SIEMS, Patentee

Over 600,000 People Have Tested My Great Hatcher!

They know from experience that in simplicity, ease of management and certainty of results, no incubator in the world equals it. The actual, living hens control everything. It's the incubator that can't make mistakes—and you can't make mistakes in operating it.

As Proof Read the Following:

Increase Egg Yield This Winter, Save Money on Feed, Make Chicks Grow Rapidly, Strong

by installing an Ideal Grain Sprouter and feed your hens the green food that is absolutely necessary to insure prolific egg production.

Eggs are going higher in price every year, the demand is far exceeding the supply, and it looks like *good times* and *plenty of money* for the man who has one of our sprouters.

The IDEAL Grain Sprouter

—is the *best machine* for sprouting grain ever made;
—will produce sprouts over two inches long in 24 hours;
—sprouts any kind of grain *better*, in *less time* and without fuss or muss;
—produces *three* to *four bushels* of feed from one *bushel* of grain;
—pays for itself in a single month by saving in feed bills, increasing egg yield, supplying food that makes chicks grow strong and vigorous.

The "Ideal" is made in several sizes—for a few hens up to hundreds. Can be used in summer (without lamp) as it has proper arrangements for moisture and ventilation to produce quick results and crisp feed.

CONSTRUCTION

Made of best lumber—double walls, *insulated* with heavy deadening felt—inside lined with galvanized iron—frame of trays heavy galvanized iron—bottom of tray heavy wire netting—front of machine glass, which induces green sprouts. These sprouts require very small amount of artificial heat which is produced by the Ideal Safety Lamp, the fumes of which pass through ventilators.

Get Special Low Price Offer Today

Don't delay, but write at once for special low price introductory offer, full particulars and description of this perfect grain sprouter. No poultry man should be without it. It is the *Biggest Money Maker for the Poultryman since the Incubator was Invented.*

Made by J. W. Miller Co., Manufacturers of Incubators, Brooders and Poultry Supplies, which is sufficient guarantee of its excellence.

J. W. MILLER COMPANY, Box 600 ROCKFORD, ILLINOIS

Conn., Buff Orpingtons seen at the Palace New York show repeated their record of last year and went them one better and then some. This year they won cocks 1st and 2nd; hens, 4th and 6th; cockerels, 1st and 5th; pullet, 7th; pens, 2nd, 3rd and 7th; specials for best display, best shaped male and female, best colored male; medal for best Orpington in show, and several others.

Our readers should be interested in our mention of the Niagara Farms of W. R. Curtiss & Co., Ransomville, N. Y. This is one of the great big things in poultry, a farm that has made a big success. They have mastered the question of feeding and growing and their books are of untold value, for they are written from practical experience and founded on facts that are good to know. We have used their Niagara Brand of cut clover for years and can highly recommend it, the same as we do this firm and their whole line of products.

* * *

French's Poultry Mustard has found imitators galore and we feel it a duty to advise our friends that French's is put up and sold in sealed packages only. Insist on this and get the pure article.

White Rocks That Win.

Dr. LeGear's White Rocks just made another record winning at two big shows held at the same time. We had a separate and complete string of our famous White Plymouth Rocks at each of the two big poultry shows held at St. Louis at the same time, November 24 to 30, 1913. Any one familiar with showing birds at big shows will readily understand what it means to be able to select two strings of high class show birds at one time from one flock. No other White Rock exhibitor showed his birds at but one of the below named shows; therefore, we had to put half of our "strength" against all competitors' "full strength." With all these disadvantages, and in strong competition, Dr. LeGear's White Rocks won more ribbons than all competitors combined.

At the great St. Louis Coliseum Poultry Show we entered 25 birds and won 1st, 2d and 3d cock; 1st, 2d and 5th cockerel; 1st hen; 2d and 3d pullet; 1st and 2d pen. Also cash special for best display, and cash specials for champion male and champion female.

At the St. Louis Poultry, Pigeon and Pet Stock Association Show we entered 21 birds and won 1st and 2d cock; 2d and 3d cockerel; 2d and 3d hen; 1st and 4th pullet, and 1st pen. Also special prize for best display and the Useful Poultry Journal's silver cup for the champion female.

Every bird we showed or own is absolutely our own raising. We have on hand several hundred of as good White Rocks as ever grew up on one poultry plant during one season. We hatch eggs only from our best pens, consequently our quality is the best. Dr. LeGear's poultry remedies are used exclusively and constantly on Dr. LeGear's White Rock Farm, consequently disease is almost unknown, and the birds are all vigorous, healthy and beautiful. Bred and owned by Dr. L. D. LeGear, 725 Howard St., St. Louis, Mo. Farm at Kirkwood, Mo.

We desire to call your attention to the advertisement of Jas. S. Miles & Son of Petersburg, Ill., whose advertisement of Mammoth Bronze turkeys appears on another page of this issue. Messrs. Miles & Son have been breeding bronze turkeys for twenty years, and in that time have built up a strain of turkeys that for size and brilliancy of color is second to none. They have never failed to capture a large per cent of the awards at such shows as Illinois State Fair, Illinois State Show, and at the recent Coliseum Show, Chicago, they won more premiums than all their competitors combined. Their exhibit was the finest ever shown in Chicago. They report a large number of cockerels and pullets and yearling toms for sale. We heartily recommend Jas. S. Miles & Son and their Mammoth Bronze turkeys to the readers of A. P. J.—J. C. Johnston.

Our Mammoth Bronze Turkeys

make a clean sweep at the Great Coliseum Show, Chicago, winning 1st and 2nd cockerel, 2nd, 3rd, 4th and 5th cock, 1st and 5th pullet, 2nd and 3d hen, and the **$100.00 Trophy Cup** given by the National Bronze Turkey Club for the best display. A grand lot of young and yearling stock for sale, including the **Grand Champion Cock at Illinois State Show, 1913.**

JAMES S. MILES & SON -:- -:- PETERSBURG, ILLINOIS

Walker's Barred Rocks

Again make a grand winning at Davenport, Ia., winning 1st cockerel-bred hen; 1st exhibition pen; 1st pullet mated pen; 2d, 3d and 4th exhibition cock; 2d pullet-bred cock; 2d and 3d pullet-bred cockerels; 2d exhibition pullet; 3d cockerel-bred pullet, 2d cockerel mated pen. $25 cup for best display in the show, Am. Barred Rock Club cup and 2 cups on pens. At the Coliseum Show, Chicago, Dec., 1913, 2d and 5th pullet-bred cockerel; 5th exhibition pen; 5th pullet mated pen. I have 400 grand cockerels and pullets for sale. Write your wants. Prices reasonable. All birds shipped on approval.

WIN AT THE

GREAT MID-WEST COLISEUM SHOW, CHICAGO

In competition with America's best, win twice as many firsts as all others combined. Our individual winnings were: Cock 1-4, Hen 1-4, Cockerel 2-3, Pullet 2-4, Pen, old, 1; pen, young, 1. Our birds are winning north, south, east and west. They win for others, they will win for you; try them. At New York, Scranton (Club Show), Chicago, Guelph, Toronto and London, we have proven that we have the goods. Stock for sale bred from our winners. Eggs in season, $3.00, $5.00, and $10.00 per setting.

ROSS SWARTOUT, Mgr. Prop. **Box C, Newport, Ont., Can.** **GEO. ROLT,** Supt. Muscovy Ducks

A. P. A. and Minorca Club Member

Bringing Chicks Through the First Ten Days.

Everyone who has hatched and reared chicks in numbers too large to raise by the setting-hen method knows how difficult it is to bring the youngsters through the first ten days without losing many from bowel trouble and other chick complaints.

The cause of this heavy mortality among young chicks, is in most cases, due to improper feeding during this critical period of their lives. When an animal is born it is usually nursed on its mother's milk, which contains the right ingredients to regulate and strengthen the delicate organs of the youngster until the "weaning" age is reached, or until old enough to switch to another diet.

With young chicks, turkeys, pheasants and ducks, etc., it is a different matter, however. Their digestive organs are also very delicate and cannot readily absorb and digest corn meal, oat meal and other heavy grain feeds during the first ten days after hatching.

About thirty years ago this fact was appreciated by Mr. F. P. Cassel of Lansdale, Pa. He studied the chick food problem carefully and experimented with many different mixtures of clean, wholesome feed, until he determined just the right ingredients to use and the proper ratio in which to mix them.

Such marked improvement was noticed in every flock of young chicks fed on Mr. Cassel's chick preparation that he decided to place it on the market so others might share the benefits of his investigating and experimenting work. He named the new feed "F. P. C. Chick Manna," and in 1884 he mixed the first supply himself up in his feed storehouse. Since then either he, his son, or some other member of the Cassel family have personally supervised the preparation of this wholesome chick food and kept the ingredients which help make it such a successful lifesaver of chicks a family secret. This accounts for the failure of so many imitations and substitutes for "F. P. C. Chick Manna," which have since been placed on the market.

Prominent poultrymen all over the country have been feeding "F. P. C. Chick Manna" for years and they know its real worth.

Michael K. Boyer, the eminent poultry authority, says: "Chicks not only like F. P. C. Chick Manna, but they thrive wonderfully upon it." If you feed it the first ten days after hatching you will eliminate the heavy losses of little chicks.

F. P. Cassel & Son, of Lansdale, Pa., are still the sole manufacturers of this, the original and best baby chick food. They will make you a parcel post shipment of "F. P. C. Chick Manna" at a special price if the dealer in your locality does not happen to carry it in stock. We suggest that you write to these folks today for free circulars and fuller particulars of this chick food and their special offer.

S. C. White Orpington Sale.

The Dunrobin Farm, Red Bank, N. J., offers for sale their entire line of S. C. White Orpingtons of about 100 birds. This line has been a winner for years, full of quality, and in this offer is an opportunity to secure an established breeding line of merit. Mr. Sulby, the owner, will be pleased to give particulars.—H. P. Schwab.

On another page of this issue appears the advertisement of Mrs. John Wysocki of Aurora, Ill., who is breeding Silver Campines of splendid quality, showing clean-cut, snappy barring and rich, brilliant sheen, with good type and size. At the recent Coliseum Show, Chicago, she exhibited a well balanced pen of young birds and doubtless lost a place in the awards by the cockerel being shown in bad condition. Mrs. Wysocki has quite a number of cockerels and pullets for sale at prices that will surely satisfy her customers. If you are looking for Campines write her your wants. You will receive prompt and courteous treatment.—J. C. Johnston.

"The Mighty Power of Oxygen."

McAlester, Okla., Dec. 12.
Reliable Poultry Specialty Co., Alexander, N. Y.

Gentlemen: There are times when it is hard to find the words with which to say just what you want to say. That's the way I feel right now. For some time I have had in mind writing you again, to tell you more about the splendid work that your Ajax Improved Oxygen Vitalizer did for us last season.

As I have gone all over the results, not only at the time of hatching, but the size, health, etc., of the pullets hatched with the artificial methods. Of the 1,377 chicks hatched and raised, there are about 600 pullets. They are now laying—the first one at four months and eighteen days of age—and 100 per cent better than they ever did before. They are larger, stronger and the finest lot we have ever had.

We firmly believe, and do not hesitate to say, that in our judgment these conditions are directly due to the use of oxygen at hatching time. It not only hatches every hatchable egg, makes the chicks immune to the white diarrhoea "germ," but, as before stated, they grow faster, are matured earlier and are better every way. Let us again thank you for your courteous treatment, and express the wish that the poultry world

Chief Winamac 4th, a fine White Wyandotte cock bird bred by Chas. V. Keeler, R. F. D. No. 11, Winamac, Ind.

Oxygen device. I find that the first words that come to my mind, and that in any way express what I want to say, are those at the beginning of this letter, to wit: "The Mighty Power of Oxygen." Had any one told me what Oxygen would do, when applied to the hatching of chicks, I would have been very skeptical, and probably said, "I am from Missouri," or something of that sort. But when one has used your Oxygen Vitalizer and sees for himself the wonderful results that it brings, all doubts simply vanish and the bold facts stand out as proof that it does all that you claim for it.

You will recall that we wrote you in the spring, and at that time told of how we had hatched 1,377 chicks. How every egg that pipped the shell brought us a strong, healthy chick. How we had gone through the season without a single case of white diarrhoea, something that we had never been able to do before in all our years of hatching by might know more about this really wonderful device.

Yours very truly,
W. S. Crowl & Sons.
By W. S. Crowl.

Don't fail to read the advertisement of S. N. Tremper's Barred Plymouth Rocks, which appears on another page of this issue. Mr. Tremper is breeding some quality Rocks, some of the best blood lines in the United States being represented in his flock. On a recent visit to this plant, we handled many specimens that showed fine quality. Mr. Tremper informs us that he has a large number of cockerels and pullets for disposal, at very low prices, quality considered. If you are in need of Barred Rocks you will do well to look over Mr. Tremper's advertisement and write him your wants.—J. C. Johnston.

SPECIAL 30 DAY OFFER

Peerless Poultry Protector

The Snow White Disinfectant Coating is offered to the readers A. P. J. at a **25 per cent discount** for the next thirty days.
This offer is only for thirty days, after which time it will be sold at the regular prices listed below.

DON'T FORGET

it is worth the regular price but this offer is only to convince the doubting poultrymen that it is the only

Snow White Disinfectant Coating on the Market

For inside and outside use on Poultry Houses, Incubators, Brooders, Coops, Feed-Bins, Nests, Barns, Fences, and all other places where **Light, Cleanliness, Sanitation, Elimination of Germs and Vermin.** Is desired as well as a snow white surface which can be washed as often as is necessary without injury to the coating.

WHITEWASH WILL NOT DO THE WORK, neither will Oil Paint. Whitewash peels and will not kill vermin, while Oil Paint has no good essential except durability.

PEERLESS POULTRY PROTECTOR, the snow-white disinfectant coating, does kill vermin. It does produce a sanitary interior and a weatherproof coated exterior. It is a permanent coating and the cost is so small that the smallest Producer can well afford to use it.

THIS SNOW-WHITE DISINFECTANT is put up in dry powder form; and, when mixed with water, makes a liquid coating which can be applied to all kinds of surfaces with brush or spraying machine. It is especially manufactured for use in Poultry Buildings.

It takes about five pounds of this material, to make a gallon of liquid and a pound properly mixed, will cover from 20 square feet on real rough surfaces to 35 square feet on smooth sufaces two coats.

PRICES IN LESS THAN TON LOTS

350	pound	Barrel.....	$25.00
200	"	"	15.00
100	"	Keg.....	9.00
25	"	Box.....	3.00

Less 25 per cent discount for the next thirty days.

FIGURE THE COST FOR YOURSELF and then you will recall that there is nothing on the market today for double the cost that will do the work which can be accomplished by using the snow-white disinfectant coating.

REMEMBER THAT YOU GET A SNOW-WHITE INTERIOR for only a fraction of a cent per square foot and you can use the same material for outside work provided you use two coats. It makes a weatherproof job which will last two years on the average surface.

WE GUARANTEE SATISFACTION IF PEERLESS POULTRY PROTECTOR IS USED ACCORDING TO OUR PRINTED DIRECTIONS.

You should take advantage of this special offer DON'T PUT IT OFF.

Peerless Poultry Promoter
Port Richmond, New York

POULTRY FLATS

Are Sure to Revolutionize Poultry Raising for Profit, Because:

1—You need no brooders, and these alone are a great expense.
2—Each Flat will brood and raise 600 chicks, and do it right.
3—Each Flat is a unit—a basis of calculation.
4—Each Flat will house and winter without fire 72 old birds.
5—All work is done under cover and you need not move three feet from one spot in doing it—no exposure to weather for man or birds.
6—Easily cleaned—no lice.
7—You can build one in your back yard.
8—Covers 24x36 feet and includes six runways. Can make runways as large as space will permit.
9—In the Flat you have everything you need, at one cost—a complete plant.
10—If you build a common, ordinary poultry house, your extras will cost more than an Ott Brooder and Winter House combined, and then you only have the old way.
11—One Flat will make you money right off the reel.
12—With a Flat you are starting right. One will make you money. Build as many as your time and means will permit. any one, who is at all handy with tools, can construct one.

Read the book "Poultry Flats" as written by Mr. Edward Amherst Ott, the man that knows and does. One man sold $800 from just one, on a back lot. The book also contains letters from those who have built in twenty-one different states. Read these. Send us 25c, that's all, and we will send you the book and the INLAND POULTRY JOURNAL for six months. This paper is known all over the world as one of the best,—so do this now and you will always be glad. Address

Inland Poultry Journal Co.
Indianapolis, Indiana

Monmouth Farms' Recent Winnings.

The Poultry Show at Hagerstown, Md., held in November, added another prize-winning record to the already long list credited to "The Twentieth Century Dual Purpose Fowls," produced at Monmouth Farms, Freneau, N. J. These Monmouth S. C. White and Buff Leghorns have also made records in egg production, which is the reason they are called dual purpose fowls.

At the Hagerstown Show, Monmouth S. C. White Leghorns were awarded first pen, fourth cock, fourth hen, fourth and fifth cockerel, fourth and fifth pullet. The first pen was awarded the best pen of the show—all varieties competing. The Buff Leghorns won first pen, fourth cock, second and third hen, first cockerel and first and third pullet. The first cockerel and the first pullet also won all special awards.

On five entries of S. C. Buff Leghorns in the Grand Central Palace Show, New York City, Monmouth Farms won first and fourth cockerel, first pullet, third hen and nine specials. This is a record to be proud of and we congratulate both Monmouth Farms and any poultrymen who are fortunate enough to obtain stock or eggs from this fine strain of Leghorns.

Mr. J. C. Punderford, the owner of Monmouth Farms at Freneau, N. J., says that his new 1914 catalog will be ready to mail about February 1 and it is to be a "beauty." We advise our readers to send in their names now for a copy if they are interested in either White or Buff Leghorns

—o—

Wm. Cook & Sons, originators of all the Orpingtons, Scotch Plains, New Jersey, have recently won at Buffalo, N. Y., in White Orpingtons, first and second cockerel, first cock, second pen, second hen, second pullet. In Buff Orpingtons, first cockerel, first in pen, first pullet, third cock. In Black Orpingtons, first cock, first pullet, second cockerel, second pen, second hen. First Blue Orpington pen. Cups for best display in each class and best display of Orpingtons. At Atlanta, Ga., they won in White Orpingtons, first cockerel, first cock, third pen, second hen; in Black Orpingtons, first cockerel, first cock, second pen, second pullet; in Buff Orpingtons, first cock, second cockerel, first pen, third hen. Best display of each and all varieties of Orpingtons. At Cincinnati they won in White Orpingtons, first and third cockerel, third hen, third pen; in Black Orpingtons, first cockerel, first pullet, second cock, second hen, second pen; in Buff Orpingtons, first cock, second cockerel; first Blue Orpington pen; first Diamond Jubilee Orpington pen. At Troy, Ala., they won in White Orpingtons, first and third cockerels, first cock, first pen, first hen, first pullet; in Black Orpingtons, first cock, first hen, first pullet, second cockerel; in Buffs, first cock, first pen, first pullet, first hen, second cockerel; first Blue pen. At New Haven, Conn., they won in White Orpingtons, first cockerel, first cock, second hen, first pullet; in Black Orpingtons, first cock, first cockerel, second pullet, third hen; second Buff Orpington cockerel. Winnings made by this firm at several other shows have already been reported. Mr. P. A. Cook believes in taking his Orpingtons around the country to show the people what he has. Each bird is only exhibited once, then mated up in the breeding pen. This ensures fertile eggs; fresh birds being used for each show. The report from Wm. Cook & Sons is that they find the Orpington business better than it ever was. Their sales for Blue Orpingtons are enormous.

One of the prize-winning White Orpington males on the Parsons' Poultry Plant, Avon Lake, Ohio.

"Get right on Poultry Supplies." Before spending another cent for equipment, write Otis & Moe Manufacturing Co., Otis Bldg., Chicago, for latest catalogue. They manufacture Moe's line of useful devices invented by a successful breeder for his own needs and they are what you want.

Chas. Nixon, Washington, N. J., the well known White Wyandotte breeder and judge, in sending in his new copy for advertisement says business is good. This, of course, is as it should be, for Mr. Nixon does business on the square and stock to back up any statement he makes.

A Mammoth Shipment of Mammoth Incubators.

The growth of the custom-hatching and the day-old chick business has been wonderful during the past two years. Many large poultry plants as well as smaller ones have had to increase their equipment for hatching in order to fill the great demand for young chicks.

The most important factor in the successful development of this branch of the poultry business has been the Mammoth type of hatcher. It has made the large commercial poultry farm possible—and profitable. The Hall Mammoth Incubator Company, Little Falls, N. Y., deserve much of the credit for this remarkable evolution in the business, as they brought out the first successful hatching machines with egg-capacities running up into the thousands.

Since the beginning, they have been leaders in this line of hatching equipment. The largest plants in this country and abroad have tested Hall Mammoth Incubators and Brooders and found them most satisfactory.

As an example of the growth in the hatching business, the Pittsfield Poultry Farm Co. of Maine have built another enormous poultry plant at Holliston, Mass., which is planned to be one of the largest poultry plants in the world. Their experience with Hall Mammoth Incubators at their Maine poultry farms was so satisfactory that they equipped the new plant entirely with these hatchers. They recently purchased new Hall Mammoth machines, giving them a capacity of 82,500 eggs in this new plant. It required five carloads to ship these machines from the Hall Incubator Company's plant at Little Falls, N. Y., to Holliston, Mass., and is the largest shipment of this kind ever made to one poultry farm.

We show a picture on this page, taken of these five carloads en route and offer our congratulations to both the Pittsfield Poultry Farm folks and the Hall people. We suggest to any of our readers who are interested in the successful hatching and rearing of chicks, custom-hatching or the day-old chick business, that they write to the Hall Company at 132 Southern avenue, Little Falls, N. Y., and get their free book on this subject.

—o—

Crowther's Single Comb Reds.

Ira M. Crowther, Willoughby, Ohio, is to be congratulated on his grand and glorious victory at the classy show in Cleveland, Dec. 2-7. The Rhode Island Red classes were very large in both the Rose and Single Comb varieties and not only were they there in quantity but in quality. Mr. Crowther won on Single Combs, 1-4-5 cock, 1-2-4 hen, 1-2-3-4 cockerel, 1-2-3-5 pullet, 1 pen. On Rose Comb, 1 cock, 5 cockerel, 2 pullet. Mr. Crowther has just recently taken up the R. C. variety; he has always been a strong advocate of type, emphasizing long backs and low tail carriage. His Cleveland exhibit were paragons for type and fine head points in both varieties. I carefully examined and handled each and every bird in his exhibit and a more even lot in dark rich red could not be found in any show room. His Reds are particularly strong in under color and back points. Mr. Crowther is an acknowledged expert in mating Rhode Island Reds to produce ideal type and grand color. We regret that he did not enter his birds at Chicago, for he certainly would have captured the lion's share, as he did in 1910. To appreciate the quality in his Cleveland winners, one has to see them. The secret of the success he has made dates back to his starting right and sticking to his text that dark, rich red was the proper color. Practically every winner at our largest shows last year were dark rich red. The dark birds must be mated to produce non-fading Reds. The original "Aristocrat," after which the strain was named, fixed the type and color and has proved himself one of the world's greatest sires, having produced first prize winners for Chicago, Indianapolis and other large shows. Lady Aristocrat 2nd, the champion pullet at the International Meet at Buffalo, 1910; Aristocrat 3rd and Aristocrat 4th are also in his list. These birds have gone on reproducing themselves and bettering the quality year after year. Mr. Crowther has a lot of high-class cockerels that can strengthen most any flock of Reds. Anyone wishing to get started right or righted up in Reds will do well to communicate with Mr. Crowther. —H. H. Coburn.

GERTRUDE H. KELLY, BREEDER WILLOUGHBY, OHIO

Coal-Burning Self-Feeding
Self-Regulating Brooders

are money-savers and money-makers. They save labor and fuel, greatly reduce mortality, and Grow the Chickens.

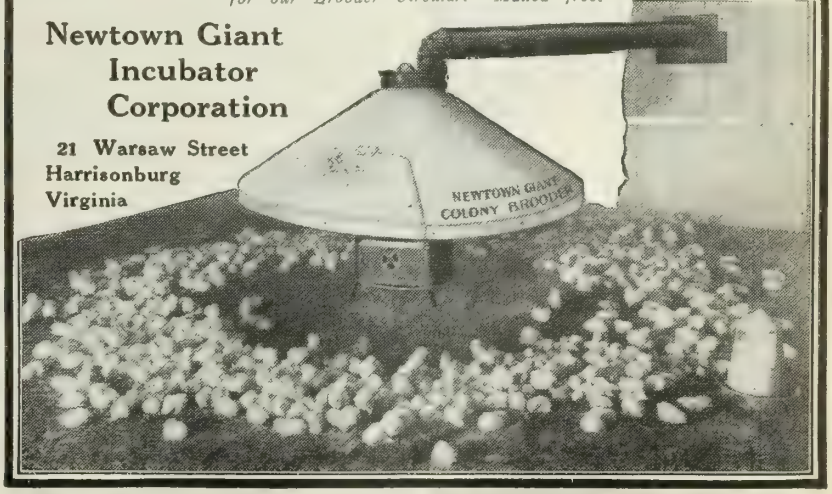
They demand the construction of no special buildings. May be satisfactorily operated in any comfortable structure, as a barn, colony house or large poultry building. Each forms a complete brooding system, at once safe, convenient and efficient. They are easily installed and may be quickly moved as required.

No other piece of "chick machinery" so satisfactorily meets the requirements of so many different classes of poultrymen. Small and large operators alike may use them to advantage, either exclusively or in addition to their present equipment.

Newtown Giant Colony Brooders

are made in two sizes, the smaller for any number of chicks up to 500, the other for 1,000 to 1,500.

The coal-burning stove is controlled by a simple but powerful regulator. This positively maintains the temperature at the desired point regardless of weather changes. The coal magazine holds sufficient fuel to last from one to three days. Fuel costs but eight cents per day. And there is no danger of fire, which is a mighty important factor.



The hover furnishes the maximum of chick comfort, being light and well ventilated. No fumes or gas; no crowding; no chilling; no over-heating.

Don't add to your brooding equipment until you investigate the merits of this—**the best brooder on earth.**

Inspect it at your dealer's. Or write to-day for our Brooder Circular. Mailed free.

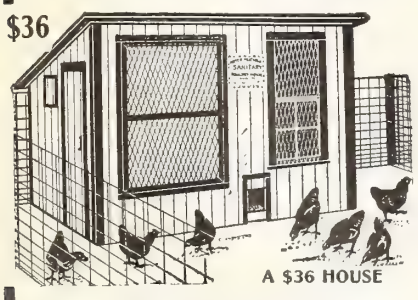
FRANK F. CONWAY, Manager **Nineteen miles from Buffalo**

DON'T KILL or sell your laying hens

Use the **Potter System** and pick out the layers from the loafers and diseased hens. Keep only healthy laying hens. The **Potter System** is a secret and the greatest discovery of the century in the poultry world on the subject of Egg Producing Hens. Used by over 50,000 satisfied poultry keepers, who are saving dollars every year. Our new 100-page Potter System book, **"Don't Kill the Laying Hen,"** contains the secret and knowledge about laying and non-laying hens. It's a revelation to poultry keepers, and you will learn how you can use the Potter System on your flock, keep less hens, get more eggs and make more money using it. Write today, sending two red stamps to cover postage on our large catalog and circular telling all about Potter Poultry Products made for Particular Poultry People. If you are particular and want to make more money on your flock, you will write us today.

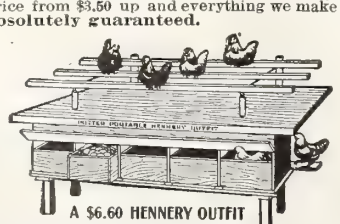
DON'T BUILD



YOU can buy better, cheaper, more complete ready (factory) made hen-houses, roosting and nesting fixtures, coops, etc., from Potter & Co., because they buy lumber in carloads, cut and fit all parts perfectly by automatic machinery and deliver the house, coop or fixture you need in convenient sections all ready to set up.

Potter Poultry Houses and Fixtures

Portable, Sanitary, Inexpensive



Have been on the market for over ten years and are used and recommended by thousands of poultry keepers who want the best and buy the best in poultry houses and equipment. You start **right** when you buy a Potter portable with complete outfit of roosts, drop board and nests. A clean, sanitary house means healthy hens and lots of eggs. The fresh air sanitary house shown here is only one of the twenty styles of houses and coops we make ranging in price from $3.50 up and everything we make is **absolutely guaranteed.**

$36

A $36 HOUSE

No. 5, style "D" 8x10-ft. Potter portable open front, fresh air, scratch shed house, equipped with No. 17, style "A" 5-ft. 3 perch complete hennery outfit for 30 hens. Price of complete house, $36. Painted 2 coats.

A $6.60 HENNERY OUTFIT

No. 19, style "A" 6-ft. 3-perch complete Potter hennery outfit for 36 hens. This same style made in 12 sizes.

Send for Our Big Catalogue

Contains 132 pages and over 150 illustrations showing Potter portable houses, coops, hennery outfits, feed hoppers, brooders, hovers, feeds, etc.—in fact everything the poultry keeper needs to insure the greatest success. Catalogue mailed for two red stamps to cover postage. Write for it today and save money.

T. F. POTTER & CO. Box E-21, Downers Grove, Ill., U. S. A.

The Uhl Hatchery.

The Uhl Hatchery, located at New Washington, Ohio, is entering on its 14th season; it is the largest mammoth hatchery in the world and has a capacity of about 150,000 eggs. Uhl & Co. came into this distinguished position very gradually, increasing its capacity annually, beginning in a very small way and making sure they were right. It is a sight to visit and go through this great hatchery; one can scarcely conceive its magnitude nor believe his eyes when looking it over. The main building is 46x100 feet and there are five buildings in all. The season of 1913 started with 14 mammoth hot water machines holding from 10,000 to 15,000 eggs each; with this equipment they expect to hatch out 35,000 baby chicks per week. It will be remembered the spring of 1912 followed one of the coldest winters ever experienced, which was a great handicap to the poultry industry in its various branches, which particularly affected the hatcheries, yet this hatchery hatched 280,000 chicks. Last year was a very successful season; they hatched and sold 377,000 little chicks. The coming season they hope to outdo this. The hot water machines are of their own make and give great satisfaction, hatching 95% of the fertile eggs, all infertile eggs tested out on the fourth day. These machines are heated with a special hard coal heater which took years of experimenting to get to its present state of perfection. It takes 20,000 laying hens to keep the incubators full. When this firm started in the poultry business some 20 to 25 years ago they could hardly find two dozen pure bred chickens in a day's drive in any direction, now almost everybody keeps pure bred flocks. Uhl & Co. have 150 specialty breeders to supply eggs for their hatching and pay good prices for them, but these breeders keep strictly standard bred stock and as near perfection as possible, many of them winning prizes annually at our best shows. Practically all of these birds are kept on free range which is the only way to insure strong fertile eggs that hatch chicks that live and thrive and win in the show room.

Now that the hatching of baby chicks on a large scale is an undisputed success it costs but little to start a pure bred flock. It is a grand way to start, too, as you get your chicks all the same age and do not have the worry and care of running a small machine, which you do not properly understand, neither do you understand the science of artificial incubation. Buying baby chicks in 100 or 500 lots saves a tremendous lot of fussing with fussy, vermin covered hens. The chicks come to you strong, clean and healthy and it is up to you to keep them so, but if they are hen hatched it is a continual fight with mites and lice.

The Uhl Hatchery guarantees all its chicks to be true to name, full count and of a standard variety, just as represented. They deliver them boxed in perfect condition to their express office; and will also be liable and replace free any losses during transit, if such losses are not due to the carelessness of the express company.

They breed chicks from 22 varieties, namely: S. C. White, Buff and Brown Leghorns, Rose and S. C. Reds, White, Buff, Golden and Silver Wyandottes, Barred, White and Buff Rocks, White and Buff Orpingtons, Rose and S. C. Black Minorcas, S. S. Hamburgs, Black Langshans, W. F. Black Spanish and Light Brahmas. This firm is most reliable and I take pleasure in recommending them to our readers. Send for catalog and mention American Poultry Journal.—H. H. Coburn.

New Home in Baltimore.

In order to properly take care of the big increase in its volume of business, the Baltimore branch of the H. W. Johns-Manville Co., has been compelled to seek larger quarters.

The new home of the company is a modern six-story building with floors measuring 47x187 feet, located at 207-13 E. Saratoga street, which is within two blocks of the postoffice and right in the heart of the business section. It will include an attractive store and up-to-date offices, in addition to large warehouse accommodations. To facilitate the handling of incoming and outgoing shipments there will be a railroad switch running into the building.

Charles G. Pape, Ft. Wayne, Ind., the well known breeder of S. C. Black Minorcas, reports the following winnings at the late Cincinnati show: 1-2-4 cock, 1-2-3-4 hen, 1-2-3-4 cockerel, 1-2-3-4 pullet, 1 pen, besides several specials for best display of S. C. Black Minorcas. If you want something high class in this variety write him and mention American Poultry Journal.

Associations and Shows

Secretaries are Requested to Send in News Items of Interest About Their Shows for This Department

Quincy, Ill., Show.

The Poultry and Pet Stock Show held in Turner Hall, Quincy, Ill., the week ending November 29, brought out one of the largest and best displays of standard-bred poultry ever cooped in Illinois. Two thousand one hundred and ten fowls, not including pigeons and pet stock, were on exhibition. The immense hall was packed to its utmost capacity. Barred Plymouth Rocks was the leading class, with 175 entries. Competition was keen with J. J. Klein of Macon, Ill., winning most of the honors. His exhibit showed fine quality all through. First pullet-bred cock was a remarkable bird, in clean cut narrow barring, while his pullets were the sensation of the show; first pullet-bred cockerel was a splendid specimen, with clean, snappy barring in all sections. Second exhibition cock, also Mr. Klein's entry, was a grand good bird but was compelled to lay down the honors to his more worthy competitor exhibited by E. C. Forrest of Quincy.

First hen was simply "down to date," and won with ease from the nearest competitor. Second pullet-bred cockerel exhibited by Chas. C. F. Fritz of Staunton, Ill., was great in barring, winning the color special, but lost on maturity.

Single Combed White Leghorn Alley was the attraction of the show. One hundred and thirteen single entries and ten pens were on "dress parade," and better quality has never been cooped in the Middle West. First cock, exhibited by C. H. Rickey, Clarence, Mo., was grand in type, with splendid back and tail. First cockerel, Chas. W. Moeller's entry, while not quite finished, was good enough to win the grand championship of the show, all varieties competing. First and second hens, exhibited by W. E. Plowman of Quincy, were neck and neck for the place, both showing grand quality. First pullet was a revelation in Leghorn type and color and yet with all her quality she only won by a narrow margin from second pullet, exhibited by Ben Kausteimer. The pens were all good, but first pen was simply the class of the show. White Rocks and White Wyandottes were well represented, and honors pretty evenly divided. White Orpingtons, though not a large class, brought out some quality. G. H. Woolington of Monticello winning the lion's share of the awards. His first cockerel was a fine specimen and won with ease, while first pullet is, we think, the best seen to date. Mr. Woolington also won grand champion pen of the show on a pen of old birds. Single and Rose Combed Reds were well represented and some good specimens were exhibited. In the Single Comb class E. M. Webb & Son of Waukesha, Wis., won first cock on a bird of fine type and brilliant color. H. T. Marshall, Serena, Ill., captured most of the awards, winning both first premiums on young birds in the single.

In Rose Comb Reds the quality was good and the awards well distributed, no exhibitor being able to boast a clean sweep. Other classes that were well represented were Buff Rocks, Partridge Rocks, Partridge Wyandottes, Single Combed Brown Leghorns, Single and Rose Combed Black Minorcas, Anconas, Silver Campines, Black Orpingtons, Black Langshans. Buff Orpingtons brought out one of the prettiest contests of the show with most of the honors going to Otto Baker, Kirksville, Mo., and A. A. Anderson of Macon, Ill., the latter winning second on an undeveloped cockerel showing great promise. His first and second young pens were well mated and had quality to spare. Mr. Anderson also won color special on the best colored pullet we have seen this season, showing an even shade of beautiful golden buff in all sections. J. S. Bales of Springfield, Ill., made his usual "clean sweep" on Rose Combed Black Minorcas.

Much praise is due the Quincy Association for their efficient management of a show that far exceeded their expectations. In their literature they advertised in advance that all awards would be paid as soon as the awards were made, and the program was carried out to the letter, many of the premiums being paid before noon on the day judging began. Friday evening at seven o'clock a sumptuous banquet was served at the Newcomb Hotel at which about one hundred and fifty enthusiastic fanciers were seated. Short after-dinner speeches were made by many exhibitors. All expressed entire satisfaction with their treatment at Quincy and expressed their intention of again exhibiting there at their next annual show, Thanksgiving week, 1914.—J. C. Johnston.

—o—

Coliseum Show, St. Louis.

Not since the World's Fair, at St. Louis, in 1904, has Henry Steinmesch taken any active part in the management of a poultry show, but at the earnest request of many local breeders, he was asked once more to get into harness, and no better show was ever pulled off. There are very few, if any, exhibitions where there are so many different exhibitors, as at poultry shows. The secretary of a poultry show, as a rule, is the "Man Behind the Gun," and when we stop to think that the winners are few and the loosers many, we can get some idea of a secretary's troubles, if even a few of the loosers have a grouch. This is where the Coliseum Show at St. Louis set a mark. Some of the principal local exhibitors got licked, but every one of them took their licking in splendid style, and one of them expressed the sentiment of others, when he said he got licked, because the other fellows had the best birds. If there is anything that will put good humor in a poultry show, and still strengthen the secretary's backbone, and create good feeling all around, it is the fellow that shows by his words, and his acts, that he is a good looser. May his number increase everywhere.

The Big Coliseum at St. Louis is one of the very finest halls in the country for a poultry show. Large, well-lighted, and well ventilated, not a pillar or post to interfere with the placing of coops, and private boxes all around, where visitors may take a bird's-eye view of the show, rest and lunch if they wish, and the building is accessible by seven different street car lines; five minutes from the heart of the city. The hall was beautifully decorated

Carver's Red Farms, Seville, Ohio

Sunlight S. C. White Leghorns

(D. W. Young Strain)

Day-Old Chicks, Hatching Eggs and Stock

Now is the time to place your order for eggs and day-old chicks, to avoid the rush, and before placing your order you must remember there is a vast difference in chicks. You want chicks that will develop into robust cockerels and pullets, and to get this, the parent stock must be vigorous and hardy.

Sunlight S. C. White Leghorns

represent the best quality and type and are bred for heavy laying qualities. I have been breeding them for the last five years and utmost care is used in breeding true type stock. They are persistent layers, hence money makers, the year round.

Splendid Breeding Cockerels For Sale

$2.00 and up. If you want pairs, trios or pens, I can make you most attractive prices. Orders for eggs filled after January 15; Day-old chicks ready for delivery after February 15. I guarantee satisfaction. Catalogue after January 10.

My motto is, THE MOST OF THE BEST FOR THE LEAST.

SUNLIGHT POULTRY FARM, E. N. Lemon, Owner : LYNCHBURG, OHIO

with flags and banners. The display of the Missouri Experiment Station, with Mr. Quissenberry in charge, and assisted ably by Assistant Director Ralph Searle, was the Mecca of many visitors, looking for information on poultry and poultry fixings. A new feature in connection with large shows, in large cities, was the educational work, with lectures by Prof. Jas. E. Rice of Cornell, and charts showing much of what has been and is being done at Cornell. Prof. Rice gave two lectures and each of which was attended by 300 and 400 people, an exceptional audience at a poultry show. Lectures were also given by Mr. R. C. Lawry, Mr. Ralph Searle, Mr. C. A. Morton, President of the Missouri State Poultry Board, with movies showing many details of the poultry business, the hatching of eggs, the handling of young chicks, buildings and equipments of up-to-date poultry stations, and farms showing 1,000 chickens on range. Such work, of course, cannot be undertaken unless the poultry show building is adapted for the purpose, and in this respect the St. Louis Coliseum has no equal in the country, as the lecture room is an annex, all under the same roof, especially built for the very purpose of holding meetings in connection with any and all kinds of exhibitions that take place in the main hall.

We were informed by Mr. Henry Steinmesch, Secretary, that this educational work will be conducted on a larger scale next year, and also that he has in mind quite a number of new features, the purpose being to put the Coliseum Show at St. Louis in a class by itself. Better poultry and more of it, is the slogan of the directors of the Coliseum Show, and as an indication that the management mean business, a large sign was placed across the hall, reading as follows: "The Next St. Louis Poultry Show will be held in this Coliseum, November 24th to 30th, 1914." At the close of the show the Secretary, Mr. Henry Steinmesch, was called into the committee room where President E. W. Grove, Jr., on behalf of the exhibitors, presented to Mr. Steinmesch an elegant gold watch with appropriate remarks, and to which Mr. Steinmesch responded in his usual happy vein and also thanked Mr. Grove for a beautiful fob to go with the watch, which was the president's personal gift. Usually secretaries of poultry shows are lucky to get off with a vote of thanks, and even these are seldom offered. For list of awards see American Poultry Journal Year Book for 1914.

S. C. White Leghorns

Choice cockerels $2 and $3 each. Bred for heavy laying. Write for what you want. We can please you.

JOSEPH STENZ & SON, Fond Du Lac, Wis.

HOW TO SAVE THE LITTLE CHICKS

Ordinary feed is not the proper food for baby chicks. Their delicate digestive organs require a special food properly balanced to meet the entire needs of their little bodies. Feed during the first 10 days after hatching

"F. P. C. CHICK MANNA"

and watch 'em thrive and ward off epidemic attacks—especially bowel troubles. Starts them off in life healthy with strong, vigorous constitutions. **Introduced in 1884—the original** and best food for baby chicks, turkeys and pheasants. Ask your dealer for it. Accept no imitations.

Special Parcel Post Offer—Write for Free Circulars and our special offer to send "F. P. C. Chick Manna" by Parcel Post. A 5 pound package feeds 75 chicks first week.

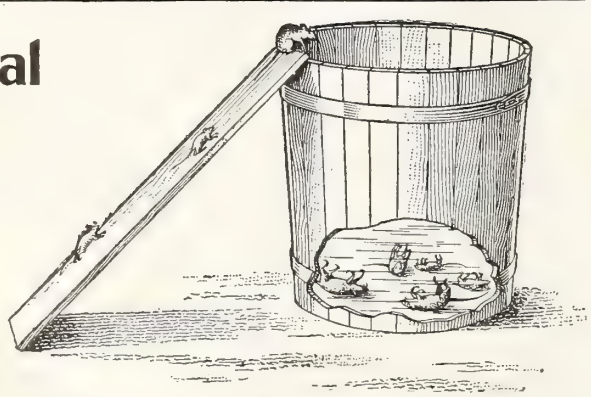
Pat. applied for

Make Fowls Exercise—Keep Vegetables Clean

Here's what you poultrymen have long been looking for—a cheap, convenient, sanitary and durable device for feeding green stuff to poultry. Hang one in each pen in your henhouse. It keeps vegetables and green stuff clean and makes the fowls exercise while they eat.



Carter's Sanitary Green Food Feeder

Is made of strong, soft, fish-net cord and lasts for years. There's nothing to get out of order or injure fowls' combs or heads. No fouling and waste of food. It holds one-half bushel of beets, cabbages, clover, meat bones or other similar food. Leading poultrymen are using it and sending in orders for more. It fills a long felt want. Green food turns winter into summer for the hens—makes 'em lay. Feed 'em this wasteless, sanitary way.

Price 35c each. Three for $1.00, postpaid. Special prices on larger quantities. Guaranteed satisfactory or money back. Order today.

H. F. PIERCE, Sole Mfr., 482 Wadsworth Bldg., Portland, Me.

Universal Rat and Mouse Catcher

Cleans a building of Rats and Mice in a short time, and keeps it cleaned, for it is always ready for use. Made of galvanized iron, can't get out of order and lasts a lifetime. A large number can be caught daily. Go to the Catcher mornings, remove device on inside, which only takes a few seconds, take out the dead rats and mice and replace device and it is ready for another catch. A small piece of cheese is used, doing away with poisons.

The Catcher is 18 inches high and 10 inches in diameter. When rats pass the device they die and no marks are left on them. The Catcher is always clean. One of these Catchers set in a livery stable in Scranton, Pa., caught over 100 Rats in a month. One will be sent prepaid to any place in the United States upon receipt of $3. On account of shipping charges being prepaid, remittance is requested with order.

Catcher 8 inches high, for mice only, prepaid for $1.

H. D. SWARTS, Inventor and Manufacturer, Scranton, Pa.

Niagara Frontier Poultry Show.

The prize-list of this progressive association shows a most attractive list of cash prizes and specials and backed up with a hall large enough to take care of a very large entry, the officers are ready to give all exhibitors who send their birds the most satisfactory results. Customs arrangements have been made for American entries so that exhibitors will experience no inconvenience and the express companies are pledged to give the entries first consideration over everything else.

Judges of national reputation will place the awards and a square deal can be looked for in all classes.

Niagara Falls is naturally placed where one of the very best shows can be held as it offers a chance to send along a few birds and go and enjoy the falls and surroundings.

The Olympia Rink has been secured for the week beginning Jan. 27th and it affords a building well heated and lighted with meeting rooms and possibilities for considerable good display.

Everyone who can possibly make this show should have a prize-list which can be had by merely addressing a card to E. L. Wallace, Niagara Falls, Ont.

Cleveland's Great Coliseum Show.

The Ninth Annual Show of the Cleveland Fanciers' Club pulled off December 2 to 7, was as usual a great success. The weather was cloudy and stormy, but the attendance was good. The ribbons were up and premiums paid promptly. The quality of birds at the Cleveland show is equal to that of Madison Square Garden and Chicago. In fact there were some birds at Cleveland that no show can beat and they will not be at either Madison Square Garden nor Chicago. The competition was so keen that to get a place at all was an honor—and some birds that had to be left out of the money can win in other large shows. Among our successful advertisers were Ira M. Crowther, Ernst Birkholz, E. H. Lichtenwalter, C. F. Webster, Ewing and Romich, H. C. & C. W. Sixt, Rocky Run Farms, Robert Mawer, Frank Schellang, H. Cecil Sheppard, Fred A. Poertner, Parsons' Poultry Plant, and Chas. McClave, who had 50 entries. This classy show should be on your list next year.—H. H. Coburn.

Greater Buffalo Show for 1914.

The Greater Buffalo Show of 1913 was one of the most successful poultry exhibitions ever held in the Queen City. It was conceded to be the most beautiful show in arrangement of cages and decorations.

The management takes pleasure in announcing that new and even more attractive features will be added to the Greater Buffalo Show of 1914, which will be held in the Broadway Auditorium November 23rd to 29th, 1914.

As many sales were made at the great 1913 show, exhibitors who were present, will return in 1914.

Breeders, who intend exhibiting at the Greater Buffalo Show in 1914, should send their names and addresses to J. H. Drevenstedt, Secy., 506 Electric Bldg., Buffalo, N. Y., so that they may receive full printed particulars of the great event from time to time.

Egypt's Greatest Show.

Was closed November 15th, 1913, and proved the claim made for it, that it is the greatest show in Egypt. The building was full to overflowing with the highest class stock ever shown in southern Illinois which came from some of the greatest breeders in the country. Frank Heck placed the awards with entire satisfaction to all.

The new officers for the Centralia Poultry, Pigeon and Pet Stock Association for

the year 1914 are Frank Prusz, President; H. M. Barker, Secretary; C. F. Kruger, Treasurer; Willis Prusz, General Superintendent. The directors (H. L. Coffey, C. F. Kruger and June Love) wish to announce that this association will give $50 in cash to the Specialty Club whose members have the largest display at the annual show to be held at Centralia, Ill., November 11th to 15th, 1914.

Great Fort Wayne, Ind., Show.

Breeders in Indiana, Ohio, Michigan, Illinois and other central states, please take notice that the Fort Wayne show takes place January 22 to 27, 1914. This is one of the best shows in the middle states and has become a permanent institution. The judges this year are Pickett, Faulkner and Hamlin. Premium List will be ready December 15th. Please send in your name for one to the Secretary, T. J. Kucher, care City Hall, Fort Wayne, Indiana.

Poultry Shows.

The National Fanciers' Club Show will be held at Indianapolis, Ind., January 10-16, 1914. Judging from the liberal premiums offered by this association and the fact that the show comes after the holiday season, it will no doubt go on record as one of the best shows of 1913-14. Mr. Henry C. Dipple, Secretary-Treasurer of the National Fanciers' Club Show, is a hard and faithful worker, and his efforts to bring together one of the most representative exhibits of pure bred poultry this season will no doubt be crowned with success. The following judges will officiate at the National Fanciers' Club Show: O. L. McCord, Chas. V. Keeler, Louis Dambarger, J. H. Wendler and R. Roscoe McKinney. State meetings of the following National Specialty Clubs will be held during this show: National S. C. Black Orpington Club, National S. C. Buff Orpington Club, National Buff Rock Club, National White Wyandotte Club, National S. C. Brown Leghorn Club, Rhode Island White Club of America, National R. C. White Minorca Club. Twenty-five thousand school children will receive free tickets to the National Fanciers' Club Show this season. For premium list and entry blanks address Henry C. Dipple, 114 North Delaware St., Indianapolis, Ind.

Negotiations are under way which practically assure a big poultry show in connection with the National Corn Exposition at Dallas, Texas, in February. Secretary C. P. Bull has been in correspondence with poultrymen and fanciers throughout the Southwest and has met with much encouragement, and feels sure that this is going to be the largest show ever held in Texas.

The Barberton Poultry Association wish to announce through the columns of the American Poultry Journal that they have been successful in securing the services of Mr. Julius Frank of Akron, O., one of the ablest judges in the country, to place the awards at their show, January 20-24, 1914. Mr. H. C. Miller of Akron will assist in the scoring.

Frank L. Caugh has resigned as secretary of the Wisconsin State Poultry Association and James F. Irvin has been appointed in his place. This association will hold their seventeenth annual show Jan. 22-25, 1914, at Oshkosh, Wis. For full particulars address the secretary.

The East Texas Poultry Association will hold its fifth annual show Jan. 22-24, 1914. The slogan of this association is "More and better poultry." For premium list and particulars write the secretary, F. S. Riggs, Marshall, Texas.

Washington Heights Fanciers' Association will hold its annual show Jan. 21-24, 1914, at Washington Heights, Ill. Frank Heck and Wm. Plaehn, judges; Wm. J. Zuttermeister, Secy.

The National White Rock Club will hold its annual meeting during the fourteenth annual show of the Indiana Fanciers' Association show at Indianapolis, Feb. 2-7, 1914.

The fourth annual exhibition of the Lynchburg, Va., Poultry Association will be held Jan. 13-16, 1914. Newton Cosh and Chas. Nixon will place the awards.

The Muncie Poultry and Pet Stock Association will hold its fifth annual exhibition at Muncie, Ind., January 26-31, 1914. E. M. Quay, judge. The Muncie show is one of the largest and best in Indiana. Hand-

Ideal Coal Stove Brooder

Send for our Free Booklet
Describing the Ideal Coal Stove Brooder. Price $17, with Automatic Regulator $22.
Heats poultry houses and broods large flocks. Superior to oil burners in safety, economy and amount of heat. It is made by a firm which has manufactured stoves for over 60 years. The adjustable hoover to the Ideal Coal Stove Brooder is regulated with pulleys and cords (note illustration). The height can be adjusted according to the temperature. Economy, plus effectiveness, is found in the Ideal Coal Stove Brooder.
LIBERTY STOVE CO.,
Philadelphia, Pa.

some silver cups will be given the best pens of all principal breeds. One large sweepstakes cup for best pen in show room. Send for Premium List to Ray M. Allen, Muncie, Ind.

The Fox River Poultry & Pet Stock Association will hold its annual show Jan. 29-Feb. 1, 1914; Wells and McClave, judges. For full particulars write the secretary, W. L. Lamb, Appleton, Wis.

The Perry County Poultry and Fanciers' Association will hold its second annual show at Duncannon, Pa., Jan. 6-9, 1914. Premium list now ready. Write for one to the secretary, H. C. Hemperly, Duncannon, Pa.

The Guernsey County Poultry Association will hold its ninth annual exhibition at Cambridge, Ohio, Jan. 21-24, 1914; $200 in cash and a fine lot of other special prizes; Ira C. Keller, judge. Write for premium list to the secretary, Jas. C. Sarchet, Cambridge, Ohio.

Buff Leghorn Club Catalogue.

This Club has just issued a neat, well printed and illustrated 64-page catalogue, telling all about their favorite breed, and nothing but the good and bad points about the Buff Leghorn can be found in this book. It is worth 25 cents to any person who is just beginning in the poultry business, but will be mailed free to any person addressing Geo. S. Barnes, Sec., Battle Creek, Mich. If you are looking for some good fowl to add to your yards, the studying of this catalogue will help you wonderfully. Buff Leghorns hatched in July will lay in December, and win prizes. What more is wanted of a breed of chickens.

Notice is hereby given that the annual meeting of the Illinois State Poultry Association will be held at four o'clock Thursday afternoon, January 8, 1914, in the office of the secretary, in the State Arsenal Building, Springfield, Ill., for the purpose of such business as shall legally come before it. We appeal to each member to enter at least one specimen and to attend this meeting. Prof. R. C. Lawry and Prof. A. G. Phillips will address the banquet Wednesday night. You can't afford to miss it. William Osburn, President; Theo. S. McCoy, Secretary.

The annual meeting of the Idaho State Poultry Association will be held Jan. 26-31, 1914, at Boise, Ida. J. H. Drevenstedt, of Buffalo, one of the best authorities in America on the standard-bred fowl, will do the judging. The comparison system has been adopted and competition will be open to the world. L. L. Long, a live-wire fancier, is the secretary of the association. His address is Box 1396, Boise, Ida.

The annual meeting of the National White Wyandotte Club will be held in connection with the Cedar Rapids, Ia., show Jan. 11-17, 1914. Meeting will be held Tuesday night, Jan. 13, 1914. For further information write A. J. Gies, Sec., Delmar, N. Y.

The Virginia branches of the American Barred Plymouth Rock Club and the American S. C. Black Minorca Club will be held in connection with the Lynchburg show. Premium list now ready. Address the secretary, R. H. Anderson, Lynchburg, Va.

The annual meeting of the American Houdan Club will be held at Boston, Jan. 14, 1914, at 2:30 p. m., in connection with the Boston show. For further particulars write J. A. Underwood, Sec., Penn Yan, N. Y.

Mrs. A. A. Carver, Seville, Ohio, purchased of Urban Farms, Buffalo, N. Y., their entire string of Golden Campines, including their imported birds and winners at the Greater Buffalo Show last month. This string, together with her own fine string of Goldens, including the 2nd New York State cockerel and the finest Golden cockerel she could import from Rev. Jones, should make her one of the leading Golden Campine breeders in this country.

Urban Farms, Buffalo, N. Y., report the following winnings on White Plymouth Rocks at the Greater Buffalo Show: 1-2 cock, 1-2-4 hen, 2-4 cockerel, 2 pullet, 1-2 pen, special best male, special best female, special display. Every prize won with the exception of fifth cockerel was taken by stock either raised from eggs on his farms, or sold by them, or hatched from eggs from their pens. Look up their ad in this issue and write for further particulars.

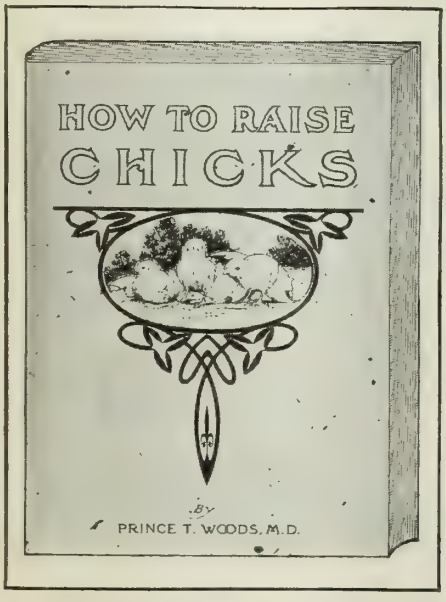
The Home That Was Built by Hens

A Practical Poultry Story, by "Uncle Cal" Stoddard

An unusual book, so different from any other now in poultry literature that it is in a class by itself.

BASED on actual facts and told in a breezy manner, it appeals immediately to the reader. It is not a story about poultry alone, but we are certain that the reader will absorb more practical information from the pages of this book than he could obtain from any text book published exclusively on poultry. The story tells the actual facts of how the poultry business presented unheardof opportunities for a foreman in a foundry, who after serving his company for many years had been discharged, and how in a very short time he built up a business that netted him a bigger salary than he ever earned before. The appendix in the book gives complete feeding formulas, symptoms of and remedies for poultry diseases. This part of the book alone is worth dollars to anyone keeping a few fowls.



Handsomely illustrated by Leonard K. Stahmer, son of Louis A. Stahmer, the well known poultry artist, makes it a book which everyone ought to have in the library.

AMERICAN POULTRY JOURNAL PUBLISHING COMPANY
542 SOUTH DEARBORN STREET -:- -:- CHICAGO, ILLINOIS

DR. PRINCE T. WOODS' NEW BOOK

How to Raise Chicks

INCLUDING REVISION OF "FACTS ABOUT WHITE DIARRHOEA"

A down-to-date manual on breeding poultry, getting hatchable eggs, incubation and brooding both natural and artificial, preparing chick foods, feeding chicks, how to raise chicks and how to avoid and prevent disease and losses. Told in plain language. Illustrated with reproductions from photographs and pen drawings. Tells how to make your own brooders and chick foods. Written by a man who knows how and how to teach others. 88 pages, 35 illustrations and 5½x8 inches in size. Printed on good paper. Well and durably bound in cloth.

A Book for Everybody Who Keeps Fowls or Grow Chickens Whether Beginner or Old Timer in the Field of Poultry Work

It has ten chapters: Chapter I—Selecting and Mating Breeding Stock. Chapter II—Food, Vegetable, Animal and Mineral. Chapter III—Fowls and Food. Chapter IV—Care and Management of Breeders. Chapter V—Eggs for Hatching. Chapter VI—Iucubation, Natural and Artifical. Chapter VII—Brooding with Hens and with Brooders. Chapter VIII—Chick Foods and Feeding Chicks. Chapter IX—Growing Chicks. Chapter X—Facts About White Diarrhoea. What white diarrhoea is. Symptoms of disease. Causes. Is there more than one form? Has germ of specific disease been found? Infection. Prevention. Treatment. Formula for a simple remedy which has proved effective in many cases in many climates for four years.

Here is a book devoted to chick comfort and to more and better chicks, 75 cents per copy postpaid. Learn to save your chicks; that means more profit; Dr. Woods tells how; send for the book now, only 75 cents, cloth bound.

75c per copy, postpaid; with American Poultry Journal, one year, only $1.40. Canadian subscribers add 25c for postage, foreign 50c.

American Poultry Journal, 542 South Dearborn St., Chicago, Illinois

The Niagara Farms.

The Niagara Farms as seen today, with their many thousands of inhabitants of the feathered tribe and with a regular army of workers, is the result of 28 years of intensive poultry study and work. Way back in 1885, when the poultry business as we know it today was simply the chicken business, these farms were started, a pioneer in the class of more and better poultry, and like a ship on the high seas without a chart, for they had to find their own way, learn their own lessons and trust to the future for success.

Beginning with one pen of White Wyandottes, this plant grew and prospered, reaching its present enormous size, and is still on the increase year by year. In time other varieties were added—the White Rocks, S. C. W. Leghorns, Pekin Ducks, Indian Runner Ducks and R. I. Reds. The aim ever remained the same—it was quality first—and in all their years of business they have been consistent winners at several of our best exhibits and national expositions, also including Madison Square Garden, New York.

The actual figures of what this plant is and has done are staggering in size, for here are bred and raised over 100,000 head of chickens and ducks annually. Upwards of 75,000 day-old chicks and ducks are sold, many thousands of eggs for hatching and a thousand tons of "Niagara Brand" of cut clover for poultry feeding. In market poultry alone they have built up a trade that takes weekly 3,500 head of broilers, roosters and spring ducklings, and for ten weeks this season their output was 5,600 head per week. Their feed bill alone averages $150 per day the whole year round. For poultry and ducks close to 10,000 breeders are kept, and here are over 300,000 square feet of floor space under cover to house the stock. On this farm are over 200 colony breeding houses, all yarded; several large breeding houses and duck sheds; one is 36 feet wide and 1,500 feet long, and others in proportion; a 10,000-bushel capacity grain elevator, located beside the R. W. & O. R. R., with their feed house adjoining, and with their own railroad and cars for feeding purposes extending to all parts of the farm. There are nine wells on the farm, with four windmills, and large supply tanks from which water is supplied to all buildings and whenever desired by about 20,000 feet of piping.

We feel that this description does the plant but scant justice, for there is too much there to see to properly present in any one article; but it will give the reader an idea and we hope a desire, for here progress and success are stamped visibly in every department and in an unmistakable manner, for it is a plant that we shall always point to with pride, for it is the direct result of broad-minded business principle of long and deep study, with unlimited work and the greatest possible credit to both W. R. Curtiss and W. J. Curtiss and their noble father, whom we were very glad to meet during our visits there.

THE STOCK AS SEEN THERE.

Ducks are the leading factor on this mammoth plant, and at the time of our visit, Nov. 14, 1913, it was a case of ducks everywhere. The breeders had been selected and were mated for next season's business, while the killing stock were carefully graded in large flocks growing to size and weight that spells their doom at from 10 to 12 weeks old.

The mammoth Pekin Ducks are the specialty here, with the name mammoth most appropriate, for we have never in all our experience seen such a magnificent flock of ducks before. The breeders are a wonderful lot. Here were drakes weighing up to 12 pounds each, and ducks from 10 to 11 pounds, with size in proportion to weight. Their fine long bodies, broad and deep and full breasts, told of their worth. They have won highest honors at our best shows, and we dare say that we seen better ducks here at this time than we have ever seen in the show room.

The White Runner Ducks are coming into great favor, and here they are a close second in numbers to the Pekins. Their breeders in these had added attractions for us, with their history as told us by W. Jay Curtiss, who so kindly acted as our guide on the trip over this farm. These great flocks of Runners were all hatched from but seven breeders this season, and here were two flocks of a hundred each and several pens of a quality hard to equal. They were just alike in form and general character, making them a most desirable lot. This should also be said of their Pekin ducks, for they, too, were all moulded after one type and from the same pattern.

In Pekins they have for sale at this time a few hundred extra choice breeding ducks and a great lot of superior drakes that may interest some of our readers.

Their White Wyandottes and Rocks, as well as their Reds and S. C. White Leghorns, were mostly on near-by farms at the time of our visits, but we have known this line for many years and have seen them as winners at so many shows that we know and can well recommend their quality.

DAY-OLD CHICKS AND DUCKS.

Baby chicks and ducks are a leading feature here, and last year close to 100,000 were sold. The day of our visit thousands of chicks and ducks were taken from the incubators, and during the four days of that week close to 20,000 were put in their own brooders to raise for the trade. Here were the baby ducks of every size from the day-old to that of 90 days, who were facing the end of their existence and were fed up to supply the most delicate demands of American appetites. There are no special seasons here—every day is alike. Hatching is done the year round, and the birds start on their way to either the breeding pen or the killing house, according to quality and demand.

THE FEEDING QUESTION.

Our readers can well imagine that the feeding question is one of first importance on a plant of this size. The cost of food is an important item; but far more important are the results to be attained by proper feeding. To grow the ducks and chicks properly and quickly is the real secret of this line, and it is in this that this farm has well succeeded. The proper ration and right mixture to insure rapid growth within the least possible time and at the smallest expense are some of the great questions they have conquered with time and experience, and while their feed bills now average upwards of $150 per day the year round, results are obtained to warrant their mode of feeding and has insured their success.

THEIR STRAIN OF STOCK.

While they obtain proper results by feeding, we are personally positive that much of these results are directly due to their strain of breeding birds. They show careful selection and superior quality. Their breeders in Pekin and White Runner Ducks are the pick of a hundred thousand bred yearly, and the same can be said of their White Wyandottes and Rocks, and of their Reds and White Leghorns—all are bred and built on highest standard quality and to actual practical value.

Cable: Harmony Farwood

books that are of special interest to the breeders. One, their regular catalog, which is free for the asking, contains rather fully a descriptive article of their plant, varieties and mode of doing business. The other, "The Curtiss Poultry Book," is one of the best we have ever seen, for it is a "practical" book—one that all can read and understand. It handles every question of the duck and chicken business from the production of eggs to the marketing of dressed poultry, and also contains their six formulas for feeding. We believe this book sells for 25 cents. Like this farm, their brand of Niagara cut clover is used and known the country over. We were delighted with all seen there, for it is a positive look at money in poultry, and we will surely hope to call again and to tell our readers more of this great plant.—H. P. Schwab.

Cleveland's S. C. Black Minorcas.

Elmer Cleveland, of Imlay City, Mich., is fast placing himself among Michigan's

foremost Single Comb Black Minorca breeders. This variety of fowl will always be a popular one for an all-round purpose fowl. They have the size for a table fowl, and they are great layers of large, snow-white eggs that demand a fancy price. As a fanciers' fowl they are among the best.

The type of the Black Minorca is so distinguished and their beautiful glossy green-black plumage makes them very attractive. Mr. Cleveland's breed run very long in back, and tail carriage is low. He advocates medium size comb and is breeding them much smaller than the English type. His Minorcas are strong in clear, white ear lobes. He seems to have a system of mating Minorcas for fine type and green-black plumage free from that objectional purple barring. He raises most of his youngsters with good mother hens on free range. This in part accounts for their excellent color and great size and vigor. It is needless to state that the eggs are as fertile as sparrows and that he received many reports of excellent hatches.

We had the pleasure of handling his birds at the Imlay City Fair and placed the following awards: 1st cock, 1st hen, 1st and 2nd pen, 2nd pullet, 2nd cockerel. His pullets and cockerels were young or they would have won first place, hands down. He is mating some very fine pens for the egg trade. If you order settings or birds from Mr. Cleveland you may be assured of good treatment. H. H. Coburn.

A New Sectional Hot Air Incubator.

Among the displays of appliances at the recent Chicago Coliseum Poultry Show was a new incubator that promises to revolutionize the making of mammoth machines. This machine was the Schwalge Sectional Hot Air Incubator. The writer of these lines confesses that he viewed this new device rather critically at first.

He knew the apparent difficulty of driving hot air horizontally and suspected that the sections furthest away from the heating unit would be much colder than those located nearer. But he was agreeably surprised to find that the more remote sections were slightly warmer.

While making this investigation the writer was accompanied by H. A. Robinson, of Downer's Grove, Ill., and who, by the way, is a consulting engineer and conversant with heating problems as they pertain to buildings. He can bear testimony to the fact that the thermometers were, practically speaking, uniform in every section.

Mr. Schwalge, the inventor of this machine, has exercised every care in the development of this machine and before offering it to the public tested it in hatching 6,000 ducks during the past season.

This machine is just what many poultrymen have been looking for. It enables the beginner or small farmer to start in a small way—with a 150 or 500-egg machine and add to his numbers as he increases.

It is impossible here to go into all of the details of construction; but their catalog tells all. Send for it. Address William Schwalge, Manufacturer, Dept. A, Elmhurst, Ill.

An Interesting Exhibit.

Sixty Perfection White Wyandottes of uniform type were exhibited at the Great Mid-West Chicago Show by George H. Rudy, Route 15, Mattoon, Ill. The exhibit consisted of 40 male birds and 20 females and was one of the main attractions of the show. Particular interest was shown in the male bird sired by the great Perfection, unbeaten champion wherever shown. This bird possesses all the standard requirements and would be an easy winner in any competition.

It may interest our readers to know that three pullets in this exhibit laid one egg each day during the five days of the show. This exceptional showing may be attributed directly to their breeding. These three pullets will be placed in individually mated pens for the spring egg trade. The birds were not competing for prizes, but were merely on display to show the uniform type of Rudy's Perfection White Wyandotte strain and the fact that Mr. Rudy sold 48 of these 60 birds in the show room is evidence that his birds and prices are satisfactory.

Anyone desiring White Wyandottes of uniform type and color and especially good male birds at reasonable prices, should communicate with George H. Rudy, Route 15, Mattoon, Ill.

Fischer's bred-to-lay exhibition White Orpingtons make great winnings. At the great Coliseum Poultry Show, St. Louis, they won 1st and 2nd cock, 1st and 2nd

hens, 1st and 2nd cockerels, 1st and 3rd pullets, 1st and 2nd pens and all specials. At the Arkansas State Show at Rogers, Ark., they won four firsts on 5 entries. At the great National White Orpington Club Show, Cincinnati, in strongest competition, they won at the same time 1st pen old, 1st pen young, 1st and 5th hen, 2nd pullet, 5th cock and 5th cockerel. They have 1,100 quality birds to select from and will treat you right. Write them if you are in the market for egg laying strain. White Orpingtons. They will have 20 pens for egg trade. Also baby chix. Address Shawnee Poultry Farm, Dept. M, Jos. H. Fischer, Mgr., Jackson, Mo.

Licene Kills Lice and "Nits."

When other lice killers fail, try Licene. It does the work every time. Send to the Licene Co., 1500 Pontiac Building, Chicago, Ill., for a tube of Licene, price 50 cents, and they will send you enough Licene for 200 birds. This firm will refund your money if you are not satisfied.

H. P. Schwab, Irondiquoit, N. Y., breeder of Barred Rocks for 25 years, says: We have used your "Licene" with grand success and with utmost satisfaction, for it is all you claim for it and there is not a louse of any kind on our birds today.

Very truly yours,
Schwab Bros.,
By H. P. Schwab.

The above half-tone represents the type of Leghorns bred at the Swastika Poultry Yards, Plano, Ill. On a recent visit to this plant we had the pleasure of handling many specimens bred and raised on this farm that showed splendid quality O. E. Faxon, the proprietor, has been making a specialty of Single-Comb Leghorns for a number of years and in that time has produced many of the winners at the leading shows of the middle West. At this time he has a number of exhibition and utility birds for sale and will furnish a limited number of eggs to his customers.

J. C. Johnston.

E. A. Webb, Ewing, Ill., the "Ringlet" Barred Rock breeder, who has been using our classified ad columns for a number of years, has decided to use display advertising in the future, and his ad will be found elsewhere in this issue. Mr. Webb has been a very successful exhibitor for a number of years at some of our largest shows. At St. Louis in 1911 he won 2d pullet-mated pen; in 1912 he won 1st cockerel, 2d pullet and 2d pullet-mated pen. In 1913 he won 1st and 2d pullet, special for best shaped female and 2d pullet-mated cockerel. At Ewing, Ill., 1st cock; 1st hen; 1st, 2d, 3d cockerel; 1st, 2d, 3d, 4th pullet; 1st, 2d pen. In fact, his birds always win wherever shown and he is in a position to supply stock or eggs at reasonable prices. Write for full particulars, and mention American Poultry Journal.

Gertrude H. Kelly, Willoughby, Ohio, breeder of Black Orpingtons, starts a display ad in this issue of A. P. J. Her Black Orpingtons have been very successful at the leading shows so far this season. At the Big Buffalo Show held recently her birds won 1st pen, 2nd pullet, 2nd cock, 3rd cockerel, 4th hen. At the Cleveland show last month they won 1st pen; 2d, 3d cock; 4th cockerel; 5th hen. The winning of the first pen at the Cleveland show makes it three times that she won 1st pen in 1913. This included the Cleveland Fanciers' Show of a year ago. No two pens made up of the same birds, and each winning made under a different judge. Write for full particulars, and mention American Poultry Journal.

J. D. Keyworth, proprietor of the Elmwood Poultry and Stock Farms, Hudson Falls, N. Y., who is a breeder of Buff and White Orpingtons, has a display ad in this issue, and we would call our readers' attention to the mention made of this stock in a write-up of the New York State Fair in our October issue. At the Albany, N. Y., show November 26-30 his Buff Orpingtons won 3d cock; 3d hen; 1st, 2d pen; 1st, 2d, 3d cockerel; 1st, 2d, 3d pullet; special for best display and special for best exhibit in the English class. Mr. Keyworth guarantees satisfaction to all customers. Write him for prices and particulars, and mention American Poultry Journal.

In this issue will be found the ad of Oscar C. Nicodemus, Wadsworth, Ohio, breeder of White Orpingtons, White Rocks and White Indian Runner ducks of the very highest quality. Write him and mention A. P. J.

R. A. Hewes, Crete, Ill., the well known breeder of Black Langshans, has a number of choice exhibition and breeding birds to spare, sired by his 1912 winners at Chicago, where he won 1st, 2nd, 3rd cock, 1st, 3rd cockerel, 2nd, 3rd hen, 2nd, 3rd pullet, 1st pen and silver cup for best display. He is mating a number of choice pens for the egg trade.

A Farm Genius Discovered.

Up in the wilds of Wisconsin, 25 miles from a railroad, along the shores of Lake Michigan, once lived a young fellow who became a walking encyclopedia of farming information and the sympathetic adviser of farmers old enough to have been his grandfathers. This young man lived on a little rented farm of 20 acres. His parents were old and not able to work, and he and the little patch were their entire means of support.

Scientific farming was jeered at; yet Bill Johnson began to realize that he had to farm that 20-acre patch scientifically or else see his parents and himself go hungry. Bill's parents were poor and Bill was too busy making a living for them to hire out to earn money to go to an agricultural college, but by borrowing books, getting a lot of information from the government and from the state agricultural departments, he was able in three or four years to become so proficient in practical scientific farming that those who formerly had made him the subject of jibes, now came to him freely for advice and made money by it.

Bill used to tell how, after working alone in the fields from sunrise till dark, he would sit up till twelve o'clock at night drinking black hot coffee in order to keep awake while he could study.

He began to write a few practical experiences in farming and sent them to some agricultural papers. Mr. Herbert Quick, the author and statesman, received one of

Champion Buff Orpington Male at Illinois State Show. Bred and owned by A. A. Anderson, Macon, Ill.

these contributions from Johnson and immediately contracted with him to leave the farm and come to work on a certain agricultural paper which Mr. Quick was then publishing. Johnson's articles are now copied by farm papers the country over because they almost vie Abe Lincoln's sympathetic and simple fashion of expression.

This young genius who less than a year ago was a raw, unpolished back woodsman, has written a remarkable article—"Turning Eggs Into Chickens Into Dollars"—which is published by the Rayo Incubator Co., 1012 So. 13th St., Omaha, Nebr. This valuable little booklet, containing also a full description of the most convenient, economical and simple incubator ever invented, will be sent postpaid to all who request it.

A Very Strong Guarantee.

which must interest every one of our readers and that is the Des Moines Incubator Co. guarantees the feeding of sprouted oats as produced in the "Successful" Sectional Grain Sprouter will materially increase the egg yield from your hens during the winter months and at the same decrease the cost of feeding them. This guarantee is backed personally by Mr. Gilcrest, who for twenty years has manufactured the well known "Successful" Incubators and Brooders. This Sprouter is different from all other makes. It is built in sections, with double steel walls and has all galv. steel trays, rendering it indestructible and absolutely safe anywhere in the house. Every poultry raiser should strive to obtain as many eggs as possible from his hens, especially when this can be done by lowering the cost of feeding at the same time.

They want you to send for their illustrated descriptive matter showing the sprouter and sprouts in their natural color. See their ad on another page or write now to the manufacturers, Des Moines Incubator Co., 561 Third St., Des Moines, Ia.

The saving of labor is a large item on every poultry farm, that's why most of the large poultry plants in the country are installing Simplicity Kant Klog Poultry Feeders. They feed chickens to perfection, and instead of hand feeding four or five times a day the hopper is filled once a week, and the chickens will feed themselves. Investigate this feeder at once. It will save you many dollars in labor and feed bills. Address Simplex Supply House, Pontiac Bldg., Chicago, Ill.

Mr. E. R. Philo, one of America's most successful poultrymen, has written a book telling how to manage every detail of the poultry business by modern methods. To be successful in this business, as in any other, it is necessary to know how to do every part of the work. This is told in the Philo System Book, the new system of poultry keeping that has started more people to raising poultry than any other one thing, in recent years. It is especially adapted to the needs of the beginner—requiring but a very small initial outlay and admitting of increase as rapidly as the poultry keeper learns the work. It is the small unit plan that expands as readily and as economically as the "sectional bookcase." Whether you intend to make poultry keeping a business, a recreation, or as an addition to the present income this System will solve your problems. In less than five years the book has passed through eighteen editions, over 500,000 copies, and is helping thousands to better success. This System will be demonstrated to anyone, at the Elmira plant of the Philo National Poultry Institute, "the home of the Philo Systems," where over 5,000 chicks are raised on a half acre of land. Write Mr. E. R. Philo, Elmira, N. Y., for full particulars regarding this system.

Chicks are raised nature's way in the Simplex Perfection Feather Brooders. They require no artificial heat. The chicks hover in contentment under the natural feathers, and do not crowd or smother to death. No leg weakness or bowel trouble will be had if the Simplex Perfection Feather Brooders are used by you this season. Investigate them. Cost is small and value large. Send for catalog. Simplex Supply House, Pontiac Bldg., Chicago, Ill.

WHO BREEDS THE BLACK LANGSHAN WINNERS?

Four Year Record of HEWES FARM PRINCE EBONY STRAIN OF BLACK LANGSHANS

Chicago, 1908-09-10 and 1912, four 1st cocks, three 2d, one 3d; four 1st ckls., one 2nd, one 3d and one 5th. New York shows, six 1st cocks, three 2d, one 3d and two 5th. A 2nd, 3d, 4th and 5th ckl. Illinois State Fair, two years' winning, one 1st cock and two 2nds, two 1st and two 2nd ckls. We have bred first prize cocks for Philadelphia, Hagerstown, Baltimore, Norfolk, Pasadena, Dallas, Orange, Patterson, Illinois state show, Scranton and at Northeastern Illinois Fanciers' Show won Grand Silver Trophy three years for ten best birds in the show, all breeds competing. These prizes were all awarded by different judges except in two instances and include the best in America. Hens, pullets and pens were also in the lead at most of these shows. Black Langshans won over all Leghorns as the best layers at Missouri contest two years in succession and stood 2nd from top in 1912 and 4th in 1913, 156 and 160 eggs. Catalog 10 cents.

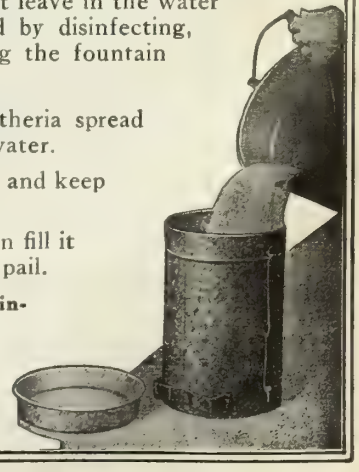
A Really Sanitary Drinking Fountain at Last

Here it is. A galvanized steel drinking fountain that absolutely prevents any dirt from getting into the drinking water.

Germs in the hen's water may mean germs in the eggs. We don't know about this, but we do know that they mean disease in the hens every time.

The Oakes Economy Drinking Fountain

keeps both germs and dirt out of the water, because the dirt cannot get in, and any germs that sick hens might leave in the water can be easily killed by disinfecting, scalding, or exposing the fountain to sunlight.



Roup, Canker, Cholera and Diptheria spread almost solely through the drinking water.

Use the new "Oakes Economy" and keep your hens well.

The bottom comes off and you can fill it or clean it as easily as you could a pail.

Mail the coupon today for special introductory price.

Oakes Mfg. Co., Tipton, Ind.

CLASSIFIED ADS

UNDER this heading ads will be inserted for seven cents per word each month for less than three months, and **five cents per word each insertion for three months or longer.** Changes in copy allowed every three months. Numbers and initials count as words. All ads will be inserted under **classified headings.** No ads accepted at less than an average of sixty cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Write your copy plainly, as upon this the correctness of your ad largely depends. When placing your ads remember that advertisers using Classified Ads get better returns from AMERICAN POULTRY JOURNAL than from any other poultry journal—none excepted. On writing any of these advertisers mention A. P. J. **All copy for Classified Ads must reach us by the 17th of month preceding date of issue.**

Swastika Poultry Yards, O. E. Faxon, Plano, Ill.

"Early Broilers and Early Fall Layers."

We learn from Cyphers Incubator Company, Buffalo, N. Y., manufacturers of the Paradise Brooders, a unique sectional indoor brooding device, that the sale of these brooders last season was the largest in the history of the company. The following sample report from a customer is published at the request of Cyphers Company:

Lincoln, Nebr., March 5, 1913.
Cyphers Incubator Company,
Buffalo, N. Y.:

If it were impossible for me to obtain another Paradise Brooder, I would not part with mine at any price. It is the finest thing in the way of a brooder I ever saw. Last year I raised about four hundred chicks in it and the total mortality was only five out of the whole lot. At first I placed the brooder in one of the living rooms of the house, but after a month I put it in an enclosed porch. Although it became quite chilly on this porch, I never had to worry about the heat in the brooder.

This spring I built a small brooder house to accommodate the brooder, the house being made large enough for at least three more brooders as they became needed later on. With the Paradise Brooder the chicks can be cared for with the least amount of work possible, and there is no getting down on your knees to see that everything is all right. The glass sides make it possible to see all the chicks at any time, and the adjustable dampers make it easy to regulate.

I am using a 110 and 220 egg Cyphers Incubator which were purchased of you twelve years ago, at Wayland, N. Y. These machines today are giving the best of satisfaction. I am obtaining 79 per cent hatches from them on the average. The only repairs that have been bought for them have been new lamps for both I would not trade today for any machine on the market other than a Cyphers.

EDW. K. STOCKFIELD, Prop.,
White Fowl Poultry Farm.

Reader is requested to look up the Cyphers Company's full-page advertisement of this brooding device on page 117 of this issue of American Poultry Journal

Greatest Subscription Offer Ever Made

The Three Best Poultry Papers for the Price of One

American Poultry Journal, the one great poultry paper of America, is now in its 45th volume. Contains as high as 252 pages per issue. The eight-page colored supplements and colored covers each month are alone worth the subscription price.

American Poultry Advocate, published at Syracuse, New York, one of the widest quoted publications in the field, is always readable and instructive, and is conceded to be one of the best papers of its kind in the East.

Western Poultry Journal is one of the oldest poultry papers in America. Published at Cedar Rapids, Iowa, it has long been recognized as one of the most up-to-date and progressive papers, appealing alike to professional and amateur.

These three papers of the East, West and Middle-West cover the country thoroughly and no matter where you live you will find your peculiar problems treated with familiarity.

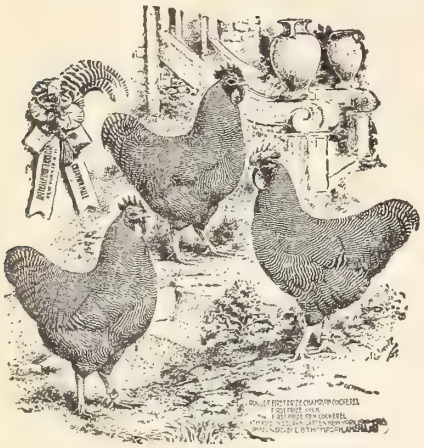
L.A. STAMMER

E. B. Thompson's "Imperial Ringlet" Barred Plymouth Rocks



Win the most remarkable record beyond all precedent in Barred Rock history at the imperial and most classic show of all America—Madison Square Garden, New York—winter of 1913, winning as follows:

First, second, sixth and eighth on cockerels.
First and sixth on pullets.
First, second and fifth on exhibition pens.
First on cockerel mated pen.
Second, third, fourth and fifth on cocks.
The Imperial Prize of the show, Sweepstakes special for champion male.
Sweepstakes special for champion female.
Diploma presented by the Amer. Poultry Asso. for best cockerel.
Sweepstakes cup for best Plymouth Rock hatched in 1912, male or female, any variety.
Challenge silver cup for best exhibition pen.
Special best shaped male.
Special best colored male.
Special best colored female.
Best cock, cockerel, hen and pullet, four best cockerels, four best pullets, $25 special prize, presented by the New York Show for finest display.
All silver cups and cash specials—four times as many first prizes as any competitor.
More first prizes than all competitors combined. More first, regular and special prizes than won by any exhibition of any breed.

My Exhibit of 56 Birds Was the Best the World Has Ever Seen

"Ringlet," 1st Prize and Champion Cockerel, 1st Prize Cock and 1st Prize Pen Cockerel at Madison Square Garden, New York, Winter 1910-1911.

The Three Greatest Living Barred Rock Males

No other Barred Rock breeder has ever produced or is producing such matchless quality. Every feather in my exhibit was bred on my farm. My First Prize Champion Cockerel and First Prize Champion Pullet are years ahead of their time. They are the product of the highest skill.

No other Barred Rock breeder has ever accomplished the unprecedented achievement of winning the two greatest prizes in the world, Sweepstakes Champion Male and Sweepstakes Champion Female, at one show in Madison Square Garden. For 25 years at New York my "Ringlet" victories have been complete; my clean sweep of 1ST, 2ND, 3RD, 4TH AND 5TH PRIZES on pullets has never been approached at Madison Square Garden

and stands alone and unequalled. The Imperial "Ringlets" are the standard by which all other Barred Rocks are judged. To meet success in winning prizes you must have my birds and eggs. I will sell you grand exhibition birds for any show, and breeders of this Richest First Prize, New York, blood mated to produce prize winners. Richly illustrated 70-page catalogue upon request. It is full of original pictures of New York winners from life.

Does This Look Good to You?

$3.00 Hen That Lays $21.27 in Eggs in One Year

This Is Why There Is Such An Increasing Demand for My Anconas

Sheppard's Famous Anconas

Made another great win at the late Madison Square Garden Show (Dec. 1913). In largest and strongest class ever shown in New York, we won eight first prizes, being eight times as many as my nearest competitor. In a class of 20 high grade cockerels, we won first, second and third. In Rose Comb class we won first cock, hen, cockerel, pullet and pen. Was awarded Gold special for best display. Have won first at the world's greatest shows, including London, Eng., Cleveland and Madison Square Garden. For seven consecutive years my birds have won three times as many first and second prizes at the nation's greatest shows as all my competitors together, (including the late shows) so have earned the distinction of being

THE WORLD'S BEST

They are famous egg machines and the greatest **winter layers,** with the wonderful egg record of **256 Average for a Flock.**

If you want to win at your show or increase your egg production, write for catalogue. Orders booked now for eggs and baby chicks. A fine lot of stock for sale.

H. CECIL SHEPPARD Pres. International Ancona Club **Box M2, BEREA, OHIO**

F. E. Harrison's Champion S. C. Rhode Island Reds

have for year demonstrated that they are the one strain that stands out ahead of all others.

At Chicago, 1913-1914, Royal Reds won in the largest class ever shown, forty-nine exhibitors showing a total of 270 birds, and in the largest class of Cockerels ever shown in America (106) as follows: 1st and 4th Cock; 2nd and 5th Hen; 1st and 5th Cockerel; 1st, 2nd, 3d and 4th Pullet; 1st and 3d Old Pen and 1st and 5th Young Pen; every color special; every shape special; every championship; elegant watch offered by the Association for the best display, and the Western Rhode Island Red Club of America Cup offered by the Club, both Rose and Single Combs competing.

Bred, Owned and Exhibited by F. E. Harrison

NOTE THIS: I am the only exhibitor that has won in all six classes in one showing. Twice have I accomplished this feat.

Twice have Royal Reds exhibited personally by me won 87 points on best display at the great Coliseum Show of Chicago. No other exhibitor has ever won this number of points before. Therefore, Royal Reds have the distinction of on two different occasions winning the greatest number of points ever given at Chicago.

More facts of this world's greatest show of Chicago are as follows: At Chicago I have won twice as many first prizes on Old Pens as all other exhibitors combined. Twice as many first prizes on young pens as any other competitor. Twice as many first prizes on cock birds as any competitor, and more points on cock birds at the last two shows than all other exhibitors combined.

I have won more places on Cockerels at Chicago the past four years than any other competitor, and hold the world's record for winning 1st Cockerel in the largest class ever shown in America.

VERY IMPORTANT: I have won more points on males (Cockerels and Cocks), on hens, pullets and pens, at the last two Chicago Shows than any other competitor. Therefore, Royal Reds outclass all others in winning the largest number on males, females and pens than any others.

NOTE THIS: I have won three times as many points on pullets at Chicago in the past two years than seventy-two competitors combined.

At Chicago, 1912-13, I won 1st, 3d and 4th Cock; 2nd and 3d Hen; 4th Cockerel; 1st, 2nd and 3d Pullet; 1st and 2nd Old Pen and 1st Young Pen.

To think of a world's record is to think of Royal Reds.

I have every first prize (eight in number) winning males from the last two Chicago Shows.

My egg offer is the best opportunity in all America to start in Single Comb Reds.

2,000 head of Cocks, Cockerels, Hens and Pullets, Trios and Pens for sale, rich in the blood of these Chicago winners.

Catalogue free, describing best pens ever put together.

F. E. Harrison

Box 30, Menominee, Michigan

Halbach's White Rocks

Never in the history of Poultry Exhibitions has any strain made such wonderful wins. They hold the world's record by capturing best **Display** at **Chicago** five times. At the

Great Mid-West Coliseum Show, Chicago, Ill.

America's Greatest Exhibition

Jnretouched
First Springfield Cock erel

in a class of 140 White Rocks—the best ever got together, they made the marvelous winning of

1-2-3-4 Cock (4 entered)
1-2-3-4 Cockerel (4 entered)
1-2-3-4 Hen (4 entered)
1-2-4 Pullet (4 entered)
1-2-3 Old Pen (3 entered)
1-2-3 Young Pen (3 entered)

45 out of 46 birds placed in winning. A grand total of 153 points out of a possible 157.

This is an astonishing win but not as astonishing as the undreamed of quality of the birds that made the winning. It was a revelation in perfection of type, pureness of plumage and was the wonderment of all.

Hundreds of show birds that will win, at $25.00 to $100.00 each. Breeding pens perfectly mated and from these winners, at $25.00 to $75.00. Get started with this quality. Utility females, $2.00 each. No matter what you want I have it. Send your order.

Place your order today for eggs from my unapproached matings, at $15.00 per setting. Utility eggs $10.00 per 100. Catalogue 10 cents. Mating list free. Mention American Poultry Journal.

NICHOLSON'S ROYAL BLUE ORPINGTONS

CHICAGO, NEW YORK and BOSTON

At these three 1914 classic shows my Blue Orpingtons have swept everything before them, and are **unequaled** by any other strain in England or America. Their color, quality and type have never even been dreamed of before. **My winnings** read more like a fairy story, and the buyers of Blue Orpington stock or eggs should, for their own future, study my winnings and then decide who has the best Orpingtons, not in America, but the World. I claim above title because my birds have earned it in **open competition** and have **defeated** the **World's Best Blue Orpingtons.**

MY WINNINGS ON ROYAL BLUE ORPINGTONS.

CHICAGO, 1913-14.
First Cock.
First Cockerel.
First Pullet.
First Hen.
Best Display.

MADISON SQ. GARDEN, N. Y. 1913-14.
First Hen.
Second and Fifth Cocks.

BOSTON, 1914.
First, Second, Third Cocks.
First and Second Cockerels.
First and Fifth Pullets.
Fourth and Sixth Hens.
Best Display.
52 in competition.

First Pullet, Chicago 1913

My record of **First Pullet** at **Chicago, New York** and **Boston,** with **three sister pullets** stands **alone** and perhaps will never again be equaled. Above records have been made at the Three Great Classic Shows of America, not second-rate Cattle Shows. I have won under three different judges—Delano, Byers and Greenwood. My pens will be headed by the most exhibiting lot of winning males that the Blue Orpington World has ever seen.

BARRED ROCKS.

My Barred Rocks again win at Boston, 1914. **In the Hottest Class** ever seen I won First, Second and Sixth Cocks. At the Crystal Palace Show, London, England, American Class, Nov. 18, 1913, I won First and Second Cocks; First and Second Cockerels; First, Second and Third Hens; Second Pullet and International Medal.

LETTERS I HAVE RECEIVED FROM MY CUSTOMERS

January, 1914.—Mr. Murphy of Essex, Iowa, wrote: "Barred Rock Cock bird out of your eggs won at four of the largest shows in the West, and at the Iowa State Show; my first Barred Rock was the best bird in the Show.

January, 1914.—Mr. John Enders of Berryville, Va., wrote: "Captured First and Second Cockerel, First Pullet, other breeders showing, at Baltimore, Md. I got Second Cockerel, First Pullet, three exhibitors, beaten on cockerel, but the party who beat me on cockerel bought eggs of you." Blue Orpingtons.

January, 1914.—Mr. C. P. Stafford of LaMoille, Ind., wrote: "Won at Minneapolis with your stock and strain." Barred Rocks.

BARRED ORPINGTONS, ORIGINATED BY ME.

At Boston, 1914, I won First Barred Orpington Cockerel and First Pullet.

Send for circulars to the breeder who is Exhibiting and **Winning** and **Proving** he is breeding the **Best Blues** in the **World.**

BE A WINNER! Get some of the Royal Bred

Tecktonius Strain S. C. AND R. C. Buff Leghorns

into your flock and secure a "running start" in the race for the most sought for honors in Exhibition Arenas, where recognition means fame and success as a breeder. Others are doing it, and so can **you.** For seven years "a running" the **"Tecktonius Strain"** has—for its proprietor and hundreds of his customers—grabbed off the leading Buff Leghorn Prizes at Madison Square, Philadelphia, Baltimore, Boston, Chicago and other big shows whose prize favors mean everything in the Poultry World.

The World's Champion Utility Fowl

This magnificent **strain** of Buff Leghorns has proven itself—against all comers and under all competing conditions—to be the World's Champion Utility Fowl—the surest and biggest money-maker in the poultry field today.

Some Unrivaled "Tecktonius Strain" Bargains

S. C. Matings—Pens 1 to 6 inc., one 15-egg setting, $10; two, $18; three, $25. **Random Selection**—If selected from one pen in which price rules, $5 per setting extra. Pens 7 to 10 inc., one setting, $5; two, $9; four, $15. Pens 11 to 14 inc., $2 per setting, $10 for 100. **R. C. Matings**—Pens 15 and 16, one setting, $15; two, $25. **S. C. Utility Stock**—Hens, $2; Cockerels, $3 and $5; Trios and Pens, $10 and $15. **Exhibition Breeding Stock** Hens, $5; Cockerels, $15 and $25; Trios and Pens, $25 to $50. **No Chicks of Either Variety For Sale.** Send for handsomely illustrated Catalog and Mating List, showing you how to put your birds in the "Tecktonius" Class.

Reproduces Its Winning Qualities

"Tecktonius Strain" Buff Leghorns have all the prized show room points—color, contour, poise, etc.—as well as the big "Market" earning qualities—being small eaters, early layers and tremendous egg producers. **"Tecktonius Strain"** Buff Leghorns are vigorous, healthy, beautiful birds, and reproduce their marvelous "prize winning" and "laying" qualities with amazing accuracy and uniformity.

If you desire to get into the limelight as a fancy breeder—if you want to dominate in the market place—get into the game with the **"Tecktonius Strain"** the superb prize winning and heavy laying strain—and you will get both fame and money.

TECKTONIUS & REED BUFF LEGHORN FARM Route 7 RACINE, WIS.

THE TALK OF THE SHOW

RUDY'S PERFECTION WHITE WYANDOTTES

A display of 40 male birds and 20 females of uniform type and color attracted all visitors at the Chicago Coliseum show. Conservative breeding is what did it. Note the standard type of the cockerel shown here. Rudy has many like him to sell. They conform closely to the New Standard.

PENS NOW MATED

Send for mating list. Low prices on special matings will astonish you. Don't delay your request. Also get handsome illustrated catalogue telling all about Rudy's Perfection White Wyandottes how he raises them where he raises them and how he sells them. Address

GEO. H. RUDY - Route 15 - MATTOON, ILL.

Safety at the Heater

The drafts of the coal burning heater are automatically regulated from the temperature of the water, assuring a steady, even supply of hot water.

Safety in each Egg Chamber

Each 300-egg compartment has its own automatic regulator, governed by the air temperature in the egg chamber and controlling the flow of water into the compartment radiator.

A Candee 1200-egg size is shown. It has five automatic safeguards against overheating—one on the heater and one on each 300-egg compartment.

They are true safeguards because each compartment regulator only admits just the amount of heat needed and shuts out the surplus.

Any extra heat circulates harmlessly in the asbestos covered supply pipes under the sections.

Does Not Depend Upon the Operator

One adjustment of a compartment regulator does for a hatch. If the cellar gets cooler, the compartment regulator allows more hot water to flow in. If it gets warmer, less hot water is admitted from the supply.

Room and weather changes are automatically taken care of, night and day, without any attention from the operator. He is free to go about his regular work.

Nothing Complicated

The Candee principle is simplicity itself. The water supply temperature at the heater is automatically regulated—not by adding or drawing off any exact amount of water.

The compartment regulator is adjusted by turning a thumbscrew—the same as on small lamp machines.

The trays are not raised or lowered by hand. There are no auxiliary attachments, no alarms. It is an incubator that an inexperienced person can set up and operate successfully.

There is nothing experimental or theoretical. Every size is a proved success in the hands of customers.

This is the Year to Get Started

Begin with a 1200-egg Candee and add extra sections later.

Besides doing your own hatching, fill any spare space with your neighbors' eggs and earn cash from your Custom Hatching. Every section needs at least one such hatchery. You can also make a handsome profit by selling Candee hatched Baby Chicks.

You can set up your 1200 in a day, without expert help, and it can earn money from the start.

How to Make Money

Our catalogue tells of the successes scored by our customers in the different lines of poultry—the great duck ranches and the large and small poultry plants, country estates, etc.—what is actually done.

It is a 108-page catalogue with hundreds of pictures of plants from Florida to Maine, the Atlantic to the Pacific, and throughout Canada. It is free upon request. Better write to-day.

MORE THAN SIXTY REGULAR PRIZES

INCLUDING THE HIGHEST HONORS

Were Placed on Owen Farms Birds

In my own hands and in the hands of my customers at the LARGEST SHOWS ever held at N. Y. and BOSTON.

An OWEN FARM Bird won First, Second or Third in nearly every one of the twenty-five classes in which I competed,

And this victory was made in the BEST CLASSES that were ever assembled. Every visitor at New York and Boston this year freely stated that they were the best exhibits ever put together.

At Boston I showed only White Orpingtons. The **White Orpington Record** again reads **Six** of the possible **Ten Firsts** at **New York** and **Boston** placed on Birds Bred and Raised on **Owen Farms.**

OWEN FARMS

BUFF ORPINGTONS
WHITE ORPINGTONS
WHITE PLYMOUTH ROCKS
WHITE WYANDOTTES and
S. C. RHODE ISLAND REDS

Have demonstrated their merit in the **Hottest Competition** and met and defeated all comers. **Thousands of first prizes** have been **won** at the most **important shows** in the **United States** and **Canada** by birds sold by us or hatched from eggs laid by our **unequaled matings.**

You may win without these bloodlines, but you will find it practically impossible if your competitor meets you with Owen Farms Birds.

AS UTILITY BIRDS

These flocks each year have demonstrated their exceptional merit. Wonderful reports of high average egg yields come in from customers. One customer has reported 262 eggs laid in 290 consecutive days by a pullet bought of us, and many other reports are almost as good.

My flocks have perfect health, size, bone, substance and bodies with tremendous egg capacity. **Treat them well and they will do the rest.**

1914 MATINGS

Of all varieties are the best ever made on Owen Farms. My customers for **eggs for hatching** or **baby chicks** will receive remarkable value this year, as eggs and baby chicks have never been sold from birds of equal quality at prices approaching these I am making for 1914. Many orders are already booked and **early booking insures delivery at exact time you want them.**

Eggs from Best Matings in the World
All Varieties.
$10.00 for 15. $30.00 for 50.
$50.00 for 100.

Baby Chicks from these Matings
$1.50 each in lots of 20 or more at one time.

Eggs from Choice Matings
Better than most sold at higher prices.
All Varieties.
$5.00 for 15. $15.00 for 50.
$25.00 for 100.

Baby Chicks from these Matings
50c each in lots of 20 or more at one time.

Send for my new **Illustrated Catalogue** and **Mating List** and book your order now. Superb Show Birds to win the February Shows and Grand Breeding Birds mated to produce show or utility stock at absolutely fair prices. State your exact requirements, and if possible what you wish to invest, and receive my prompt quotation.

I want your order, and **Remember,** your **Absolute, Ultimate Satisfaction** means my **Permanent Success.**

HATCH BY ELECTRICITY

The Modern Way

Bigger Hatches — No Dirt — No Trouble
Stronger Chicks — No Smelly Lamps — or Worry

The "Lo-Glo" Electric Incubator

HAS COMPLETELY REVOLUTIONIZED HATCHING

ALL METAL — FIRE PROOF — INDESTRUCTIBLE

Electricity is the cleanest, most convenient, easiest and quickest to operate, and most economical power, light and heat, and for these reasons has been adopted in modern, up-to-date manufacturing plants. Electricity is the most scientific and exact method of hatching chicks, and in the **"LO-GLO" ELECTRIC INCUBATOR** is combined

Perfect Automatic Control of

HEAT - VENTILATION - MOISTURE

There is no guesswork, no watching, no worry, no lamps to trim and fill, and keep track of for fear they will run up and cook the eggs, or go out and chill the germs. Simply turn on the light switch, set the thermostat at 103 degrees, put in your eggs, and hatch the largest percentage of strongest chicks. The electricity automatically shuts off and comes on again to save expense.

Hatch in the Parlor, Dining Room, Kitchen, Bedroom

or anywhere an electric wire can be connected. There is positively no odor and **no interference with your fire insurance.** The **"LO-GLO"** is all metal—heavily galvanized iron inside and sheet steel outside, with asbestos interlining; enameled dark maroon. **Has legs or not, as you wish.**

COSTS NO MORE THAN OTHER STANDARD MACHINES

THE "LO-GLO" ELECTRIC HOVER

can be set anywhere you can carry an electric wire; **can't burn chicks; can't overheat; can't chill.** Always the right heat. **No smell** of kerosene to weaken the chicks; **no danger of fire; no lamps;** no trouble; economical. You can add as many as you like, to hover **40 chicks or 40,000.** It's a great point that the **"LO-GLO"** does not affect your insurance. **For indoors or out.** Our Free Booklet tells all about them.

Every Breeder

Should know all about hatching with electricity, with a **"Lo-Glo" Electric Incubator,** it's so far ahead of every other method in every way, so accurate, so dependable for high percentage hatching, and so little trouble.

Thousands Who Never Hatched Before Can Use the "LO-GLO"

Because it's so easily run; can be set anywhere in the house, and practically runs and manages itself. You can't make a serious mistake with it.

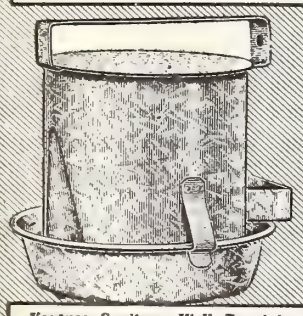
All You Need Is Connection With An Electric Wire

Every machine is shipped fully equipped, even with light bulbs, and all you have to do is screw in the connection from your own electric light or wire.

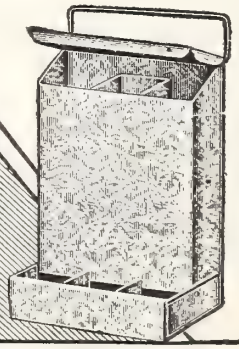
WRITE TODAY FOR OUR **FREE BOOK**

It's new, illustrated, gives full particulars and description of the "LO-GLO" INCUBATORS, Hovers and Hover Runs. Also prices, and letters from those who have used them. You will have greater success with a "LO-GLO." You need one. Now's the time to find out all about it. Write today.

STANDARD ELECTRIC INCUBATOR COMPANY, Office, 90 West Street, NEW YORK



Keep Your Birds Healthy— Save Money on Feed

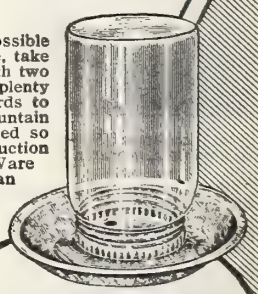


There are two big profit making features for you in Kentuco Poultry Ware. One is that you have the best possible protection for keeping poultry feed and water pure—the other is that the birds cannot waste their feed. It is the truest economy to equip your entire poultry yard with

KENTUCO Poultry Ware

Kentuco Two Piece Fountain
Cone top prevents birds from perching on it and polluting water in the pan.

Kentuco Sanitary Wall Fountain
Birds can not pollute water, yet always have a plentiful supply. Reservoir can be taken off and cleaned.



Kentuco Grit Box or Food Hopper
Birds can not waste food or pollute it.

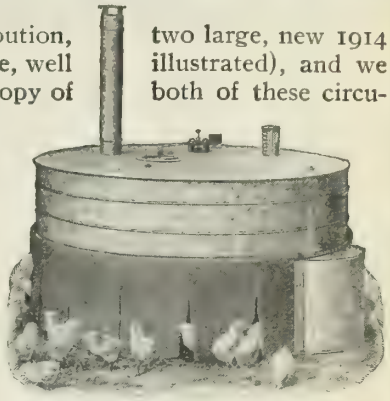
The water fountains are galvanized after they are made. There's no possible chance for rust. Every piece is easy to clean and keep clean. For instance, take the **Kentuco Sanitary Wall Fountain** illustrated here. It's made with two pieces. You can get into the reservoir with a brush to clean it. There's plenty of room all around the pan for many birds to drink at the same time. No other wall fountain is built like this. No other can be cleaned so easily. Equally valuable points of construction can be found in every piece of Kentuco Ware —yet Kentuco Ware does not cost more than the less worthy stuff now on the market.

Write at Once

for the big folder telling the money making facts about Kentuco Ware. Ask your dealer about Kentuco Poultry Ware. Insist upon having it. In writing, please mention your county as well as your city and state. Address

Kentucky Stamping Co.
104 N. 15th St.
Louisville, Kentucky

FREE



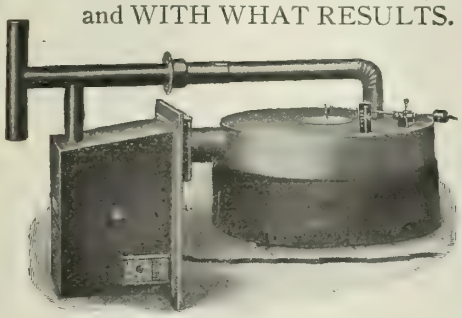
Kentuco Jar Fountain

The handiest fountain anyone could imagine. Screw the base on to any Mason jar. This base is made so it doesn't splash water when inverting it as others do.

To let you know more about Kentuco construction we will send you the base free if you will enclose 10c, stamps, to cover postage and packing.

"WHEN, WHERE AND HOW" TO BROOD YOUR CHICKS

FREE 1914 CIRCULARS: We have just published, for free distribution, two large, new 1914 illustrated circulars (each consisting of four pages, 11 by 18 inches in size, well illustrated), and we ask you, Reader, to write today—NOW, before you forget it—for a copy of both of these circulars. They will be mailed ***promptly on request*** to any address, postpaid.



Cyphers Portable Hover

Set it down Anywhere Indoors and you will have a Safe and Comfortable Place for the Little Chicks. "Movable" at a Moment's Notice without even turning down the Lamp Flame. No steps or Inclines that Chicks Must run up and down. Weighs 35 Pounds in use. Price, Complete, Safely Boxed, $8.50 free on cars at all our Places of Business, except Oakland and London. Oakland F. O. B. price, $9.50. Entirely Safe to order a sample from this advertisement.

THEY TELL WHEN, WHERE AND HOW:

In each circular numerous ***actual users*** of Cyphers Portable and Cyphers Adaptable Hovers tell ***in their own words*** "When, Where and How" they used these low-cost, standard devices in brooding hundreds, in fact thousands of chicks, in ***small lots*** and in ***large lots***—and WITH WHAT RESULTS. To these more or less detailed reports from "actual users" we have added ***timely suggestions and advice,*** making, all told, two of the most helpful pieces of free printed matter ever published by this company. Here are short EXTRACTS from a few of the sample reports:

Cyphers Adaptable Hover

Fire-proof, Wind-proof, Insurable, Self-regulating and Automatic in Ventilation. Best Device in World's Markets for Use in Home-made Brooder Cases, Colony Coops, Roosting Coops and Portable Houses. All Metal and will last Many Years. Price, Complete, Safely Boxed for Shipment, $8.50 free on board cars at all our Places of Business, except Oakland and London. Oakland F. O. B. Price, $9.50.

Burlington, Ill., July 21, 1913.

Cyphers Incubator Co., Buffalo, N. Y.—

I use Cyphers Adaptable Hovers in colony houses aud home-made brooder cases. I put about 50 chicks in each Hover and have raised a larger percentage to maturity than with hens. There are no lice to fight, no hens to pick and trample the chicks or lead them through wet grass and eat their food. The Adaptable Hover supplies an abundance of heat and fresh air at all times, is easy to attend to, is reliable and will last a lifetime if cared for properly. I do not hesitate to put my choicest S. C. Black Minorca chicks in the Adaptable. I wish every poultry raiser would buy one of these Hovers install it in a suitable place and try it out according to directions, before buying those tin-can, made-to-sell cheap brooders. They certainly would have more and better chicks in the fall,

B. F. ELLITHORPE.

Methuen, Mass., May 20, 1913.

Cyphers Incubator Co., Buffalo, N. Y.—

I bought one of your Self-regulating Portable Hovers to test its usefulness and I am very proud of it. It will please you to learn that I have now tested this Portable Hover during four weeks and I have not lost a single chick—not one. It does all you claim for it. Have never before found or heard of so easy a way to take care of little chicks. They are safer than with hens and much easier to look after. Have found your free printed matter of great help to me.

MRS. JOS. SEVIGNEY

Mt. Kisco, N. Y., July 15, 1913.

Cyphers Incubator Co., Buffalo, N. Y.—

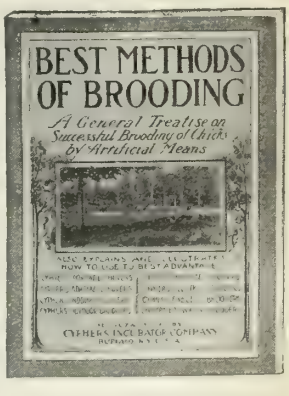
The Cyphers Portable Brooding Hover is all that you claim for it. I am very well satisfied with mine and several friends who also purchased these Hovers are just as well pleased. This season I hatched 400 chicks and kept each hatch about four weeks in the Portable Hover, after which they were transferred to colony houses. Have not lost a chick this season on account of any reason that could be ascribed to the Hover, while in other years my losses have run fully forty per cent. on account of poor brooding facilities. Had as high as 104 chicks under my Portable Hover at one time and they did not appear to be over-crowded. It is very roomy and burns less oil than any other brooder I ever used. Next spring I intend to use Portable Hovers exclusively.

S. W. BELLMER.

Beech Creek, Pa., June 23, 1913.

Cyphers Incubator Co., Buffalo, N. Y.—

It affords me much pleasure to give you our experience with the Cyphers Portable Hover, which we purchased last spring. We placed 186 chicks in this Hover and raised every single one. After the chicks were far enough along to take care of themselves we placed 20 Indian Runner Ducklings in this Hover to see how it would work and raised 19 of the finest ducks we ever had on the farm. The one duck that died was a weakling.



H. C. BERRY

Lebanon, Kansas, January 23, 1913.

Cyphers Incubator Co., Buffalo, N. Y.—

I find that your Self-regulating and Self-ventilating Adaptable Hover is a wonder when it comes to raising chicks in cold weather. Recently the thermometer here has registered as low as 22 degrees below zero, but the chicks are healthy and happy in the colony house in which we installed this Hover. Poultrymen who have seen this Adaptable Hover working have marvelled at its simplicity. I am sure that if all poultry raisers knew how easy it is to rear early chicks by this method they would obtain these Hovers and there would be a wonderful increase in their volume of business. I feed in the litter each morning, scraping it under well and that answers for all day. The youngsters put in their time alternating between scratching for the grains and getting under your simple, liceless, miteless foster mother whenever they need warmth.

W. H. WRIGHT.

Flanders Strain S. C. White Leghorns

VICTORIOUS AT CHICAGO

Just Look at These Winnings:

1st, 3rd, 4th and 5th Cock.
1st, 3rd and 4th Cockerel.
1st and 3rd Hen.
1st Old Pen.
1st Young Pen.
Special for Best Shaped Male.
Special for Best Colored Male.
$50 Silver Cup for Best Display running four times as many points as nearest competitor.
$10 Gold Special for Best Display.
Swiss Gold Watch for Best Exhibit.
And Sweepstakes.

Guess that's going some.

It has taken eight years to make that sensational cleaning at America's greatest show—and against what judges declared was the best class of S. C. White Leghorns ever exhibited this side of the Atlantic.

Eight Years Ago Robert Parmenter, then a student at Knox College, started with a carefully selected trio consisting of a cock and two pullets.

He Had Very Definite Ideas as to what constituted an ideal White Leghorn. He selected his foundation stock and then bred consistently toward his goal.

Parmenter Never Fooled Himself — he never came to a show with a second rate bird hoping to win just because it was his bird. He did the eliminating before he left home. We have today 500 birds that would almost win at Chicago—that would sweep everything before them at most shows. But Parmenter didn't take them to Chicago.

He Began to Win in 1908, and has been one of the most consistent winners every year since. Not a cleaning like this year—but one year he had first hen; another, first cock; again, first pen and cockerel, etc., and from these he has kept on breeding toward his goal.

And This Year showed the culmination—the splendid reward for his years of effort.

About a Year Ago Parmenter formed a connection with Walter E. Flanders, whose farm and herd of thoroughbred Holstein cattle are famous. This gave him a plant built to his heart's desire and range—250 acres of range. The best equipped and one of the largest plants in the world.

Because of The Fame of the Flanders farm **and to avoid confusion the name of the** strain was changed to "Flanders."

Now You Know the history of this strain, that, by the winnings at Chicago has, in effect, been proclaimed the leading strain of S. C. White Leghorns in America.

You Can Start where Parmenter left off—you can start with a bird bred from, or that is akin to those perfect ones that won so many honors—that showed such splendid consistency at Chicago.

The Cuts of Our Winners are not complete. Our special announcement and photographs will appear in March issue.

Hold Up Your Orders till you see our mating list and prices.

Meantime, if you want birds guaranteed to win in any company, write

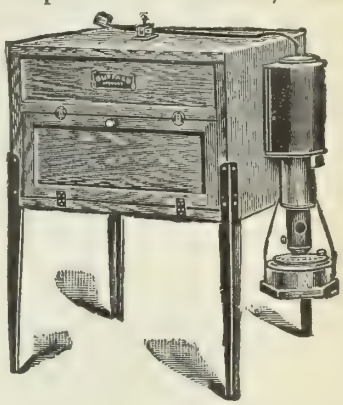
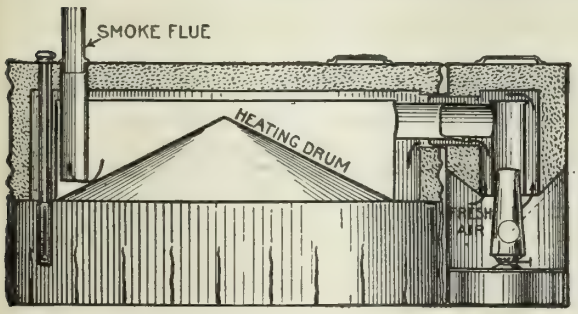
Buy Your Incubator of Chas. A. Cyphers



The Original and the Only "Cyphers" in the Incubator Business



The Cyphers who is "The Recognized Authority on Artificial Hatching"—The Cyphers who made Commercial Hatching possible—The Cyphers who discovered the Cyphers Principle—The Cyphers whose Incubators Circle the world—The Cyphers who will sell you his latest creation, the "Buffalo" at

HALF THE STANDARD PRICE

Every vital Principle that made my original Cyphers a world success is embodied in the "Buffalo". The same three-compartment heater; the diffusive ventilation; and sensitive and accurate regulation; combined with heavy insulation and durable construction. For Durability, Reliability and quality, the "Buffalo" is a wonder. "Buffalo" incubators insure you big hatches of strong chicks that live and are easily raised to make money for you. 80% of the output of "Buffalo" Incubators are sold to poultry raisers who must make a success of their work to live. 80% go to men who know; who have used my incubators in the past; who would use no others. **You can't make a better selection.**

THE BUFFALO HANDY HOVERS

Buffalo Handy Hover, 100 Chick Capacity

The Buffalo Handy Hovers are just what their name implies.

The Buffalo **"Handy"** is a floor level hover. You can set it any old place.

Sanitary—All galvanized Iron.

Heats Easily—Walls are heavily packed with good insulating material.

Uses But Little Oil—Flame burns with a white light, which indicates complete combustion.

Hottest at Outer Circle—Heat is brought lowest at that point.

Perfectly Ventilated—Heater is double with fresh air flue.

Handy—Just pick it up and set it aside to clean the floor:

Lamp flame can be seen without stooping. Lamp compartment or heater is attached to hover with "rolled-edge slip-joint," and is quickly detached for tending lamp.

Has all the good points of others, with thick walls and complete combustion added. Others are thinly insulated and are hard to heat. Other lamps burn a yellow flame, and waste oil. The Buffalo Handy Hover will heat 10 degrees hotter with same oil consumption; and in a room too cold to use any other hover.

Send Postal for fuller description.

CHAS. A. CYPHERS

President Buffalo Incubator Company

465 DEWITT STREET -:- -:- BUFFALO, NEW YORK

Moore's S. C. White Leghorns

Win at Greater Buffalo Show, Thanksgiving Week, 1913, Buffalo, N. Y., Cocks 1, 5; Hens 2, 3, 4; **Cockerels** 1, 4; Pullets 2, 5; Pens 1, 2; **$25 Special** for best **Display** and numerous other gold specials. **Eggs, Stock** and **Day-Old Chicks** for sale. Send for mating list. When writing mention American Poultry Journal.

MOORE BROS., **Moscow, Livingston Co., New York**

Harold Tompkins' Rhode Island Reds BOTH COMBS

Leading winners at the Annual Red Club Meeting at New Haven, Conn. this season. Also winners at Madison Square and Boston Shows, 1913-1914.

When you want the best breeding blood in stock or eggs write always to

HAROLD TOMPKINS **CONCORD, MASS.**

WHITE ROCKS and WHITE WYANDOTTES

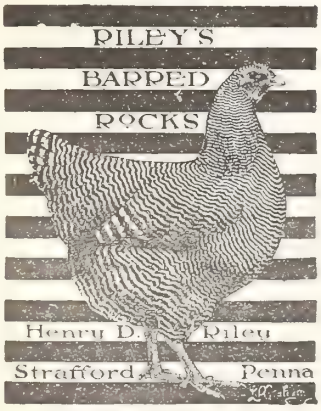
At the annual show and meeting of the National White Wyandotte Club, held at Cedar Rapids, Iowa, Jan. 12-17, in a class of 300 of the best White Wyandottes ever shown, we won 1st, 4th, 5th and 6th Cockerel, 3d and 4th Pen, 7th and 8th Cock, 4th and 5th Hen, 4th and 6th Pullet, second display cup 4 best Cockerels, cup best White Wyandotte in show, gold medal best Cockerel in show, medal best Cockerel in American classes. We also entered one pen White Rocks and won first. A few choice breeding birds for sale. Will sell eggs from best matings. Write for mating list.

ROCKANDOTTE FARM **Route 3** **JANESVILLE, WISCONSIN**

BLUE ORPINGTONS :: SILVER CAMPINES

At the Crystal Palace Show, London, England, November, 1913

I won on Blue Orpingtons, 3rd cock; 2nd and 3rd cockerel, and 2nd pullet. On Silver Campines, 3rd cockerel and 4th pullet.



At the Great Dairy Show, London, England, Held on October 21, 1913

I won on Blue Orpingtons first in a class of 34 entries, the biggest class ever known in this variety. Also 3rd and 5th. After my previous wins at Madison Square Garden, New York, and the Crystal Palace, London, in this variety, it's positive proof of the excellence of my strain. Remember, I am the originator of the Blue Orpingtons of today. It's easy to buy winners, but a different thing to breed them, unless you have the stock and the knowledge. I have got them ready right here for you and birds that will reproduce their like. I have birds now for sale that will win in the keenest competition in the world. Having attended personally the Madison Square Garden Show, New York, in 1911 and 1912, I know the exact American Requirements. Write me, stating your needs. I will answer by return mail and guarantee you every satisfaction. I can ship immediately on getting your order and guarantee live delivery in New York.

MAX DE BATHE, HARTLEY COURT, READING, ENGLAND

Vice President English Poultry Club. Member Advisory Committee Live Stock Department, Panama-Pacific Exposition, 1915

The Riley Trade Mark of Perfection.

Whenever you see the "Bars," think of Riley's Rocks, Barred of course.

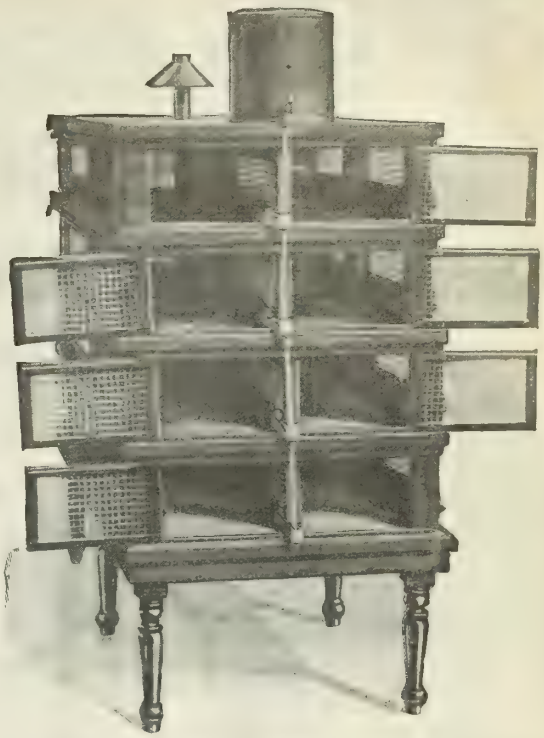
RILEY'S BARRED PLYMOUTH ROCKS

At the Great Boston Show

Where the entry was the largest, the quality the finest and the competition the greatest, my wonderful birds made the following remarkable winning.

1st, 3rd, 5th & 6th	Cockerel	Also 25 Special Prizes, including the best display for Exhibition birds and the best display to include Cockerel and Pullet Bred birds, the $100.00 Champion Challenge Cup for the best male,
1st, 4th & 5th	Hen	
1st & 3rd	Exhibition Pen	
3rd & 4th	Cock	
4th	Pullet	

special for the State Champion Cockerel, special for the best colored and best shaped male and for best shaped female, special for best headed female, special for three best Cockerels and three best Pullets and many others. These winnings tell the tale of the wonderful quality of my birds and show their ability to win in the largest and best shows in the country.



MY BREEDING YARDS FOR 1914

Will be the most wonderful that I have ever mated up on my farm, and as has been my policy in the past, will contain every winning bird that I have on my place, and the eggs from these birds will be offered to my customers.

Positively no birds are reserved for my own use. In buying eggs from me you get the very best that I have and "Riley is the man that is known as the one that can and will sell you eggs that will produce winners." Hundreds of my customers have been successful this season with show birds hatched from my eggs. My illustrated mating list will be ready to send out about Feb. 15th and every Barred Rock breeder who wants the best there is should have one. I have some remarkably fine breeding birds in cockerels and pullets, both matings for sale.

Henry D. Riley **Box B** **Strafford, Chester Co., Pa.**

LET OUR CUSTOMERS TELL THE WHOLE STORY

End View of Cyphers Company's Complete Four-Section, Eight-compartment Paradise Brooder, ready to receive chicks. Capacity, 400 to 600 Chicks in Eight Separate Lots of 50 to 75 each. Base Section (Two Compartments) Can be Bought and Used Separately. Later One or More Uppers Can be Added. Heated at all Times by one Blue-Flame Safety Oil Stove.

WHEN, Where and How to use the Cyphers Company, two, four, six or eight-compartment PARADISE BROODERS is told in the following ***recent sample reports*** from customers—also the ***results obtained*** by their use:

AS A "TENDER" FOR DAY-OLD CHICKS

Centerville, Pa., July 18, 1913.

Cyphers Incubator Co., Buffalo, N. Y.—

The one-section, two-compartment Paradise Brooder I bought of you this past spring has given me **practically perfect satisfaction.** I have run through it about seven hundred chicks **with scarcely any loss.** I find this Brooder especially valuable—in fact, the finest thing I know of as a "tender" for day-old chicks. With its handiness in feeding and cleaning it makes **the ideal indoor Brooder** for a person with limited space. I do not know of any other brooder that can be cared for with **one-half the ease** nor one in which **the chicks are so safe,** night and day.

RAY T. MAYNARD.

"IN THE COLDEST WEATHER LAST SPRING"

E. Chester, Neb., July 20, 1913.

Cyphers Incubator Co., Buffalo, N. Y.—

Last spring I purchased a Paradise Brooder of you and it was **even better than I expected.** It is a model as a chick and labor-saving device. It is **convenient and sanitary** and has many good features not found in the old-style brooders. You need not crawl around on your knees to clean it out or to feed the chicks, but you have them up before you **where you can see every one** and there are no dark corners for them to hide in. I ran my Paradise Brooder in a room 8 x 12 feet in the **coldest weather last spring** and had no trouble in keeping the heat up. Chicks of different ages can be brooded successfully at one time in the several compartments and I have kept them in this Brooder until they required no artificial heat.

JOHN G. KUHLMAN.

"CUT THE AMOUNT OF LABOR IN HALF"

La Grange, Ill., February 26, 1913.

Cyphers Incubator Co., Buffalo, N. Y.—

Last year I purchased one of your Paradise Brooders mainly because it "looked good to me"—my judgment being **based on ten years experience** as a commercial poultryman. To say that it has "made good" is stating it mildly, for it not only **cut the amount of labor in half,** but it was the means of enabling me to save more chicks than I ever have been able to do with the Brooders formerly used. I ran my early chicks for three weeks in the Paradise, **with the loss of only four chicks.** With the Paradise, complete, in four sections (eight compartments) I can care for four hundred chicks with the same amount of labor it requires to care for one Colony Brooder, holding fifty chicks.

GEO. M. GEAR.

"KEPT IT FULL TO OVER-FLOWING"

Canaseraga, N. Y., March 3, 1913.

Cyphers Incubator Co., Buffalo, N. Y.—

I can say that your Paradise Brooder is the **most complete labor-saving device** for poultry raisers that I have ever seen. And it saves the chicks, too! I certainly gave mine **some unfair tests.** I had as many as a hundred chicks in one compartment three or four times and I kept them there until they were at least a month old. I tried to get them out in outdoor brooders at three weeks of age, but on account of bad weather kept some in the Paradise **for six weeks, and longer.** I cannot tell you how many chicks my Paradise Brooder brooded during the season, I kept it full to over-flowing until well into July and **raised a larger per cent. than I ever did before.** Paid no attention to ages in the different compartments, but always put those of the same age together. I used it in one of my laying pens 12 x 27 feet.

(MISS) MARY E. LAMONT.

"PRACTICALLY ELIMINATED FORMER LOSSES"

Hope, Ind., February 24, 1913.

Cyphers Incubator Co., Buffalo, N. Y.—

After enjoying the benefits of your Paradise Brooders for two seasons I would not want to operate a large poultry plant, or even a small one, for that matter, **without the help of this valuable Brooder.** We place our chicks direct from the incubators into our Paradise Brooders and keep them there ten days, then they are moved into the brooding house proper. For this short time we find we can accommodate **from seventy-five to one hundred chicks in each compartment.** The death loss is very light indeed. By using this Brooder as a "chick nursery", as herein described, we have practically eliminated former losses in chicks up to ten days old.

U. R. FISHEL.

LARGE FREE CIRCULAR: The reports given above are ***merely extracts*** from longer and ***more complete*** reports sent to us by these customers and by many others. The reports IN FULL are published in a large four-page, 11 by 18-inch illustrated circular (1914 edition), entitled "When, Where and How to Use Paradise Brooders," a free copy of which will be mailed by us, postage paid, to any address, domestic or foreign, ON REQUEST. In the large, four-page circular our customers ***tell in their own words*** how they operate these incomparable indoor brooders and ***with what results.*** Please write today for your free copy, addressing our place of business nearest you.

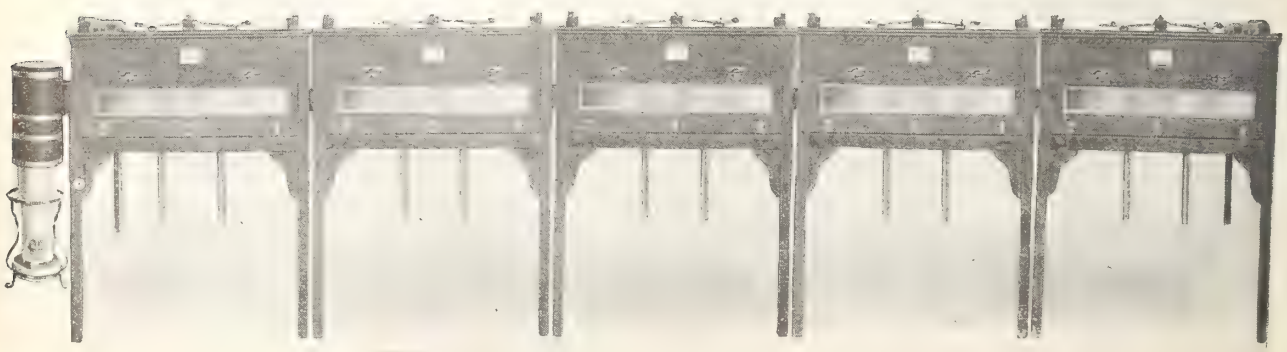
GROW AS YOU GROW

THE SCHWALGE

Sectional Hot Air Mammoth Incubator

has solved the puzzle



SCHWALGE'S HOT AIR MAMMOTH INCUBATOR is the only sectional machine on the market. This sectional feature permits you to start small and increase as your business requires—it will grow as you grow, and these additional sections can be easily added without disturbing the hatch. You simply join the pipes which extend from the end of each section—no tools required. Each machine is operated independently and the temperature is under independent control. No coal to shovel or ashes to handle.

This machine has been thoroughly tested and tried in the experimental stage and one of them hatched over 5,000 duck eggs last season.

Don't Waste Money!

YES, READER, a Standard Cyphers Incubator costs somewhat more; *at the start*, than does a cheaply built, wrongly-constructed, "bargain price" machine, but before the *first season's work* is ended, the genuine, latest improved "Cyphers" will have *more than made up* THE DIFFERENCE IN COST, and then you will own a strictly high-class, *dependable hatching machine* that will last ten to twenty years without a cent of repairs. If you are going to buy an incubator, buy a good one—*the best to be had.* If you decide that you would like to own a Cyphers, we strongly urge you to buy it *first*—not after you have "tried" some cheap machine and met with discouraging losses. When you buy one cheap incubator, discard that and buy another that is no better, you are *overpaying* the Cyphers price, *without* getting Cyphers *results* and Cyphers *satisfaction.*

Recent Sample Reports

"1,925 Chicks Out of a Possible 2,220"

New Brunswick, N. J., July 3, 1913.

Cyphers Incubator Co., Buffalo, N. Y.—

I have two Standard Cyphers Incubators, a No. 3 and a No. 1 machine, and have been getting **excellent results.** In all, we hatched 1,925 chicks out of a possible 2,220, as follows: NO. 3 MACHINE—from 372 fertile eggs, hatched 356 chicks; from 381 fertile eggs, hatched 364 chicks; from 341 fertile eggs, hatched 327 chicks; from 382 fertile eggs, hatched 366 chicks. NO. 1 MACHINE—from 132 fertile eggs, hatched 121 chicks; from 141 fertile eggs, hatched 133 chicks; from 132 fertile eggs, hatched 126 chicks; from 139 fertile eggs, hatched 132 chicks. **We are more than pleased with these results.** Your Paradise Brooders also have given us the best of satisfaction. We have successfully raised as many as one thousand chicks in two of your complete four-section Paradise Brooders, with a loss of comparatively few. All chicks were strong and vigorous.

O. POLINSKY,
Per S. Pollins, Mgr.

"2,530 Fertile Eggs, 2,456 Chicks."

R. F. D. No. 8, Shelton, Conn.
Sept. 2, 1913.

Cyphers Incubator Co., Buffalo, N. Y.—

Early in March I started my Standard Cyphers Incubators and finished late in June. From 2,530 fertile eggs, I got 2,456 good, strong chicks. **Several hatches were 100 per cent.** I have no trouble whatever with your incubators and like them better every time I start them up. Am sending you, under separate cover, a photograph of my last hatch for this season, 175 chicks from 175 fertile eggs.

ALFRED SHAW.

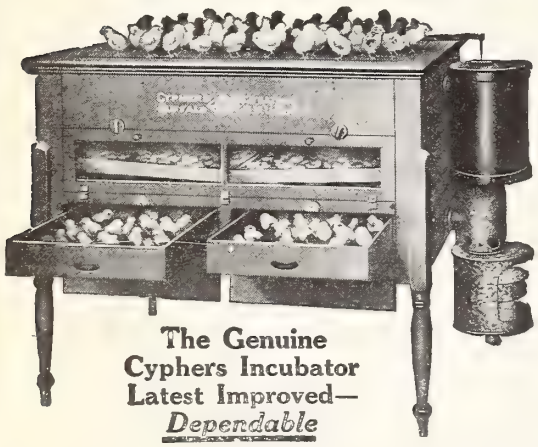
"Out of 144 Eggs I Got 130 Chicks"

Gaviota, Cal., April 20, 1913.

Cyphers Incubator Co., Buffalo, N. Y.—

I received my Standard Cyphers Incubator in March and am very much pleased with it. I thought that you would like to know that it is doing very good work. **Every egg that is fertile is hatched.** Out of 144 eggs I got 130 chicks. The results from your incubator are better than I ever expected, and I gladly recommend to any and everybody the Standard Cyphers Incubators. No one can make a machine that will hatch more chicks from the same number of eggs. I would not sell mine for any price if I could not get another Cyphers Incubator, and I cannot praise it enough. I am just starting to raise chickens and I would like to have some of your poultry books, and also your catalog.

M. ERRO.



1,293 Fertile Eggs—1,266 Chicks

Battle Creek, Mich., Mar. 11, 1913.

Cyphers Incubator Co., Buffalo, N. Y.—

The two Cyphers Incubators I purchased of you have **given excellent satisfaction. Here** are results: **first hatch,** 236 chicks from 244 fertile eggs; **second hatch,** 204 chicks from 204 fertile eggs; **third hatch,** 199 chicks from 205 fertile eggs; **fourth hatch,** 232 chicks from 242 fertile eggs; **fifth hatch,** 178 chicks from 178 fertile eggs; **sixth hatch,** 217 chicks from 220 fertile eggs. Naturally I am well pleased with the work these machines have done, and will recommend the Standard Cyphers to any one wanting the best machine for hatching **strong, healthy chicks**—and lots of them.

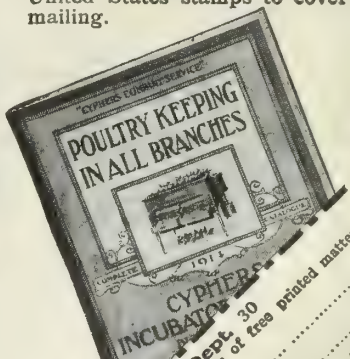
See list of twenty-four Bulletins herewith.

CYPHERS INCUBATOR CO.
Department 30, Buffalo, N. Y.



Don't Waste Time!

BEAR IN MIND that a merely "built-to-sell" incubator is a *losing proposition* right from the start. First to last, it will never give you the *right kind* or the *right number* of chicks. And it is no respecter of eggs—fertile or infertile—fancy sittings or eggs bought at a store *are all alike* to the "bargain machine." The cheap, flimsily-built, wrong-in-principle incubator starts working *against your interests* as soon as it starts doing anything at all. Remember, also, that it takes more than an "occasional" good hatch to prove that an incubator is *truly dependable*—that it is the hatching machine you *can afford to adopt* as the foundation of your *personal success* in any branch of the poultry business. We have received *hundreds upon hundreds* of reports like the samples published herewith.

$1,000 Prize Contest Book

This remarkable book contains reports—"fact-stories" from men and women chicken-raisers all over the country—who won success in spite of hard conditions, of uphill work—who met difficulties and downed them—who succeeded because they were earnest, careful, efficient. This book is a gold mine of valuable suggestions to any one interested in poultry growing or in egg-production. A free copy will be sent to any address, domestic or foreign, on receipt of 10c in United States stamps to cover cost of mailing.

What Our Customers Say

Won't "Trust Them Under Hens"

R. F. D. 1, Comstock, N. Y., July 28, 1913.

Cyphers Incubator Co., Buffalo, N. Y.—

I use and strongly advocate the Standard Cyphers Incubators and Brooders. Have used them three years now and they never yet have been beaten. Have tested them with other machines, but the Cyphers is the winner every time. In setting high-priced eggs I will not trust them under hens, or in other incubators, but put them in the Cyphers and raise the chicks in your brooders. Following are hatches made early the past spring in my Cyphers machines: from 150 untested eggs, 129 chicks; from 148 tested eggs, 144 chicks; from 133 tested eggs, 126 chicks. Of these 399 chicks, I raised 98 per cent, so you see they must have been extra strong. There was not a cripple among them. I am going to buy more machines of you next winter. I raise only White Wyandottes, and this past spring, at two and one-half months old, they weighed three pounds each on an average—some of them a little more.

SPRINGSIDE POULTRY FARM.
Harold C. Thomas, Proprietor.

"Have Never Had Less than 300 Chicks"

R. F. D. 3, San Diego, Cal., June 29, 1912.

Cyphers Incubator Co., Buffalo, N. Y.—

I have four Standard Cyphers Incubators—three 390-egg, and one 244-egg. My first hatch I set 440 eggs in a large machine, tested out 58 infertile eggs, leaving 382 and I hatched 338 fine, strong chicks. In another machine I set 440 eggs, and I hatched 372 chicks—a 93 per cent hatch. In the other machine I set 400 eggs, and hatched 306 chicks. In the 244-egg machine I set 260 eggs, and hatched 200 chicks. Those were all my early hatches and I had never run an incubator before. From the 390-egg machines I have never had less than 300 chicks. I think that the Cyphers Incubators are very easy to run and regulate. I thank you very much for the "Cyphers Company Service" Bulletins I have received. I find them a great help. MRS. R. H. POTE.

"Worth the Price and More"

R.F.D. 19, Elsie, Mich., July 21, 1913.

Cyphers Incubator Co., Buffalo, N.Y.—

Last March I purchased a 144-egg Standard Cyphers Incubator and a Style B Outdoor Brooder through your agent, Mr. E. A. Phillips. I set the incubator four times. The first hatch I secured 110 chicks from 128 fertile eggs; the second hatch, 118 chicks from 130 fertile eggs; the third hatch, 116 chicks from 124 fertile eggs, and the fourth hatch, 110 chicks from 129 fertile eggs. I have raised them partly in heated brooders, partly without artificial heat. But for all round use I much prefer the Cyphers Adaptable Hover, there being no danger of smothering and the temperature can be kept even. There is no question about Cyphers Incubators being worth the price and more. If the eggs are right, they are bound to hatch in the "Cyphers."

MRS. A. J. FIZZELL.

"Hatch was 92 Per Cent of Fertile Eggs, No Deaths!"

Las Vegas, Nevada, May 15, 1913.

Cyphers Incubator Co., Buffalo, N.Y.—

You may be interested in learning of my success this year with a No. 1 Cyphers Incubator and Cyphers All-Metal Adaptable Hover. The first hatch was 92 per cent of fertile eggs. I placed the 116 chicks in an Adaptable Hover and fed them by the deep litter method from the day they were taken from the incubator, supplying nothing but chick food at any time. Today they are six weeks old, and NO DEATHS. The second hatch gave me 89 per cent of chicks from all fertile eggs. These chicks (120) were raised in the same way as the first lot and today are three weeks old and only one death. What do you think of this?

W. S. PARK.

There is more real proof in a teaspoonful of experience than in a demijohn of talk.

If you have ever bred the GROVE strain of SINGLE COMB WHITE LEGHORNS, you know from experience that they represent just what we claim for them.

Upon receipt of 50 cents in stamps or coin, we will send you postpaid our new sixty-four page book on poultry, which explains in detail the method of raising, feeding and conditioning line bred poultry for successful results.

E. W. Grove, Jr.
Route 1, Clayton, Missouri

FISHEL'S
World's Best White
Wyandottes

have again demonstrated the fact that they are the dependable strain

At Cincinnati, O., Dec. 1-7, 1913

in the strongest show ever held in that city, they won

First, Second, Third and Fourth Cock.
First, Second and Fourth Hen.
First, Second, Third and Fourth Cockerel.
First, Second, Third and Fifth Pullet.
First Old Pen.
First, Second, Third and Fourth Young Pen.
Sweepstakes for Best Cock bird in the American Class.
Sweepstakes for Best Pen, Wyandotte Class
And Several Cups and Specials.

IS NOT THIS CONVINCING PROOF

Considered with the fact that for years they have been outclassing all rivals wherever shown, that Fishel's blood lines are right? Fishel's World's Best Strain is the product of a lifetime devoted to the perfecting of this most beautiful and profitable of all breeds of poultry,

THE WHITE WYANDOTTES.

Our stock is all grown on free range where every individual bird has room to roam over large fields and pick up nature's food, thus insuring a vigor never found in birds reared in enclosed pens. We grow these beautiful and profitable birds by the thousand and devote our entire time to this work. We can supply your every want, be it an individual show specimen to fill your weak place, or an entire show string, or a breeding pen, and our prices are very reasonable, quality and established blood lines considered.

Why experiment and face disappointment when for a very little money you can get the benefit of our years and years of careful line breeding that has for years and will for years to come produce the prize-winning birds.

Eggs for Hatching

We have 20 yards mated, all line bred, high class exhibition specimens, and will furnish eggs at $10 per setting of fifteen. Eggs from our utility birds, free range stock, $10 per 100, $5 per 50 and $3 per 15.

Guaranteed Results

That is what you pay for and that is what you receive with every $10. Just think of it:

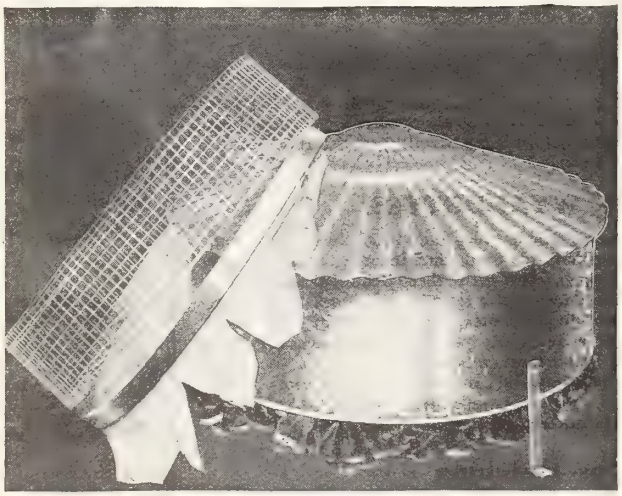
A TEN DOLLAR BILL

brings you this astonishing combination:

One Peerless All Metal Incubator

60 EGG CAPACITY, AND

One Simplex Perfection All Metal Feather Brooder



50 CHICK CAPACITY

PEERLESS 60 INCUBATOR

WHAT A PEERLESS INCUBATOR MEANS:

Every fertile egg hatched—less labor and fuel—no complicated parts—no wood to warp or decay—every part made of metal. Set on four iron legs eighteen inches from the floor. Self ventilated—no water to bother about—thermometer attached—**automatic lamp tripper**, regulating the heat and saving fuel. Price of Incubator, only $6.00.

Simplex Perfection Feather Brooder, showing Brooder with Curtain and Rat Guard Removed.

WHAT A SIMPLEX PERFECTION FEATHER BROODER MEANS:

Better and healthier chicks—no fire to light—body entirely of metal. Inside is nature's hover made of feathers, whereby the chicks retain their natural body heat—no danger of overheating—no danger of chill. Felt curtain and Iron fence to keep out rats. Feathers can be raised and lowered by simply turning a thumb screw. Positively nothing to get out of order.

Price of Brooder, only $5.00.

The Mighty Power of Oxygen

YES! THAT'S THE
Ajax Improved Oxygen Vitalizer

"That's the device that puts an END to "dead in the shell" chicks, and White Diarrhoea.
That's the device that brings you a chick from EVERY hatchable egg.
That's the device that will put a MILLION DOLLARS in the pockets of American Poultrymen THIS year if they USE it.

HOW?

Simply by supplying OXYGEN to the egg chamber of the incubator.
You have heard of coal miners being caught in a "gas pocket", and how they are brought to the surface nearer dead than alive from gas poisoning?
The ONE and ONLY thing that brings them back to LIFE is OXYGEN.
That's all there is to the "dead in the shell" chicks. They are killed by Carbon Dioxide Gas Poisoning.

SUPPLIES OXYGEN

The Ajax Improved Oxygen Vitalizer supplies OXYGEN to the egg chamber in just the right amount, and 99½% PURE, so that EVERY hatchable egg produces its CHICK, just as Nature intended.
Yes, I've USED it, and I KNOW. Don't take off a single hatch without it, BECAUSE it MORE than pays for itself EVERY TIME it is used."

DR. J. OREN BEARSTLER,
Pres. of the Pottsville, Pa. Poultry Asso.

These are Dr. Bearstler's words, NOT OURS. His name stands for integrity and ability with the poultry world. What he says OUGHT to make you THINK.

Tried, Tested and Proven

The Oxygen Vitalizer is a tried, tested and PROVEN NECESSITY. It's sold under an OFFICIALLY SIGNED money-back Guarantee that it WILL DO all that Dr. Bearstler says it WILL do. Your losses from "dead in the shell" chicks and White Diarrhoea will NEVER END until you USE the Oxygen Vitalizer. For **$4.00** it will be delivered to your door, complete, ready to use, all charges paid, with full instructions and our Money Back Guarantee.

Safe—Simple—Sure

There's nothing to get "out of order." Can be used on any incubator. Simple of operation. Attached in five minutes, lasts a life time, and EVERY TIME it's used it SAVES MORE than DOUBLE its cost.

The Oxygen Booklet

Our Oxygen Booklet—the most VALUABLE thing of its kind ever printed—is FREE. Please DO NOT ask for it UNLESS you own or operate an incubator. The supply is LIMITED. Send your order TODAY. The FIRST hatch will MORE than repay you.

"Lack of Oxygen Kills More Incubator Chicks in the Shell Than Any Other Cause. Unless Oxygen is Supplied the Chicks Will Die."

Your Money Back If It Fails

What It Has Done for Others—the Rayo Will Do for You

Am much pleased with your machine I purchased last spring as a time and labor saver. 96% of fertile eggs hatched out every time.—*Mrs. Bowles, St. Clairsville, Ohio.*

Your Rayo is simply O. K. I just pulled off a hatch that clipped the best record here. I want you to know that I am more than pleased. — *Oscar Dixon, Takamah, Nebr.*

It's a fine hatcher and easy to take care of. Worth twice what you ask. — *Grace Jones, Center Point, Iowa.*

I made two hatches in the Rayo. I like it better than any other incubator I ever saw. I have a..... .....incubator of 100-egg size which took four times the amount of oil and looking after. — *J. M. Hood, Albertville, Ala.*

I will say that the Rayo is the best I have ever seen. I made three hatchings with it and have over 400 chickens alive up to date. — *Ernest Johnson, Balaton, Minn.*

I count on more chicks with a Rayo—and I get them. I make money, too, on the oil I save—*Roy Best, Waverly, O.*

I am a mechanic and read how the Rayo was made. That's why I bought mine. Only lost one chick in my first hatch. That's going some, thanks to the Rayo. — *F. L. Lee, Indianapolis.*

Our Best Advertisement

The Thousands of Satisfied Users of RAYO Incubators Are Our Best Advertisement!

We've told you of the **superior** and **exclusive** features of Rayo construction over and over again. **We've** told you that because of this construction the Rayo boosts profits, slashes expense and cuts out the drudgery. **We've** told you, too, **why** the Rayo uses **only one gallon** of oil, where others use five. And **we've** told you that the Rayo is so nearly automatic that it practically **runs without attention,** while others require constant looking after.

Now let some of our **customers** tell you what **they** think of the Rayo Incubator. Read the notations from letters printed above, also the few letters below. They back up all our claims.

You can be sure of buying the right incubator if you get the

RAYO Incubator

Hundreds of experienced poultrymen will have no other and you can be safe in following their lead. The Rayo is especially recommended to beginners on account of its simplicity, reliability and certainty of producing best results. For instance, here's a beginner who

Won Big Hatching Contest With a RAYO

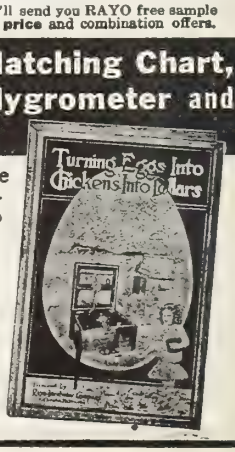
"The Rayo I bought of you won for me in the contest conducted by Successful Farming, which included practically all of the best makes. I had only 71 fertile eggs in the machine but I **got 71 nice, hearty chicks** and **raised 70** of them. It never varied 3 degrees, and only used seven quarts of oil for two hatches." — *Mrs. Wm. Weaver, R. F. D. 1, Baltimore, Ohio.*

An Expert Breeder Orders Another RAYO

"I just made my first hatch this season and hatched **every fertile egg** with the Rayo I got last season. Enclosed find an order for another machine, complete. Send it as soon as possible, for I am in need of it badly, and I would like to have the agency for same, as the machine I have has 'skinned' all." — *David Crowe, Breeder of S. C. Rhode Island Reds, Hanna City, Ill.*

Beats All His Neighbors' Hatches

"I am well pleased with the Rayo Incubator. I have no trouble from start to finish—no lamp to fill every morning, as with other machines. The Rayo heat is regulated in less than one hour, ready for the eggs, but with other makes of incubators I have been from 12 to 24 hours regulating the heat. This spring with the Rayo I hatched the highest percentage of fertile eggs in this neighborhood. Everyone who has seen my machine likes the looks of it at first sight."— *James P. Cool, Morris Plain, N. J.*

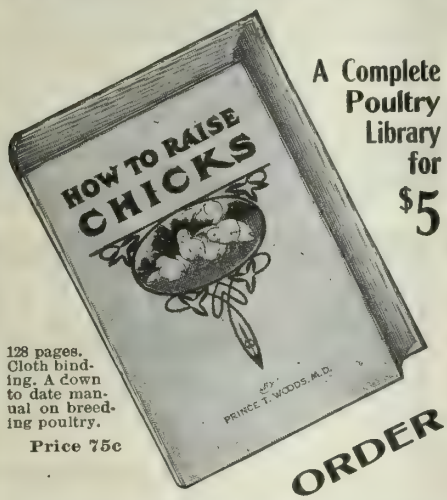


RAYO INCUBATOR COMPANY
1012 S. 13th Street OMAHA, NEBRASKA

A Better Incubator At A Lower Price

The "Rayo" requires only one filling to a hatch. Eggs and thermometer can be seen through double glass top, which raises for airing, cleaning and turning eggs. Lamp under egg chamber gives perfect radiation. Double wafer thermostat **acts on flame**—produces exact heat needed—**none thrown away.** Automatic ventilator. Strong redwood case, covered with steel, enameled like mahogany, makes it fireproof and handsome.

Write for Book No. 17 and we'll send you RAYO free sample hatching chart, **special low factory price** and combination offers.



FREE Hatching Chart, Hygrometer and Money-Making Book

Absolutely free, a sample of the Rayo Patent Hatching Chart. It tells what to do day by day during hatch. We also give you a $1.50 Hygrometer with each Rayo Incubator you purchase. **Book,** "Turning Eggs into Chickens Into Dollars" **FREE** and postpaid on request. This **FREE book** also tells all about Rayo Incubators and Brooders. Write for it and sample of only patent hatching chart in the world. Both are FREE. Get Book 17.

ROOFING

Corrugated STEEL ROOFING
1¼c Per Square Foot

Here is the chance of a lifetime to buy the best roofing in the world, at a mere fraction of its real value. Our enormous buying power enabled us to pick up for spot cash a stock of this brand new, perfect corrugated, "V" crimped and Standing Seam Roofing and Brick Siding, at a tremendous sacrifice—way under what it is actually worth. Immediate cash needed made possible this purchase. Just another chapter added to the long list of our famous bargain sales.

Corrugated STEEL ROOFING
Practically Indestructible

There is nothing else that compares with corrugated steel roofing for real protection. It makes a long, lasting roof. Is fire, rain, frost, wind, sun and lightning proof—warmer in winter—cooler in summer; and under ordinary circumstances does not leak, rot or warp, neither does it taint rain water. You can depend upon it that Corrugated Steel is the best material for roofing, siding and ceiling.

At 1¼c per square foot, we furnish our grade **CE-700** Steel Roofing, in sheets 22x24 inches x1¼ inches. This price is delivered on board cars at Chicago.

Galvanized STEEL ROOFING
2¾c Per Square Foot

Another big Steel Roofing Bargain. Several thousand squares of the very highest grade specially coated, corrugated, galvanized roofing and siding, made of specially prepared steel, of superior quality. Best roofing and will last indefinitely. We'll furnish it in suitable lengths for any purpose. Only a limited quantity on hand, so we urge you to send us your order immediately. Don't wait to write us again—order today, while this stock exists. Price only 2¾c per square foot, and will outlast 4 to 1. Just drop us a line, and tell us the size of your studding and general facts, and we will help you to select proper sheets. If you are not ready to use the material now, we will reserve it for future delivery, if you will give us a small deposit on account. This price of 2¾c per square foot is for our Lot **CE-800** corrugated material, and is delivered on board cars at Chicago. If you prefer some other style, we will furnish it. We have this same grade in "V" crimped, Standing Seam and Brick Siding. Samples on application.

Ready Roofing With Supplies
62c Per 108 Square Feet

We have several thousand squares of a superior quality Ready Roofing, which we are offering in our AJAX BRAND, 1-ply, at a price of 62c per square of 108 square feet, including necessary cement and caps to lay it. This is undoubtedly the most remarkable bargain ever offered in Ready Roofing. This famous brand is put up 3 or 4 pieces to a roll.

The price of 62c per square of 108 square feet is loaded on board cars at Chicago. We will, however, make a freight prepaid price on this same grade of roofing, including nails and necessary cement of 85c per roll of 108 square feet, and at this remarkably low price

We Pay the Freight

in full to any point east of Kansas and Nebraska and North of the Ohio River.

We will also furnish 2-ply, at 90c: 3-ply, at $1.05.

This Ajax Roofing is guaranteed to wear as long and give as good service as any Rubber Surface roofing on the market.

SEND FOR SPECIAL ROOFING CATALOG AND SAMPLES

Write at once for our Special Roofing Catalog. Free samples and full instructions for laying roofing.

Chicago House Wrecking Co.

Now operated under the name of Harris Bros. Company.

For 22 years the Chicago House Wrecking Company has been well and favorably known to the public. During all these years the four Harris Brothers have been the executive officers and owners, and for that reason have finally decided to operate under the name of HARRIS BROTHERS COMPANY.

There is no change in our business, except that in the future the four Harris Brothers will advertise and sell their goods heretofore advertised and sold under the name of Chicago House Wrecking Company, under the name of HARRIS BROTHERS COMPANY.

Our Guarantee

We guarantee absolute and complete satisfaction. There is no half way about this guarantee. Every purchase you make from us will be exactly as represented, and you will be satisfied in every way, or we will make such just amends as are within our power. We will take back any unsatisfactory article at our freight expense both ways and refund the purchase price. We refer as to our responsibility, to the publisher of this or any other publication, any bank or express company, and to the public at large.

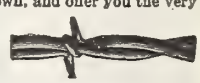
LUMBER

Complete houses and barns at an enormous saving. Never before in the history of Building Material has such an opportunity existed. We offer high grade, brand new complete lumber and building material needed for the construction of houses and barns at lower prices than ever before.

20,000,000 Ft. of New Lumber at Our Yards and Warehouses ready for Quick Delivery

We have upwards of twenty million feet of first class, brand new lumber for the construction of buildings of every kind. A wonderful stock of the very finest millwork, interior trim, etc.—enough material to construct cities and villages everywhere. It is our determination that 1914 will be the "Banner" year in the history of our Great Lumber and Millwork department, and the way we will accomplish this, is by quoting prices that undersell any possible competition. The proof of this is in our catalog and literature.

Write today and tell us what you contemplate improving or building during this Spring—talk to us plainly, and we promise you the advice straight from the shoulder. No other concern in the world is equipped such as we are. Right in our main yard and warehouses, at Chicago, we can load you out complete, at one time, and in one carload, every single article required for the improvement of the building you have in mind. No where else can you go and get such service.



Personal Service To You

You can get the kind of service that will give you absolute satisfaction—satisfaction from the word "go." If you have ideas of your own as to the kind of building that you want, we will give you the benefit of the Greatest Architectural Department in the world. Will furnish you with plans according to your own ideas, and will quote you a price on the material that will make you a wonderful saving. Dollars saved are dollars earned.

Write today for our *Book of Plans* and Latest *Catalog of Building Material* and Supplies.

FENCING

Brand New WIRE FENCING Less Than 1 cent Per Running Foot

Biggest of all offers of the past. We come to you with the most wonderful proposition ever known, and offer you the very best woven wire fencing at a fraction of its real value; lower in price than ever before, notwithstanding that all other merchants and manufacturers have advanced their prices on fencing. We are determined to simply get all the business in sight, and with that in view, we bought up from manufacturer's sales, 150 carloads of High Grade Woven Wire Hog, Cattle, Field and Poultry Fencing, Barb Wire and Nails, in quantities sufficient to take care of our regular customers and those who will quickly respond to this advertisement.

Barb Wire Less Than 2c Per Rod

Galvanized, two-point Barb-Wire, full weight (not the light kind) put up regular on spools, containing about 100 lbs. to a spool. It is made of No. 12½ wire, with good weight barbs. Price per 100 lbs. during this sale, **only $1.95. Order by Lot No. CE-600.** Several thousand spools of this Barb Wire, Painted, price per **100 lbs. $1.75. Order by Lot CE-500.** Also have in stock 1000 spools of light weight, new galvanized barb wire, put up 80 rods to the spool, made of No. 14 galvanized wire No. 15 barbs, barbs 5 inches apart; price per spool of **80 rods $1.45. Lot CE-400.** We also have several other bargains. You never had a chance like this before, and we advise that you send us your order today. Don't wait until the material is sold—we cannot hold this quotation open.

GALVANIZED HOG FENCING AT A MATERIAL REDUCTION IN PRICE

100,000 rods of 26 in. Galvanized Steel Spring Wire, 26 in. high, hog fence, put up in 10, 20, 40 and 60 rod rolls, made with 7 bars, spaced 12 in. apart, with No. 9 top and bottom wires, No. 11 intermediate wires, heavier than the regular fencing offered. Price per rod, during this sale, **only 15c. Order by Lot CE-900.** Same fencing spaced 6 in. apart, per rod during this sale, **only 21c. Order by Lot CE-1000.** Other heights at proportionately low prices.

High Grade Poultry Fencing 48 in. High PER ROD 27c

A complete stock of all heights of Woven Wire Fencing for every purpose. Do not delay your order, but send it in at once, even if you are not ready to have it shipped. We will hold the material ready to deliver when you want it.

Smooth Galvanized Wire $1.00 per 100 lbs.

Sold "as is," as near as possible one guage only to the coil. Our price of $1.00 per 100 lbs. is in lots of 1000 lbs. Where ordered in other quantities our price for gauges 9 to 12 per 100 lbs. **$1.25.** 16, 17, 18 gauges, **$1.45.**

SOME BIG BARGAINS IN NAILS

At last we have the bargain of bargains. 10,000 kegs of genuine galvanized wire nails; will outlast all other kinds. Put up in regular kegs. Price per keg of 100 lbs., as follows:—

10 pennyweight, $2.00 — **8 pennyweight, $2.10**
6 pennyweight, $2.15 — **Shingle Nails $3.00**

Also 5,000 kegs of Nails, mixed all kinds in a keg; good assortment, handy to have around your workshop. During this sale only, **per 100 lbs., $1.38. Order by Lot CE-1100.** We have other bargains in nails.

Also, in the same job, we have 5,000 kegs of Fence Staples, galvanized, **per keg, $2.00. Lot CE-1400.**

Crimped wire for reinforcing, cut to any desired length; **per 100 lbs., $2.00 Lot CE-1300.**

We have bargains in every line. Write us today for our Wire and Fence Catalog, but the best thing for you to do is to send your order now, and we will hold for shipping instructions.

ANNOUNCEMENT

THE
American Poultry Journal
YEAR BOOK
FOR 1914 READY SOON

Place your order for this book today—it's still bigger—better—more thorough than the 1913 Year Book which has been pronounced one of the greatest, most valuable books for poultrymen—everywhere.

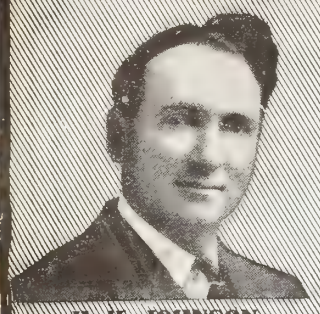
It will contain complete show reports for the season—many valuable articles—charts—poultryman's calendar—almanac—colored illustrations, etc. In short, it will be the boiled-down-to-the-minute cream of information you are looking for.

READ WHAT THEY SAY ABOUT THE 1913 EDITION

Alexander, N. Y., May 26, 1913.
American Poultry Journal.
Dear Mr. Bell: When you first made announcement of your intention to prepare and present to American poultrymen your first Year Book, those of us who have had occasion to know the real value that invariably attaches to anything coming from the Journal office, had some idea of the scope and value of your work. Having received my copy and given it careful examination, I feel it safe to say that nothing of like character has ever before been presented to our American poultrymen, and that no book of recent years possesses so much of usefulness to the poultry fraternity. Let me congratulate you upon the excellence of the book itself, and the scope and real merit of the whole work. Yours very sincerely, Reliable Poultry Specialty Co., by Eugene W. Harrington, Gen. Mgr.

Buffalo, N. Y., June 7, 1913.
American Poultry Journal.
Gentlemen: Your 1913 "Year Book" has been received and carefully inspected. We find it to be a most complete and comprehensive work. We realize full well the effort necessary to place such a volume in the field and sincerely trust it will be received in full worth by the breeders at large. We will be very glad to remember you editorially and will no doubt use the volume in our fall subscription campaigns. Very truly yours, National Barred Rock Journal, per Leo T. Robinson.

June 11, 1913.
Mr. J. W. Bell.
Dear Sir: I congratulate you upon the 1913 Year Book. It is a much better work than I expected, and is a credit to you and assistants. It is the result of a fine idea well expressed. I wonder why some publisher did not attempt it here before. It will be a great help to many breeders, and commendable every way. Very truly yours, Mrs. Denton Cole, 23 Dickson avenue, Binghamton, N. Y.



Quincy, Ill., May 31, 1913.
Editor American Poultry Journal.
Gentlemen: While we have just glanced through the book we hasten to congratulate you upon such a fine piece of work. It is nicely gotten up and full of good things and we feel sure that it will meet with a large demand. Very truly yours, Reliable Poultry Journal, D. E. Hale, Associate Editor.

West Newton, Pa., June 9, 1913.
American Poultry Journal.
Gentlemen: Received the Year Book of 1913, and must say that I'm more than pleased with the same. I think this a great book for amateurs. Yours truly. R. P. Schneider.

American Poultry Journal.
Gentlemen: The Year Book has reached me and more than fulfills my expectations. It is worth waiting for. Very truly yours, Edwin R. Fraser.

The 1914 Edition will be still better—order today. Paper Bound, 50c; Cloth Bound, $1.00

AMERICAN POULTRY JOURNAL PUB. CO., 542 S. DEARBORN ST., CHICAGO, ILL.

H. H. JOHNSON

I Am Making 100,000 Old Trustys this Year

I Have Fixed a Price That Will Sell Them Quick

Get My Price to You, Freight Prepaid

I WANT you to be one of my new customers this year. I know if you understand what I have got and will get my terms, you will be as anxious to get an Old Trusty as I am to send you one. I don't feel that the Johnsons or the Old Trusty exactly need an introduction to poultry raisers.

We have been here in Clay Center something over 19 years. We have made and sold half a million incubators, and I think you will agree that the business would not have grown this way if the Old Trusty wasn't right. We wouldn't have half a million satisfied customers if the Old Trusty didn't make poultry profits more surely, easily and steadily than any other hatcher. We wouldn't have all these customers if we didn't deal in the way people like.

From year to year the business has grown until I can see definitely ahead from 90,000 to 100,000 orders for 1914. I am ready for 100,000 to make sure of no disappointments.

M. M. JOHNSON

Start Now, Old Trusty Gets Big Hatches in Coldest Weather

I don't think I need to tell you much about the money-making possibilities of poultry. You have got that idea or you wouldn't be reading this paper. But you won't know and can't know, until we get closer together, that this money comes easier and quicker through using the Old Trusty Incubator and Brooder than by any other means. And you know, too, that the early hatches, that prove successful, are the most profitable hatches. A "fair weather hatcher" is a handicap. The Old Trusty hatches in any weather. You will understand this difference when you read the details of construction. The fact that three or four times the number of people in this business have selected Old Trustys than those using any other one make, is my best argument for asking you to get the Old Trusty book, compare the Old Trusty machine with any others you know, compare Old Trusty prices, and figure your own prospects accordingly. Then you'll feel safe in starting your hatches anytime, anywhere, with an Old Trusty.

FREE The A-B-C of Poultry Profits

Send Your Name for Johnson's 1914 Book

The book is 120 pages this year and it isn't entirely given over to extravagant talk and big claims about the Old Trusty business either. It's got the same kind of stuff in it that has helped half a million other folks enlarge their poultry operations and increase their profits.

Just send me your name and address anyway, so I can mail you a copy of this book, with the understanding that you are not to be hounded for an order.

Entirely metal covered. Triple walls including top and bottom. Asbestos lined.

Shipped ready to use. No extras to buy.

Mail a Postal for this Free Book

and learn how half a million people are making more poultry profits.

Get the low factory price, freight prepaid, based on making 100,000—$5.00 less than any one else could afford to ask.

90 Days' Trial—20 Year Guarantee

That's about all I need to give you here as an indication of Old Trusty quality. If it doesn't make good from the start, we trade back. If it doesn't last you through the years making good right along, it's up to me to make it right, or still trade back.

I make this 20 year guarantee because the Old Trustys put out over 10 years ago are still doing the business just as good as new. And right here I want to say that when you are convinced that the Old Trusty is the machine you want, you will get it when you want it. We ship the day your order is received—always within 24 hours, and generally within a few hours the Old Trusty is on its way. But the book explains it all. Just send your name on a postal and we will send it by return mail.

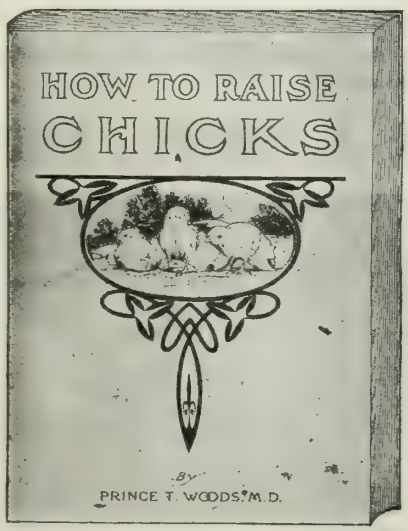
The Home That Was Built by Hens

A Practical Poultry Story, by "Uncle Cal" Stoddard

An unusual book, so different from any other now in poultry literature that it is in a class by itself.

BASED on actual facts and told in a breezy manner, it appeals immediately to the reader. It is not a story about poultry alone, but we are certain that the reader will absorb more practical information from the pages of this book than he could obtain from any text book published exclusively on poultry. The story tells the actual facts of how the poultry business presented unheardof opportunities for a foreman in a foundry, who after serving his company for many years had been discharged, and how in a very short time he built up a business that netted him a bigger salary than he ever earned before. The appendix in the book gives complete feeding formulas, symptoms of and remedies for poultry diseases. This part of the book alone is worth dollars to anyone keeping a few fowls.



Handsomely illustrated by Leonard K. Stahmer, son of Louis A. Stahmer, the well known poultry artist, makes it a book which everyone ought to have in the library.

AMERICAN POULTRY JOURNAL PUBLISHING COMPANY
542 SOUTH DEARBORN STREET -:- -:- CHICAGO, ILLINOIS

DR. PRINCE T. WOODS' NEW BOOK

How to Raise Chicks

INCLUDING REVISION OF "FACTS ABOUT WHITE DIARRHOEA"

A down-to-date manual on breeding poultry, getting hatchable eggs, incubation and brooding both natural and artificial, preparing chick foods, feeding chicks, how to raise chicks and how to avoid and prevent disease and losses. Told in plain language. Illustrated with reproductions from photographs and pen drawings. Tells how to make your own brooders and chick foods. Written by a man who knows how and how to teach others. 88 pages, 35 illustrations and 5½x8 inches in size. Printed on good paper. Well and durably bound in cloth.

A Book for Everybody Who Keeps Fowls or Grow Chickens Whether Beginner or Old Timer in the Field of Poultry Work

It has ten chapters: Chapter I—Selecting and Mating Breeding Stock. Chapter II—Food, Vegetable, Animal and Mineral. Chapter III—Fowls and Food. Chapter IV—Care and Management of Breeders. Chapter V—Eggs for Hatching. Chapter VI—Incubation, Natural and Artifical. Chapter VII—Brooding with Hens and with Brooders. Chapter VIII—Chick Foods and Feeding Chicks. Chapter IX—Growing Chicks. Chapter X—Facts About White Diarrhoea. What white diarrhoea is. Symptoms of disease. Causes. Is there more than one form? Has germ of specific disease been found? Infection. Prevention. Treatment. Formula for a simple remedy which has proved effective in many cases in many climates for four years.

Here is a book devoted to chick comfort and to more and better chicks, 75 cents per copy postpaid. Learn to save your chicks; that means more profit; Dr. Woods tells how; send for the book now, only 75 cents, cloth bound.

75c per copy, postpaid; with American Poultry Journal, one year, only $1.40. Canadian subscribers add 25c for postage, foreign 50c.

American Poultry Journal, 542 South Dearborn St., Chicago, Illinois

Their Superiority Again Proven

Not being satisfied with the winnings made by our White Plymouth Rocks at **22** of the **Largest Shows and 5 Exhibitions** we again have proven the superior quality of our fowls by winning

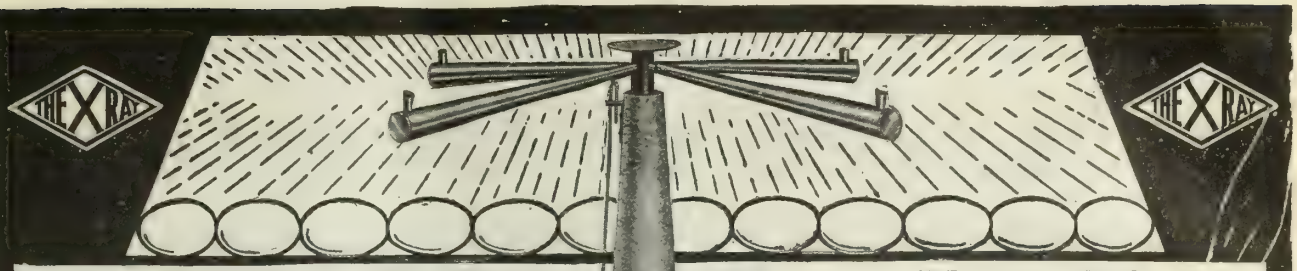
At Cincinnati, O.
Dec. 1913

Theo. Hewes and W. W. Zike, Judges

First, fourth and fifth cock, first, second, third, fourth and fifth hen, first, second, third and fourth cockerel, first, second, fourth and fifth pullet, first, second and third old pen, first, second and third young pen, grand special best display any and all varieties, silver cup for best two cocks, two cockerels, two pullets and two hens. Silver cup for best display Plymouth Rocks, grand championship cup for best Plymouth Rock cock, also hen, cockerel, pullet and pen.

This is surely proof that

U. R. Fishel's Wh. Plymouth Rocks



"The Best in the World"

are better this season than ever before. Why fool your time and money away on fowls that can not give you results, when you can buy line bred, farm reared, strong, vigorous fowls for the same price. **We have over eight thousand** to select from. **Selected breeders** and **Utility fowls** that will come as near producing two eggs a day as any fowl. **Send 25c** for 64 page book telling all about our 120-acre farm of White Plymouth Rocks. **Eggs, $10 per 15.** Sale stock eggs, $10 per 100. **Baby Chicks,** $25 per 100; $15 per 50; $8 per 25.

How the X-Ray Places Even Heat at Every Point of Egg Chamber

THE Central Heating Plant is the only sensible—the only *right* principle for the incubator. You know it. You can see it at a glance. Everybody knows it. "Why didn't they build incubators that way before?" Because the *right* construction—the simplest construction—is the last to be found. The X-Ray is the only incubator in the world with this construction—and it's patented.

Here you see how the lamp is placed—squarely underneath—right in the middle—where it can distribute heat *equally* to every corner alike.

How different from the lamp stuck on the end or side—putting too much heat close by, and not enough at the farther ends.

The X-Ray Incubator uses only one gallon of oil for the entire hatch. Others use five gallons.

X-Ray Automatic Trip Exactly Regulates the Flame

Another X-Ray feature that no others have, is the X-Ray Automatic Trip. It cuts down the flame at the burner when the egg-chamber gets too hot. It lets on more flame when more heat is needed. You don't worry over changes of temperature. *It is always the same in the X-Ray egg-chamber*, no matter what the air is outside—you don't have to watch it or bother with it at all. It runs itself—runs itself right—scientifically right—better than the guesswork of the most expert.

Saves 75c to $1.00 a Hatch—Many Dollars a Season!

Because the heating plant is in the middle, underneath—and because the X-Ray uses just the right heat—it is a big saver of fuel. It saves four times the quantity of oil others use.

The X-Ray uses only one gallon of oil for the entire hatch. Others use five to eight gallons. Think of the saving! Count up what that means. And it goes right on making this saving the lifetime of the incubator!

You put oil in the X-Ray just once for the hatch—when you start it. That's all. No work of refilling! Think of that, you who have filled tanks every day of a hatch—a daily job for 21 days.

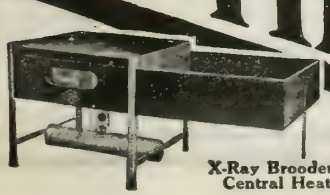
You Get More Chicks! You Get Healthier Chicks!

The X-Ray Brooder with lamp underneath is just as far ahead of old-fashioned, wrongly constructed brooders, as the X-Ray Incubator is ahead of other incubators.

Start your business right! If you are an old hand at poultry raising, fire out the old expensive, uncertain, unsatisfactory, greasy, work-making machines. You'll be dollars and dollars ahead. If you are just starting, start right! Start with the *scientific* poultry raising plant—the X-Ray, the Incubator and Brooder of today.

Send for Free X-Ray Book No. 10

It shows you the way. It answers every question. It puts you in touch with the methods the big successful poultry raisers are using all over the country.



X-RAY INCUBATORS AND BROODERS ARE SOLD DIRECT FROM THE FACTORY TO YOU. You pay no agents'—no middlemen's profits. You get the splendid X-Ray outfits—made of the best materials in the largest factory of its kind in the world—at the lowest price at which the best can be built. And we prepay the freight.

Send for the Book today. The coupon will do—a postal will do. The point is, send for it.

Starved or Overfed

In Which of These Two Classes Are Your Chickens?

SIMPLICITY POULTRY FEEDER

NOTE LOW PRICES

Baby chick size	$1.25
6-quart, coop size	2.00
10-quart size	2.50
20-quart size	3.00

Special discount on quantities

This feeder is guaranteed to be perfect in every way. It can't choke up when pieces of corn cob or straw gets mixed with the feed. It has no springs or mechanical parts to get out of order. It feeds your chicks and chickens clean, sweet food—whenever they want it—and just a little at a time; it makes them exercise or else starve. Properly constructed automatic feeders are recommended by all noted authorities on poultry, for they insure success to the amateur and lessen the work of the older breeders. Our guarantee is your proof that the Simplicity is properly constructed in all ways.

Statistics prove that at least 94 per cent of all poultrymen — professionals and amateurs alike can not feed chickens correctly by hand. Feeding by hand means too much or not enough food, one being as bad as the other. When you overfeed by hand the hen becomes a **drone**—and you have yet to know of a drone being a laying hen. Make a hen work for her food and she becomes a busy laying hen—in fact, ninety-nine out of a hundred times she lays earlier and more often. Have you ever figured how much your **waste** feed bill amounts to—the feed that is carried away by birds and mice—or else left to become filthy and foul, spreading disease.

NOTE LOW PRICES

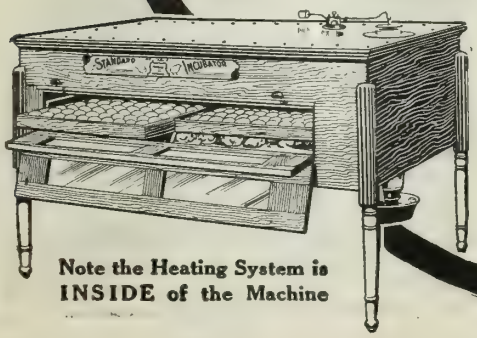
Don't Take A Chance—Get The Facts About Incubator Values

J. W. MYERS,
President of the World's Largest Incubator Factory

I PROMISE you a revelation in how to get the utmost in **quality** and **results** at the **least possible cost.** My 1914 prices on good old "Reliable" machines set a new standard of value in incubators. You should know the inside facts. Let me place them in your hands. For 32 years I have been building the best incubator that experience, knowledge, the finest materials and best workmanship can produce. Reliable Incubators are the choice of experienced poultrymen — the leaders in the industry. They are the machines of widest use not only in this country but in all parts of the world as well. They give results. This is not theory or advertising bunk, but facts. Every hatchable egg you lose in unknown machines means a loss to you of at least 50 cents. I say, buy the machine of known results. I can name an unheard of price on the **highest** grade incubators because I have the largest incubator and brooder factory in the world. Every department is equipped with the latest labor saving, cost reducing machinery.

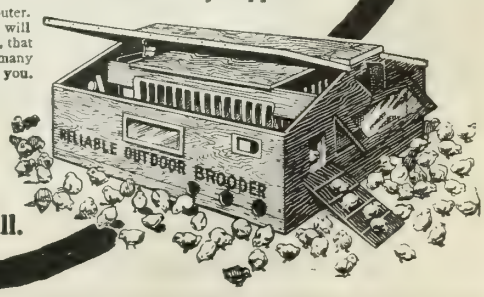
Let Me Name My 1914 Price on "Reliable"

If I were to name here my price on this famous incubator you would think I had cut quality. Such is not the case. It's the same good, old "Reliable," with every 1914 improvement—the best at any price. It's guaranteed to hatch every hatchable egg. Nothing but the finest materials used throughout. Perfectly seasoned, beautiful, everlasting Red Wood lumber, with top and bottom tongued and grooved. Has double heating system built right into the machine, yet you can get at it instantly. Has accurate regulator — tanks of cold rolled copper — metal chimney — government standard tested thermometer — all metal safety lamp and the whole machine is thoroughly insulated. Every "Reliable" is carefully tested before shipment. I know the kind of a machine you get. The "Reliable" simply can't help giving perfect satisfaction, no matter about the weather or the altitude. It gives results — that's what you want. Send for my 1914 prices today.



The Reliable Brooder

is built on the same thorough principle, and is of the same excellence of construction as the Reliable Incubator. Can be furnished with either Hot Air or Hot Water heating system. Built in four sizes — for 80, 120, 220 and 300 chicks. Roof is of heavily painted, galvanized iron.



Every machine backed by an iron-clad guarantee of money back if not perfect in every way. Don't buy until you have investigated the "Reliable" line, and have my 1914 prices.

If You Want Stock

The Reliable Poultry Farm offers you a thoroughly dependable source from which to secure either birds or settings of eggs. This is one of the largest and most noted pens in America and only pedigreed stock is bred. All varieties of chickens, ducks and geese. Birds or eggs successfully shipped anywhere. **We Also Handle All Manner of Poultry Supplies** including our Reliable Grain and Oat Sprouter. Send now for prices and descriptions. We will also send you free our new poultry catalog, that you will find interesting and to contain many suggestions that will prove profitable to you. Just a postal — send tonight.

Note the Heating System is INSIDE of the Machine

Reliable Incubator & Brooder Co.,

Box A-1, Quincy, Ill.

AFTER HATCHING COMES the REARING

Hall Colony Brooder with Hover Down

The modern poultry keeper cannot afford to trust to "luck" in rearing chicks. Upon the percentage raised depends his profit or loss. You need equipment that will increase the percentage of healthy, husky chicks raised to maturity and at the same time reduce the labor and time required in caring for them. Chicks thrive best in out-door brooders, but the little kerosene lamp brooders require too much time and attention to operate profitably if rearing chicks in any large numbers.

The HALL Coal Heated COLONY BROODER

Solves the chick-rearing problem in the most satisfactory manner for anyone who has two or three hundred chicks or more. It gives plenty of heat and room in the healthy, vitality-building environment of the outdoor range. There's no danger of fires, no kerosene fumes or odors, no lamps going out, no chilled chicks.

A Cheaper and Safer Fuel

The Hall Colony Brooder burns hard coal, which gives the cheapest and safest heat for chicks. It costs less than one-third as much as oil fuel for lamp brooders. The saving in time and labor in caring for chicks in the Hall Colony Brooder is another important consideration. The floor of the colony house also serves as the floor of the brooder. The hover lifts easily by a counter-balance weight—exposing the entire surface of floor for cleaning.

Raises More and Sturdier Chicks

You can care for 300 or more chicks in each Hall Colony Brooder with less labor than 50 or 100 chicks require in the old type brooder.

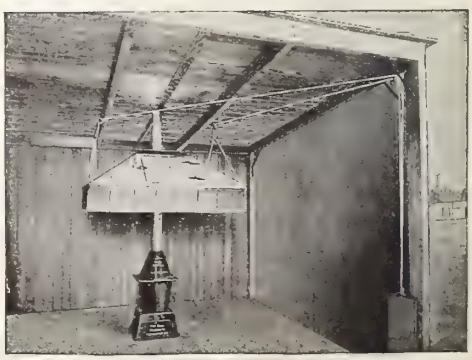
The Hall saves you time and money and rears a larger percentage of healthy, vigorous chicks. When chicks are old enough to no longer require a brooder, the hover is easily removed and chicks can roost in the house until maturity.

Read Mr. Dare's Letter

R. F. D. No. 6, Dover, Del., April 21, 1913.

THE HALL MAMMOTH INCUBATOR CO.,
Little Falls, N. Y.

Dear Sirs:—I received the one Hall Colony Brooder complete that I ordered from you on March 3rd, 1913. It is certainly a great brooder. For economy in labor and results I wouldn't give it in exchange for 20 lamp brooders of the so-called 100-chick capacity. I am brooding 300 chicks with mine and they are certainly a lively bunch.



Yours very truly, E. M. DARE.

Write for Free HALL Catalog

It illustrates and describes the Hall Coal Heated Colony Brooder fully. Also explains the Hall Mammoth Incubators and Sectional Pipe Brooder Systems. It will pay you well to investigate Hall equipment this season. Let us show you how to raise more chicks with less labor and expense. Write today for our free catalog.

"TYCOS" CUP won by the Belle City

Write Today for My Free Book "Hatching Facts"—It Means More Money to You

GET the whole story of these Championship hatches with the Belle City. Get the stories of thousands of men and women who are getting 100% perfect hatches. Satisfy yourself. This great book is free. Write for it today. No other incubator made—not even the highest priced—approaches this amazing record of my Belle City. I have the letters of owners to prove it. Many of these letters are printed in this book "Hatching Facts." They tell you how Belle City owners are making *the most money* in the Poultry business. You certainly want this book. A postal gets it.

When You Buy from Me You Get an Exact Duplicate of the Prize Winning

Eight Times World's Champion Belle City

I send you an exact duplicate of the hatching outfit used by Mrs. Alta Hamlyn of Indiana, who joins the Belle City's list of World's Champions with TWO 100% hatches scored by her Belle City Incubator in Successful Farming's 1913 contest. Mrs. Hamlyn says: "I can hatch every fertile egg in my Belle City and regard your honesty the keynote to success." I send you an exact duplicate of the Belle City Hatching Outfit used by William C. Schott of Iowa, who shares the 1913 honors. His 100% hatch, 140 chicks from 140 eggs, won another World's Championship for the Belle City in Successful Farming's 1913 Contest. Mr. Schott writes: "The Belle City is the best incubator made—has given much more satisfaction than high-priced machines." I send you an exact duplicate of the Belle City Outfit used by each of the other world's champions whose pictures appear above.

The Kind "Uncle Sam" Uses

I send you an exact duplicate of the Belle City machines chosen by the U. S. Government. The Department of the Interior is one of my customers. The department asked for prices on 300-egg sized machines, but ordered my 140-egg Belle City machines, because even "Uncle Sam" wants to have Championship hatches, too.

I send you an exact duplicate of the Belle City Hatching Outfits used by leading agricultural colleges.

I send you an exact duplicate of the Belle City Hatching Outfit that won the gold lined silver "Tycos" Cup and the Championship for Mrs. Osman.

A Postal Brings You the Big Portfolio, "Hatching Facts"

In addition to the facts about the 90 to 100 per cent hatches, it tells you how the Eight-Times World's Champion Belle City Hatching Outfit is made—illustrates it in actual colors. Shows that it has every thing worth having in and on an incubator, yet it is the lowest priced.

My Eight-Times World's Champion Bell City Incubator has Oakes double disc self-regulator, correct hot water heating system, copper tank and boiler, safety lamp, double walls and double door and dead air space all over, with roomy nursery and strong egg tray. Of course, the thermometer is right: I use the "Tycos." I also supply egg tester, Edw. Miller sun hinge burner, funnel, everything you need, including valuable instruction book on operating, hatching and care of chicks. The book tells you all about my world famous 140-Chick Belle City Brooder—the only double-walled, hot water, top heat brooder made, guaranteed to raise largest percentage of chicks every time—a fitting companion to my World's Championship Belle City Incubator.

Ask for My Low Price

I will show you why I can send you my Belle City Hatching Outfit at half or less than half what others cost you! You buy direct from me. You pay no agents' or dealers' profits. I have prepared to build fifty thousand Belle City outfits to supply the demand for this season. This big volume enables me to cut my profit down lower than anybody else can afford to take—and I prepay the freight to all points east of the Rockies and allow it that far to points beyond.

Don't turn this page without either writing to me or else tearing out this advertisement as a reminder. Whether you order or not, you get all my valuable World's Championship "Hatching Facts" absolutely free! But be sure to write to me today. Just say, "Send World's Championship 'Hatching Facts.'" Address Jim Rohan, President.

Special Best Display
Special Best Colored Male
Special Best Colored Female
Special Best Shaped Male

This record of 4 firsts at both of America's Premier shows, in competition with the very best Orpingtons from Canada, England and America, with birds bred and reared on our farm, has never been equalled by any breeder of White Orpingtons in the world, thus proving beyond a doubt that **Aldrich Strain White Orpingtons** cannot be excelled, so that if you advertise the Aldrich Strain your success is assured, as the superiority of the Aldrich Strain is now acknowledged by all.

That you may see our customers win prizes as well as ourselves, we call attention to a few shows where our customers have won between July and Dec., 1913:

Allentown	Atlanta	Cleveland	Fulton, Ky. Akron, O. Battle Creek
Cincinnati	St. Louis	Richmond	Winston-Salem, N. C. Jackson, Miss.
Little Rock	Springfield	Indianapolis	Forrest City, Ark. Meriden, Miss.
Jersey City	Roanoke	Plainfield	Hobart, Okla. Augusta, Georgia
Albany	Reading	Grand Forks	McAllister Kingston, Mass.
Sioux Falls	Davenport	Marion, Ind.	Vancouver Guelph Winnipeg
Lancaster	Canton	Hamilton	Brandon, Canada

We have now mated up the finest pens of White Orpingtons ever mated in the world, and eggs from these pens are $5 and $15 per setting, fertility guaranteed. Remember these pens contain **every first prize male bird at both Chicago and New York shows this season,** and eggs of this quality were never before offered at such reasonable prices. Mating list now ready, and would advise early bookings if you desire eggs at at a certain date.

The Revolution Parcel Post Will Bring

The Great Fundamental Idea of the New Twentieth Century Distribution System Is That the Producer Must Reach the Consumer Direct.

H. H. Stoddard, Riviera, Tex.

"IT is the first step that costs," saith the proverb. The establishment of parcel post, after the express companies had defeated it for many weary years, was a first step, and a fateful step, for it will lead to other steps culminating in a business revolution amazing in extent.

This great revolution will largely consist in abolishing the costly drummer, and much of the costly advertising, the bad debts and delivery wagons of the retail store, and to a considerable extent the retail store itself, along with the wholesale dealer and the commission houses. "Utopian?" Not one bit. You just wait. The air is full of the movement.

As soon as parcel post was fairly started, its success was wonderful, despite the difficulties inevitable in grafting a new, huge and complex department on an old institution, running in well worn ruts. The efficient way the new business was managed, and the unbounded satisfaction of the public, led to the late enlargement of the service, but even this is but a drop in the bucket.

That the parcel post will be extended in time, so as to take packages to the weight of one hundred pounds or so admits of no doubt. Very likely the limit will remain for a long time at the weight that one man of average strength on a rural route can conveniently lift. The successive enlargements of permissible weight, accompanied by reductions in postage, will start a wonderful train of consequences.

How slow the world moves! People knew just about nothing in 1850, and now look at the improvements! But changes have only begun. The greatest revolution in business and society is yet to come. The factors that will work together to produce this revolution are: Agitation and legislation regarding high cost of living. Example set by mail order houses. Parcel post. Good roads movement. Manual training in schools. Proper experiments at state stations. Non-adulteration and correct weight laws.

The presidential campaign resulting in Wilson's election, the defeat of one great party and the elevation to power of another great party was largely waged on the tariff issue supposed to be intimately related to the high cost of living. Lowering of duties will have some effect, but not, however, as much as the supporters of Wilson hoped. The whole structure of the old system of getting products to the consumer will have to be radically changed before cost of living is lowered perceptibly. Not only will production be increased, in the near future, by the training school which will supercede much of the atrocious curriculum concerning which of late there has been so much dissatisfaction; but the really valuable experiments at the state stations, demanded and sure to come, will also assist production.

Then when the things produced reach the "ultimate consumer" in the new way, transportation and distribution will for the first time properly supplement production.

Bless us all! The old round about way of reaching the consumer is so fearfully awkward, costly and unscientific, that in a great many cases the producer now gets only one fourth or one third of the price the consumer has to pay. Transportation charges are not the principal trouble either. In the main they swell prices very slightly, comparatively. It is the pay of so many parties standing between producer and consumer that makes the high prices. If every part of the present machinery for reaching the consumer was no more in fault than the railroad charges, prices would never have soared to the skies.

The great fundamental idea of the new Twentieth Century Distribution System is that the producer must reach the consumer direct.

The utility poultryman is vitally interested in every movement that will bring the buyers of his eggs into more direct touch with him; when parcel post and the abolition of the middleman are fully developed. Live fowls, not pairs or trios merely, for breeding purposes, but good sized cratefuls for the food market, will be parcel posted. You can send a horse by mail in England. The good roads movement will assist. Uncle Sam won't grant a rural route, bye and bye, unless every foot of the way is a fine automobile road.

Before parcel post was established in this country, it was not economy for so many thousand miles on rural routes, carrying the light weight of a few letters and newspapers. A few small parcels could just as well be carried too. Everybody sees this plainly enough. Now, by the same token, the carrier can just as well drive two horses where he now drives one, and take along larger parcels and more of them, till the automobile crowds horses out. Manufacturers had better be studying up auto vans for rural routes, some to carry two-horse loads, and some to carry the equal of loads for four or more horses. Such vans have already been adopted in some cases for suburban mail routes, the numerous parcels having overloaded the carrier who was afoot.

Groceries should not go to the farmer, or to the city customer either, except to a limited extent, in a retailer's delivery wagon; but in a smart U. S. carrier's cart or van, having the right of way over every thing but the fire engine.

The P. O. in a small city ought to be as big a building as the department stores are now in large cities, and the inside workings of the two should show resemblance as far as the numerous packages are concerned; but instead of customers being in evidence the crowd will consist of clerks sorting for delivery to customers, who, both in city and country, are at their homes, and not obliged to leave their work to go to either the post office or the store. Sakes alive, how posterity will laugh at the bungling methods of the first part of this century, as we laugh at the painful dreary, time-taking methods of the beginning of the last century, when even so necessary a thing as fire was procured laboriously by flint, steel and tinder.

"But the retail stores being crippled, oh, how the country towns will languish!" say some people. Well, let them lan-

guish if they are in the way of progress. Just as the hand looms had to give way to power looms, and the sickle was kept for the museum, when the cradle and later the binder were invented; so every new step of civilization raises "Ole Nick" with something and somebody. That has always been the way and always will be. For one good thing the grocery egg biz, that reproach of modern life, will have to step down and out, and there is one consolation. Eggs will go by mail direct from producer to consumer.

But the country town will soon be left. Its character will be changed somewhat. The dentist's office will be there, the doctor's and lawyer's office and the railroad station, the school buildings with work shops and large farm attached for vegetables, fruit, dairy and poultry, the livery stable, and especially, the large garage and auto repair shops, and certain other things that parcel post will permit or actually stimulate.

The character of the town will change for the better. It

QUALITY KING
1st PRIZE COCKEREL, MADISON SQUARE GARDEN, DECEMBER 1911
OWNED BY ALDRICH POULTRY FARM, COLUMBUS, OHIO

will be more of a social center than now, instead of being a retail business center. The good roads which the enlarged rural delivery will cause to be built, and the universal use of automobiles will make farmers' families resort to the hall for lectures, movies, and concerts, in the small town as a regular habit. Children will begin to be really educated.

The four great things for which we spend money have been called "food and raiment, house and fire." Our food and clothing will be bought and delivered almost entirely by the new system, and our fuel, the liquid part of it also; but our houses involving the lumber trade, will be exempt from its influence, being left in the drayman's hands, such articles as wall paper, paint, and other minor things will, however, be included.

To expect the old order to go and the new to come immediately would be unreasonable. It will be a growth. But ten or fifteen years or so will tell the story. The change will come not by law (or only in part by law)—it will come by custom. Doing business by hired clerks at the retail store and sending out so many delivery wagons is too costly, that's what's the matter. Shipping direct saves labor.

Nothing can stop the new method. And if there is any one article, among the millions of articles civilization has made a necessity to man, woman and child, rich or poor, everybody being a consumer—it is eggs, and in the distribution of this article it is more important that producer shall ship directly to consumer than in case of any other article of universal use that can be named; because it is the only important sort of goods where looks give no clue to quality, and, on top of that, freshness is particularly desirable and deterioration rapid. The proper rules of the post office for parcel posting eggs, and the proper sort of case or box, will both have to come, for the public will demand same, or in fact, is already doing so.

In forecasting the approach of the new era, the inevitability of the best way, i. e., the labor saving way, should be recognized. The line of least resistance, the line of least cost, the "parsimony of effort" must be followed, and in the case under consideration is involved the sure decline and ultimately, almost the complete extinction of the whole tribe of middlemen, including drummers, wholesalers and retailers.

Just look at the war that has been waged for over thirty years by the country store, the country press, and the small city press, against the big mail order houses? What does it amount to? The mail order business grows by leaps and bounds simply because it is the most economical. You can't stop such a thing any more than you can stop the use of a machine that does away with hand labor. The mail order method will live, but it will be modified. Just as even that stupendous power, the press, cannot withstand the natural laws of business in the mail order instance, any more than it can annul the law of gravitation; so it will be powerless to stop posting direct from manufacturer to consumer, this being a great improvement over the mail order business as hitherto conducted.

In passing, would say that I care not a brass farthing for the present mail order firms except for the lesson they teach. Just as I care not for the rascally promotors of Texas land companies, except, since they are selling land, I want to have poultrymen (careful meanwhile about not getting cheated) come here, and make a co-operative association large enough to enable me to buy my supplies cheaper. The present mail order house is a hint merely. It will be compelled to undergo changes, because it now buys much of its stuff from the manufacturer. "Direct from the manufacturer to the consumer" must be the watchword, and of course this means also, direct from the farmer and the poultryman, dairyman and the raiser of fruit and vegetables, to the consumer.

The inspection by agent of government, can be carried out cheaply and effectually in securing unadulterated articles and honest weights, by having the officer stationed all the time at the big factory, right at the fountain head, before goods are parcel posted to consumers.

When transportation was new and raw, and production equally so, the elimination of the middle man would have been impossible. His coming was by degrees, and slow and stealthy. But now transportation has become almost perfected, scientific production is coming fast, and the fateful advent of the parcel post shows just what is going to happen to the middleman. The commission dealer, the wholesaler, and the retailer, must all go. The handwriting is on the wall.

The mail order houses have had a tremendous growth, simply because they could afford low prices. Sales and deliveries could be made by their method at less expense than the retail stores could possibly make them. They gave the example. A striking example, made on a scale sufficiently large to be impressive, and carried on for a sufficient time to be exceedingly instructive. It has taught beyond the possibility of doubt, that the slogan of the future sounded by the parcel post—"Sell direct to the consumer"—means manifest destiny.

A new institution will probably start up. I mean that a building full of samples of all sorts of non-perishable merchandise, with price labels attached, will be established at every county seat or sizeable country town in the land, by manufacturers, to facilitate parcel posting. The custodian, or curator, of what will be really a sort of museum, will have enough time on his hands to carry on what little retailing experience will show may be absolutely necessary.

* * * * * * * * *

'Tis said that "kind words will never die," but the vitality of humbugs often seems to exceed that of kind words or of anything good or sensible.

About sixty-five years ago phrenology had a great run, and the itinerant lecturer would call upon strangers in the audience to come forward to have him "feel their bumps" and describe

their characters. Bumps, big and little, were a matter of common conversation. "Ever had your head examined?" one person asked. "Never since I went to school," was the reply.

Now comes one Mr. Hooligan, who for a fee, or the price of his book, will tell you how to examine the bumps on a pullet's

Prize White Wyandotte cockerel at Indianapolis, 1913. Bred and owned by F. E. Skinner, Sandwich, Ill.

head and find out whether she will make a good layer or not! Great Jumping Jehosaphat!!!

One poultry paper probably with a view to a page or so of advertising bye and bye, has actually given this preposterous fake, a civil, lengthy, and half way commendatory notice in its columns! With a little idle curiosity I am waiting to see whether the rest of the poultry press will be enticed by the scent of the same advertising bait. Trappers use putrid meat for bait for coyotes. Some of the poultry papers would contract with Satan if he would pay well.

Try to teach a valuable principle or method; and only a select few will listen. Trot out a fake that is new, and the crowd will pay you a dollar apiece. If some chap will advertise, skillfully, a book which proclaims a great toenail discovery, he will make money faster than his honest neighbors:

"Cut the toenails of your wee chicks close off. This will keep them all their lives from scratching as much as they would otherwise. Scratching uses up strength that ought to go to the making of eggs. Your pullets will lay wonderfully, and you can send them, for competition to Storrs, Mountain Grove, New Zealand, Australia, or anywhere with full confidence."

Now once get the last paragraph by itself, started in some farm paper, and it will go the rounds as helpful advice. "Impossible that anybody with sense enough to hold a desk in a publishing office at all, should seriously reprint such balderdash," you may say. But stuff equally preposterous has been quoted again and again regarding poultry.

There has been pro bono publico, a museum called the "Chamber of Horrors," showing by pictures, and also models in wax, the ravages of tuberculosis; this to incite people to fight the great white plague. Now if another museum should be desired, to be called the "Chamber of Absurdities" just collect all the damphool statements regarding poultry, the "systems" only a dollar for the book, and the "cures," from horseradish to turpentine and electricity, and add all the secrets on sale, and the nostrums to "make hens lay," and the mixtures prescribed by learned men to compel them to "balance" their rations, nature having forgot to enable them to know what to eat, when she gave instinct to the wild birds regarding this matter. Add now, all the cranky notions, ridiculous conceits, "discoveries" and whimsies regarding poultry, and your Chamber of Absurdities will have to be larger than Madison Square Garden.

The horseflesh hoax was the earliest poultry hoax I ever knew. The papers seized on it with avidity. It was to the effect that one, M. de Sorra, located in the suburbs of Paris, kept some thousands of hens, feeding them on nothing whatever but horseflesh. For some reason or other this yarn seemed to charm the paragrapher. Perhaps as thousands of hens on the premises of one owner was a thing he nor his readers had never seen or heard of, the picture in his imagination, of such a wondrous flock, was quite exciting. There was not then, and never had been, a poultry farm in England or America, and many eyes were turned to France and M. de Sorra!

Finally a party in England, I forget who, went to Paris on purpose to sift the matter, and reported that there was no M. de Sorra and no big flock of poultry there, and none such had ever been heard of. His statement had at first a limited circulation, and the old M. de Sorra gag kept going the rounds for twenty years after its refutation was first published.

The next fake was as follows: Mr. Greyelin started a big enterprise in England in the late sixties and formed a joint stock company to push it, and wrote a book about it, American edition dated 1867. The scheme was to keep the fowls very closely confined in houses made largely of glass, with hot house plants and small trees growing in every other apartment for shade.

His enterprise failed before it was fairly established, but his book left one remarkable legacy to the paragrapher in the shape of a table of figures which was set before the public over and over for full forty years. It seemed that it would never cease. The table said that every hen was endowed with six hundred egg germs, no more and no less, and would form and lay a specified number of eggs the first year, so many the next year, so many the next, and so on, till the six hundred were all used up. How any sane editor could print such a preposterous statement I never could understand when it is a matter of common observation that, ages being the same, some hens lay more than others.

But anyhow, the old chestnut kept going the rounds till some

A prize winning White Wyandotte male as bred by A. J. Savacool, Box 6, Maud P. O., Cornwells, Bucks County, Pennsylvania.

two years ago, or such a matter, Prof. Pearl of the Maine Station, as told in this magazine a while ago, gave it a deathblow by setting an assistant, armed with microscope, at work counting the minute bodies, the "egg seeds" in the ovaries of different hens. There was no uniform number, and almost invariably there were a great many more than six hundred.

View of the great Madison Square Garden Show.
Chas. D. Cleveland, Supt.

The Great Madison Square Garden Show

The Most Brilliant and Largest Poultry Show Ever Held on the American Continent. Mr. Cleveland's Great Success, Royal Quality Classes in Most Varieties. *By H. P. Schwab*

THERE can be but one answer given relating to the twenty-fifth annual exhibition of the New York Poultry and Pigeon Association, held at Madison Square Garden, New York, December 26 to 31, 1913, and that is that it was the largest, greatest, most brilliant and most successful poultry display ever held, with a value to the Standard-bred industry incalculable. The gigantic garden was filled on the main floor, the galleries, and even the concert hall and restaurant were occupied. Not a nook or corner was vacant, but go where you would there was something to interest you, and that something was the best the world and its people have produced to date.

The decorations were simple and magnificent, with the American flag exclusively used; the entire ceiling was covered, and wherever it was possible to nail a flag or drape the galleries, boxes and walls it was done, making a beautiful display of the colors we love so well.

We do not wish to praise Mr. Cleveland specially. He does not require that, as his work speaks stronger than any of our words, but we do wish to compliment him and those connected with him. His efforts have been far more successful than even we could hope for. That he has the breeders with him is an assured fact, and that he deserves the confidence of all alike is also most true. He has led the way to better and greater things and throughout his entire work we can see his personal love for the fancy and his earnest desires to place Standard-bred poultry and the poultry industry in general on the highest possible plane. In the management of this show Mr. Cleveland follows a great man, and in no particular has he failed. Every success is due him, and we most heartily wish it to him.

The banquet was a feature of the week, while the Information Bureau was serviceable and its work of particular value to all. The postoffice department was also a feature and the writing and reading room met a long-felt want. We could not help but note the general sociable feeling displayed at this show. Everybody knew everybody and the season's best wishes were gladly handed around.

The "Fleas" were in evidence and two meetings were held and many new applicants admitted. This association's cause meets general approval and we hope for all poultrymen to join.

Among the birds entered here were several strings from England, including Capt. Max DeBathe, William H. Cook and Clem Watson. Entries were also cooped from California and from every section of America and Canada. The world's best were here to be admired.

Notable winnings were made by several exhibitors. Mr. D. W. Young's first prize S. C. White Leghorn cockerel was awarded the A. P. A. gold medal for best cockerel in the entire show. Mr. E. B. Thompson's winning of all five prizes offered on Barred Rock cockerels is a record unapproached. In White Wyandottes the winnings of A. J. Fell and Arthur G. Duston were features. In Partridge Wyandottes, Chas. H. Wood's record was a great victory. In this we should also mention the Aldrich Farm, Hugh A. Rose, M. F. Delano, the Yama Farm,

Frank McGrann, Frank Harbaugh and others, who also did things in their line.

The entries far exceeded those of any former show, and from our catalogue we take the following figures, with the display coops only estimated: Single entries in poultry, 2,584; in Bantams, 516; poultry pens, 1,320; Bantam pens, 100; displays, 750; ducks and geese, 226; turkeys, 51; pigeons, 1,893; rabbits, 134; cavies and mice, 65; canary and cage birds, 315; cats, 200; making in all a grand total of 8,154 specimens on exhibition.

Many important club meetings were held and the lectures and demonstrations were largely attended. It costs but little beyond time nowadays to get reliable poultry information. We heartily endorse the meetings and were pleased to see the numbers attending them daily, for it all stands for more and better poultry.

The poultry journals were well represented, the A. P. J. by President Jas. W. Bell, Editor Prince T. Woods, Artist Louis Stahmer, Mr. Anderson, Yours Truly, etc.

All around the entire Garden were displayed incubators, brooders, supplies, foods, and particularly the new coal heating brooders in all makes and styles. The gigantic Flea-Bill Bailey and Sally-Flea Howard Davis were both busy telling the natives how to hatch and feed chickens.

The attendance was the largest we have ever seen at a poultry show; filled to overflowing by delighted thousands is the best expression we can find for it. Sunday was a big day and afforded many the opportunity of seeing this great exhibit that could not have enjoyed it in any other way.

That our English cousins think well of the Garden show was evident here for Captain Max De Bathe, Wm. H. Cook and Mr. Clem Watson crossed the Atlantic with great strings of their favorites to exhibit here. They proved themselves royal good fellows and fanciers and we hope to welcome them yearly.

The Exhibitors and Their Winnings.

Mr. E. B. Thompson, with his "Ringlet" Barred Plymouth Rocks, established two new New York records by consecutive winning and by winning all five prizes offered on cockerels from first to fifth, both inclusive. Some years ago Mr. Thompson won all awards offered on pullets, a feat also unequalled and which stands today, as likely his new record on cockerels will for years to come. His complete winnings are: Cock 1-4, cockerels 1-2-3-4-5, pullets 5, pens 1-2-4, Spratt's cup for best Plymouth Rock hatched in 1913, gold special for best display, the Sun cup for best cock, hen, cockerel, pullet and pen; Harding cup for best pen, Club specials for best color and shape male and for champion male, President's specials for three best cockerels, for best cockerel and pullet, for best display, for best collection, and Robinson champion special badge for best Barred Rock male.

This stupendous record at this great show carries with it an assurance of quality and of breeding value in this line. The "Ringlets" were at their best, and they never had better birds to contend against. Mr. Thompson and his two sons, Valentine and Walter, were in constant attendance and receiving the compliments of the judges, breeders and visitors alike.

Mr. C. N. Myers, Hanover, Pa., whose "Lady Beautiful" won first prize hen here last year, came back and duplicated his record by again winning first prize hen. This year he also won hen fifth, pullets 2-3 and pen 3. This winning hen also won the championship special for best Barred Rock female. Mr. Myers now, with his two New York records and several at Philadelphia, Hagerstown, etc., has firmly established his line and placed it in the front ranks of the best winning female line (he breeds the pullet line only); in them he has the desired color and barring and good form with extra breeding value.

The Yama Farms, with Mr. Newton Cosh in charge, won well on both their lines: In Barred Rocks, cock 3, hens 2-3-4, pen 5. In Barred Rock specials the Yama Farms won special for best shaped female and special for best cock and hen. In S. C. Black Minorcas, cock 1-3, hens 1-4-5, cockerels 3-4-5, pullets 3, pens 1-3, and several specials. This Minorca class was the best in general quality we have seen here. Mr. Arthur Trethaway was a happy man, for in this win he deserves much credit.

Mr. C. H. Latham won first pullet, also fourth and color female special.

Neither C. H. Welles nor Henry D. Riley was exhibiting this year. They both have won their honors here, but we expect to see them back in the future.

Mr. Maurice F. Delano, successor to Owen Farms, was here both as a judge and as exhibitor, showing White Rocks, White Wyandottes and Buff and White Orpingtons. In all his varieties he was well placed and winning a grand good record for this show. When we consider also the winning birds he has sold this season we can well say there is no limit to his quality. In White Rocks he won cock 2-4, hen 1-5, cockerel 5, pullet 1-5, pen 1-5, best display and champion female special. In Buff Orpingtons, cock 2-3, cockerel 2-3, pullet 1-5, pen 3-5 and specials. In White Orpingtons, cock 5, hen 2-5, cockerel 5, pullet 1-3-4. The general character of this line is better year by year. Mr. Delano is a worker and deserves the best we can give him.

The Mirimichi P. F. won first cock, cockerel 2-4, pullet 2, pens 3-4, with a classy line of birds. They also breed Reds and made a good showing here.

The Rancocoas Poultry Farm, Browns Mills, N. J., exhibited a few of their White Rocks and won hen 3-4 and cockerel 1. In these they seem unbeatable, having won first prize cockerel at both New York shows and three others this season.

The Hamden P. Y. won cock 3-5 on two fine strong birds shown in excellent condition. They were birds of quality.

Mr. J. D. Koons, Treichler, Pa., one of our oldest White Rock breeders, won cockerel 3, pullet 3.

Buff Plymouth Rocks, an unusually large and fine class, in which Mr. John W. Poley, owner of the Linfield Poultry Farm, Linfield, Pa., won his usual yearly record of cock 2, hen 3, cockerel 1, pullet 2, pen 1-4, and specials with best display, etc. His winning pen and cockerel were the class of the exhibit, fine in form and most excellent in color both surface and under.

Mr. Fred Armer won cock 1-3, hen 1-4, pullet 1-4 and pen 3, with a choice line of quality birds.

Silver Pencilled Rock awards all went to the Bonapart P. Y. They also won in Partridge cock 5, hen 2-3, ckrl. 3-4, pullet 3-5.

Paul Klingbeil winning cock 2, hen 1, pullet 1, pen 5.

Besuden Bros., Cincinnati, O., won cock 3-4, hen 5, cockerel 5, pullet 4, pen 3.

The Partridge Rocks at this show are not complete without Bird Bros., Meyersdale, Pa., they having sold in the single classes exhibited but two exhibition pens and won 1st and 2nd. Both their pens were masterfully mated, of grandest quality; the males, in form, color and markings, were superior and most beautiful; the females matching perfectly and of rarest type and quality. In Bronze turkeys, Bird Bros. almost outdid themselves. We can't believe that we have ever seen a better lot in competition before and their record here is a credit in fact. Cock 1-2-4, hen 1-3-5, cockerel 1-2-3-4-5, pullet 1-2-3-5; bear this in mind.

The Wilburtha Farms, Trenton Jct., N. J., with the "Midget Flea" W. D. Campbell in charge, won in Columbian Rocks, cock 1, hen 1, cockerel 3, pullet 1-4. This pullet we have placed before and is a bird of value.

Mr. S. W. Bradley, Lime Rock, Conn., one of the early breeders of this variety, won cockerel 2, pullet 3 and pen 1.

Silver Wyandottes, a grand class, with R. G. Williams, J. Reepmeyer, Jr., J. F. Hughes, Millspaugh & Decker and L. H. Brown the leading winners.

In White Wyandottes, with the leading breeders showing, it was close picking, quality was everywhere abundant and, as in years past, honors fell to Mr. A. J. Fell, West Point, Pa. Here he won cock 1, hen 1-3, cockerel 2-3-4, pullet 2-5, pen 1, special for best display, etc. It was a most worthy exhibit; the winning cock a wonder in form, condition and general quality, finish of tail and head exquisite. First pen finished and seen at their best; all were alike and of the very choicest in quality. There is special quality and character to this line, which they have stamped as features to this New York class. In their four years of exhibit here they have made a record of value that will stand well with time.

Here this year Mr. Arthur G. Duston made one of the best records of his long career. Most anyone can win if the other fellow is not showing, but they were showing here and it was the grandest quality fight ever staged. Mr. Duston won cock 2-3, hen 4-5, cockerel 1, pullet 1-3-4 and pen 5, with specials. The value of this win centers around his two first prizes on young birds, and we can well include cocks also, for those who saw this class can well understand that the best credit we can

(Continued on Page 289)

Madison Square Garden Poultry Show

Nearly Eight Hundred Exhibitors Represented and Six Thousand Birds Cooped. The Largest Show Ever Held in the Garden.

By Prince T. Woods, M. D.

THE largest and best poultry show ever held in Madison Square Garden is the record for the silver jubilee of the New York Poultry and Pigeon Association. The weather was fine throughout the show, the attendance unusually large and the gate receipts must have been very gratifying to the management. The show dates, December 26th to 31st, inclusive, carried the show over the Sunday following Christmas and on Sunday afternoon the big hall was crowded with visitors. The twenty-fifth annual show was a great success.

Secretary-superintendent Charles D. Cleveland is to be congratulated on his admirable work in building so well on the firm foundation which former Superintendent Crawford established in so many years of fine Madison Square Garden shows. The Garden Show has always and will always be the Garden Show, the ruts are worn deep and the big machine travels well and easily along the well worn lines, but it is a big show, a good show, and one well worth attending for both pleasure and profit.

The 1913 show was very much like those which have gone before, practically the same arrangement of exhibits, which seems to be particularly adapted to the Garden exhibition hall, the same double tiering of exhibits, the same crowded and limited displays by manufacturers of incubators and poultry supplies and the same densely packed crowds in narrow aisles. It makes one wish there were more desirable hall space available and a better chance to view exhibits.

One need only visit the Garden Show to realize the great and widespread interest in standard-bred poultry, not only the great crowds of visitors, but the hosts of exhibitors who flock to this competition of fine specimens from all parts of our great and wonderful country and from the other side of the "herrin' pond." Some six thousand birds were cooped at this show, eclipsing all previous records. Nearly eight hundred exhibitors were represented in the competition. That means a big show and particularly does it mean a BIG INTEREST IN POULTRY, for, mind you, most of these exhibitors had to sacrifice a part or all of the world's greatest home holiday of the year in order to be represented at a show, which began promptly on the day immediately following Christmas.

It seems to us that poultry shows are growing cleaner and better with each year. At this New York show the machine of the management seemed to be working better and with less friction than ever before, there was less complaint and kicking by exhibitors, the crowds as a whole were more orderly and showed greater interest. The specimens exhibited were unusually fine. Throughout the show, the hall was a bit overwarm and some fine birds in the end of the building farthest from the main entrance were exposed to chilling drafts, now and then, by opening of the big doors for teams near the express office. On the third day we noted a large number of fine specimens exhibiting symptoms of severe colds, which we believe resulted largely from these sudden and chilling drafts in an overheated hall. It should be prevented another year.

The judges of poultry at this show were:

Henry P. Schwab, Irondequoit, N. Y., Barred Plymouth Rock pens and cockerels.

A. C. Smith, St. Paul, Minn., Barred Plymouth Rock cocks, hens and pullets.

A. C. Hawkins, Lancaster, Mass., White Plymouth Rocks.

T. F. Rigg, Iowa Falls, Iowa, Creve Coeurs, La Fleche, Red Caps, Houdans and any other variety.

George P. Dearborn, Blairstown, N. J., S. C. Rhode Island Reds.

Wallace R. Pierson, Cromwell, Conn., R. C. Rhode Island Reds.

Dr. A. T. Beckett, Salem, N. J., Silver Laced Wyandottes.

Charles Nixon, Washington, N. J., White Wyandotte cocks, hens and pullets.

J. W. Andrews, Dighton, Mass., White Wyandotte cockerels and pens.

F. L. Sewell, Niles, Mich., Langshans.

J. F. Van Alstyne, Niverville, N. Y., Columbian Wyandottes.

John C. Kriner, Stetlersville, Pa., water fowl and turkeys.

J. H. Minnshall, London, Ont., Minorcas.

Geo. L. Young, Brooklyn, N. Y., ornamental bantams.

Arthur O. Schilling, Rochester, N. Y., Faverolles and Black Wyandottes.

J. C. Funderford, Freneau, N. J., Buff and Black Leghorns.

George H. Burgott, Lawtons, N. Y., Brown, Silver, Blue and any other variety Leghorns.

Irving F. Rice, Cortland, N. Y., White Leghorns.

W. G. Minich, Carlisle, Pa., Game bantams and Polish, except White Crested Black.

Chris. Kirschler, Newark, N. J., White Crested Black Polish.

W. B. Atherton, Randolph, Mass., Hamburgs and American Dominiques.

Richard Oke, London, Ont., Buff and White Orpingtons.

Maurice F. Delano, Vineyard Haven, Mass., all other Orpington.

J. H. Drevenstedt, Buffalo, N. Y., Cornish: Golden, Partridge and Silver Penciled Wyandottes; Silver Penciled and Partridge Plymouth Rocks and Javas.

F. L. Platt, Toledo, Ohio, Campines and Dorkings.

James Glasgow, Mahwah, N. J., exhibition games.

J. H. Wolsieffer, Vineland, N. J., Buff Wyandottes, Buff and Columbian Plymouth Rocks and Buckeyes.

W. J. Stanton, New York City, Light Brahmas and Anconas.

Hugh A. Rose, Welland, Ont., Cochins and Dark Brahmas.

Newton Cosh, Napanoch, N. Y., Blue Andalusians and Spanish.

Dr. H. P. Clarke, Ashville, N. C., Pit Games, Silkies, Sultans, Frizzles, Lakenvelders, Sussex, Sicilian Buttercups, Sumatras and Black Red Malays.

One of the big feature interests of the exhibition was the poultry institute conducted in the lecture hall. Seating capacity was crowded at these lectures, both afternoon and evening. Evidently poultrymen, and the public generally, are very eager for practical information about all branches of poultry husbandry. Eighteen specialty clubs held their annual meetings during the course of the show. On Friday evening an informal luncheon was served by the management to exhibitors and friends. It was an enjoyable affair and did much to promote good fellowship.

The judging was completed on Saturday at noon and there was very little adverse criticism. One "old-timer" said to us: "Whatever criticism any one may have to make concerning the judging at this show, at least will have to concede that it is honestly done. Such mistakes as have been made are undoubtedly the result of enthusiasm and inexperience." As he had over forty years experience with fancy poultry and had attended all of the Garden Shows, we believe his comment worthy of a place in this report.

Judge Schwab was enthusiastic about the Barred Plymouth Rocks and told us that classes showed some of the finest specimens ever brought together. Judge Arthur Smith seemed a bit disappointed in the cocks and hens in this variety. We don't pretend to distinction as a fancier or judge of fancy poultry and we were mighty well pleased with E. B. Thompson's winning Barred Rock pens and five ribbon winning cockerels. In fact, we found specimens that pleased us well both in and out of the ribbons in all classes of this variety.

White Rock classes were good. Maurice F. Delano's first pullet was one of the best we have seen. Taking these classes as a whole there were many fine specimens both placed and unplaced.

Buff Rock classes were good and well filled. Nevertheless, to an unprejudiced observer there is getting to be a striking similarity of type between exhibition Buff Rocks and Buff

Orpingtons. It is a pity that breeders do not strive more for distinctive breed type, not only in these varieties but in all varieties.

Taking the buff breeds as a whole at this show, and some of the other varieties, one cannot help feeling that the A. P.

Third prize Rose Comb Rhode Island cock, Chicago, December, 1912. Bred and owned by The Buschmann-Pierce Red Farms, Carmel, Ind.

A.'s voting symmetry out of the standard is already beginning to be taken seriously by both exhibitors and judges. One veteran judge said to us: "By George! It's getting so, that after 40 years with poultry, when I walk down the aisles of the Buff classes I have to look at the legs of the birds to tell whether they are Rocks or Orpingtons."

It is a pity to drop symmetry, for symmetry is a necessary part of type and we very much need distinctive breed type following through all varieties of every breed. Without type and symmetry we will lose breed.

Judge Drevenstedt told us that the Partridge Plymouth Rocks were some of the finest he had ever handled. Grove Hill's first cock and cockerel he considered models in type and good in color. Paul Klingbeil's first hen and first pullet were fine in color, penciling and type. Bird Bros.' first pen "Drev." found well mated and good in shape and color.

Other Plymouth Rock classes held good birds, though entries were few in number.

Competition was keen in the White Wyandotte classes. There were some mighty fine birds in and out of the winnings. First honors in cock and hen went to A. J. Fell. First cockerel and pullet were Arthur G. Duston's.

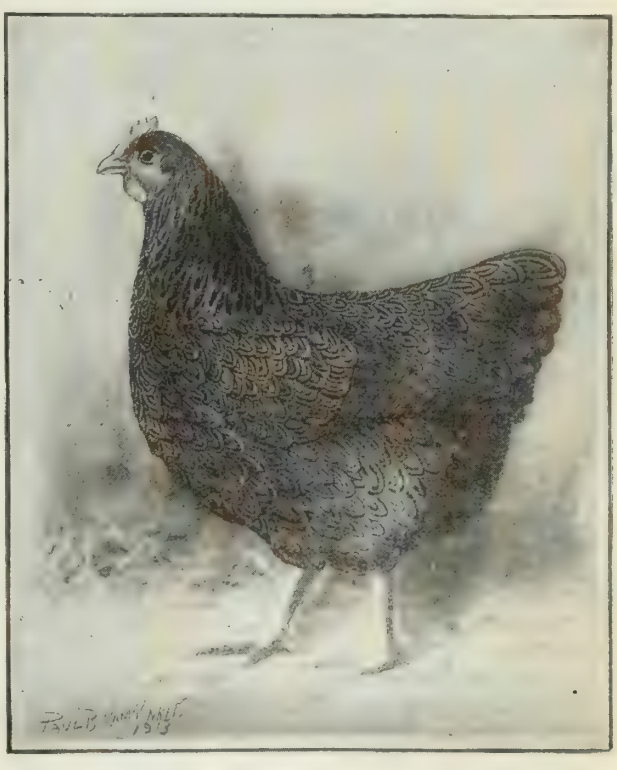
Partridge Wyandottes were at their best in the male classes. Buff Wyandottes were good in all classes, but under the ribbons showed apparent indecision in color and type on part of the judge. Columbian Wyandottes were well filled classes and some fine birds. Silver Wyandottes fairly well filled classes and some excellent specimens. Goldens, small classes but good. Silver Penciled Wyandotte classes fairly well filled with good ones. Black 'Dottes good.

Rhode Island Reds, both combs, showed a lot of fine birds in all classes. Brahmas were unusually strong at this show. Buff and Patridge Cochin classes were fairly filled and excellent birds shown. Other Cochin classes poorly filled. Langshans were moderately filled classes and quality about average with past seasons.

White Leghorns made up hot classes with a lot of good ones. D. W. Young's winning cockerel was probably the best ever seen in the Garden and was a wonder at natural posing. He seemed to be expecting to have his picture taken any minute. Brown Leghorns, strong classes of good ones. Buff Leghorn classes well filled. Other Leghorns fairly well represented.

Black Minorca classes well filled. Females better than the males. Quality in male classes not quite equal to average of former years. Black Spanish classes well filled. Andalusians, a fair showing.

Hot classes in both S. C. and R. C. Ancona classes. There were plenty of good birds in and out of the ribbons. H. Cecil Sheppard's first R. C. cockerel was good all over—and we had him out of the cage.



Silver Grey Dorkings showed up well and there were some fine birds in the lot. This is a fine old English variety and deserves to be boosted more into popularity.

Buff Orpingtons were fine classes. Blue Orpingtons were unusually fine and some of the English birds were wonders in frame, size and shape. Black Orpington classes were well filled with good ones. White Orpingtons good in numbers and quality.

F. D. Baerman's White Houdans were well worth looking over. We understand that this new variety has been developed in only three years. Wonderfully good type and head points distinguished the winners.

Dark Cornish were remarkably strong in type and color in both English bred and American bred birds. Most specimens were fine, big bodied, big thighed, big legged, heavy specimens. Cornish breeders announce that they are determined to boost their favorites into greater popularity. It is commonly believed that hens of this variety are sluggish layers, but the breeders say that is not so. We can see no reason why Cornish cannot be bred to be excellent layers if proper attention is given to selection, and there can be no question of the value of Cornish as a meat breed.

Elsewhere in this Journal will be found a detailed report on the winners at this show, we have not space for further comment here. It was a good show, a great show, and one well

First prize Partridge Plymouth Rock pullet, Chicago Coliseum show, December, 1913. Bred and exhibited by Bird Bros., Meyersdale, Pa. This firm made the greatest winning on Partridge Rocks ever made at Chicago.

worth going many miles to visit, but we do wish there was some way to do away with the double tiering of exhibits and to get better light on them. It does not seem possible to do better in the old Garden, and, after many years of talk of "farewell to the Garden," it now looks as if we might meet in that historic old building for years to come.

Biggest, Best and Busiest Boston Show

Greatest Poultry Show Ever Held in America—Nearly Eight Thousand Specimens on Exhibition—Record Breaking Attendance. *By Prince T. Woods, M. D.*

THE 1914 Boston Show has made history as a record breaker. It was the biggest, best and busiest Boston Show of record, the eighteenth annual event of the Boston Poultry Association, and was conceded by all the veterans to be the greatest poultry show ever held in America.

There were nearly eight thousand specimens on exhibition, a wonderful increase over the 1913 entry. The weather man even furnished a record-breaking collection of New England winter weather, such as has not been experienced in Boston in many years. On Monday of show week as the birds were arriving, after a long period of mild winter weather, came a sudden cold windstorm of unusual severity. Monday night was cold, with a howling, icy gale, and Tuesday, opening day, was ushered in with the worst winter gale recorded in Boston for seven years. Railroad traffic was tied up all around the city and even the suburban locals were from three to seven or more hours late. North of Boston traffic was practically suspended for half a day. Tuesday night the lowest official temperature recorded was 17 degrees below zero, with an eighty-mile wind, and in the suburbs temperature records were reported as low as 40 degrees below zero. So sudden and severe was the onset of this icy gale that heating plants were slow in responding to the demands made upon them and much trouble was experienced all over the city. The mammoth poultry exhibition hall in the Mechanic's Building was cold to the point of discomfort on Tuesday, and it was not until evening that the management was able to get the heating in hand by putting on a special corps of furnace men. Wednesday the weather began to moderate, traffic difficulties were adjusted, and the balance of show week had very comfortable New England January days.

In spite of these unusual conditions the attendance on Tuesday and Wednesday was unusually good. Thousands of people braved the icy wind to come to the exhibit and not a few of the exhibitors were touched with frostbite on Tuesday. Thursday and Friday were days of record-breaking gate receipts and the hall was crowded. Saturday's big crowd included a host of school children. Visitors showed the greatest interest in all exhibits and there was every indication that public interest in standard-bred poultry is decidedly on the increase.

The exhibition hall, though crowded as never before by a poultry exhibit, was well arranged, beautifully and tastefully decorated, and all exhibits displayed to advantage. Pretty much everything of interest in the poultry line, from a bantam to an ostrich, was on exhibition. Displays were well placed and were made more attractive by the use of evergreen trees in the decorations.

The booths of manufacturers and dealers in poultry supplies and equipment of all sorts were many more in numbers, attractive and well arranged, though in some instances more crowded than in former years. No provision was made for poultry journal booths and publication representatives had to content themselves with little stands at the aisle ends scattered about the hall. We believe it would be a good plan to require each magazine to provide a neat booth and to have these scattered about the hall even more than they were this year.

Among the poultry equipment displays which came in for the greatest demonstration of public interest were the various portable poultry houses and coops, the small and mammoth incubators, the large colony brooding stoves, and the feeders and hoppers for self-feeding of poultry. Labor saving devices of all kinds held the attention of the crowds and there was ample opportunity for comparison of the many lines of galvanized iron poultry equipment.

Fanciers did a good business in sales of breeding stock and in booking orders for eggs for hatching, and there was plenty of evidence that this year will witness a surprising demand for day-old chicks. We talked with a number of "old-timers" and were glad to find many of them taking a very active and healthful interest in modern developments in the poultry business. We look for a number of well known fanciers, who get long prices for hatching eggs from their best stock, to develop a trade in baby chicks from their best matings. It ought to be easier to get $20 for a dozen well-hatched sturdy chicks from a special mating than $10 for a setting of eggs from the same mating, and, with proper attention given to filling all orders carefully and well, there ought to be less trouble for the seller and less complaint from the buyer.

Wednesday was "Veteran Fanciers' Day" and breeders who have been in the fancy poultry business for 20 years or longer were the guests of the management. These upbuilders of modern poultry business were feasted, and many were the reminiscences of the early days and stories of the development of the valuable poultry of today.

Those present were I. K. Felch of Natick, 80 years old; Charles L. Seely of Afton, N. Y., 75 years; Dr. S. Lott, Bellona, N. Y., 71 years; J. D. Jodroy, Danvers, 70 years; Frank L. Fish, Taunton, 66 years; George F. Eastman, Northampton, 66 years; Frank C. Nutter, South Portland, Me., 61 years; F. B. Breed, Clinton, 79 years; H. B. May, Boston, 82 years; C. W. Richardson, Appanaug, R. I., 71 years; H. F. Felch, Natick, 75 years; W. H. Sylvester, Brockton, 66 years; Frank Johnson, Indianapolis, 64 years, and C. B. Travis, Brighton, 61 years.

The utility poultry exhibit, live breeding fowl representing stock kept exclusively for market meat and eggs, the capons both alive and dressed, the displays of broilers and roasters, and both chicken and fowl canned in glass jars, and the fine exhibit of eggs, in the lower hall, came in for a large share of the attention of visitors. Prof. J. C. Graham of the Massachusetts Agricultural College was in charge of the utility exhibit and also of the college exhibit which occupied the same room. He was kept busy all the week by great throngs of people seeking poultry information.

There were nearly two hundred live birds shown in the utility classes, and the number would have been much greater had utility poultrymen generally understood that there was $500 up in cash prizes and no entry fee. It was a very good beginning for a practical department of a poultry show and one out of which much good should grow. With the right sort of advance work on the part of the college and local poultry associations, this utility show ought to have fully a thousand specimens on exhibition another year. We would like to see the birds in mated pens and allotted liberal, comfortable floor space after the manner of the Atlantic City summer show.

The college exhibit included charts showing comparison of the outlines of the various Standard breeds; plans, photos, and specifications for poultry buildings and equipment, diagram charts of digestive and reproductive organs of fowl, and one big chart with the slogan: "There is room for you in the poultry business. Massachusetts consumes $25,000,000 worth of poultry annually. Massachusetts produces only $5,000,000 worth of poultry annually." The whole college and utility exhibit was featured as an object lesson and it was a good one. We hope that next year our Uncle Sam will be induced to bring his moving pictures of practical poultry husbandry to

Boston Show and devote a special institute week to the poultry movies. It would be a big drawing card and do a deal of good. Also we hope to see a bigger display of dressed poultry and eggs and all exhibits specially labelled so that the public can know what they are looking at. With the fine display of dressed stock and big collection of fine eggs it was a pity not to have each lot bearing identification marks.

Right here, we want to congratulate Secretary-Manager "Billy" Atherton on the wonderfully well-conducted work of managing this greatest poultry show of America. It was a mighty big undertaking and most ably managed. His unfailing courtesy and good nature kept all the mechanism of the big show working smoothly, and this mammoth show will go on record as a fine example of good sportsmanship, good fellowship and friendly rivalry between breeders and fanciers. Any suggestions made in this report are not for the purpose of criticism, but are made with a desire to help the "Old Glory" Boston Show of 1915, which will come on January 12 to 16, 1915, to eclipse even this big event of the present year. We heartily wish there were more W. B. Athertons in the poultry show business all over this country—it would be good for the business, and we trust that "Billy" will live long, prosper and continue to make Boston stand out as a good fanciers', good fellowship poultry show. May the Atherton type increase.

The judges of poultry at Boston Show were:

Wm. Armbrust, Armbrust, Pa. Polish.

C. S. Byers, Hazelrigg, Ind. Orpingtons.

C. A. Ballou, Worcester. S. Penciled and Partridge Plymouth Rocks and Lakenvelders.

Dr. H. P. Clarke, Indianapolis, Ind. Thoroughbred Games, Malays and Sumatras.

W. H. Congdon, Oaklawn, R. I. Ornamental Bantams.

W. H. Card, Manchester, Conn. Rhode Island Reds, American Dominiques and Exhibition Games.

M. H. Coffin, Roslindale. Partridge Wyandottes and Pheasants.

M. L. Chapman, Brown's Mills, N. J. White Plymouth Rocks and Campines.

Charles D. Cleveland, Eatontown, N. J. Buff and Blue Leghorns and Blue Wyandottes.

Frank Conway, Welland, Ont. Dorkings.

George W. Dakin, Roxbury. White Wyandotte Cockerels and Pens.

W. H. Fitton, Worcester. Game Bantams.

C. S. Flanders, Concord, N. H. Golden Wyandottes.

John Kriner, Stettlersville, Pa. Waterfowl and Turkeys.

W. G. Minich, Carlisle, Pa. Hamburgs and Black Wyandottes.

Richard Oke, London, Canada. Langshans, Minorcas, Silkies, Spanish, Creve Cœur, La Fleche and Sussex.

D. Lincoln Orr, Orr's Mills, N. Y. Columbian Wyandottes.

Frank L. Platt, Toledo, O. Columbian Plymouth Rocks and Cornish.

W. A. Russell, Ottumwa, Iowa. Barred Plymouth Rocks.

H. N. Rollins, Woodville. Light Brahma Cocks, Pullets and Pens.

F. W. Rogers, Brockton. Dark Brahmas, Brown and Duckwing Leghorns.

Eugene Sites, Elyria, Ohio. Buff Wyandottes, Buff Plymouth Rocks and Anconas.

H. P. Schwab, Irondequoit, N. Y. Red Caps, Andalusians, Faverolles and Frizzles.

D. P. Shove, Fall River. Houdans.

H. William Scott, Barre, Vt. Buttercups.

C. J. Titus, Maplewood. White Wyandotte Cocks, Hens and Pullets.

C. A. Wheeler, Brighton. Silver Penciled Wyandottes, Light Brahma Cockerels and Hens.

Geo. W. Weed, E. Lee. Cochins, Javas and Buckeyes.

H. Wolsiefer, Vineland, N. J. Silver Wyandottes, White and Black Leghorns.

Judge of dressed poultry and eggs: Geo. V. Fletcher, Belmont, Mass.

As this report is rushed to catch the last forms of the February issue, we have little space for detail here and it would take a great deal of space to tell the whole story of the Boston Show. Henry P. Schwab will describe the winners in his report in our March issue.

Light Brahmas showed good classes, a few fine birds, but the run of the classes a little behind those of former years. Awards well and conscientiously placed and some very excellent birds in first and second places. Dark Brahmas medium sized classes and some fine birds.

Buff Cochins medium sized classes of good ones. Partridge Cochins, two fine displays of males and females that come from an old line of Boston winners. Competitive classes well filled with some fine birds, but these classes need a little more of

S.C.R.I. RED PULLET WINNER OF FIRST PRIZE SYRACUSE STATE FAIR 1913 ALSO WINNER OF SHAPE AND COLOR SPECIAL, BRED AND OWNED BY HOUCK & ALT BUFFALO N.Y.

the old-time painstaking effort put into them. Other classes fairly well represented. Langshans, good sized classes and some excellent quality.

Barred Plymouth Rocks, good sized classes and fine birds. We were glad to see that A. C. Hawkins and the Grove Hill Poultry Yards, both made displays showing pens mated for pullet breeding and for cockerel breeding. Shows help beginners and have great educational opportunities. We hope more breeders will exhibit display pens mated for results. Exhibition pens mated for competitive exhibition mislead the beginner; pens mated for breeding would prove a valuable object lesson. Open classes for pullet-bred and cockerel-bred birds were interesting and a good feature.

White Rock classes large and a lot of good specimens. Buff Rocks, some very fine birds and some only medium in quality. Partridge Rocks, well filled classes and some comers among them getting closer to the real thing in type and color. Columbian Rock classes quite well filled, but most specimens not well conditioned for the show. Quality very good, but washing

would have helped many of them. Other Rock classes fairly well shown.

Silver Wyandottes good classes and some fine birds. Blocky type birds of good original Wyandotte shape in the winnings. White Wyandottes, big classes with an abundance of fine quality all along the line. Buff Wyandottes, good classes of good ones. Columbian Wyandottes, very good classes, some very good birds, particularly those in the blue, and some not so good. Most of the specimens shown would have been greatly improved by conditioning and washing. Good classes of good ones in Silver Pencilled 'Dottes. Partridge classes small.

American Dominiques very well represented and the winners consistently bred to the real old Dominique type. They seem to be coming again fast.

Rhode Island Reds, both combs, were fine, well filled classes of good ones. W. H. Card said of the Reds that he never handled a finer lot of birds. Good quality all through the classes.

Dorking classes in Silver Greys quite well filled and some fine birds. Other Dorkings single entries of Canadian stock.

Buff Orpington classes well filled, quality good; Blacks, same comment. Blue Orpingtons, good classes, some good ones, but as a whole not up to the quality of Madison Square Garden exhibits.

White Orpingtons, good classes and some excellent quality. Other Orpingtons few in numbers.

Buckeyes showed well filled classes. Brown Leghorn classes good in size and quality. White Leghorn classes good sized, with a wide range in quality. Buff Leghorns, fair classes with some good ones. Other Leghorns promising.

Minorcas well shown in Blacks. Andalusians, small classes and some good ones. Black Spanish made a brave showing in numbers, but many birds looked out of condition from overshowing. Houdans, big strong classes for this variety, and a lot of good ones. White Houdans a brave showing of good ones. Blue Houdans have also arrived, one in each class.

W. C. Black Polish, a fine showing in all classes of some very fine birds. Other Polish well represented. In fact, there was a grand display of crested varieties all along the line.

Hamburgs, good classes. Campines, moderately filled classes, but some good quality. Buttercups made a strong showing; we can understand how this variety can be boomed as egg producers, but we wonder who the joker is that started a boost for them as a market breed.

White-Laced Red Cornish made a big brave showing of good birds and certainly reflect much credit upon their originator.

White Faverolles, though few in numbers, attracted the attention of a number of roaster growers who are looking for a big, quick-growing fowl. Clean legs on this variety would help popularity in this direction.

Water fowl and turkey classes well filled with good ones. Bantam lovers found plenty little beauties in Bantam classes. The display exhibits all through the hall were good and set off the balance of the show to good advantage. Even the lone and somewhat the worse for wear African ostrich at the main entrance was the recipient of much attention.

It was a great show, the greatest ever, and one to be long remembered. "Billy" Atherton says the "Old Glory Show" in 1915 is going to eclipse this one, and he has already begun the work. He will have to hustle some to beat the 1914 show, but then friend Winthrop knows how to hustle. Prosit!

Selection and Mating of Silver Campines

Only a Few Americans Have Had Any Experience in Mating Campines. Many Will Mate Their First Pens This Season.

By Chas. A. Simmonds, Camp Point, Illinois

THE standard-bred Campine is a hen-feathered bird, the color pattern for the male being the same as that of the female and thus they do not require double mating.

To properly mate, one must first have clearly in mind the ideal bird which he is striving to produce, and there is still much difference of opinion even among leading judges and breeders as to just what the ideal or perfect Campine is. Owing to some mistake in the application, the Campines were not admitted to the Standard at the last meeting of the A. P. A. Had they been admitted, judges would have been bound to follow the standard, and we would thus have had more uniform judging. However, the American Campine Club has issued a standard which the best judges are following, and which represents the ideal of the average breeder, nearly every member voting to accept it.

In judging Silver Campines, a bird with squirrel tail or one that is not a typical Campine, should never be given a place simply because it has good color or because there are no better birds in the class. In shape and size the perfect Campine is mid-way between the Leghorn and the Minorca. The comb of the female should conform exactly to the standard description for a Leghorn. The comb of the male differs, however, from that of the Leghorn, the blade proceeding slightly under the horizontal and following the shape of the head. The wattles and earlobes should be of medium size, smooth and fine in texture; neck, medium length and nicely arched. The back should slope slightly towards the tail, the top line being straight until it approaches the tail, where it shoud be slightly concave, just enough to cover any angle between back and tail.

The Campine is not a loose feathered bird and a broad back is not desired, however, it should not be narrow across the shoulders. The tails should be carried at the same angle as those of the standard Leghorn. A male whose tail is devoid of sickles and long coverts should be severely discounted in placing the awards. The breast should be prominent and well rounded.

The Campine has more and longer feathers in proportion to its size than any other bird with which I am familiar, but its neat, trim appearance is secured by the feathers lying close to the body. This is quite an advantage, making them able to withstand severe cold. The legs are an important section, plenty of station is what is wanted, the thighs and shanks being rather long, and the latter round and smooth, the toes long and slender. This is the type of Campine that will uphold the breed's reputation as everlasting layers of the heaviest, whitest eggs, and the lightest eaters in poultrydom.

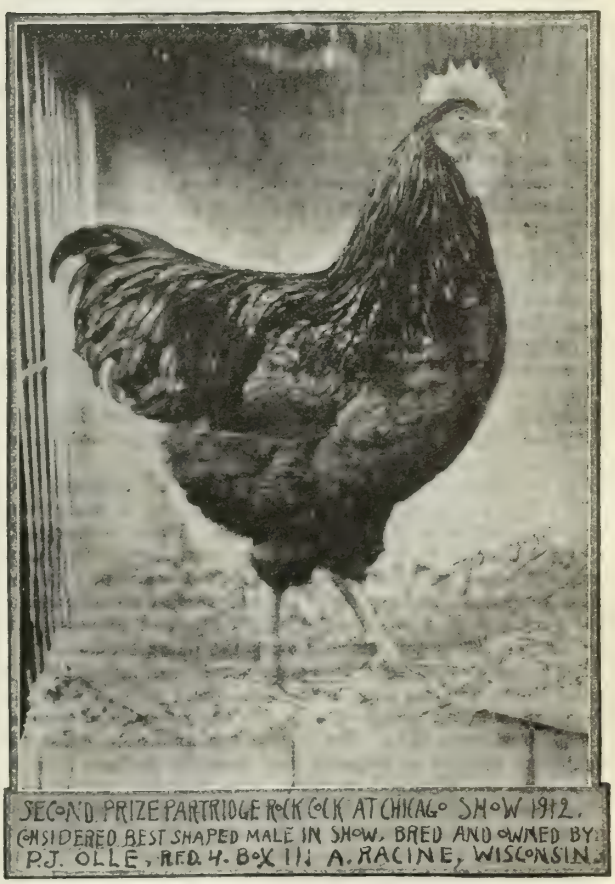
Size is a very important section if we are to uphold this reputation, standard weight birds (cocks, 6 lbs.; cockerels, 5 lbs.; hens, 4 lbs.; and pullets, 3½ lbs.) are ideal. We must maintain the size of the bird if we would maintain the size of the egg. However, birds of excessively large size are undesirable, as they are not so early maturing; are too coarse in type, and do not lay any larger eggs than the medium or standard sized birds.

The plumage pattern of the Campine is unlike that of any other breed. The standard calls for slate undercolor, and as all true Campines have slate undercolor, the breeder is not handicapped in producing brilliant surface color by having to produce an exact shade of undercolor, or "barring to the skin." In surface color the neck hackle should be pure white and the rest of the body barred black and white, the black bars being four times as wide as the white, except on the breast, where they should be of equal width, the white bars narrowing as they approach the shoulders and thighs so as not to form any break in the barring and spoil the right barring so much desired. The black bars must have a rich green sheen—the more luster the better.

Having the ideal shape and color clearly in mind, the breeder is now ready to mate his birds in an effort to produce it upon

their progeny. In selecting your breeders, reject all birds having disqualifications, much red in the earlobes or red eyes. A red eyed Campine contains Hamburg blood or other foreign blood, all true Campines having large, dark brown eyes.

FIRST W.W. PULLET INDIANA STATE FAIR INDIANAPOLIS, SEPT. 1912. BRED AND OWNED BY SHERMAN BOWDEN, MANSFIELD, OHIO



If you would make rapid progress towards the ideal, breed nothing but the best. A pen of four or five "stars," is far more valuable, and will produce many more dollars' worth of progeny, than dozens of pens of ordinary quality. The greatest breeders owe their success to careful pedigree breeding, using trap-nests or mating in pairs or very small matings of high-quality and evenly matched females.

Having decided upon the females from which you desire to breed, divide them into pens according to color, placing all standard-colored birds in one pen; those a little darker than standard in another, and the lighter females in a third pen, etc. You are now ready to select the males to head these pens. The general rule in mating is to select the male strong in the points wherein the females are weak, and while this is correct in regard to combs, shape, etc., the rule has restrictions when it comes to mating for color. For instance if one has a pen of coarsely barred females and would mate with them a fine or narrow barred male, in an effort to refine the barring of the females in the progeny, he would meet disaster in intermediate barring and mossiness. The same is true in mating a male that is much lighter or darker than the females to which he is mated.

To illustrate, suppose you have selected three pens of females. Pen No. 1 contains your standard colored birds, the black bars (except breast barring) four times as wide as the white. The primaries, secondaries, and main tail feathers will probably run lighter than four to one. The barring should be as straight and narrow as possible, coarse barring is very undesirable. The male that heads this pen should be a trifle darker than standard, as the tendency is to run light, and one should have plenty of color in the mating. The barring on this male should be about four and one-half to one. The standard allows V-shaped barring in the male, but the straight barring is much more desirable, and is what the best breeders are striving for. V-shaped barring is a relic of the Belgian type and will not produce the beautiful ringlet effect that straight bars will. To produce barring in rings around the body the bars must run perfectly straight and even on all the feathers, the shape of the feathers themselves and the way they are held on the bird, producing the rings. In selecting the male pay particular attention to tail shape, selecting a bird with a low tail and well furnished with long sickles and coverts. Head points should also be good, comb of medium size, firm on the head, and as near 5 points as possible.

Going to pen No. 2 we find females with back bars about five to one, and with dark main tail feathers and the large wing feathers dark. (The primaries, secondaries and main tail feathers should be barred the same as the back plumage, but are seldom found so, generally running much lighter or darker than the back plumage. However, the best Campines are now fairly well barred in these sections, especially the secondaries and another season's breeding will likely find a goodly number with wing and tail plumage to match that of the back.) At the head of this pen we will place a male with back barring four to one, or standard color and with primaries and main tail feathers about three to one.

In pen No. 3 we find the females with barring that runs a little lighter than standard. If the females are only a trifle light you can mate with them a male that is a little dark and in this way so balance the color as to breed some good birds. But should the females run much lighter than standard, we would have to use a male very much darker to balance the color, and mating extremes in color will produce mossiness or mealiness in any breed, and especially in Campine females. Mossiness is caused by two defects in the barring, one is the tendency for the black and white bars to over-lap or intermix at the edges, and the other is the presence of gray bars running across the center of the black bars. Either defect is not so distinctive of a bright or clearly barred appearance in light birds as in dark, as the light birds having wide white bars can have a little gray at the edge of the bar and still leave a clear white space in the center. In a class rightly judged these light birds would lose because of their light breasts and light wings, but some judges are carried away by a white hackle and

SECOND PRIZE PARTRIDGE ROCK COCK AT CHICAGO SHOW 1912. CONSIDERED BEST SHAPED MALE IN SHOW. BRED AND OWNED BY P.J. OLLE, R.F.D. 4. BOX 114 A. RracINE, WISCONSIN.

a bright distinctly barred back, without giving due consideration to breast barring and the barring of the wings and tails. The standard allots as mang points to breast color as to back color and calls for wing and tail barring to match that of the

back. An extra light bird should never be used as a breeder, but if one has some well barred females only a trifle lighter than the standard, they will give good results by mating with a dark cockerel.

The Campine males are seldom mossy, being very brightly barred. A rather mossy female will often breed good colored males and for this reason it is very important for you to know that the males from which you are breeding are from well barred females.

It pays to hatch Campines early and late. The early hatched pullets will moult in the fall and make breeders the equal of yearling hens the following season. The later hatched birds make the best show birds as they are just "ripe" in time for the December and January shows.

Campines do not seem to suffer from the hot dry weather (their native home being a country where the temperature ranges from excessive heat in summer to severe cold in winter), the chicks growing very fast in all kinds of weather, and can thus be hatched much later than other breeds which require cool weather to grow rapidly and six or seven months to mature. In rearing prize winners the only special care required is plenty of shade where the birds will spend mid-day and thus prevent the hot sun from fading the "rich green sheen" out of the feathers.

Physiology of Digestion in Domestic Fowl

An Explanation of How Food Is Digested and the Functions of the Digestive Organs. *By Dr. T. P. Shaw, Montreal, Canada*

IT is just as important to know how food is digested and how much of it is digested as it is to know how much protein, carbohydrate and fat are contained in the foodstuff given. As an illustration let us suppose that an engineer, knowing that coal consisted chiefly of carbon, and that graphite (black-lead) consisted of carbon; undertook to fire his boiler with graphite instead of coal. What would be the result? Graphite being an incombustible form of carbon would not keep up the fire and the steam pressure would fall. In the one case coal is carbon in a digestible form and can be utilized to produce heat. In the other case graphite is an undigestible form of carbon and will not burn and produce heat, except under extraordinary conditions.

Keeping to the same analogy, some coal produces more waste material—as ash—than other coal. The cheapest coal may not be the most economical, because of it containing more waste material than a coal the first cost of which is greater.

The same applies to foodstuffs, some are easily digestible and a small amount of waste, while others, although containing, theoretically, all the requirements of an economical foodstuff, may be found in practice to be an expensive food; because the digestive juices of the fowl are unable to break it up so that it can be absorbed and utilized in building up flesh.

Foodstuffs are divided in two:

1. Mineral or inorganic compounds.
2. Organic compounds or compounds of carbon.

A convenient method of grouping these proximate principals of the food, is as follows:

Inorganic—Water. Salts, e. g., common salt, lime, iron, etc.

Organic—Carbohydrates, e. g., sugar, starch; proteins, e. g., albumin, milk-curd, etc.; fat.

WATER—Birds need water for a number of different processes. Two-thirds of a bird's body is made up of water, and a hen's egg contains about 70% of water. Water is absolutely necessary as a solvent for numerous compounds. It brings into play numerous chemical reactions, and takes part in the building up and breaking down of substances without number. It is a carrier of nourishment to the body, and conversely, it provides the means for carrying away the waste products.

SALTS—Salts such as lime, common salt (sodium chloride), combinations of iron, etc., have been found necessary to the life of all animals. Pigeons soon die when fed on substances washed free from salts. Some salts are known to enter the circulation without undergoing any previous change; but no doubt some are absorbed combined with fats and proteins.

We know that laying hens require large amounts of lime (calcium) for the formation of the egg-shell. There is still much to learn about the absorption of the various salts and the part they play in the life of birds.

CARBOHYDRATES—The carbohydrates (starches and sugars) are extremely abundant in nature. They take a prominent share in the building up of the vegetable kingdom, and play an important part as food in the animal economy; on the other hand, compared with the protein bodies, they scarcely come into consideration at all as building materials for the animal tissue cells. They are the energy producers chiefly.

Ordinary starch occurs in the potato, other vegetables and grains. Animal starch, or glycogen, is found in the liver and muscles. Cellulose makes up the covering of grain and the woody fiber of plants.

Among the sugars we have cane-sugar or beet-sugar, lactose or milk-sugar, and maltose or malt-sugar.

PROTEINS—Proteins (albumin, milk-curd, etc.) occur both in the animal and vegetable kingdoms. We have protein in wheat, oats, corn, peas, beans, etc. Alfalfa, clover and hay, contain protein. Eggs contain a large percentage of protein; the muscles or meat of animals are made up principally of protein. Proteins are very important substances because they contain

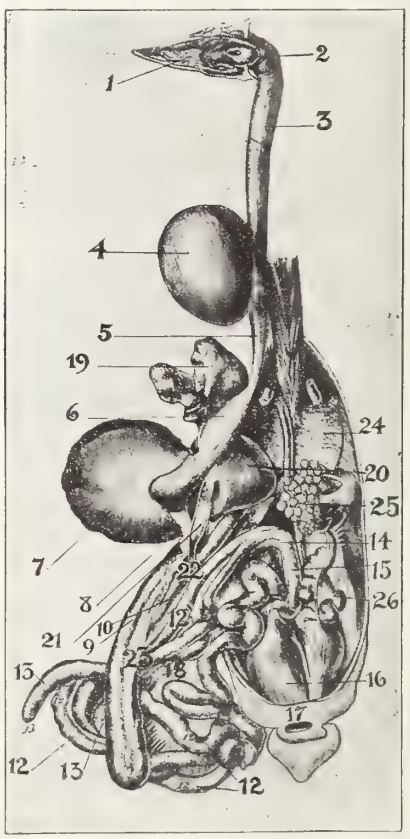


FIG. 1.—General view of digestive apparatus of fowl (after Chauveau). 1, tongue; 2, pharynx; 3, first portion of œsophagus or gullet; 4, crop; 5, second portion of gullet; 6, stomach (proventriculus); 7, gizzard; 8, origin or duodenum; 9, first branch of duodenum; 10, second branch of same; 11, origin of floating portion of small intestine; 12, small intestine; 12', terminal portion of this intestine; 13, the two cæca; 14, insertion of these into intestinal tube; 15, rectum; 16, cloaca; 17, anus; 19, left lobe of liver; 20, right lobe; 21, gall-bladder; 22, insertion of pancreatic and biliary ducts; 23, pancreas.

an element, nitrogen, which is not contained in carbohydrates or fats, and which is absolutely essential to the life of all living tissue. The fact that all proteins are not the same has escaped the attention of many poultrymen and stock raisers. Proteins are made up of a number of small groups chained together to form one complex body. All proteins do not contain the same groups and all the groups are not of the same food value. For example, feathers are made up of protein and the protein of feathers contains a group called glycocoll. Now we find that milk-curd, or casein, does not contain this group, but that the seeds of certain plants, like the sunflower and hemp, do contain this group in their protein. Experience has shown that sunflower seed and hemp seed are good foods for moulting birds and this is borne out by the chemist. It has been found also that certain proteins lack certain groups which are essential to the life of the animal, and starvation will result; although theoretically, based upon the amount of protein fed, the ration contains a sufficient amount of nitrogenous food.

FATS—Fats occupy a peculiar important place, due to their high calorific value. They also play an important rôle as reserve material. The animal organism stores tremendous reserves of vital energy in the form of fats. Small deposits occur in every organ and cell. They are the principal source of heat in animals. Again, as a non-conductor of heat, the fat deposited under the skin protects the fowls from cold in winter.

Hens require more fat-producing food in winter than in summer, because, besides requiring enough to supply the amount contained in the eggs produced, they use up a large amount in keeping up body heat.

Fat is contained in sunflower seeds, corn, oats, wheat, and also in animal food, such as milk, meat, cut-bone, etc.

A very important source of fat are the carbohydrates. Birds as well as animals are able to convert starch and sugar into fat and store it as such in the body.

DIGESTION—In birds the senses of taste, sight and smell, no doubt, all come into play in the selection of food. As poultry do not chew their food, taste and smell are of less importance than in animals, like the dog and cat. (By looking at Figure 1, the course of the food through the digestive tract may be followed.) From the mouth the food passes into the gullet, through which it is forced into the crop.

THE CROP serves as a storage sack so that poultry can collect a large quantity of food rapidly and digest it at leisure. While in the crop the food becomes mixed with the spittal, or saliva, secreted by the glands of the mouth. The saliva is a liquid containing a slimy substance called mucus, and a ferment-like yeast, which acts on starch and changes it into sugar. The crop contains glands which secrete mucus, but no ferment.

While the food is in the crop it becomes moistened by water and saliva. The grain softens and swells, bursting the hard outer covering, and allowing the ferment to act on the starch contained therein. Some grains resist this action for a long time. For instance, the author has seen corn remain in the crop for 48 hours without undergowing any more change than to become softened.

Every little grain of starch is enclosed in a covering of cellulose which must be broken before the ferment in the saliva can act upon it. The action of the crop it very important, because we shall see that starch must be changed into sugar before it can be absorbed into the system.

The ferment found in the saliva is called ptyalin, and is found in the saliva of all animals, including man. The author has found it in the saliva of the chick a few hours after it leaves the shell. It acts best at about the body temperature of the chick and is destroyed by acids.

STOMACH (PROVENTRICULUS)—The food is allowed to pass from the crop into the stomach, a little at a time, so we never find the stomach distended like we do in animals without a crop.

The stomach in birds is small as compared with other animals, but its action on the food is very similar.

The semi-fluid mixture coming from the crop is made acid by the muriatic acid secreted by the cells of the stomach. This acid destroys the ferment of the saliva but activates the ferment of the stomach. This acid acts also as an antiseptic. It does not destroy all bacteria, but stops their growth for the time being. They flourish later in the intestines.

The weak solution of muriatic acid acts upon the pepsinogen of the gastric juice and converts it into pepsin. Pepsin is a ferment which has the power of digesting protein material.

To understand the action of ferments on protein we must think of protein as being made up of a number of building blocks cemented together. (Fig. 2)

If we submit this particle of protein (egg albumen) to the action of pepsin and muriatic acid, it is split up into what is known as peptone. (Fig. 3) The peptone stage represents the first stage in the digestion of protein and is as far as the gastric juice is able to carry it.

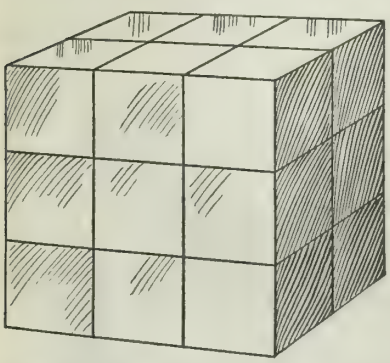

Fig. 2. Diagramatic picture of a particle of protein, made up of a number of building blocks cemented together.

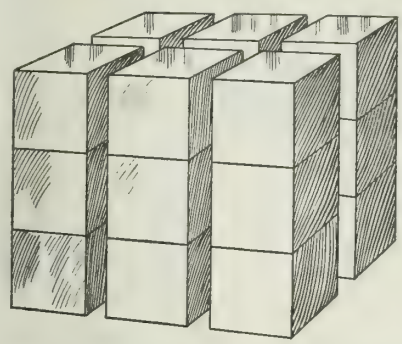

Fig. 3. Peptone. Diagramatic picture of protein after it has been acted on by muriatic acid and pepsin.

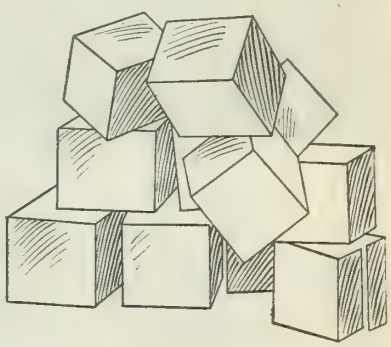

Fig. 4.—Diagramatic picture of protein after it has been acted on by the pancreatic juice and broken down into its individual building blocks.

A large proportion of the protein food will not be changed because it is surrounded by an impervious coating like fat or cellulose.

We have another ferment in the stomach, called rennin, which acts on the casein of milk, forming a curd, some of the groups being split off in the process. This action is not very well developed in birds, as milk is not their natural food. In animals like the calf where milk is their natural food, this curdling function of the gastric juice reaches its highest development.

GIZZARD—From the stomach the food passes into the gizzard. The gizzard is a thick muscular organ lined with a tough horny membrane. Animals whose food is soft or else is chewed before swallowing do not possess a gizzard. It is found best developed among seed-eating birds. Various fishes, reptiles, crustaceons, insects, worms, and other invertebrates have gizzards.

The function of the gizzard is to crush the hard grains. This it accomplishes by muscular contractions which rub the grains one against the other. This process is very much facilitated if sharp particles of grit are mixed with the grain.

Some writers claim that grit is unnecessary for poultry. We fail to notice the report of any experiments which prove that fowls without grit in the gizzard, when fed on whole grain, did as well as fowls with free access to grit. Some experiments have been reported where the observers have taken for granted that the gizzard did not contain grit because the birds had not had access to any for a month. The author has counted between 15 and 25 particles of grit, varying in size from that of

The type of White Wyandotte males used in the breeding yards of George H. Rudy, Route 15, Mattoon, Ill.

a pin-head to that of a split-pea, after birds had been without grit for three months.

In young chicks the soft food first given may become impacted in the gizzard. This is prevented by allowing chicks access to sharp sand. The sharp sand particles stimulate the muscular action of the gizzard which is sluggish when soft food is given.

The gizzard does not contain digestive glands, therefore cannot secrete digestive juices. The glands found in the gizzard are for the purpose of renewing the horny lining membrane which is constantly being worn away. The action of the gastric juice is continued in the gizzard and is not arrested until the food enters the first part of the small intestine or duodenum, as it is called. The crushing and friction action of the gizzard is very important because it breaks down the grain envelopes and allows the digestive juices to reach the proteins, carbohydrates and fats contained therein.

DUODENUM—The gizzard opens into the intestinal tube, the first part of which is bent back upon itself like the letter "U" lying upon one side. (Figs. 9-10.) In the hollow of the "U" is situated a gland called the pancreas, which secretes three

powerful ferments which act on starch, protein and fat. These ferments enter the lower part of the duodenum through ducts situated close to the ducts from the liver carrying the bile.

Both the pancreatic juice and bile are alkaline in reaction.

When the food becomes of the proper consistency in the gizzard it passes into the duodenum a little at a time. Here it comes in contact with the alkaline bile and pancreatic juice; the acid of the stomach is neutralized, the starch is rapidly broken down to maltose, the peptone which was formed in the stomach is further acted upon and broken down into smaller groups of building blocks until these groups are separated into single blocks. (Fig. 4.)

Pancreatic juice not only acts upon peptone but is able to act on any proteins which have escaped digestion in the stomach and break them down to single building blocks.

The fats are split up into glycerin and fatty-acids. These fatty-acids form soaps with the soda, potash and other alkalies of the bile and pancreatic juice. The soap thus formed, along with the free fatty-acids are absorbed by the intestine and reconstructed into the peculiar form of fat found in the fowl.

The bile, although it contains no ferments, aids the pancreatic juice in various ways, especially in dissolving the fatty-acids and breaking the fat into small particles (emulsifying the

fat), so the ferment in the pancreatic juice can act on it more readily.

The author has observed that the digestive functions of the stomach are developed by the second day after hatching, whereas the pancreatic ferments were imperfectly developed before the seventh day.

Chicks should be fed carefully with small quantities of easily digestible food for the first week after hatching.

SMALL INTESTINE—The juices which are secreted by the walls of the small intestine contain ferments which aid the pancreatic juice to digest protein and carbohydrates.

We have found that cane sugar is present in the sugar-beet, but before it can be absorbed and used by the fowl it must be changed into glucose. This change is produced to some extent by the acid in the stomach, but more particularly by a ferment in the intestinal juice. The maltose produced by the digestion of starch by the saliva and pancreatic juice is also changed by the intestinal juice into glucose.

In most animals we have a ferment present in the intestinal juice which acts on milk-sugar. This ferment is absent in poultry, and they must depend on bacteria to break up milk-sugar.

The author found that chicks could not digest milk-sugar and when pasteurized milk was fed alone to chicks it caused irritation of the stomach and intestine and the chicks suffered from lack of digestible carbohydrate in the food.

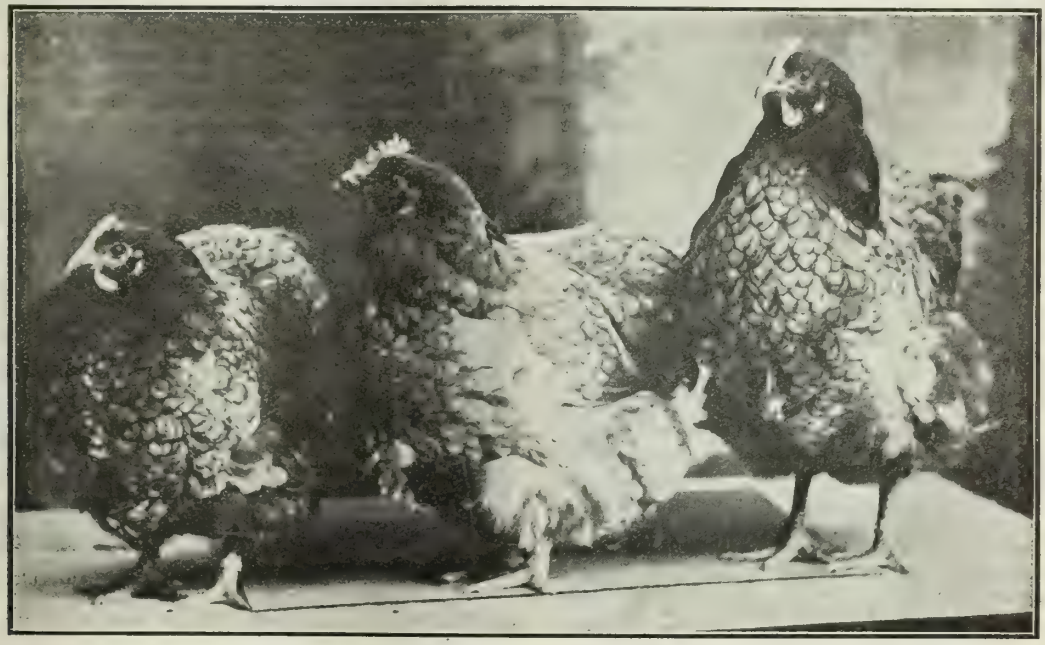
ABSORPTION—The glucose formed from the digestion of starch and sugar is rapidly absorbed by the intestinal wall, taken up by the blood and carried to the liver and muscles where it is stored as animal-starch (glycogen).

When the food is rich in carbohydrates the liver and muscles cannot retain all of it as glycogen.

Now what becomes of the sugar which is not disposed of as glycogen? A direct consumption of sugar is not to be thought of; and on the other hand, the sugar content of the organs, and the blood especially, never exceeds well-established limits when the storage places for glycogen have been filled.

Numerous experiments have shown that the excess of sugar is transformed into fat.

Now what becomes of the stored up glycogen? Whenever muscular action takes place some of this animal starch is converted into glucose and is used up to produce energy.



The glycogen content of the liver stands in a definite relation to that of the muscles. After the muscles have performed hard work, we find that not only does the glycogen in them disappear, but that in the liver as well. This leads us to believe that the liver serves as a central storage place which is capable of feeding all the other stores in the body. The transfer of liver-glycogen to the muscle takes place by means of the blood, and in the form of glucose.

The rôle of the carbohydrates in the animal body is not limited to the production of energy. They are to be considered as a source of heat. It is possible to cause the glycogen store to disappear by merely chilling the animal.

Fat like glycogen is stored up as a reserve material and besides acting mechanically as a protection against cold, is used up to produce heat.

If we burn sugar and fat it is changed into carbon dioxide gas and water with the production of heat. The same thing takes place when these substances are burned in the fowl's body.

Protein food we have found has been broken down into individual building blocks. These various building blocks are absorbed and carried by the blood to the liver, which sorts them out, so to speak, allowing those to pass which can be used by the animal in building up its tissues. No matter whether the protein material was originally animal or vegetable, the fowl first breaks it down and then reconstructs it into its own peculiar form of flesh.

BLUE ORPINGTON FEMALES.

Reading from right to left is first Chicago hen, 1913; first Madison Square Garden hen, 1913; first Chicago pullet, 1913. Bred and exhibited by H. Nicholson, Leominster, Mass.

The daily activities of the fowl cause a certain amount of wear and tear of body tissue with the formation of complex substances which are more or less poisonous. These poisonous substances are carried to the liver, where, along with the discarded building blocks, they are changed into ammonia and uric acid, and thrown out of the body by the urine.

BACTERIAL ACTION—The gastric juice is an antiseptic; the pancreatic juice is not. An alkaline fluid like pancreatic juice is just the most suitable medium for bacteria to flourish in. It is often difficult to say where pancreatic action ends and bacterial action begins, as many of the bacteria that grow in the intestinal contents, having reached that situation in spite of the gastric juice, act in the same way as the pancreatic juice. Some form sugar from starch, others peptone from proteins, while others again break up fats.

The action of bacteria on milk is a good example of the way bacteria may aid digestion in the fowl. We found that poultry produce no ferment that will break up milk-sugar. In the souring of milk the lactic acid bacteria change part of the milk-sugar first into glucose and then to lactic acid, so we see that our milk will contain some glucose which is the form in which sugar is absorbed.

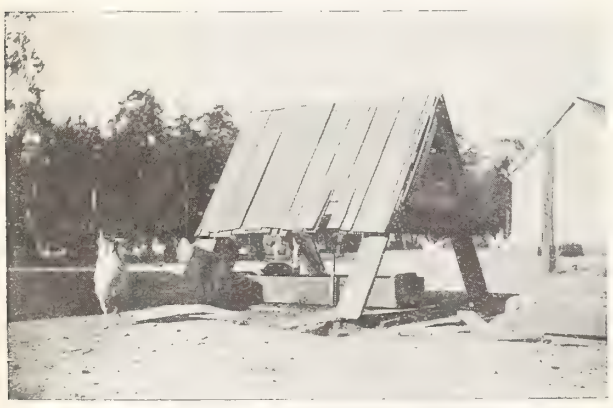
Womans Success With Poultry

Helen F. Woods, Editor

A Department for the Exchange of Helpful Poultry Experiences

A California Girl With A Thousand Hens

A GIRL eighteen years old who is making $900 a year from a thousand hens should be encouraging to other girls who are anxious to make money. It isn't the California climate that makes the profit for Mabel De Vasse, of Sonoma County, but her own painstaking care.



It is really no small task to care for a thousand laying hens, but Miss De Vasse considers it a recreation. Her work shows that she enjoys what she does and that she does not consider it a burden in any way.

The reason she raises White Leghorns is because the San Francisco market demands a white egg and the Leghorn produces that kind. Dark colored eggs are classed as No. 2's at San Francisco and bring a price about 2 cents below the price of No. 1's. Most every one in this vicinity raises White Leghorns and that makes it easy to buy new stock of the kind you want or sell what surplus you may have.

The eggs are sold for cash to dealers in the towns near by and the transaction is completed in a few minutes. There is no waiting for returns and no commission to have deducted.

The thousand hens average a profit of about 90 cents each per year. This is after subtracting the cost of the feed, which usually amounts to $1.25 per hen per year. In other words, the total income is about $2.15 per hen per year, or $2,150.00 is the total amount of money handled by Miss De Vasse in the conducting of her flock of white layers during twelve months.

It might at first thought seem that it would be heavy work for a girl to care for such a large number of birds, and especially would it seem difficult when it is known that the birds on the De Vasse ranch are housed in small lots of 50 each, and these are scattered over an area of nine acres. The idea

Cover for water trough used by Miss De Vasse.

is to give the birds plenty of range so that they will have sufficient exercise each day to keep them healthy and active, for an active bird is always a worker, and it is not profitable to keep hens that are not good layers when it requires an outlay of as much as $1,250.00 to provide the feed.

In order to make it easier to carry the heavy pails of feed from the feed-house to the different yards, Miss De Vasse uses a two-wheeled push-cart. This is shown in one of the pictures. This cart will hold all of the food required for three or four pens, and being mounted on large wheels with well oiled bearings it is very easy to push it from one yard to the other.

The caring for the fowls consists of four operations. In the morning a mash is fed, in the afternoon, about 4:30, whole wheat is placed in the self-feeders. Immediately after this the eggs are gathered, and when they are all collected they are

Type of house commonly used in California.

candled, weighed, and packed in the cases ready for shipment.

The mash which is fed in the morning is prepared the night before, and consists of ground barley, bran and shorts. These are mixed in about equal proportions in a large tank and are well moistened with water. The mixture is allowed to soak over night.

The amount of whole wheat fed in the afternoon is governed by the amount that the chickens eat. If considerable grain is found to be left in the troughs, no more is added. But when the troughs are well cleaned up, another pail full is given to each pen.

By giving plenty of food during the week, it is not necessary to give an evening meal on Sunday. There is always enough left in the troughs which has accumulated during the week to provide the Sunday supper. This provides for a thorough cleaning of the feed troughs once a week.

The eggs are gathered in large candy pails and the two-wheel cart is used for carrying them from one pen to another. After they are all gathered they are taken to the incubator house which is dark except for a small hole about the size of an egg in one wall. The eggs are all candled by holding them, one at a time, up to this hole and noting whether they are clear or have a dark spot in them. Those with a dark spot in them are destroyed as being unsalable. The eggs are placed at once in cases holding 30 dozen each. These cases are provided by the egg dealers. No. 1 eggs must weigh 22 ounces to the dozen; moreover, each egg must weigh one-twelfth of 22 ounces. In order to be sure that all the eggs in the No. 1 case are exact weight, an automatic scale is used to weigh each egg. The scale is arranged so that the egg sets into a little hopper, and the weight at the other end of the beam just balances an egg of the right weight. Those that cannot bal-

ance this weight are placed in another crate marked "No. 2." The No. 2 eggs usually bring about 1½ to 2 cents below the market price for No. 1's. The egg dealers deliver food to the raisers, and on the return trip take away the eggs. The price

Miss De Vasse and her cart.

varies throughout the year, usually being the lowest during April and May when the production is heaviest.

The yards are so arranged that parts of them can be cultivated each year and planted to some crop such as barley, wheat, or oats. This provides green stuff into which the fowls may run. In addition to this, mangel beets are fed occasionally. These are thrown whole upon the ground.

The houses contain nothing but the roosts and are made 8 feet wide, 10 feet long and 6 feet high. This size of house accommodates 50 hens. Back of the houses are two nest boxes. These are 2 feet wide inside and 8 feet long and contain 12 nests each. The nests are made of tin cans in which distillate oil is received. The cans are just about the right size for nests, and are very easy to keep free from mites, or lice. The nests are arranged so that the hens approach them from the rear. In front there is a board which serves as a door. This is the door through which the eggs are gathered and is kept closed so that the nests are rather dark. Both the houses and the nest boxes are of very cheap construction. All that is needed in a house is to keep out the wind and rain, and all that is needed in the nesting boxes is to keep out the rain and provide a dark, cool place in which the birds may hide to lay their eggs.

All of the baby chicks are raised on the ranch. The incubators will accommodate about 8,000 eggs at a setting. It is the aim to have all of the chicks that are to be used on the ranch hatched at the same time so that there is less bother in caring for them. Of course, not all the chicks hatched are kept on the De Vasse plant, but the surplus finds a good market and are sold as day-old chicks for 10 cents each.

Tiers of outside nests used with colony houses.

The chicks for the De Vasse ranch are brooded in a brooder house which accommodates about 1,200. This is heated by means of a small wood stove, and is provided with hovers for the chicks, which are heated with distillate oil.

Everything about the farm is kept thoroughly clean and the stock is thrifty and bred for business. The layers are kept until they are three years old. That is, they produce eggs three seasons, and are then sold for meat.

Provides Clean, Healthful Water.

Most of the larger poultry raisers in California provide running water for their fowls. Nearly everyone has a supply tank or is connected with a water main.

After a good supply of water is secured, it must be kept clean and cool. A faucet that drips constantly usually provides cool water, but the drinking trough should be protected in some way. Some place the trough on a platform to prevent the fowls from scratching dirt into it. Others protect it with a lath screen. Perhaps the most effective method I have seen is one used by Miss De Vasse and shown in the accompanying picture.

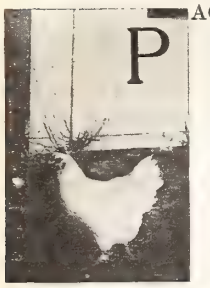
The trough and the pipe that supplies it are protected by an A-shaped roof. This is made from old lumber and is very inexpensive. It not only protects the water from the sun, but avoids to a large degree contamination by the sparrows and other birds that bother in the poultry yard. The whole outfit cost only two hours of labor and is to be highly recommended to poultry raisers.

This is an example of what a girl may do who has ambition and a love for live stock. Miss De Vasse has no special opportunities that other girls do not have. Of course she lives close to a large market, but there is always a big demand for eggs in every section, and when the business is handled properly there is the opportunity to make a good profit.

———o———

1914 American Poultry Journal Year Book

We are pleased to announce that the 1914 Year Book will soon be ready for distribution.



Place your order for this book today—it's still bigger—better—more thorough than the 1913 Year Book which has been pronounced one of the greatest, most valuable books for poultrymen—everywhere.

The 1914 Year Book will contain complete show reports for the season—many valuable articles—charts—poultryman's calendar—colored illustrations, etc. Everything new. In short, it will be the boiled-down-to-the-minute cream of information you are looking for.

Prices—Paper bound, 50c; handsome cloth bound de luxe edition, $1.00. Address American Poultry Journal Publishing Company, 542 South Dearborn Street, Chicago, Illinois.

Practical Packing of Eggs for Hatching

A Method That Reduces Breakage or Shaking Up of Eggs to the Minimum, While the Carrier and Packing Being Light Reduces Transportation Charges. *By J. W. Parks*

PACKING eggs for hatching is a branch of the fancy side of the poultry industry that has made little or no advance from a scientific standpoint, and this seeming unconcern is working more harm to the eggs-for-hatching branch of the industry than the average breeder realizes.

It is a fact that eggs may be packed in such a way that they will reach the purchaser without loss from breakage, yet still be in poor hatching condition. If the eggs are not properly packed, especially for long journeys, with provision made for taking care of the great number of sudden bumps, the contents of the eggs will become so shaken up from the constant vibration that the germs become weakened, and either die at different stages of development, or the hatch results in a number of weaklings which never amount to anything.

I spent a few days during the busy season last year visiting a few of our leading breeders, calling, among others, on a good old friend of mine who has been in the business for something like thirty or forty years, and who has in that time done the industry an immense amount of good. I found him busy packing eggs for hatching, and still doing them up in the way they packed them twenty-five or more years ago, at which time an order was seldom shipped out of one's own state. Neither was the world moving in the hurry-flurry style of today—or the employees of the express companies. Eggs packed in the old way simply could not have stood the average twenty-four hour journey and been expected to arrive in good hatching condition under present day conditions. The old-time breeder's intentions were good enough, for his package cost as much or more than the best, and required a great deal more time getting a shipment ready than we could devote to packing the same number of eggs today.

At another plant visited, a leading specialty farm, where the best talent obtainable was employed, eggs were being packed in a way that would insure their reaching the purchaser in good shape but the time and material used in the packing was double what it ought to have been. The eggs were first packed securely in a box, which was then placed in a basket with a good cushion all around and muslin sewed securely over the top. Following this method, the packer put in as much time getting a setting ready for shipment as I would allow for a one hundred egg order, and while they were getting several times as much for their eggs, I have since learned that their plant is a losing proposition.

Eggs to be shipped great distances and hatch well must be packed scientifically. In the first place they should be packed in a receptacle having some flexibility or "give" to it, so that the package will help take some of the sudden jars, the eggs also being packed in a way that they will likewise give with a sudden jar, as it is this that so frequently causes a weakening of the delicate fibers which hold the germ in place.

There is no question but that a split basket comes the nearest to being the proper thing to pack eggs for hatching in. Most shippers, however, use the flat top basket, sewing a muslin over the top, which takes up a lot of good time and invites the danger of other packages being piled on top, and the probability of thus breaking the eggs.

After a good many years experimenting, I have decided on the split basket with a hinged top and with two handles for packing eggs for hatching. These baskets cost a trifle more but you can save in the packing, for after the eggs are packed, the top closed, the basket should be tied shut, the two handles tied together on top, which prevents anything being placed on top of it, and your package is ready to be tagged and shipped.

I have used almost every known packing material, waste paper, chaff, rice hulls, sawdust, shavings, etc. The best and most satisfactory material for this purpose is undoubtedly excelsior. The basket should be well lined with a fine grade of excelsior, known as wood wool; a good handful of this should then be wrapped around each egg, and the eggs then placed in the basket on their ends. This method sort of makes a nest for each egg, and a good supply of excelsior is then placed on top of the eggs, filling the basket comfortably full.

Baskets of several sizes, for different size orders should be used, always allowing plenty of room for packing, so that plenty of excelsior can be used between the eggs and the basket. Using this method last season, breakage did not run over one per cent, which reduces the packing of eggs for hatching end of the business almost to a certainty.

By this method of packing, eggs may be shipped either by express or parcel post, though up to the present time, the handling of eggs for hatching through the mails is not used very extensively, though later we may expect great increase in this method of delivery.

I secure these baskets from Guile & Windnagle, Penn Yan, N. Y., who are making a specialty of supplying them to poultrymen. Eggs so packed have been shipped north, south, east and west, thousands of miles without breakage—not even a cracked egg, and have yielded good hatches. The basket being light of weight with the wood wool excelsior packing provides a resilient package which reduces breakage, or the shaking up of the eggs, to a minimum, while at the same time insuring lowest transportation charges.

Sensible and practical method of packing eggs for hatching as recommended by J. W. Parks, Altoona, Pa. See article in this issue. Eggs have been shipped in this manner north, east, south and west—thousands of miles without even a cracked egg and have yielded good hatches. The light weight package makes a resilient, safety carrier and insures minimum transportation charges.

———o———

Feeding young chicks is one of the most important questions. For the first three days mix together fine sharp grit, pinhead oatmeal, millet seed, cracked corn and charcoal. Hulled oats crushed may be used instead of pinhead oatmeal. The mixture should be put through a sieve which nothing larger than millet seed will go through. Then there is no danger of choking the chicks. Make a mash of a hard-boiled egg, shell and all, and mix with green onion tops or sprouts and bread crumbs. When the chicks are two weeks old the corn need not be quite so fine.

If you change your address give both your old and new address as well as your subscription number when notifying us of the change.

AMERICAN POULTRY JOURNAL is the oldest poultry paper in America. It has a national and world-wide reputation. The best writers on poultry matters contribute to its columns. It receives the patronage and endorsement of the foremost representative breeders of standard poultry and manufacturers of poultry appliances in the country.

Come to Chicago, Boys.

Chicago again extends a cordial invitation to the American Poultry Association to hold its next annual convention in our city, promising in return for this favor to help make the convention the largest and most enthusiastic one ever held in the history of the A. P. A. Everyone will admit that Chicago is an ideal place to hold the convention, being centrally located with the best railroad facilities in the world. Besides these two important points, the many and varied attractions to be found in Chicago will surely draw a large attendance, from near and far.

Vote for Chicago, and you may rest assured that the Chicago Association of Commerce and the local members of the A. P. A. will do everything possible to royally entertain their guests. The nominating ballots will soon be in your hands. Just write Chicago as the place to hold the convention and then come to the largest gathering of poultry breeders ever held in this country.

Buying Poultry Equipment.

At this season of the year manufacturers of poultry equipment, incubators, brooders, feeders, hoppers, galvanized iron ware, and other supplies, have their factories and shipping departments rushed to the limit. It is a very busy season.

To avoid annoying delays be sure to place your orders early. Select and order the new goods you want well in advance of the time you want to use them. If you have an order to place, it is a good time to DO IT NOW.

Many customers put off buying until the last moment and then complain because of delayed shipments. Don't put all the blame on the manufacturer, he is a busy man these days and may be at his wits ends trying to satisfy the rush season's demands on his business. The equipment and supply business is largely a spring season business, chiefly because of procrastination on the part of poultrymen who put off ordering until they actually need the equipment. This is a big country and all the year 'round is the big poultry season in some part of it.

Get your orders in now and plan to spread your buying out more over the whole year hereafter. The poultry equipment business ought to be kept comfortably busy throughout the whole year.

Stuff "Nosed Over."

There is an old saying that if you tie a horse to a haymow he will grow poor, and the saying is as true as it is old. We have seen a stable constructed in the following manner: A pair of horses were tied to the side of a haystack and allowed to eat their way in. As they progressed covering was made of rough poles supported by strong forked sticks.

When we saw this novel stable, the horses had tunneled their way in more than twelve feet, and were well protected against the wintry blasts. But they were poor, forlorn looking nags, starving to death in the midst of plenty. The explanation is this: They were breathing on the hay continually and it became mussed up, and unfit to eat; they were disgusted with it all the time.

This is an extreme instance, but something very much like it happens in all cases with sheep, swine, fowls, or any animals, whenever the food is allowed to accumulate for them to "nose over," or scratch over. Swine and fowls can stand this sort of thing better than some other species of live stock, because they are accustomed to gather their food from the dirt. Yet it is a bad practice for the keeper to force his domestic animals to swallow anything excepting perfectly clean food.

Now do not interpret this to mean that "dirt," pure and simple, not filth, I mean, but soil, or "clean dirt," will hurt if swallowed. Throw feed onto freshly plowed or spaded soil if you will, or on new ground where fowls have never been, but this is different from contaminated soil. Probably common fresh earth mingled in the food of horses or cattle would be injurious to some extent, even if small in quantity. But fowls need ash, or earthy matter to make egg shells of.

Even horses and cattle, as well as deer, resort not only to "salt licks," as is proverbial, but also to spots where there is alkali and various mineral matters and sometimes calcareous earth. This hints that though they do not form egg shells they form bone. But preeminently the domestic fowl, producing an unnatural number of eggs, especially needs earthy matter.

High Prices.

We have heard persons say that it was a shame for breeders to charge such high prices, no matter if it was for extra specimens of blooded birds. "No fowl is worth more than a dollar," we heard a man say at a poultry show. Let us examine the above statement a little. It takes time and patience to improve a line of breeding stock, does it not? If the line is a continuous series of generations, and every one of the animals in the line a direct descendant from great-grandfather, grandfather, father, down to son, grandson, etc., and all are good and capable of imparting their desirable qualities to a considerable portion of their progeny; why this state of things has only been brought about by a sacrifice of much time and money and never wavering patience and more breeding pens than you can shake a stick at.

Now we will suppose that this achievement has been reached. It is not an empty supposition either, for it has been done again and again. Now the capacity for increase, and increase at a tremendous rate when it has been well started, is an attribute that belongs to our domestic animals, including our

poultry; bipeds or quadrupeds, it matters not which. Even the slowest of all breeding animals is capable in the course of not so very many generations of producing descendants enough to produce in turn progeny in sufficient numbers to fill the earth, supposing there was enough for them to eat.

It is this capacity to increase that gives such great value to a particular breed of animals from a superior strain such as has been described. It is not the animals themselves but this "promise and potency" of multiplication which gives them extreme value.

It has happened again and again that the introduction into a country of surpassingly fine breeding animals, horses, sheep, swine, horned cattle, or what not, to the value of five hundred or a thousand dollars, has been the means of increasing the value of the live stock in that country, in the course of a dozen or twenty years, to hundreds of thousands of dollars over what it would have been if nothing but common stock had been introduced.

So well is this principle recognized by the railroads in the United States that they carry fine breeding stock to agricultural fairs, free either one way or both ways, to encourage the live stock interest. It is like transporting carloads of seed wheat free of charge, in order that the railroads may have the privilege of afterwards carrying enormous harvests which shall tax the capacities of their rolling stock to the utmost.

No man who says "no fowl is worth more than a dollar" has ever grasped the principle of breeding, or appreciated the mathematical and financial elements in the problem. He is an ignoramus who has no claim on our attention. He has no case and should be dismissed from court. Probably he never at school learned, in his "rithmetic book," that there is such a thing as geometrical progression.

———o———

Feeding for Both Economy and Thrift.

By keeping always within reach of fowls, young and old, the two extreme sorts, the highly carbonaceous, such as Indian corn, or seeds of Kaffir or some other of the non-saccharine canes, and the highly proteinous, as wheat bran and shorts, less is actually consumed than by the methods commonly pursued. With abundance always before them, it has been often feared that fowls will gorge themselves and become hog fat. But it is really the other way. The gorging is, when feed is thrown to hungry eaters. The time when they fill their crops to distention is when you have allowed them to become very eager.

Just so sure as you feed somewhat sparingly, owing to the oft repeated injunction "do not over feed," which is the stock in trade with many writers, you find your flock ravenously hungry at next feeding and they pitch in to make up for lost time. Feed by hand "all they will clean up greedily" if you want to bring about overeating, especially if you starved them down a bit previously, for you will then naturally give them enough to make up for previous withholding. Their crops are their haversacks to hold a supply against need and they will cram these haversacks chockfull the next time, after you have been so virtuously heeding the "don't overfeed" injunction.

They will acquire a habit of cramming to distention and their crops will keep gradually stretching day by day till you are really not carrying out the sparse feeding plan so much as you think you are.

If you are afraid of gorging, and if "over feeding" is a nightmare to you, just dole out sparingly and grudgingly this and that to your fowls and allow them by spells to become "sharp set," thus teaching them to crowd at your feet and tumble over one another, and see how your wishes will be defeated by the very plan you are pursuing. My word for it, they will acquire the habit of gobbling fast as they can whatever you throw them. They will sometimes even swallow at once an unaccustomed sort, which they would peck at daintily, or refuse entirely, if all sorts of staple food were before them all the time so that they would never become accustomed to crowd and play hog.

If you throw an ordinary staple grain food to poultry educated to fight for it, and think you are following moderation by stopping "when they cease to be eager for it," as is so often recommended, they will pack their crops to distention before ceasing to be "eager," and then what becomes of your dogma of not "overfeeding"?

———o———

Breeding Time.

Once again the big show season is over and breeding time is with us. Most of the utility men already have their breeding pens well mated up and a goodly lot of early chicks started. A good many fanciers are obliged to wait until the big shows are over to get their matings in order. Show birds need to be rested before breeding and if they have been over-shown take quite a while to get into good form again. Exceptional exhibition specimens are seldom used for breeding.

Prolonged cooping in small cages both before and after shows is now out of date. The birds get rather too much of small cage confinement in the show rooms. Some of the best specimens exhibited this season came in off the range and were handled and trained with very little cooping. The best way to rest up birds after showing is to provide liberal open-air scratching quarters, sheltered ranges in the open if possible, and a well aired roosting apartment. Supply sufficient food and water and let the birds alone. Give them a chance to rest up and disturb them as little as possible. Application of a little hen sense here will bring good returns. Simply keep them comfortable and well fed and allow them to do pretty much as they please, and do not fail to supply a "dust bath."

Mate up the breeders carefully. Keep in mind constitutional vigor all the time. Breed for health, vigor and vitality. Consider that first. Don't breed from any bird that has been seriously sick, or one that is deformed, has constitutional faults, or is out of condition. Don't breed from any matings where both females and male have tendencies to similar faults. If you inbreed, remember that similar faults in mated male and female are certain to be multiplied and intensified in the progeny. Don't fuss too much with your birds, give them a chance. Sometimes "letting them alone" is a big part of good care.

It will be a good plan to have all the early chicks you can care for well. February and March chicks usually thrive well and are hardy and free from ailments. Hens that produce hatchable eggs in February and March are usually in good breeding condition. Hens with diseased ovaries and infected with "white diarrhoea" seldom lay much until later in the spring. Early chicks will make good and big growth and if properly handled will prove good fall and winter layers.

Get hen sense into your breeding this season.

———o———

The Tide Still Sets Back to the Farm.

Everything indicates that the "back to the farm" movement, the lure of Nature, "near to the soil," and the "simple life," will be stronger than ever during 1914. But, there's a difference. It is no longer a strong tide sweeping inland to the slogan of "go west young man." The movement from now on will be toward the coast. Coastwise farms or those not far removed from the sea coast lines, on the Atlantic, the Pacific and the Gulf, are in greatest demand. The deserts of Texas and Southern California are being reclaimed and made into wonderfully productive farms. Our wizard of plant life, Luther Burbank, is demonstrating new possibilities in agriculture in this wonderful country of ours and soon we will have many new foodstuffs. The almost deserted and little worked New England farms are coming into greater demand. The low prices at which they have been held, and the nearness to the big coast cities, is a lure that attracts and the city demands for foodstuffs will prove a practical source of revenue that will help the new owners of farms to hold them and live well. The development of the parcel post will prove a big factor in building up the farm communities.

The coming Panama-Pacific Exposition in 1915 is sure to teach all of us a big lesson. We are going to hear more and learn more about the production of foods and about getting the foodstuffs direct from the producers into the hands of the consumers. The opening of the Panama Canal will set going a big tide of activity along all the seaboard of the whole United States. There are good times and big times coming and everybody is going to have a chance to participate in them. The big tide will set back to the farm near coastal points and along navigable rivers, but there will be plenty doing inland. As one enthusiastic fancier said at the New York Show: "It is a fine time to be alive and it is going to be finer."

Better make your plans now to attend the great Panama-Pacific Exposition in 1915. If you can, plan to take along or send a good string of birds for the poultry exhibit. It ought to be made the finest poultry show ever held in the world. A good many Eastern and Mid-Western fanciers are waking up to the possibilities of the 1915 exposition and are planning strings of good ones for the show. Get in line and do your share to make it a success and get your share of the honors. There is going to be a big opportunity for American fanciers to get a lot of profitable South American trade in the near future and the Panama-Pacific Exposition will help pave the way to it. When you are there, South America is practically next door. In fact, with the opening of the canal we will

be next door to all the world and in California you may find a key to big business. It is well worth planning for.

Hatching Egg and Baby Chick Time.

Now is the time to place your order for eggs for hatching and for day-old chicks. Get your orders in early. State your wants clearly and send cash with your order. Patronize American Poultry Journal advertisers and be sure to mention this magazine, which will insure special consideration for your order.

If you have hatching eggs and baby chicks to sell, get a little of the Golden Rule into your business dealings, try to treat all of your customers as courteously and generously as you yourself would wish to be treated. Ship only good eggs and good chicks. Acknowledge all orders promptly and advise customers when to expect shipments. Use up-to-date shipping packages and coops. Pack all shipments well, to insure safe arrival in good condition. Don't ship cull eggs or cull chicks. Remember that the fine appearance of the goods on arrival and the satisfaction of your customers are the best kind of business assets. Some men are getting as high as eighty per cent. repeat orders from old customers. That sort of business pays. To so please and satisfy a customer that he keeps coming back for more eggs, more chicks, and more breeding stock, is the best and most profitable way to conduct poultry business.

Every promising lot of eggs or chicks may not do well. Some are sure to yield good results. A good deal depends upon the man who receives the hatching eggs and baby chicks. Don't expect too much. Don't be unreasonable. Don't let one disappointment sour you. Try again. Try to be obliging and courteous in all business dealings, whether you are buyer or seller. Nineteen fourteen promises to be a good season, do your share to make it so.

More About Production Cost

Since we started the ball rolling we are pleased to note the considerable interest which is developing concerning the actual production cost of market eggs and poultry. We have repeatedly suggested the advisability of experiment stations making a real business of finding out what production cost is or should be. Of course the cost will vary somewhat, according to location, and a good deal according to season, but systematic investigation along the right lines could do a lot of good.

Right here, we want to say that we are not especially interested in the production cost of eggs and poultry produced by common farm flocks kept under usual farm flock conditions. Investigations along the usual farm flock lines wouldn't be of much value. The common farm flock has, we believe, seen its best days and a decided change for the better is coming soon. Farmers, more and more, are going to become specialists. They are going to devote their energies to specializing with their farms with a view to getting the best and most suitable crops and the best returns. Except for the run of non-progressive farmers, who will always be with us to some extent, the farmer of the future is going to work a good bit with his brains and he will understand that the business of producing foodstuffs for the people of the world is a mighty important undertaking and worthy of his best effort and energy. He won't have time to be a "Jack of all trades" as much as he has been in the past. He won't be able to have too many side lines to occupy attention that should be given to specialty work. He is going to have a big man's job and he will have to tackle it in a modern down-to-date business way. Then, too, parcel post distribution is going to put both big and little farmer on his mettle and give a mail order business to a good many enterprising ones.

Chick hatching will become more and more a specialty and big incubators will give us more and better chickens. Producing the best eggs for hatching is another field for specialization, so will be the growing of breeding and laying stock and the now well established specialty of producing prime market poultry will find greater and more profitable development. Modern egg farming, with sanitary methods and well fed flocks, is another important specialty. There is plenty of work to do, that will be done all along the line.

Farmers, big and little, seldom take very kindly to poultry. Unless the farmer is a poultryman he hasn't the time or the inclination for special poultry work. The farm flocks are tolerated to please the farm wife, and to furnish eggs and chicken meat for

Fashion Plate Strain BUFF ORPINGTONS

One variety correctly mated and line bred for ten years develops family characteristics and is worthy the name, Strain.

Trap-Nesting your pullets to select the best layers as your breeding hens leads to big profit.

Only a few hundred birds of this double value to sell in January and February—nicely finished cockerels, trim pullets, ready to go into the best shows right now **to win**—conditioned free and guaranteed to please. First-class selected breeders, all bred from our best families of trap-nested layers, ripe and ready to ship out at **Special Prices.**

1914 Orpington Fashion Plate Book

Our book for this season is the best ever issued on Orpingtons. Many high schools and colleges use it as a text where poultry husbandry is taught; **56 pages, Fashion Plate Buffs** in natural colors, over 40 other illustrations, full description of our **28 yards** and the price of stock and eggs, articles on trapnesting, conditioning birds for show, feeding, etc., **free.**

A. E. MARTZ & SON **Buff Orpington Specialists** Box A, ARCADIA, IND.

the home table, and now and then a bit of pin money or trade at the country store. The farm flocks are farm scavengers, pick up a large part of their living from waste, and, as a rule, the cost of production of the farm eggs and chickens is not considered to amount to much.

In fact, farm poultry occupy a similar position to that in which a certain big dairyman placed his hogs. He grew many acres of corn and fed a good deal of it into his growing cattle and milch cows; the hogs lived and fattened chiefly on the undigested corn food in the dung of the cattle and such waste and slop as came from the dairy. The dairyman said he made a profit on his beef cattle, breeders, cows and dairy products, but that his hogs cost him next to nothing and were "all profit." Yet, dung-fed pork hasn't much appeal to appetite.

Just as cattle inspection, meat inspection and milk inspection is beginning to improve, we can look for inspection of eggs and poultry meat to come and improve along modern lines during the next few years. It is bound to come. There is nothing more important in this world than getting pure foods to feed the people.

Egg farm conditions and market chicken farm conditions have got to be improved and modernized. That is certain. We are not going to hark back to the old-time slip-shod farm poultry methods. With modern, up-to-date, sanitary egg and chicken farm conditions comes increase in cost of production.

What our government investigators and experiment stations should do is to think less of the old-fashioned farm eggs and farm flocks and more of future modern poultry plant flocks. Get busy, get together, and work together. Endeavor to find out what it should cost to produce eggs in different sections of the country on modern, well conducted poultry plants, where the hens are well housed, well cared for and well fed, and where the eggs are properly handled and shipped to market. Don't dally with food cost alone or average costs. Get the cost month by month, or week by week, or day by day, but get the whole cost, the total cost—figure all expenses, land, labor, buildings, upkeep, capital invested, marketing, etc. Get the real cost. Find out what it costs to put a dozen new laid eggs, from a modern egg farm, into the market at all seasons of the year. Find out what it costs per pound to put the best market chickens and fowls of all ages into the market, when produced under modern and sanitary poultry plant conditions. That sort of information will be worth while.

The prices of good poultry products are going to go up, not down, and to stay up. The prices will reach a greater uniformity throughout the country, quality will improve, and real poultrymen will be able to earn a good living with that "little more for a rainy day." Poultry and eggs are necessary and desirable foodstuffs and we will have to have the best and prices will have to be based on production cost. It is going to take an enormous quantity of poultry and eggs to supply the needs of the people and the work will have to be developed in a modern, sane, business way.

More and more the consumer is going to demand and to get fresh foodstuffs direct from producers. He is not likely to get it for any less than he now pays, but the producer will get better paid and the consumer will get better quality and better food and have less doctor bills. Cold storage will come under better regulation. It will be necessary to take care of surplus in time of plenty and preserve it against time of scarcity, but there will be fewer abuses, actually better storage largely by producers themselves, and little or no speculation of the sort now indulged in. Transportation lines will furnish better facilities and better refrigeration of foods during transit. There are good times coming!

Let's have the real facts about production costs. Some of our "experts" are telling about producing eggs at "9" and "16" cents a dozen "average total cost for the year." That doesn't "listen good" to us for it doesn't look reasonable or probable. We believe that the minimum total cost of "flush season" spring eggs is pretty close to 15 cents a dozen on most well conducted plants and that in the period of scarcity in the fall the cost is close to 45 or 50 cents a dozen. Quit guessing and basing estimates on figures ten or twenty years old and give us facts from today.

The "Egg Trust" Nonsense.

The twaddle and nonsense in the daily newspapers about the "Egg Trust" and the silly "egg boycotts" and "price war crusades" have done some small good after all. They have paved the way for future inspection of foodstuffs like poultry and eggs and have led to investigation of methods of production, cost of production, and methods of getting produce more directly from the producer to the consumer.

If one needs proof that there is not and never has been any "egg trust," he has only to consider the wide difference in the prices of eggs, of similar or the same quality, in widely separated sections of the country and in different localities in the same section. If there was a "trust" there would be more uniformity in prices.

When new laid eggs were selling at 60 to 75 cents a dozen in Boston, Mass., and similar prices in large cities on the Pacific Coast, and 75 cents a dozen in New York City; the price was 85 cents in New Rochelle, N. Y.; not obtainable at any price in some parts of northern New Jersey; 55 cents in Plymouth, Mass.; 38 cents in Detroit, Mich., and so on all along the line. No apparent regulation or uniformity of prices. Producers simply got the best prices they could for their eggs in their respective locations.

Within a radius of twenty miles in

500 PREPOTENT COCKERELS

Crusader III, a Boston Winner

For years Regal White Wyandottes have been bred for vigor and stamnia. My male line has a wonderful reputation for high fertility. With a temperature of 20 to 25 below zero I am getting an average of 75 per cent fertility. Have 200 husky young chicks a week old and hope to hatch 2,000 before March 1st, when the rush of egg orders begins. I just received a letter this morning which illustrates my point.

Castle, N. Y., Jan. 11th, 1914.

Last spring I bought a cockerel from you and I now want to tell you he was a dandy. I bred him to ten pullets and raised some of the finest chickens I ever saw. **I set an incubator with 108 eggs from this pen. They tested 105 fertile eggs and hatched 100 chicks.** At the Warsaw Show I won 1st and 2nd Cockerel, 1st and 3rd Pullet and 1st Cock on the bird I got from you.

I remain, yours sincerely,

CHAS. EDN'U.

REGAL CATALOGUE IS READY

I have just received from the printers my new Catalogue and Mating List for 1914. It is illustrated from cover to cover with photographs of my famous winners and snapshots of my breeding pens and plant. It has a number of articles on feeding and rearing chicks; also on the care of the breeding stock. It also has a full description of my matings for 1914. If you will send me your name I will forward you a copy free of charge.

1,500—COCKS, HENS, COCKERELS AND PULLETS FOR SALE—1,500

SPECIAL—100 Exhibition Cockerels and 200 beautiful Pullets ready to now win the blue ribbon for you. 100 well matured Cockerels from my heavy laying Dorcas line, $10, $15, $20, and $25 each. Dorcas Pullets, $5, $8, and $10 each. Stay white utility Cockerels, $3 and $5 each.

John S. Martin : Box 51 : Port Dover, Canada

Plymouth County, Mass., the prices paid by five different collectors for the same period and for the same quality of eggs were respectively: 38 cents per dozen, 40 cents, 44 cents, 46 cents and 50 cents. Think of that variation in a comparatively small farm district area. The collectors were either shippers or local grocerymen and they picked up the eggs wherever they could. They bought the eggs for cash or took them in trade and of course obtained the eggs to sell again, paying a price which they believed would permit holding the eggs while securing enough for shipment to the city, or to sell to customers direct and insure a sure profit. Nevertheless, a difference of 12 cents a dozen in a small district is a big difference.

Something is going to be done, and that soon, to secure a more uniform price for eggs of equally good quality. Price revision is not going to be downward, either, for with greater uniformity in prices we shall undoubtedly reach a higher level and one that will insure better returns for hard working poultry keepers.

Do your share to help the good work along.

New Blood in "Poultry."

Clinton Mark Walter has resigned as managing editor of Poultry Pointers and vice president of Poultry Pointers Publishing Company, and has purchased "Poultry," the National Poultry Magazine, from Poultry Publishing Company, of Peotone, Ill. He has moved "Poultry" to Kalamazoo. As sole owner, editor and publisher of this well-known magazine, he promises us some "Big Things" for the present year. Mr. Walter has been a teacher of poultry culture for several years and he will direct the policy of the new "Poultry" along those lines which will start poultry men and women on the right road to success and guide them all the way. Whatever Mark Walter does he does well and you can "bank on it" that the magazine "Poultry," under his editorship, will be a big benefit to the poultry industry, for it will help everyone to prosper if they will but follow its teachings. The January issue of "Poultry" was out January 1 and Mark Walter's Happy and Prosperous New Year proclamation in that number is worth your reading.

For the Good of the Common People.

If we should believe all we read and hear nowadays there's a whole lot being done for the weal, welfare, and general good of Mr. Common People and Mr. Ultimate Consumer. But it would be well for these gentlemen to always remember that there is still a great deal of truth in the old-fashioned sayings: "It pays to keep a sharp lookout for the welfare of Number One" and "God helps those who help themselves." Don't accept an alleged "fact" simply because a presumed authority says it is so, but think it over, size it up, and decide whether or not you KNOW it is so.

Our Uncle Sam's government free bulletins are broadcasting a good deal of information and misinformation on various subjects, and his "expert" lecturers are doing likewise. Probably much good is being done and also some little harm. It is just as well to remember that a good many of Uncle Sam's "experts" are very young and inexperienced, easily influenced by the glamor of position and publicity, prone to jump at conclusions, and in other ways admirably adolescent. We are all of us bound to admire the fervor and enthusiasm of the youth fresh from school or college and his belief in the serious nature of his mission to right all wrongs of the world. But a good many of us have "been there" in our own transition period, and since then we have had to unlearn a lot and have learned that we still have a lot to learn. The cock-sure knowledge and enthusiasm of youth is a beautiful thing from the standpoint of the student of nature and biologist, and it is a state of mind productive of much good. When it comes to perpetuating much of this enthusiasm in public talks and free publications for the good of the Common People, it is just as well for the Common People to try to learn to sift the wheat from the chaff.

When we find this free information favoring "boom" projects and big packing interests, it is just as well to consider whether or not some interest may have found a way to influence youthful enthusiasm in its favor. Nevertheless, we are a bit surprised to find our United States "experts" recommending frozen poultry as much preferable to fresh killed stock, telling

Keeler's White Wyandottes

CHIEF WINAMAC 4th—First Cock Indianapolis, Jan. 10th to 16th, 1914

The Aristocrats of the White Wyandotte World

Have again demonstrated their superiority over all others by establishing the following records at the *National Fanciers' Club Show*, INDIANAPOLIS, IND., January 10 to 16, 1914: 1, 2, 3, 4 5 cocks; 1, 2, 3, 4, 5 hens; 1, 2, 3, 4, 5 pullets; 1, 3, 4, 5 cockerels; 1, 2, 3, 4 pens, old; 1, 2, 3 pens, young; the National White Wyandotte Ribbons and State Cup for best cock, hen, cockerel, pullet and pen; $50.00 Silver Cup for best display, and many other specials, thus further supporting their well-earned title of

The World's Greatest Strain

For 20 years I have been breeding White Wyandottes that win both in mine and my customers' hands at such shows as Chicago, New York, St. Louis, New Orleans, Kansas City, Los Angeles, Pittsburgh, Denver, etc. I have something like 100 cocks, 300 hens, 500 cockerels and 1,000 pullets to sell within the next 60 days. Let me send you a cock or cockerel that will stamp the superiority of this strain on your flock, or mate you a pair, trio or pen that will produce you the winners for next season's shows.

Selected Breeders $25, $35, $50, $75 and $100 a Pen of 4 Females and a Male. Start Right by Starting with KEELER BIRDS.

Eggs Eggs Eggs Eggs Eggs Eggs

For the season of 1914 I have mated 16 grand pens. These pens contain these Indianapolis winners and the best birds reared the past 3 years—sons, daughters, brothers and sisters to these grand birds. They are bred right and mated right to produce the winners at America's largest and best shows. My 1914 64-page Art Catalogue of America's finest White Wyandottes free for the asking (5 red stamps appreciated). Eggs, $5.00 per 15, $9.00 per 30, $14.00 per 50, $25.00 per 100. Eggs from special matings, $10.00, $15.00, and $20.00 per 15. State your wants clearly.

Bremen, Ohio, Jan. 5th, 1914.

Mr. Chas. V. Keeler,
Winamac, Ind.

Dear Sir:—Pardon me for not writing you sooner. The birds came to Bremen the 27th in perfect show condition. The cockerel is all that I expected, a good strong well built blocky bird with very white plumage. He won 1st in his class. The pullets are all I expected in type, size and whiteness. The pen won 1st and $20.00 silver cup for best pen Wyandottes, 12 pens competing. They also won a $100.00 silver cup for best pen in show, all varieties competing. A total of 60 pens, 44 of which were the White varieties. When I need more stock you will hear from me.

Yours for success,
(Signed) H. M. Scholl.

READ WHAT SOME OF MY CUSTOMERS SAY:

Canton, Ill., Jan. 5th, 1914.

Mr. Chas. V. Keeler,
Winamac, Ind.

Dear Sir:—Our winnings at Canton are as follows: 1st, 2nd cock, 1st, 3rd, 4th cockerel, 1st, 2nd, 3rd, 4th, 5th hens, 1st, 2nd, 3rd pullets, 1st, 3rd pens. Grand champion female. These birds are all of your strain, either hatched from your eggs or bred from birds purchased from you. I am, your friend,

(Signed) Tom Rafferty,
467 E. Chestnut St.

Canonsburg, Pa., Jan. 12th, 1914.

Mr. Chas. V. Keeler,
Winamac, Ind.

Dear Friend:—Just a few lines to let you know how I made out at our show here at Canonsburg, Pa. My winnings are 1st and special pen, 1st, 2nd, 3rd and special on pullets, 1st, 2nd, 4th and special on hens, and 1st cockerel. Best display cup and all cash special, and all won by Keeler birds, and in the best class of White Wyandottes ever entered at our show. The pen you sent me is a marvel and Judge Auerswald told me it is the finest he has seen for years. Hope you will have extra good luck at the Indianapolis show and let me know your winnings. I am, very truly yours, (Signed) Jas. B. Fisher.

Keelersville, Chas. V. Keeler, Prop. and Mgr., R.F.D.11, Winamac, Ind.

of increased weight caused by soaking up water used in tank chilling of fresh killed poultry, and recommending frozen eggs (canned) in preference to fresh eggs, and "cold storage" stuff generally as preferable to strictly fresh new goods.

Frozen egg yarns can be quickly disposed of for every housewife knows, or should know, that there are many culinary purposes for which frozen eggs positively cannot be used. Good frozen eggs, properly put up, have their uses, but they are not likely to ever become popular with the housewife and homemaker.

The very best food egg is the egg produced under sanitary conditions, by the well fed, healthy fowl on a modern egg farm, or in a smaller flock cared for under modern sanitary conditions. Most all such eggs go into immediate consumption as "nearby new-laid" eggs, or some similar term. Few find their way into storage for they sell fresh at prices above storage prices. Such eggs are best new-laid (fresh) and the fresher they are when they go onto your table the better they are. To get the best food and the best eating qualities you can't have an egg too fresh or from a flock too well kept. Such eggs cost more than the average sort and are worth more.

"Farm eggs" haven't a very good name among those who know eggs. It is this sort of eggs that collectors get, grade, and put in storage in most cases. "Farm eggs" come largely from common farm flocks, tolerated by the farmer to please the farm wife, and allowed to shift for themselves mostly and be scavengers of the farm. We would not expect the idea of eggs from scavenger hens, filth-fed 'round the barn yards, to be particularly pleasing to Mr. Ultimate Consumer. Nevertheless, "farm eggs" of this sort make up the larger part of the cheap eggs and storage eggs of the market. Think that over.

As to fresh killed chickens vs. frozen and storage stock, well, there is no accounting for tastes. Some folks like a "gamey" tainted meat flavor in their meats and poultry. We don't! Some meats if allowed to near-spoil, then soaked in saleratus water and handled by an expert chef, can be served up attractive, tasty and appetizing, if you don't happen to get some strong portions. But near-spoiled meat is not good for the inner man. Poultry meat spoils quickly and when frozen and thawed it spoils quicker and more dangerously than ever.

Folks who live on fresh new foodstuffs, that have not had a chance to spoil, live longest and have the best health as a rule. City dwellers and the unfortunates who live in hotels suffer a good deal, one way or another, from stale and near-spoiled foods. Stale foodstuffs are seldom wholesome even if some chemists cannot find anything wrong with them. Some day our medical men will begin to wake up and will find that much intestinal putrefaction (autointoxication), other intestinal troubles, kidney troubles, liver troubles and nervous ailments, rheumatism and diabetes, etc., are due largely to eating stale foodstuffs, some storage foods, and so much near-spoiled food. There is room for a lot of careful investigation here and the investigators should be mature and experienced minds and free from outside bias and interests. Keep an investigator on a small wage barely sufficient to sustain life in his calling, keep him on the anxious seat as to where his living and that of his family is coming from, keep him worried about being able to hold his job, and you put a premium on getting misinformation.

We know that fresh killed poultry is best—poultry that is properly killed one day, properly dressed and chilled, hung just long enough in a cold dry place to take the first stiffness out of the muscles, and eaten within a few days of killing. The reason a good deal of "fresh killed" poultry in the market is not good is because it is not properly handled before and after killing. Every chicken and fowl should be starved (have no food whatever) for from 24 to 36 hours before killing. It should be allowed pure water to drink. At the end of this period the crop will be empty and the intestines almost empty. It is food in the crop and intestines that helps to spoil poultry meat after killing. The bird should be stuck in the "big vein" by a cut made through the mouth. It should bleed well and be dry picked without tearing. The carcass should then be thoroughly chilled, either in a refrigerating room by the dry process or in a tank of clean ice water. We see no valid objections to properly conducted tank cooling. The birds stay in the water until animal heat is all out of the body; then they are hung in a cold room to dry off and drain. That it is a fact that the carcass does not soak up water to amount to anything, is proved by the fact that the chicken after being properly hung to drain and dry actually weighs less than it did when dropped into the tank to cool. Usually the chickens chill for three or more hours in the ice water tank and then hang over night in the cold room before shipment to market.

The finest chicken meat in the world is probably what is known as the "South Shore soft roaster": A winter grown chicken brought by skilled feeding to a plump 8 to 12 pounds in 22 to 24 weeks from the shell. These chickens are stuck, dry picked, ice-water chilled, hung to dry, shipped some two or three hours' express journey to Boston market, all engaged or sold at a retail price of close to 50 cents a pound before they actually arrive in the market, never displayed in market stalls, in good demand by folks who can afford and will have the best food obtainable, and usually such chickens are entirely consumed in less than a week from killing time. Does "frozen stock" compare favorably with soft roaster meat? What do you think about it?

We have had a good many guests at our house to eat fresh killed chickens, ducks, turkeys and guinea fowl. Everyone has something to say about the wonderful excellence of the poultry meat; they "never ate anything like it

Are you sending your eggs by **Parcel Post?** The Automatic Mail Exchange Co. say—"we have not found any thing which can be in the least construed as a competitor of the **Regal Egg Carrier** for the safe handling of eggs by parcel post." Send $1.80 to **B. W. PLANE, Box 5, BELVIDERE, ILLINOIS** for a dozen now.

ORIGINATORS OF ALL THE ORPINGTON FOWLS & DUCKS

Plants in America, England and South Africa Established 1873 : **Box A, Scotch Plains, New Jersey**

Eventually, if after the best Orpingtons any variety you will buy from their **originators, why not now?** And avoid loss and disappointment. We **guarantee** safe delivery and **satisfaction,** backed up by a reputation of 40 years' standing, this means something to you.

Now is the time to purchase your exhibition Orpingtons from their **recognized headquarters.** We always have a large stock on hand of imported birds from our English plant, being from stock mated up by our Mr. P. A. Cook especially for **American requirements.** We can ship the same day your order is received.

We have thousands of Orpingtons to choose from in S. C. Black, White and Buff, Diamond Jubilee, Spangle and Blue Orpingtons, **all** of which we originated.

It is **natural** the best can be procured from their **originators.**

Send 10c for illustrated catalogue, containing history of the origination of all the Orpingtons and hints on poultry keeping. Eggs from our winners and the finest Orpingtons in the world, $20 a setting; from fine stock, $10 a setting. Advice free. Inspection invited. Trains met. Over fourteen thousand first prizes won by us. We are by many times the largest poultry breeders in the world. Ornamental land and water fowl for sale.

or so good before." One young man, who had lived most of his life in first class hotels, said: "I never before knew what real chicken tastes like. I always supposed that the white meat around the wishbone and the dark meat of the 'second joint' had to have a queer gamey taste, and I didn't particularly like that taste."

That "queer gamey taste" of the meat about the wishbone and about the second joint is due to careless preparation of the fowl for killing and is caused by food left in crop and intestines, and careless cooling will make this offensive taste still more objectionable. We don't want such near-spoiled food ourselves and we don't recommend it to our friends. Real new-laid eggs and fresh killed poultry is not any too good for us, and stale or frozen stuff is not good enough, no matter who the "expert" may be who produces much evidence to prove the contrary. The BEST is none too good, and frequently it is possible for a good many folks to produce the best at home. A dog buries his bone in earthy storage for reasons best known to his peculiar canine taste, but, "Is thy servant a dog?"

———o———

DR. WOODS' NOTES AND COMMENTS.

The 1914 Version.

No egg—the grocer's boy is late,
Says Dolly, "Never mind; I'll wait."
"Cut-cut-ca-dah!" she hears a squawk;
A hen appears. "What's all this talk?"
"My card, miss." Eggs for gentlemen.
Hickety pickets, fine fat hen."
"But I'm no gentleman," says Dot.
"No," says the hen; "I see you're not.
But there's the egg—a good one, too.
And as a gentleman you'll do.
In gentlemen's and ladies' ways
There's not much difference nowadays."
—Philadelphia North American.

* * *

There is a wide difference between the Boston and the New York way of doing things and this is very apparent in the different methods of handling the pass tickets for exhibitors and exhibitors' employees at shows. In New York the number of pass tickets is strictly regulated by the front foot of floor space used and courtesies are grudgingly extended and, should it be necessary for an exhibitor to be in and out of the hall a number of times on business, he will have to pay his way to get back into the show if he enters the exhibition hall more than three times on the same day. Every exhibitor's ticket is limited to three "non-transferable" admissions on each exhibition day and no more. No "pass

First prize winner at Madison Square Garden, Atlanta and Savannah. Bred and owned by the Jefferson Farms, Albany, Ga.

out" checks are issued permitting return of any visitor the same day. It seems like a foolish and mistaken policy on the part of the management and the curt refusal of a few additional passes for employees at the special displays looks like a "penny wise, pound foolish" proposition. No exhibitor wants to abuse the pass privilege and he isn't going to be running in and out of the hall any oftener than business makes it necessary. Very few will ever abuse the pass privilege by seeking free tickets not needed for employees and it isn't right or reasonable to require an exhibitor, making a good display, to pay admissions for his employees who are on duty with the exhibit.

Boston Show has a cleaner and better way and one that promotes better feeling and goodfellowship all around. Every exhibitor's or exhibitor's employee ticket has an entrance coupon for each day. No matter how often the holder may desire to leave the hall he can always get a "pass out check" from the gate keeper which when presented with his ticket will admit him to the hall again. The management doesn't care how often he enters or leaves the hall and there is no kicking and growling. Should an exhibitor have a friend meet him at the show and desire to take that friend out to dinner, he can always get a return admission complimentary for his friend to come back on, so that he is not required to pay two admissions to the show in order to see the show and dine on the same day. We certainly appreciate and admire the Boston Show way of handling show business and making exhibitors feel at home, welcome and happy. The management is to be congratulated on its courteous, broad minded policy of conducting a poultry show.

* * *

We have written so much about "ground poisoning" and germ diseases of poultry for a number of years that it seems odd to get so many requests for more, and still more, information on the subject, but they keep right on flowing in. No one knows just how many kinds of specific disease producing "germs," or micro-organisms, there are. Only a few, comparatively, have been isolated and identified. The identity and deeds or misdeeds of some are still much in dispute. Their action under different conditions, environment and growth varies a good deal. Germs of the same breed vary widely in ma-

KAUP, QUALITY BUFF ORPINGTONS

Just Made the Greatest Win at Chicago, January, 1914, Ever Made by a Buff Orpington Breeder at Any Time in a Chicago Show, to the Best of My Knowledge and Belief.

First, third and fourth cocks; first and fifth hens; second, third and fourth cockerel; first, second, fourth and fifth pullet; first old pen; first, second and fourth young pens. Silver cup best display. *Five times as many firsts as all other exhibitors combined. Three and one-half times as many points as next highest competitor. Twice as many prizes as all other exhibitors combined.* Does the above unqualified caption mean anything to you? Send for 36-page fully illustrated Buff Orpington Guide Book, the catalog of the champions; tells all about the famous trapnested winning Buff Orpingtons and tells why

I Haven't a Dissatisfied Customer in the Whole World

F. A. KAUP BUFF ORPINGTON FARM Box K-1 GLEN ELLYN, ILLS.

F. N. Perkins says:

I am convinced that my matings this year will produce the best ***Partridge Plym. Rocks*** it has ever been my pleasure to own. It has been my desire to produce birds that not only would be up to the standard requirements as far as type and color goes, they should also have an inherited tendency for big egg production. I have been successful in producing these qualities throughout my flock and birds of my strain have won the big prizes at the leading shows in the country. If you are looking for that so much desired triple lacing and beautiful rock type or for birds with abnormal egg production, it will pay you to send for a setting or two of eggs for hatching. My elegant mating list containing a fine color plate of these fowls and describing different pens I have mated is free. My art catalogue is considered the finest book on this variety and well worth the 25c I ask for it; contains a large color plate and valuable information regarding this breed. **F. N. PERKINS, 22 Harlem Ave., Freeport, Ill.**

lignancy and (pardon the term) apparent disposition—some are meaner than others in the same family. We still know very little about these microscopic friends and enemies of the human race and have still more to learn about those affecting poultry and the relationship which may exist between germs affecting humans and those of lower animals. There are good germs and bad germs. The good ones under abnormal conditions may become naughty and abuse the body they inhabit and under normal conditions the bad ones may be tame and peaceable. Therefore it pays to keep any animal body in normal, healthy, disease-resisting condition. We hope that statement is plain and simple enough for all plain people.

* * *

Now, there are an infinite number of micro-organisms (''germs'') and our scientists have only the merest speaking acquaintance with a few of them. There are all kinds, good, bad, and indifferent. And, just like we ''big folks,'' these tiny ''dust specks'' of the animal and vegetable world possess certain individuality and peculiarities of independent life and action. You can't be certain when a bad germ will quit being a meek and quiet slave or prisoner and run amuck and play the dickens with things generally. Neither can you tell when a benign or good germ will cease to be good and fail to do its duty. All we really know is that to a greater or lesser degree the germs of all sorts are always with us. The whole intestinal tract of the animal body and all cavities lined with mucous membrane continually harbor vast hordes of many breeds of germs. They are all about us in the polluted air of closed buildings, conveyances, thickly populated sections, in dust, filth, excrement, sputum, polluted food and water, ''poisoned ground,'' dust, and even sometimes in snow and rain. The normal, healthy animal body, when properly balanced, has good germs enough to kill or control the bad germs. This normal balance may be termed ''constitutional vigor,'' ''normal disease-resistance,'' ''good health'' or ''good condition.'' Let something upset condition or the normal balance and the functioning of the body becomes abnormal—disease resistance is weakened and the bad germs get the upper hand of things.

* * *

Now, many poultry plants suffer severe losses from ''ground poisoning'' due to accumulation in the soil of more or less continuous deposits of poultry dung, much of which may contain injurious germs. The dangerous germs may even be brought originally by wild birds, rodents, domestic animals, on feet of visitors, or by parasites, and in many other ways. There are plenty of ways for them to get on the plant unsuspected. Dangerous germs lurk in the dust and mould of grain and in spoiled grain, in musty or mouldy litter, in swamp muck and forest leaves, in pools in the hollows of filthy yards and in barnyard seepage. Darkness, dampness, quiet, warmth, and filth keep bad germs alive, fat, full of cussedness and maliciousness, and often cause them to multiply. Some multiply in the body and some out of it or in it as they please. Most of 'em are wicked and dangerous. In old, continuously used ranges, earth floor poultry houses, and intensive-system yards, dangerous dis-

PALACE
New York Show

Second Edition of Our 1913 Winnings in

S. C. R. I. Reds

They are unbeatable. Competing with the ''World's Best'' in a class of 155 birds, we won **First Pullet and Special for best Red in Show;** Second Ck.;First, Second Pens; Display and Specials.

At Allentown's Great Show

Our winnings stand as a Show record for at this great 1913 Show with the largest and best entry ever recorded, **we won first cock; first and second hens; first and third cockerels; first pullet; first pen;** first display; $60 cup for best Rhode Island Red; **the sweepstake for best Red male or female**, etc., etc. This is a **modern record** made by our **modern up-to-date line.**

This Stupendous Sweep

Is but a **repetition** of **our last year's winnings** when they led all others at **Philadelphia, Cleveland and Pittsburgh** by winning **13 out of a possible 15 first prizes** competing in the largest and strongest classes of the year. (Look up these records.)

At Phila., Cleveland and Pittsburgh

Our First Prize Cockerel Was Awarded the Championship Sweepstake Special for

The Best Male In The Entire Show

This Record Stands Alone and Unapproached by Any Breeder and of Any Line

Our Allentown winnings prove again we have the winning quality for any show. Having 1,300 youngsters ripening with an evenness of color and highest merit, we are prepared to fill **your wants to your perfect satisfaction** in either old or young. We offer early birds fit to win now. Selected breeding birds mated for best results; a specialty in pens, trios or in larger lots. Write your wants please. It is no trouble to quote you prices and give any desired information.

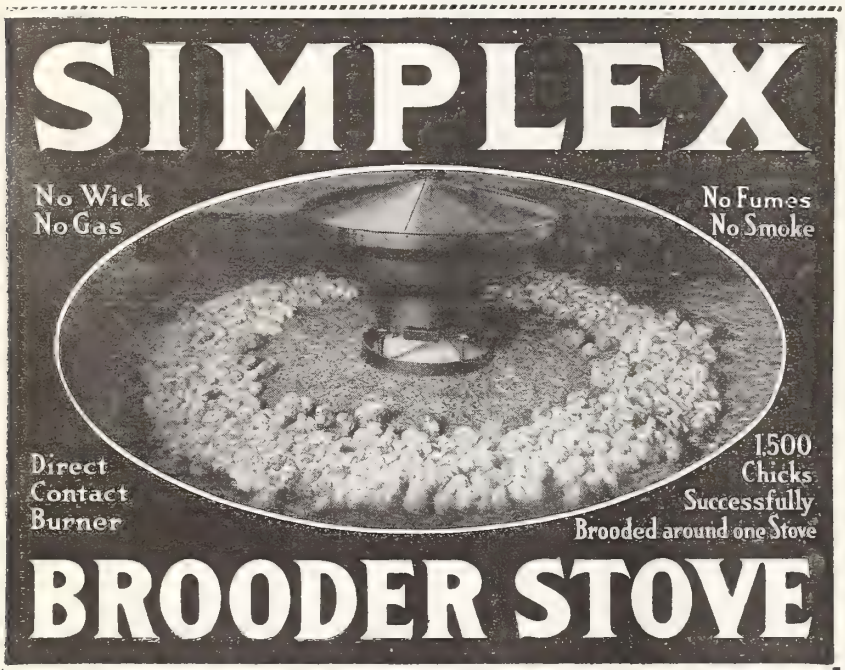
1202 Commonwealth Bldg. Pittsburgh, Pa.

ease germs have been found in the soil at a depth of two feet. They can't live indefinitely in the soil, but if not disturbed may live a long time. Freezing won't kill them. This talk isn't intended as a scientific monologue, but we do want to make it a plain and popularly told explanation that any poultryman can understand. "Ground poisoning" results from continuous occupancy of any piece of land by fowl, without some effective measures being taken for sweetening and purifying the soil. Even in the use of poultry manure for fertilizing purposes, it is best to use it only as a "starter" for crops, or to use it for grain crops or where the fruit or grain is to be fed to the fowls rather than the greens. We wouldn't recommend the use of poultry manure, freely applied, for growing poultry feeding greens, like lettuce, rape, grain sprouts, grass, etc., except where the greens are to be well washed before feeding and not fed with soil clinging to the roots. Of course if the greens were to be washed or cooked before feeding there would be little or no danger.

* * *



Sunshine, pure air, frequent deep stirring of the soil and heavy cropping with rank growing plants are the best methods of sweetening and purifying the soil. But cropping and stirring the soil is not quite enough. The land needs a rest from poultry. If it does not get a rest from poultry you can't effectively sweeten and purify it. The best and most satisfactory method of keeping out of ground poisoning trouble on a poultry plant is to alternate crops and poultry. Do away with permanent yards or runs. Use colony houses. Grow poultry on a field one year or at most two years. Then let that field rest from poultry for one or two years and plow it deep, cultivate and stir it up often to expose the soil to sun and air and cleansing rains and crop it heavily with rank growing corn, oats, etc. Cultivation and plenty of deep stirring of the soil will sweeten it and be better for the land and much better for your poultry. No land is too good for poultry. Flat lands, or fairly level land with frequent hollows, are the most difficult to keep sweet. Rocky soils, not easy to stir deeply, are difficult to keep sweet. Sharp inclines and long, grassy slopes are more easily kept clean. Even bare runs can be helped and kept sweeter by scraping and sweeping before heavy rains, removal of the top filth and deep spading, with now and then a top dressing of air slaked lime. Eternal vigilance is the price of sweet soil where intensive poultry keeping must be practiced and if you do not exert yourself with timely preventive measures, the bogey of ground poisoning will some day catch you napping and sadly damage your flocks and ruin your profits. If you can't arrange for alternation of crops and poultry in a large way, you can at least have yards to be rested and sweetened alternately. Get busy! You may get caught with a disease wave or epidemic now and then, but there is no need to keep an invitation to diseases always with you. It is not necessary to let the soil of your poultry plant continue to fill up with the seeds of canker, cholera, roup, conjunctivitis, chicken-pox, sorehead, scaly leg, scabies, "white" and other diarrheas, parasites, aspergillosis, and a multitude of other diseases too numerous to mention. This isn't a learned "scientific" talk and it isn't fiction. It is cold fact—plain hen sense for plain poultrymen. Read it again, and then again, until you digest it.

* * *

We are glad indeed that Miss Carey has called attention to the English poultryman's free use of oats and particularly "Sussex ground oats." Sussex ground oats are just good plain heavy oats ground fine and fluffy, hull and all. The oats are ground alone without admixture of other grain and by special stones or special grinding surfaces are ground exceeding fine so that the fibrous hull is very finely broken up. We have used oats and ground oats freely for a long time and have championed their use whenever some poultryman through careless or indifferent use failed to get the best results. Oats are good poultry food, one of the best poultry foods, and if oats don't give you good results the fault is probably in the way you feed or because you use poor oats. We have been using fine ground oats fed dry, hulls and all, in chick foods for small chicks for a good many seasons with fine results. We feed whole, heavy, clipped white oats freely to laying and breeding stock, both young and old, and we are still strong for oats.

* * *

Hulled oats, groats, rolled oats, and coarse oat meal are all good, but we prefer whole oats well ground for young and old stock and whole clipped oats for growing and adult stock. Indian corn is good and generally eagerly eaten. Wheat is good, but can be fed too liberally and cause trouble. Canadian corn, Rhode Island corn, and Argentine corn (all small hard grains)

How many of YOUR chicks LIVE?

With a Simplex Brooder Stove you can actually RAISE 20 per cent to 50 per cent more chicks than by any other method—and save 75 per cent of your operating expense and 90 per cent of your time. Do you know as good a way to PROFIT?

You don't want to experiment—you want to know. Here's the **knowledge** you want. The Canadian Government has done the experimenting. It moves slowly and Surely. It has to know before it plunges, just as you are saying you must know. It tested all methods in every imaginable way and finally tied to the Simplex for all Canadian Experiment Stations, increased the the equipment and is planing to still further increase the number of Simplex Brooders at each Branch Farm.

The Simplex can be used in most any room. It is built by experienced and practical poultrymen who originated it purely to raise their own chicks. They are offering it to others on the word of scores of users who are thankful for it. They have had it built right—not flimsy cheap construction nor expensive fuel upkeep. All the things you'd ask a neighbor who had one are answered in a perfectly frank catalogue and this will be sent by next mail for a request on a postal.

SIMPLEX BROODER STOVE CO.
220 Fourth St., N. W. Grand Rapids, Mich.
Sign name and address below and Cat. and letters will be sent

Simplex Brooder Stove Co.
Grand Rapids, Michigan
We have put in one or two more Simplex Brooders at several of the branch farms throughout the Dominion. Would like house plans and F. O. B. Grand Rapids prices.
V. C. Elfard,
Dominion Poultry Husbandman.

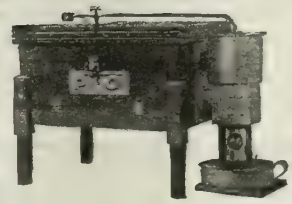
Here's the Proof

The "Simplex" Eliminates White Diarrhoea. Read this letter, it proves that we know what we are talking about when we say the "Simplex" will prevent White Diarrhoea.

Chicago, Ill.,
April 9, 1913.

Simplex Brooder
Stove Co.,
Grand Rapids, Mich.

Gentlemen:—
Enclosed please find my check for $29.50 in payment for Brooder Stove shipped me on the 7th. This is the second stove I have purchased from you this season, and of course the last one is purchased because the first one is doing the work. The stove works entirely satisfactory, and does all that you claimed it would do. I believe you have solved the bothersome problems in brooding. The stove has eliminated White Diarrhoea from which I suffered heavy losses, losing 50 per cent of my hatch. The losses with the stove have been very small.
Very truly yours,
Judge J. C. Everett,
Farm at Holland, Mich.



often run better in quality than our softer dent corns and are better feeding grains than wheat. Sometimes, even when allowed natural chance for selection of foodstuffs, adult hens (yearlings and especially two-year-olds of heavy varieties) will eat, by preference, enough corn to put on an excess of internal fat. They won't always do it, but they sometimes do, for corn is one grain that seems to be liked above all others. We like to have yearlings and two-year-olds eat a good many oats. With all grains fed in automatic feeders it sometimes happens that they do not work the oat feeder as often as we would like to have them. The pullets go about it all right, but the wise old hens may take a notion to work the whole corn feeder overtime. We fool 'em by making a visual appeal to appetite. For old hens the oats are fed in a hanging galvanized iron dry-mash hopper that won't waste feed and which keeps oats in plain sight. The main supply is covered and a fresh supply of sweet clean oats feeds down as fast as they are eaten out of the hopper. With this plan it has been a surprise to us how large a proportion of oats the hens consume with relation to other grains. Our grain supply is corn, wheat and oats only and fed in separate feeders. "Mixed feed," a mixture of bran and middlings and good beef scrap, are used in other hoppers. Green food is supplied freely and they have plenty of water or snow (when there is any) and a supply of crushed shell and gravel. The winter egg yield has been fine and the adult hens have given the pullets a hot contest in the matter of production; in fact, the yearlings have probably produced more pounds of eggs and the pullets a few more eggs.

* * *

A reader writes to know if we are "really sincere" in our recommendation of selective appetite feeding by automatic feeders and hanging hoppers as advised in our article "Give the Laying Hen a Chance" in December A. P. J. We certainly are sincere. We should not have written or published that article if we did not believe in it. We have tried the plan out long enough and with a sufficient number of fowls to feel sure of it. We have visited numerous commercial plants where the finest chicken meat in the country and the best market eggs, with fine egg yield, are produced and where automatic feeders are doing the work of feeding, and feeding better than any hand feeding ever attempted. Chicks are raised from shell to griddle, by automatic feeding methods, that are better and run more uniform than hand fed chickens. At New York Show the "old timers" hovered about the automatic feeder exhibits and we heard one say: "It won't be so very long before all poultry is fed that way." And he is a very conservative old timer too. We believe that if you give the hen a chance to feed herself she will do the job better than you can. Good, reliable automatic feeders and hoppers will give the hen a chance and do the work of feeding cheaper and with less waste than it can be done in any other way. Most manufacturers make the feeders a bit too small, but this is because the larger sizes cost more to make, must sell for a higher price and sell less readily. Four half-bushel size automatic feeders and two 20-quart hanging hoppers will comfortably feed 100 fowls in one flock. The feeders will need filling up twice a week and the hoppers should be looked at once a week and kept full. We would prefer bushel size feeders which would allow filling up once a week. With pullets we like to have two feeders for corn, one for oats and one for wheat; a hopper for beef scrap and one for "mixed feed." For yearlings and two-year-olds use two feeders for corn, two for wheat and one mash hopper for whole oats; in the other hopper use equal parts mixed feed and beef scraps. This plan certainly simplifies the "feeding problem" and it yields fine results and birds that are always in good condition. Hand methods of feeding usually have birds half starved at times and at other times gluttonously overfed. With automatic feeder and hopper feeding the fowls are always well fed and never overfed and they keep busy. In winter the floor immediately under the feeders can be covered with litter, but the birds will do well with a plain sand floor and they will take abundant exercise and find a surprising amount of time to be taking outdoor exercise too. Of course fresh raw green food must be supplied freely. Most flocks don't get nearly half enough raw greens and raw vegetables. Sprouted oats make a fine addition to ration when winter shuts off supply of cheaper greens and they supply valuable food elements not found in ordinary greens.

* * *

All the better types of automatic feeders are supplied with covers and can be used on range out of doors if desired. We prefer to hang both feeders and hoppers to a tree limb or other support for outdoor feeding of growing flocks, rather than have them set up on legs. The hanging feeder is easily filled and is less liable to be upset. On one South Shore soft roaster plant we visited this fall we saw a large flock of

Petaluma Incubators

have made Petaluma, California, famous as the greatest poultry section of the world.

1,500,000 LAYING HENS

CONCORD, MASSACHUSETTS

promising "winter chickens" fed wholly by automatics hanging from trees in a good sized orchard. It was a pretty sight and the chickens were fine and very uniform in development.

* * *

Colored celluloid leg bands for growing chicks and adult fowls are coming into use more and more. Manufacturers now supply these bands in nine colors. As a means of instant identification they are invaluable. They are easily put on and easily changed if desired. With good, healthy fowls, pullets well matured and filled out, even expert judges of 30 or 40 years' experience frequently cannot judge the age of a bird and tell whether it is a 11 or 12 months old pullet, a yearling, or a well preserved two-year-old. It is harder to judge the age of hens than it is to find out a woman's age, and that is considered an impossibility in most cases unless she is willing to tell. A bird usually produces best during the pullet year, the second year of laying and breeding is often very good (sometimes as good as or better than the pullet year), but there are very few hens that it pays to keep as two-year-olds either for laying or breeding. After that they should be discarded, sold as fowl when the price is good during Jewish holidays. Numbered metal leg bands are necessary and a great help to fancier or utility man who is up-to-date in his business methods, but the numbered band alone generally necessitates looking up the records to discover age and past performance. Usually too the metal band is a permanent band put on to stay, and with large flocks few will be so banded. The colored celluloid band provides for instant identification as to age or mating. The bird can be identified as far as you can distinguish colors. For instance, let a white band indicate 1912 hatch, a red band 1913 hatch and a blue band 1914 hatch. Use any plan of color identification your fancy dictates that comes within the scope of the nine available colors (if there is a demand it is probable that more colors will be supplied, but nine seems plenty for all practical uses). When you see a colored band you know the age of the bird, without having to look it up. When the 1914 pullets are well grown you will be selling off the white banded 1912 hatch birds and some of the least promising of the red banded 1913 hens. The plan has Grandma's old-fashioned tying of colored yarn about a hen's leg beaten to a frazzle as a means of identification.

* * *

George Lee in the Poultry Item says: "What is a good, fresh egg from well fed, healthy stock really worth? If we have been accustomed to paying ten cents a dozen, then we will consider twenty cents a dozen as extraordinary and inexcusable. If, however, we had been used to paying one dollar a dozen, then we would consider sixty cents a dozen a downright bargain. Personally, I would much prefer a couple of good, fresh eggs at five cents apiece rather than ten cents' worth of beefsteak. But, then, preferences don't count. We have to pay a premium if we want goods of any kind that are scarce, and just so long as the great majority of home owners prefer to consume rather than produce, then just so long will eggs maintain or advance in price."

* * *

Somebody has designated John H Robinson, editor and owner of Farm Poultry, "the veteran editor" and "one of the oldest writers of the country on poultry topics" and he modestly objects. He says:

"According to the rule for admission to the veteran fanciers' reunion at Boston, which is the only standard I know for determining what constitutes a veteran, the first requirement is that a man shall be sixty years old. I cannot qualify on that count for another decade. The next condition is that he must have been in poultry twenty years. Editorially, I am still several years shy on that count. So, while I appreciate the reference as in a sense complimentary, I can't accept the designation."

There you are, friends, your gifts are politely returned with thanks; hirsute facial adornment don't make a veteran, though more popular in earlier times. Such modesty is most welcome and becoming. We first knew our friend "the pioneer" some sixteen years ago and at that time supposed he was "a real Methuselah" among poultrymen. Probably the mistake was due to the glamor of adolescence. Anyhow he has sadly neglected to cuss us lately and we may begin to feel lonesome.

* * *

Some folks are born with hen sense, some acquire hen sense, but very few ever have hen sense thrust upon them. It is surprising how few people have any hen sense and how few are really able to "see a hen"; i. e., recognize the individual, quickly note its condition, see health and constitutional vigor, and quickly recognize any deviation from normal balance. Mighty few can recognize the early symptoms of disease or first loss of good condition, and they can only see disease when it has already advanced so far that it is well nigh incurable.

The man who constantly refers to hens as fool animals and says that they do not possess any sense or intelligence is apt to be the real fool himself. He

STOP Chicks Dying In the Shell

Which poultryman
are you—the one that gets 500 chicks from 600 eggs—or one that gets 500 chicks from 1,000 eggs?
The EFFICIENCY and modern methods in other lines now apply to the hatching of chicks in incubators.
Your chicks die trying to burst the shell—or soon afterwards from white diarrhœa caused by being poisoned by the carbon-dioxide gas they throw off in the air they breathe. During the last three days of the hatch you can save practically every chick and make it vigorous so that it will resist chick ills by using the
Merkley Oxy-Vitalizer
to supply them with moist oxygen. Can be attached to any incubator in five minutes. Self-operating—no watching. One can be used for several incubators Lasts a life-time. Multiplies your profits on every hatch. Write for free literature or better still write for a VITALIZER. The price is only $3.50 parcel post prepaid, and it will buy itself in one hatching.
Merkley Mfg. Co.

Syracuse, N. Y.

lacks hen sense and he doesn't get a look at things from the hen's viewpoint. If you don't try to make hens and chickens do things that are contrary to what Nature intended them to do, you will find that hens and chickens are intelligent and sensible enough and that they are very apt pupils, learning their lessons quickly and very thoroughly. Think it over. Do you know any baby animals that show more ability to make their way in the world, that learn any more quickly, or that take care of themselves any better than baby chicks? If you give them a chance to live in comfort they practically raise themselves, but if you fail to use hen sense in handling them you can quickly teach them enough bad habits to ruin the whole brood. When things begin to go wrong don't cuss the hens and chicks and call them fools; see if you can't find some fool fault under your own hat.

* * *

December Poultry Index says: "Our hat is off again to the great, big, beautiful number of the 'American Poultry Journal,' which reaches our desk just as we go to press for this number. It is far and away the best poultry journal we have seen in the country. Dr. Woods celebrates the conclusion of his third year as editor by giving his readers plenty of right down wholesome reading of the highest class."

Thank you, Editor Standish, a sincere compliment is always appreciated and doubly so from "home folks."

* * *

Most things in life are largely matters of habit. Poultrymen, their fowls and chicks are all creatures of habit. Why not try to form a habit of universal comfort, health and right living for man and fowl?

Your grandfather and mine, and your parents and mine, all probably had the winter flannel habit. Even today there are many unfortunates who itch and scratch with heavy flannels every fall, swelter in hot rooms and conveyances through the season and wonder, in discomfort during the warm early spring days, whether to "put on, take off, or go without." But the day of the old time ribbed red or blue wool undergarments is passing except, perhaps, in the lands where it is many degrees below zero most of the time. We haven't worn anything heavier than short sleeved summer weight undergarments for a number of years and rarely have a cold nowadays. Actually wear less, bundle up less in cold weather than was customary several years back. The rule holds with the whole family and all sleep out of doors, or in a cold room with windows wide open. It is a habit, a good habit, and one that promotes better health.

We know men and women who swaddle themselves to death in winter with a big weight of thick garments and who can't sleep in a room with the window open, or who take cold in the least draft of air from an open window or door. That's habit. Bad habit. Such persons have severe and distressing colds a good share of the time, while others go about in thin garments, low shoes, thin silk stockings, low collars, or low neck garments, and never have a cold.

Cold is largely habit. Heat is largely habit. Comfort, regardless of heat or cold, is the best habit to acquire. Get the habit of being comfortable, of using an abundance of pure out-door air day and night, of deep breathing, wholesome food and right living. If pure out-door air was sold by the ounce you couldn't get enough of it, but because it is free, most of you are afraid of it and try to shut it out of your lives.

Men sleep out of doors without a superabundance of clothing and are comfortable at many degrees below zero; they work in desert regions and roll up in a blanket to sleep out on the hot sands after a day's work at close

to 140 degrees, and they suffer little discomfort, thrive and grow strong and red blooded. Children, diseased victims of the "white plague," play naked in the snow and grow whole and strong again.

Think about it. Take it into your your home and learn the fresh air habit. Harden off gradually without sudden and unnecessary undue exposure. Consider it in your poultry keeping. Chicks and fowls need fresh air even more than we do, for Nature intended for them to live always in the open. Provide for comfort and an abundance of open-air. Cold doesn't necessarily mean discomfort. Open-air houses are cold but comfortable. It is live air cold, not the dead air chilling cold of the closed house. The fowls have an abundance of clothing in their admirably arranged plumage.

Baby chicks are a bit more tender than adults or growing stock, they have less resistance and reaction. They need a place to warm up quickly in when they need warming. Most brooders have been made too tight and close. For a small brooder we like best one of the out-door type heated by a combination of hot air and hot water, well lighted and well ventilated; the heat supplied where it is wanted under the hover; the chill taken off the apartment just outside the hover and the exercise chamber practically without heat. We have used such out-door brooders on a bleak, but southerly, slope in the coldest February weather and have had excellent results with the little chicks running out of doors behind board wind shelters after they were a week old. Often at night, water, left in the galvanized iron fountain inside the front section of the brooder, would freeze nearly solid. The chicks thrived and grew rapidly, with little loss, and had big strong frames, big sturdy legs and great lung capacity.

Weaned and growing chicks, allowed to occupy open-front colony shelters at first and then to roost in the pine trees, made wonderfully good development, big frames, broad backs, deep bodies, full breasts and big, strong legs. When killed for the table these chickens had big, healthy, wholesome lungs, bright and clean. It takes good lungs to make a good animal, be it man, beast, or fowl.

Stale air, bad air, over-heated air, breathed-over air is the kind that causes colds, breaks down disease resistance, and makes trouble. Open-air, especially open country air, is always good, and it is free. Don't be afraid of night air. It is usually better than in the day time.

Get the open-air habit and stop being afraid of cold and colds.

THE GREATER BUFFALO POULTRY SHOW.

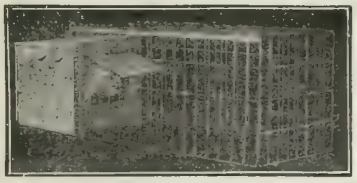
Clever in Arrangement—Attractive in Display—Grand in Beauty and Valuable to the Poultry Industry. By H. P. Schwab, Eastern Representative A. P. J.

WE wish to give due thanks and all possible credit to the International Poultry Association of Buffalo, N. Y., for their first Greater Buffalo-All America Poultry Show held November 24 to 29, 1913, for in beauty of arrangement, quality of display and with good will and feeling everywhere it has made and has well filled a nook high in value to every poultryman. Mr. President James O. Moore, we again say we are proud of you, that your many years in the fancy has fitted you to carry out your great work is evident and we can say the same of Secretary Drevenstedt; his friends are loyal and his support unlimited. Vice-President Hugh A. Rose, the directors and Superintendent August J. Braun all did their duty well, and there is glory enough for all in the success of this great exhibit.

The Auditorium was beautifully decorated with evergreens and seasonable flowers were placed in places of vantage along the aisles, making it an in-door park with seats to rest and visit and to view the grandeurs of nature amid poultry-life. Here was poultry almost without number, and from nearly every state, including California. Canada was well represented, and as usual quite a bunch of United States gold crossed the border. These Canadian breeders are strong in copping our prizes and our gold. We were particularly interested in seeing here the S. C. Brown Leghorn exhibited by Williams Bros. and Brace, Fullerton, Cal. Mr. Brace formerly lived at Victor, N. Y., a man and breeder for whom we have always had highest regard.

The total number of specimens exhibited was 3,805, of which 2,221 were in the poultry classes; Bantams, 311; water fowls, 125; turkeys, 32; pigeons, 372, etc., making it a complete and well balanced exhibit.

Features of the show, beyond exceptional classes in several varieties, were: The large and original display of turkeys in pens on the floor; this was most attractive and freely commended. The egg-laying contest between several pens carried with it unusual interest, with lively bidding for the winners. The display of wild and fancy water fowls and of wild birds was much admired. The great pair of live American eagles were admirable.



But for all, the one great feature of this show was found in the buying and selling of poultry. Sales were made daily and at the best of prices. One exhibitor told us he had sold over $1,600 worth of stock and eggs during his week at Buffalo, while the sales of two others were well over $500 each; another sold four birds for $250, and any quantity of sales from $50 up were reported to us. It seemed as if everyone came to buy and the exhibitors were awake to their interests and were ready to sell in most cases.

We did not arrive in time to attend either the association or the Geo. Urban, Jr., banquet, and know we missed a treat. These social affairs are also a Buffalo feature; we hope to miss no more of them. Our short stay there was one filled

with interest and pleasure for which we are grateful.

The Exhibition and the Winners.

Barred Rocks were not the usual class seen here in numbers or quality; some were real good and some only fair. Mr. L. B. Resseguié, Millers, N. Y., won cockerel 1 on a fine shaped bird of grand quality; also hen 2, cock 5, pullet 2 and pen 1. This pen was of the best quality and well mated and was worthy of better competition.

First pullet was again won by Mr. John B. Weig of Buffalo, who has a regular habit of winning on pullets. W. H. Upham won first cock and C. A. Hickman first hen; he also is an old hand at winning them.

White Rocks, as in the past, from the Urban Farms, Pine Ridge, Buffalo, N. Y., won the leading prizes by taking cock 1-2, hens 1-2-4, cockerels 2-4, pullet 2, pens 1-2, best display, etc. This line is favorably known and has proven one of our very best. In Black Langshans this farm also won cock 1, hens 2-3-4, cockerels 2-4, pullets 2-4-5, pens 1-3. We believe all the winners in this class line back to this strain.

Buff Rocks, a class of rare quality, with the Nescopeck Poultry Farm, Nescopeck, Pa., winning cock 1-3, hen 1-2-4, cockerels 1-5, pullet 3-4, and pen 1. This is an old favorite line that has won for years at New York, Boston, etc. The winning cockerel and the females were all exceptional quality birds. Here also fine birds were shown by D. P. North, whose winnings include first pullet.

Columbian Rocks, the best class seen out this year with F. G. Bean, winning a great record. Mr. Lew H. Brown also won well.

Partridge Rocks, a nice class of very fair size.

Wyandottes.

The White Wyandottes were the banner class of the show, with 169 birds shown by several well known breeders, making it a royal class. Onlya Farm, Florham Park, N. J., winning cock 1, hen 1, cockerel 3, pullet 3, pen 2 and specials. The winning cock, a corking fine one with rare type and extra head, nice spready tail and full, round and deep breast has this line's characteristics well stamped in his entire make-up. Condition of this line very fine.

Mr. Joseph Russell, Toronto, Ont., won cock 4, cockerel 1-2, pullet 4, pen 4.

Sunnybrook Farm, Eatontown, N. J.,

Young's Strain S.C.W. Leghorns

I HAVE NO OTHER BREEDS

They are the standard for all the Leghorns of all America, and the greatest layers of all domestic fowls.

FIRST PRIZE COCKEREL MADISON SQ. GARDEN NEW YORK 1912-1913.
BRED & OWNED BY D.W. YOUNG, MONROE, NEW YORK.

At the World's famous and Premier Show of America at Madison Square Garden, New York, for the past 13 consecutive years I have won best display and from three to five first prizes, every bird being bred and raised by me.

Winnings at Madison Square Garden, winter of 1913, were as follows:

A STUPENDOUS VICTORY

Cocks, First, Second and Fifth
Hens, Second, Third and Fourth
Cockerels, First, Third, Fourth, Fifth
Pullets, Fifth
Pens, First

Groves Trophy, value $500.

Elmhurst Sterling Silver Cup, value $150.

N. Y. State Cup, value $50.

N. S. C. W. Leghorn Club Medal for best cock, best cockerel, best pen and best display.

The Association $10 Gold Special for best display and Grand A. P. A. Medal, value $50, for best bird in whole show, all var. competing.

This bird is the most superb specimen that has ever been produced of any variety. This achievement was made possible from a thorough knowledge and scientific practice of line breeding for over 35 years, and from a strain that has been bred by our family since 1855, making it the oldest strain of Leghorns in all the World, the male line never having been broken by adding new blood. The **Young Strain Characteristics** follow through all my yards and my matings this year should be superior.

WATCH the Show Reports throughout the United States and Canada, and you will find that Young's Strain predominates and wins the coveted prizes and lays the greatest number of eggs.

Hundreds of the grandest cockerels ever bred, for sale. **Remember you cannot win without my strain**

MATING LIST FREE, ADDRESS

D. W. YOUNG, MONROE, NEW YORK

won hens 3-4, pullet 6. Their line was finely shown and of best possible type, we considered their cockerel and an unplaced hen, No. 189, very fine and rare specimens. In Columbian Wyandottes, they won cock 1-2, hen 1-2, cockerel 1-2, pullets 1-2-4, pen 1. This pen, for grand Wyandotte type and fine even quality and markings is as good as we have ever seen at any show. First cockerel has an exceptional hackle, fine tail, etc.

Silver Wyandottes, a strong class, with W. H. Leidy a leading winner.

Rhode Island Reds.

The Single Combs were a class of 115 birds of the best of best grade and plenty of quality seen in every class and Cupp, Houck & Alt, 87 Fuller St., Buffalo, N. Y., added many honors to their long record of winnings here and at other shows. They won cock 1-3-5, hens 3-5, cockerels 1-3-4, pullet 4, pens 2-3-5. First display color and shape male specials, etc. This is the fourth year they have won first prize cockerel at Buffalo. They won first pen for three years and this season won 15 more points for best display then any other exhibitor. Their line sure does show breeding and winning quality.

Mr. E. M. Dutton, Newfaire, N. Y., won cock 2, cockerel 2, pullet 1, pen 1, and in Rose Combs hen 3, cockerel 1, pullet 1-3, pens 1-2.

Mr. C. E. Riley, a Rose Comb breeder, who has won here for years, was caught with his old birds in moult and young immature, so only exhibited a very few which to our notions were beauty specimens, his cockerel very fine in head and one of the best colored and shaped birds we have seen.

Leghorns.

The S. C. White Leghorns, always strong here, were a larger class than usual and as a rule better. There were 149 birds shown. Moore Brothers, Moscow, N. Y., won a famous record with worthy birds well shown, they won cock 1-5, hen 2-3-4, cockerels 1-4, pullets 2-5, pens 1-2. First display and both shape and color female specials. Their first prize cock was a lordly beauty with a wonderful head, extra fine comb and ideal carriage and back. Their first cockerel was of similar type, a real beauty, also extra fine comb. Their line has been bred and has been winning for years. It is full of worthy quality.

Mr. Stewart Haddock, Poughkeepsie, N. Y., is another breeder well known who added much honor to the value of his line here by winning cock 2-4, hen 1, cockerel 2, pullets 1-3-4, pen 3-4 and specials. This line showed grandly and very strong in both males and females, size, shape and carriage are gracefully combined. His first prize winning hen and pullet were admirable.

The Maplewood Poultry Yards, Attica, N. Y., had a splendid display of their stock, which shows fine character. In Pekin Ducks they won cock 3-4, hens 3-4, cockerels 2-4, pullets 2-4, pens 2-4, best display, etc.

Mr. Albert Waldron, Titusville, Pa., won on S. C. W. Leghorn cockerel third with a bird of rare beauty and type, exquisite head, etc. We expect to see more of this line, for such birds have the real quality and he was young and not at his best condition.

Rose Comb White Leghorns were one of the best classes we have seen in years. The Turtle Point Farm, Saratoga Springs, N. Y., won cock 1-3-4-5, hens 4-5, cockerel 5 and Pen 1. Other winners here were A. F. Almendinger, Mrs. W. L. Haynes, etc.

S. C. Brown Leghorns, with 78 birds shown, was a beauty class well shown and of high merits all through. Rockefeller and Hubbard, New Haven, Conn., won cock 2, hens 2-3-4, cockerels 1-3-4, pullets 1-3-4-5, pen 1, display first and specials. Their winning pen was grand in quality and mating and was headed by a royal styled and quality male, the kind of pen one is glad to see at any show.

A Special Pen of Male and 4 Females for - $25

Remember I select and mate all birds sold.. Write me your wants.

Eggs for Hatching

Catalogue now on press. Let me send this to you—it tells the story of this line in breedings, winnings, matings, etc. It also describes the birds, with prices and general information. Write today.

C. N. MYERS, Box A, Hanover, Pa.

Ont., won cock 4 on a bird of fine shape and color. In R. C. Browns they won hens 2-4, cockerels 2, pullets 1-4. In S. C. Buffs cock 1-2, hen 5, cockerel 4, pullets 1-2. In S. C. Black cock 2, hens 1-2, cockerels 3-4, pullet 5. They breed all varieties of Leghorns and have made records at our best shows here and in Canada. Their late record at the "Ontario" is a worthy one.

Williams Bros. & Brace, Fullerton, Calif., won in S. C. Browns cock 1, cockerels 2-5, on their three birds shown.

Orpingtons.

All varieties of Orpingtons were seen in quality here, it was a complete and very fine exhibit of this popular breed. Wm. Cook & Sons, Scotch Plains, N. J., won all specials and display prizes in each class. Their winnings were: In S. C. Buff Orpingtons, cock 3, hen 4, cockerel 1, pullet 1, pen 1; S. C. Blacks, cock 1, hen 1, cockerel 2, pullet 1, pen 2; S. C. White, cock 1, hen 2, cockerels 1-2, pullet 2, pen 2. Their winning cocks in White and Blacks and their first and second White cockerels were the class of this variety, birds of unusual quality and the best possible type.

Dark Cornish.

The Dark Cornish numbered about 60 birds and again proved their new popularity. They were seen here at their very best in quality. Mr. John W. Ward, Jr., Pennington, N. J., proved again to be a popular winner with cocks 1-2, hens 3-5, cockerels 1-2, pullets 3, pen 1, best displays, etc. Mr. Ward is sure doing grand work for this breed. He is a hustler and we wish him every success, for the Dark Cornish have the quality to commend them.

Other winners were Ess & Forrestal, S. T. Avent, W. J. Elliott, etc.

Campines.

Silver Campines brought out a class of 87 birds with several of our best known breeders exhibiting. Quality was seen in every coop and the winners have every reason to rejoice. The Manhattan Farms, 28 Main St., E. Rochester, N. Y., with their unbroken record of two years of phenomenal winnings won cock 2-4-5, hens 1-2, cockerel 4, pullet 1, pen 1. In Golden cock 1-2, hens 1-3-4, cockerels 2-3-4, pullets 2-3-4, pen 1. Best display in both varieties and nearly all specials.

Mr. H. P. McDonough, Newark, N. Y., a breeder of worth, who made a splendid record at the late N. Y. State Fair, won on Silver cockerels 3-4. On Golden, cockerels 1, and specials. This was an exceptionally fine specimen.

Other winners here were the Urban Farms, Pine Ridge, Buffalo, N. Y.; W. W. Bush, W. C. Franz, C. F. Weelock, Jas. W. Mills, C. W. Parkinson, P. W. Grieser, etc.

Other Varieties.

Anconas numbered about 90 birds and formed a splendid class well shown. The winners were fine quality birds and so were most of the others.

Silver Gray Dorkings, a small class, we regret to report.

But few Brahmas or Cochins shown.

Houdans, a very fine class of 36 birds. They were a beauty lot and seen to advantage. The breeders should push them.

Polish and Hamburgs were seen in all varieties, with the leading winners, Brakendale Farms, Forthill, Ont., and Richard Oke, London, Ont.

Turkeys in all varieties were shown and as penned made a feature display that was good to see.

The display of ducks and geese was very large and of special interest. The Pekin and Runners had very strong classes.

Bantams, a beauty lot, with competition very strong. Here Major Hugh A, Rose and Deacon Richard Oke had a royal battle for honors and glory. They both did very well.

We want to specially commend this Show. It was clean and beautiful, the management efficient and the attendance great. Its character will be felt as a benefit to the entire industry.

THE ROCHESTER, N. Y., SHOW.

The Exhibit of the Flower City Poultry and Pigeon Association December 15-20, 1913—Over 3000 Birds Shown. By H. P. Schwab, Eastern Representative A. P. J.

THE great and beautiful Exposition Park Building, filled with the new coops and with a beauty display of over 3,000 standard bred birds from many states, made a show worth seeing. Our time only permitted us to stay an hour at the show and we were again delighted in seeing a big and classy exhibit in our home town. The hall is one of the largest and best we have seen and has the best of light, the coops new and roomy and all well arranged with President Fred Guenther, Secretary Fallinger and Promoter-in-Chief George J. Otto in charge.

Many of the classes were extremely

Madison Square Garden, New York, Champion

White Plymouth Rocks

WIN ALL HONORS AT THE NATIONAL SHOW
Held at Washington, D. C., December, 1913

Their record is unbeatable, like their superior quality. At this great National Exhibit they won Cock 1-2, Hen 1-2, Cockerel 1-2, Pullet 1-2, Pen 1 and all Specials. **At Williamsport** this season they again made their second great record, and at Cleveland, Ohio, Chicago, Ill., Boston, Mass., Philadelphia, Pa., they have proven their quality and won highest awards and honors over all, including six Championship Specials for Best Bird at these great shows.

Remember This Champion Line made its best records at America's Greatest Show, **Madison Square Garden, New York. They are now better than ever.** We have a great line of stock to select and fill orders with. They have the best of breeding quality and will give absolute satisfaction. Write for my **Special Sales List of Stock.**

Eggs for Hatching from selected matings, made on quality to produce quality. My circular and full particulars for the asking. Write me.

WEBSTER FARM, Box A, GIRARD, PENN.

Lichtenwalter's Quality

Buff Plymouth Rocks

For years they have won at the prominent shows, East and West, more prizes than any other line. They have the quality to win and to breed winners. Let me know your wants—I can please you.

Eggs for Hatching: For this year I have made but few matings. They are the best I have ever had, and from which I will sell hatching eggs without reserve. Circular and Mating List for the asking.

E. A. LICHTENWALTER, Box A, GIRARD, PENN.

large and fine, the Barred Rocks in particular being one of the best. Following we give some of the winners and notes on exhibitors seen.

Exhibitors and Winners.

The Barred Plymouth Rocks numbered 293 birds. Mr. L. B. Resseguie, Millers, N. Y., winning cock 3, hen 3-8, cockerel 2-9-10, pullet 1-6-7, O-pen 3-4, Y-pen 1-4, cockerel-bred hen 5, pullet 2, pullet-bred cock 5, cockerel 1. In S. C. Brown Leghorns, cock 1-3, hen 1-6, cockerel 2-4, pullet 1-6, cockerel-bred hen 1-2, pullet 1-2. In both these varieties Mr. Resseguie has been very successful winning in the past at Boston, Buffalo, etc.

Schwab Bros., Irondequoit, N. Y., winning in Barred Rocks, cock 1, hens 4-5-6-7, cockerels 3-4, pullets 2-4-5-8-9, O-pen 1-2, Y-pen 2-3, cockerel-bred hens 6-7-8, pen 1, pullet-bred cocks 1-2, cockerel 2, pen 1.

J. W. Chapman, Barnard, N. Y., cock 2-5-7-9, hen 2, cockerels 5-7-8, pullet 3, cockerel-bred hen 1-4, pen 3.

White Wyandottes numbered 95 birds. J. N. Price won cock 1-3, hen 9-10, cockerel 1-8, pullet 6-7, pen 4.

Long and Frank, cock 4, hen 5-3, cockerel 4-7, pullet 3-9, O-pen 1, Y-pen 3.

Buff Wyandottes, with 185 birds, were a great class with A. J. Cronoley, G. Williams, Bottons and Hawkins, L. W. Winner, A. J. Gies, W. S. Crandall, E. B. Fellows, the leading winners.

This was the Annual Meeting Show of the Columbian Wyandotte Club and found 127 birds in line; those seen were of fine quality.

Sunnybrook Farm, Eatontown, N. J., winning cock 6, hen 3-8, cockerel 7, pullet 5-8, pen 2.

W. B. Miller won cock 1-2-4, hen 7, cockerel 1-2-3-6, pullet 1-9, O-pen 1, Y-pen 3, and several specials.

Other winners were D. Link Orr, R. Woodward, C. J. Andruss, etc.

S. C. Reds numbered 154 birds, with C. Hanchet, C. C. Hart, O. H. Watts, W. W. Hewes, Chas. A. Tupper, etc., among the winners.

S. C. White Leghorns were the second largest class shown, with 214 birds exhibited, among the winners were The Sterling, P. Y. Nagel & Weed, C. A. Earle, E. B. Darrow, H. C. Burt, A. L. Wirth, etc.

Silver Campines, a fine class with good quality all through. McDonough & Bidwell, Newark, N. Y., winning cock 2, hen 2, cockerel 6, pullet 2-6. Other winners: W. H. Nagel, W. W. Bush, Sterling P. Y., etc.

In Golden Campines McDonough won three first prizes.

Black Langshans, a good class in both numbers and quality.

All the Orpingtons were in large classes and well shown. Polish Hamburgs, Lakenvelders, Games, etc., were seen to advantage.

Bantams were a great class with many pens seen. Ducks and geese and turkeys in rare quality and good numbers.

Pigeons, a beautiful display and a great entry. The cat department was also a feature and with a nice entry created much interest.

THE "ONTARIO" POULTRY SHOW.

Canada's Greatest Show Held at Guelph, Ont. By H. P. Schwab, Eastern Representative A. P. J.

THE Poultry Department of Canada's Great Winter Fair is of greatest interest to the breeders of the Dominion. It is their Madison Square Garden event and yearly for the past seven years we have seen from 5,000 to 7,000 birds exhibited there.

This year was the largest we have seen and we also believe it was the best one in quality. It was in all the classes of Plymouth Rocks we handled and to us it looked the same all through. The Canadians have every reason to feel proud of this show and to Messrs. McNeil, Oke, Saunders, Baldwin, etc., much of its success is due.

The entry in Barred Rocks was great and the winners of a class well qualified to show and win in any company. Mr. Jno. Pringle, London, Ont., winning cocks 1-2-3, hens 1-3-4-5, cockerels 1-5, pullets 1-3. His first prize cockerel winning special for best cockerel in the show. His birds were well finished and well shown. Mr. Pringle also breeds S. C. Reds and White Wyandottes and got good mention in all. We regret that we mislaid his winnings in these.

White Rocks, also a very large class, with size and form features. Mr. J. L. Brown, Seaforth, Ont., winning cock 1, hens 3-4-7, cockerel 8, pullets 2-3-7-8, best collection and specials.

They do not issue catalogues there, so can't give full report as we would like to.

Buff Rocks, a beauty class, every bird shown a good one. Mr. J. Bawden, Ridgetown, Ont., as is his custom, won most all as follows: cock 1-2, hen 1-3, cockerel 1-2-3, pullet 1-3. All these are worthy of special mention, for in form and color they are hard to beat. We hope Mr. Bawden will cross the line and show his goods.

Partridge Rocks were good classes, but they had to compete with Columbian Rocks for honors.

Orpingtons are very popular here and in Whites, Wm. Moore, Hamilton, won cock 1, hen 3, cockerel 4. Mr. Moore has won at Buffalo, New York, etc., in the past.

Mr. J. W. Clark, Cainsville, also has the habit of winning for some years here in Buff Orpingtons. This year he took down cock 1-3-4, hen 2-3, cockerel 1-3, pullet 2-4.

Petrie and Christie, Mt. Hamilton, Ont., won on White Orpingtons, cock 4, hen 1-4, cockerel 3, pullet 1-2, and several specials for shape, etc.

Mr. Harry Taylor, Toronto, Ont., the pre-eminent breeder of Houdans, won cock 2, hen 1, cockerel 3, pullet 2. We, like many others, considered his cock the best Houdan male and that he should have been an easy winner. He had crest, comb, color and shape superior.

Henderson & Billings, St. Marys, Ont., breed all the varieties of Leghorns and

Send for new Illustrated Catalogue and Mating List and book your order early. We will satisfy you.

"PREMIER"

PARTRIDGE WYANDOTTES

For Utility and Beauty

Partridge Wyandottes are daily demonstrating their **wonderful merit** as **utility fowl,** and are rapidly displacing the older breeds. As to **fancy quality,** the "Premier" Partridge Wyandottes have been awarded more First Prizes than any other strain of this variety in the world, winning the majority of the ribbons at New York, Boston, Chicago, Hagerstown, Cincinnati, Nashville and Knoxville.

EGGS FOR HATCHING. BREEDING STOCK. EXCELLENT VALUES IN $5.00 AND $10.00 BIRDS.

SHEFFIELD FARM H. B. Hark, Mgr. Poultry Dept. GLENDALE, OHIO

won S. C. Browns, cock 1, cockerel 7, R. Combs cock 3, hen 1-2, cockerel 1, pullet 1, best collection and all specials. S. C. Buff, cock 1, pullet 1, cockerel 3-4, best collection and specials. They also breed Black Leghorns, but did not show them here. Their R. C. Browns are of same size and type found in the best of the Single Combs, and are commendable. They have been breeding for years and also are winners at Buffalo and other shows over on this side.

The class of White Wyandottes numbered nearly 300 birds and contained the best that skill could breed and money buy. In this great beauty class Mr. Sid Saunders, Ingersol, Ont., won, hens 1-7, cock 8, cockerels 2-7-8-10 (79 competing), pullets 2-3-4-5-6-7 and 9th (79 competing), the $50 club silver cup and the Bullock Memorial cup for best cock, hen, cockerel and pullet, special for best hen, special for best cockerel and pullet, best collection, etc. Judge Andrews highly commended this class of birds and this splendid record made by Mr. Saunders.

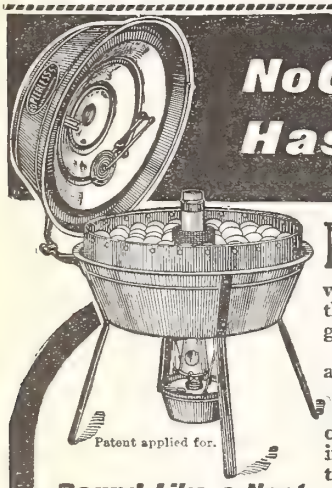
Our old friend, T. A. Faulds, London, Ont., forever known as a Black Minorca breeder, was not exhibiting them this year, but instead did show a few of his S. C. Reds and we regret we did not get list of these awards. Mr. Faulds stands safely and strongly with the Minorca breeders and his past records at Madison Square Garden, New York; Philadelphia, etc., are pretty well known to all our readers.

In all varieties of Leghorns, Minorcas, Dorkings, Hamburgs, etc., the entry was large and the show complete.

Turkeys were a feature class, as was also the display of dressed poultry.

The annual poultryman's banquet was the event of the week. It was a feast worth while. President Moore of the Buffalo Association, and Mr. Geo. Urban, Jr., were both heard to advantage. Professor W. R. Graham, who has charge of poultry at the Government College, was called upon as "Our Dick," and responded in his usual modest manner. Mr. Graham is a man of wide experience and his work at Guelph has been most valuable to the industry in Canada. They know and appreciate his value fully.

THE PHILADELPHIA, PA., EXHIBITION.



Eighth Annual Philadelphia Poultry Show Their Largest and Best—Prominent Visitors—Sales Made, Etc. By H. P. Schwab, Eastern Representative A. P. J.

PHILADELPHIA has given the poultryman seven grand shows in the past, exhibitions of worth and value that has placed this city in the front and kept it there as a show of value where the best possible quality was required to win and which has placed a high value on their awards, but good as the past has been, this eighth annual exhibit just closed far surpassed all their former efforts in size and in evenness of quality noted in all classes, further it was one of the very best handled shows we have ever seen and President H. D. Riley and Secretary F. E. Gilbert and those connected with them deserve every consideration and all credit.

The great classes of birds were a feature, for, besides numbers, the quality was there. The total entries numbered very close to 3,500, with features in every class, the display of eggs was exceptionally large and interesting. Incubators and poultry supplies of all kinds and makes were displayed and coal brooders and stoves demonstrated their popularity .

The big feature of the show was the booth the management supplied for exhibitors and visitors and in which subscriptions were taken for all poultry journals under the direction of Ex-President Moore. This proved a great suc-

56 BREEDS Chickens, Ducks, Geese and Turkeys. Hardy, northern raised, pure bred, of finest plumage. Fowls, eggs and incubators at lowest prices. America's greatest poultry farm. Send 4c for large, fine 19th Annual Catalog and Poultry Book.
R. F. NEUBERT CO., BOX844, MANKATO, MINN.

Patent applied for.

No Other Incubator on Earth Has the Features of This

$6 DELIVERED

NEW methods—new processes—new labor saving materials—these and 25 years' experience have made possible the latest addition to the great Peerless Blue Ribbon line of incubators—the little metal wonder, the "Peerless-60." No other incubator you have ever seen has the design and features of this. No other incubator you have ever used has given the results **this** is giving.

More than 11,000 of these incubators were ordered before one line of advertising appeared—months before the hatching season. Why? Because in design, in results, in economy, the Peerless stands unique—the climax of the genius of Sheer in incubator design. One poultryman, after test, ordered 50. With even just one Peerless Hatcher and a few feet of space in your back yard you can add $150 to $200 to your income. **Results**—that's the answer.

Round Like a Nest

No cold corners. The Peerless is just nature, that's all. Natural Heat. Natural Ventilation. Natural Moisture.

In the Peerless, eggs are heated **from above** with the patented triple wall heat radiator. All heat is used—that's economy. Regulation of heat, ventilation and moisture are all automatic. The machine is equipped throughout with the famous Sheer fixtures. The wonderful Sheer Wafer Thermostat Regulator **automatically** turns lamp flame up and down to meet temperature in egg chamber. Overheating of eggs is impossible. It uses less oil than any other incubator on earth of same capacity. Four of these machines, with a capacity of 240 eggs, will use **one-third less oil, require less attention and give more healthy chicks from the same quality of eggs than any 240 egg machine ever built.**

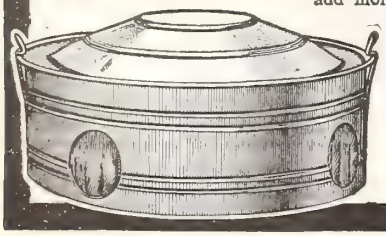
This is the **first** practical, **all metal,** fireproof, everlasting machine ever produced. The **first** machine of its size with a perfect heating and heat distributing system. The **first** incubator ever produced alike adapted to the **largest** poultry raiser, and the **beginner** with one machine as well.

Why the "Peerless-60" Is This Size

Experience has **proven** the small machine the most profitable. **Nature** knows that eggs to hatch must be newly laid. No man ever lived who could be sure of being able to place hundreds of eggs of equal fertility in a machine all at one time. The Peerless-60 is the absolute unit. **Small** enough to give the greatest efficiency. **Large** enough to give the greatest economy. **Good** enough so it will last for years—just add more units as the plant expands.

Not a "Leader"

The Peerless-60 is not a bait to get you to answer this advertisement with the hope of selling you a higher priced machine. It's not a cheap machine designed to "get you interested." It is true that the price is absolutely unheard of. Never before has such a price been named on a highest grade machine, delivered—but remember the price is the price fixed by **enormous production, new materials, new processes, new design.** The Peerless-60 could be no better at ten times the price. Of no other incubator ever sold at anywhere near the price could this be said.



Let Us Send You the Facts

We could not tell you in ten times this space all the facts concerning this revolution in incubators. We want to put these facts in your hands. Let us tell you the story of the Peerless-60, why and how it was produced, how it is made—the wonderful new application of the principles of artificial hatching. You are safe in sending your order **now**—today, but if you wish, write us for the whole story.

Special Introductory Offer

When you figure the cost of an incubator figure its cost set down. Figure the freight. The special introductory price of the Peerless is $6.00, delivered to you. This offer is made to give the widest use to the Peerless in the least possible time. It may be withdrawn any time. Now is the time to secure the Peerless. Save the freight now. $6.00, delivered.

The Peerless Brooder all metal—fire-proof—heated but lampless by a simple device that gives no bother and keeps chicks healthy, comfortable and warm, no matter what the weather. It's of 60 chick capacity—a companion to the Peerless-60 Incubator. Here is the perfect brooder—the one you have wanted, for..... **$3.00 Delivered**

H. M. SHEER CO., Dept. 13, Quincy, Ill.

cess and is the coming plan to our notion. Subscriptions were freely handed in, keeping two to four clerks busy and the visitors were free to enjoy the show as they wished without being held up at every crossroad.

Another feature here was the "Flea Banquet." The first banquet was held here a year ago and this will be an annual fixture. Many new members were initiated and the "Flea" is proving more popular than ever before.

The display of incubators, brooders and supplies was very large and most complete with all representatives kept busy.

Visitors prominent in poultrydom were daily recorded and included President E. B. Thompson of the A. P. A., and son, Mr. and Mrs. Frank J. Eppele, Hon. Frank S. Barr, August D. Arnold, A. J. Fell, Frank McGrann and others of note.

The Exhibitors and Their Winnings.

The best class of Barred Rocks we have ever seen in Philadelphia were shown here this year. It was a great class of superior merit and quality and this fact known will place due honor on all. Mr. C. N. Myers, Hanover, Pa., with his now famous "Lady Beautiful" strain of pullet breeders, won more and greater laurels than ever before. His birds were simply unbeatable in quality and condition. His winnings are: hens 1-3-4-5-6, pullets 1-3-5-7, pullet-bred males 1-3-4-5, pullet mating pen 1, color special female. His first prize hen winning also championship sweepstake special for best hen in the entire show, an honor seldom won by a parti-colored variety and was richly deserved. His birds have shape and wonderful color and barring and are a most worthy line grandly bred and shown.

Mr. R. J. Walden, Middleburg, Md. fresh from his great winnings at Williamsport, but with birds a little past, won hen 2, pullet 2, pullet-bred males 2-6, special for best shaped female, etc. Mr. Walden breeds the pullet line exclusively. He won first hen at Hagerstown this fall and won three first prizes at Williamsport four weeks ago in a large, strong class. His line is favorably known for its years of winning at popular shows.

Mr. S. M. Goucher, Moorestown, N. J., another of the old and reliable breeders of this section, made a splendid showing and won cock 3, hen 8, cockerel 3-6, pullet 4, cockerel-bred female 1, exhibitor's pen 2, cockerel-mating pen 1, and pullet mating pen 2, and several specials. His cockerel mating pen is one of the best we have seen, the females strongly barred, still very clean. The male, a youngster of exceptional quality, a rare beauty. First cockerel-bred hen a bird hard to beat, ideal in shape and grand color.

The Meadowbrook Farm, Meadowbrook, Pa., with our old friend, H. M. Kenner in charge, made their first exhibit of Barred Rocks, and won cock 7, hen 7, cockerel 2, pullets 6-8, first prize exhibition pen and specials. Mr. Kenner is started right and will hang rings of honors on this line in due time. Note this.

First cock was won by Yale Bartholomew, and first cockerel by the Burlington Poultry Yards, both bright clean cut birds of sound barring.

There were 160 birds in this beauty class, with other winners as follows:—Willow Brook P. F., Paul Whitebread, Chestnut Hill, P. F., Minch Bros., C. Guy Myers, C. F. Kurtz, Miss M. J. Healy, C. E. Hollacher, H. Maitland, G. W. Haywood, S. S. Bossert, W. L. Day and H. B. Cooper, Jr., and Geo. E. Muth.

White Rocks, a class of 95 birds, the winners and many others exceptionally good with conditions a feature. The winners here were: P. G. Springer, C. C. Burrough, Meadowbrook Farm, A. L. Russell, C. Hoelle, W. H. Harrison, etc.

In Buff Rocks 40 birds were seen and a usual high grade quality noted. The winning males by Wm. J. H. Goetz, were particularly good birds.

Columbian Rocks, a rather small class with nearly all honors won by M. L. Paul Graham, Collingwood, N. J.

Partridge Rocks, a beauty class, with Mr. W. F. Presgrave the leading winner here as at the N. Y. Palace, Hagerstown, etc. Other winners were: Ideal Poultry Yards, R. S. Anderson, John F. Mackay, M. H. Ivins, etc.

Silver Penciled Rocks, a small class, but of extra quality, with Mr. John F. Mackay, Bordentown, N. J., the leading winner. His first pullet was the gem of the class. Mr. J. W. Lippencott also exhibited a nice line.

Wyandottes.

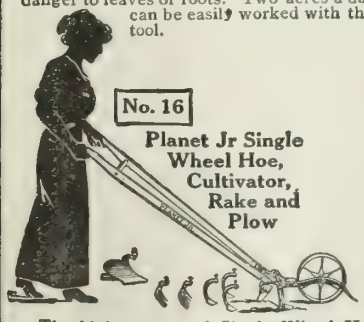
In this class of 145, Judge W. R. Graves had full hands and plenty to do. He also handled the White Rocks and did a most acceptable job. The honors were freely distributed here among several breeders. Mr. J. J. Farrell winning cock 1, hen 1. Carr Brothers cockerel 2, and pen 1. A. C. Roberts cockerel 1, pen 2. Spring Valley Poultry Yards, pullet 1. Colonel L. Paul Graham hen 4,

Planet Jr.

No. 25 Planet Jr Combined Hill and Drill Seeder and Double Wheel Hoe, Cultivator and Plow

A capital implement for large-scale gardening especially. It has steel frame, and complete seeding and cultivating attachments. The hoes run close to row without danger to leaves or roots. Two acres a day can be easily worked with this tool.

You need these scientific soil-tillers to save time, lighten labor and get bigger crops from your farm and garden. Planet Jr tools are backed by more than 40 years' experience. They range from $2 to $100, and are fully guaranteed.

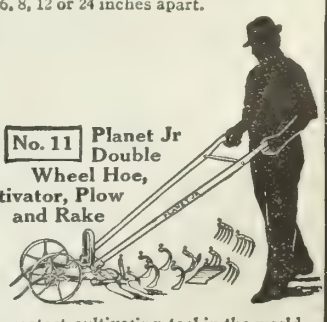


FREE Our new 72-page illustrated catalogue of 60 of the latest tools, for *all* cultivation. Write postal *today*.

S L ALLEN & CO
Box 1107T Philadelphia

No. 4 Planet Jr Combined Hill and Drill Seeder, Wheel Hoe, Cultivator and Plow

This is a practical every day time-, labor-, and money-saver. It combines in a single implement a capital seeder, an admirable single wheel hoe, furrower, wheel-cultivator, and a rapid and efficient wheel garden plow. Sows all garden seeds in drills, or in hills 4, 6, 8, 12 or 24 inches apart.



No. 16 Planet Jr Single Wheel Hoe, Cultivator, Rake and Plow

The highest type of Single Wheel Hoe made. It is light, handy, and adapted to use by man, woman, or child. Has leaf guard for close work, and a durable *steel* frame. A most useful tool in the family garden that makes the work really a spare-moment pastime.

No. 8 Planet Jr Horse Hoe and Cultivator

The best-known cultivating implement made. It is so strongly built that it withstands incredible strain, yet it is light and easy to handle. Has new steel wheel—will not clog with stones or trash. Cultivates to any depth and adjusts to any width. Opens and closes furrow, and hoes right up to plants without danger of injuring them.

No. 11 Planet Jr Double Wheel Hoe, Cultivator, Plow and Rake

The greatest cultivating tool in the world for the grower of garden crops from drilled seeds. It has steel frame. The plow opens furrows for manure, seed, etc, and can be reversed for covering. The cultivating teeth are adapted for deep or shallow work and for marking out. Crops can be worked both sides at once until 20 inches high.

pullet 2, and A. J. Savacool, Cornwells, Pa., cock 3.

Columbian Wyandottes, a good quality class, with B. W. Cooper, Dr. J. S. Rittenhouse, H. H. Hewitt and others winners.

Partridge Wyandottes of usual size class with many nice birds.

Silver Wyandottes, a dandy class of valuable birds. The Mountain Orchard Poultry Farm, Narvon, Pa., winning cock 5, cockerel 3. In Buff Orpingtons they won hen 4. In Houdans they won cock 3, hen 5, cockerel 4, pullet 5 and pen 3. Other winners in S. L. Wyandottes were: Dr. Henry M. Kalvin, M. H. Leidy, H. M. Puder, F. H. McDowell, Salem P. F.

Rhode Island Reds.

That the S. C. Reds are popular was attested in this class of 114 birds shown by a long line of exhibitors. The Schenley Heights Poultry Yards, Pittsburgh, Pa., again demonstrated their superior quality winning the championship sweepstake special for best cockerel in the entire show on their first prize S. C. Red cockerel, an honor they also won last year. Their winnings are cock 1-2, cockerel 1-3-4, pullet 4, pen 1, cup for best cock, hen, cockerel and pullet, cup for best cockerel, gold special for best pen, cup for best display, gold special for best three cockerels and severals others. In Rose Combs they won cock 4, hen 4, pullet 1-5, cup for best cock, hen, cockerel and pullet, shape male and color female specials, cup for best display and several others. These winnings need no further notice from us, as they tell their own story of worth.

Mr. Frederick H. Stillwagen, Allentown, Pa., has made several fine records this season at prominent shows. Here he won cock 4, cockerel 2, pullets 1-2-3. In Rose Combs, hen 1, cockerel 5 and pullet 3, with several specials. Other winners were: J. H. Crossley & Son, Ellenwood Farms, F. S. Rader, G. W. White, C. W. Everett, Ellis L. Shelby, Williamsburg, Pa., M. R. Amy, C. F. Lahr, E. Sachs, J. W. Yost, A. M. Anderson, Beyer & Morrison, Mrs. A. M. Pleasants, West End P. & R. Co., and O. J. Aregood.

Orpingtons.

Buff formed a class of 75 birds with the Sunswick Poultry Farm, So. Plainfield, N. J., winning cock 1-2, hens 1-2-3, cockerel 3-5, pullet 1-4, pen 1, cup for best display and cup for best cock, hen, cockerel and pullet. Their winning pen won championship special for best pen in the show. Several other specials were won by them.

Wm. Cook & Sons, Scotch Plains, N. J., won in Buffs, cock 3, cockerel 2-4, pullet 1, pen 2. In Blacks, cock 4, hen 2, cockerel 1-3, pullet 4, pen 1. In Whites, cock 1, cockerel 2-3, pen 2, indeed an excellent record while competing with classes of 232 birds. We regret we did not get a list of the cups and specials won.

In Whites Mr. J. C. Peifer & Son, Danville, Pa., won cock 2, pullet 5 and pen 1.

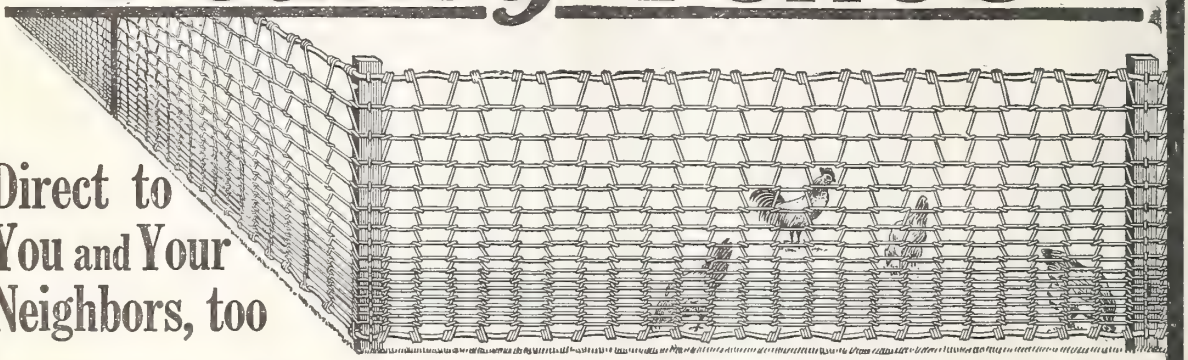
Leghorns.

For years this has been a red-hot Leghorn show and the classes this year were of the same quality. In the S. C. Whites 143 birds were seen with quality unusually fine. Mr. Stewart Haddock, Poughkeepsie, N. Y., won first prize pullet and special for best pullet at the show. She was a beauty in form, extra fine head and sound in color. He also won cock 4, cockerel 2, pullet 1-5 and pen 4. This with his recent win at Buffalo places value to this line. It has the marks of quality.

Other prominent winners were H. C. Mack, Sonder Bros., E. E. Brubaker, Meadowcrest, J. G. Jones, Pratt Ex Sta, and E. A. Ballard.

S. C. Buffs, a choice class, Mr. Lee C. Bortz making a splendid winning of all five first prizes.

Campines.



In Silver Campines 117 birds were shown and it was a royal class of quality

CLEVELAND'S BUFF ORPINGTONS

Won at the Great Coliseum, December, 1913, First and **Color Special** on old pen, **First** and **Shape Special** on hen, Second on cockerel, **Fourth** on young pen, in competition with breeders from United States and Canada. **Nineteen prizes at Chicago's Great Coliseum Show** the last three years; 18 of these winners are in my breeding pens this year. Do you want eggs from these winners? Some young and old stock for sale. Send for mating list **free.**

Poultry Fence

Direct to You and Your Neighbors, too

48 INCHES HIGH 22½c A ROD. 60 INCHES HIGH 25½c A ROD.

Not a flimsy netting but a fence requiring fewer posts and no base boards or top rail. Spacing between the line wires graduated from 1⅛ inches, at bottom to 4½ inches at top. Stay wires 4½ inches apart.

Top Wire Bottom Wire Line Wire Stay Wire

Positively the greatest poultry fence bargain ever offered—you can't afford to buy any other kind.

48-INCH COMBINED POULTRY AND STOCK FENCE 27¾c PER ROD.

A heavier fence having the same construction as above and while close enough for small chicks yet strong enough to turn stock. Stay or upright wires in this style fence are 6 inches apart and the spacing of the line wires graduated from 1¼ inches at bottom to 6 inches at top. Following shows exact size of wires used.

Size of Top and Bottom Wires — Line Wire — Stay Wire

All Fence Sold Direct to You at Factory Prices.

Large Illustrated Catalog showing over 100 styles of Farm, Poultry and Lawn Fence mailed FREE on request. WRITE NOW—before you forget it.

KITSELMAN BROTHERS, 295 So. Council St. MUNCIE, INDIANA.

all through, with many birds of exceptional quality seen. The Schenely Heights Poultry Farm, Pittsburg, Pa., won cock 1, hen 3, cockerel 3, and pen 4, color male special, gold special on cock, etc. In Golden Campines cockerel 5. In these there were 86 birds competing. The winning cock was a wonderful bird in color and markings, the kind seldom seen.

Mr. M. R. Jacobus, Ridgefield, N. J., one of the first to import and to breed these in America, won cock 5, hen 1-5, pullet 2-3-4, pen 1, specials for best shaped females, best pen, etc. In Golden's, cock 2-3, hen 5, cockerel 3, pullet 1, pen 3, the President's cup for best display of both varieties (the donor, Manhattan Farms not to compete). The first pen of Silvers was to our notion one of the grandest ever shown; in matching for size and color it was a work of art and quality was of the best. The Manhattan Farms, Brighton, N. Y., repeated their win of a year ago. They have made records here and elsewhere that will stand for time to come. In Silvers they won cock 2-3-4, hen 2-4, cockerel 1, pullet 1-5, pen 2, cup for best exhibit of males, cup for best exhibit of Silvers, shape male special, etc. In Golden's they won cock 1-4-5, hen 1, cockerel 2-4, pullet 2-3-4, pen 1-4, cup best exhibit of males, all specials for shape and color males and females, cup for best display and special for best cock, hen, cockerel and pullet. No mistake, they had the goods and this great winning is due them for quality bred and shown.

Other exhibitors here were: W. C. Frantz, J. B. Bartow, Miss S. G. Yarnall, Dr. J. H. Prudhomme, J. F. Chapman, etc.

Mr. E. F. Dran, Williamsport, Pa., won in Goldens, hen 2-4, pullet 5, and pen 2. Silver, pen 5.

Other Varieties.

Favorelles, a fair sized class, with many nice specimens.

Light Brahmas, a class of quality, Minch Bros. winning cock 1-4, hen 2-5, cockerel 5, pullet 1-3. First cockerel by Riverdale P. F., a dandy of size, form and markings.

Partridge Cochins, a large class for this variety and many good birds shown.

Black Langshans, we regret a small class, with the winners very worthy specimens.

Anconas, good quality throughout. Mr. A. E. Wohlert, Narbeth, Pa., won hen 3, cockerel 1-2, pullet 4, and pens 1-3.

Houdans, an unusually choice class. The Mountain Orchard P. F., Narvon, Pa., wins cock 2, hen 5, pullet 3 and pen 3.

Rather small classes in both Cornish and White Indian. This is not in line with the beauty classes lately shown.

Pit Games, Silkies, Butter Cups and all varieties were displayed, making the entry exhibit very complete.

The class in duck were the Runners, for in all classes were seen specimens of highest quality. In the White Runners a drake sold for $150. Mrs. E. G. Curtis, Atsion, N. J., wins first on both old drake and duck, young drake second, and young duck first, and first prize pen. Her exhibit was one of extreme quality and beauty, where type is seen to advantage.

Mrs. F. Littlefield, Middleburg, Md., won on Indian Runners, old drake 3, old duck 1, young duck 4-5. We have written of this line before; they are national winners.

In Bantams particular interest centered in the Black Cochins, which were the largest and strongest class of all Bantams. Both shape and color were seen to advantage. Here Mrs. W. H. Moore, Chadds Ford, Pa., won cock first and hen first on two birds of rarest quality. We congratulate her.

Buff Cochins were next in size. All varieties were seen and at their best.

Deer's White Rocks Win Again

At the Tomlinson Hall, Indianapolis, Ind. in Large Class

1-2-5 Cock (3 entered) 1-2 Hen (3 entered) 1-2 Old Pen (2 entered) 2-5 Cockerel (5 entered) 1-2-4 Pullets (4 entered) 1-2-3 Young Pen (3 entered)

Lots of show birds that will win at $20 to $100 each. Utility stock, $2.00. Eggs from our matings at $10.00 per setting. Utility eggs $5.00 per 100.

Successful Lessons in Poultry Raising FREE

NOW you chicken raisers have something to send for that is REAL NEWS. Hurry up and get these Poultry lessons before you hatch once.

Let Gilcrest, the successful man, start you right—keep you going right—and help you cash in on the profits this season that you hope to make, can make and deserve to make raising chickens if you start right. Just write Gilcrest a postal.

J. S. GILCREST
President
Life Member American Poultry Association

These Poultry Lessons Are Really Worth $25 or More

—but Gilcrest is glad to send them free to every man, woman or child who purchases a Successful Incubator or Brooder. A regular, simple, practical course of advice—in printed form by Mr. Gilcrest—on how to raise poultry most profitably. Beginners need these lessons which will save them failures—loss of money, time and trouble—besides showing them how to equal results with old timers, Write today for this lesson offer and

Send Me Your Name on a Postal

Write early. Get ready now. That don't cost a cent. If you decide not to buy of Gilcrest you won't be under any obligations. His business grows by the long time friends he makes. He wants you for a friend—he wants to help you. If you buy nothing of him now he knows you will some day when you learn all the facts about his World's Best Incubators and the way he helps you to make *you* most "*Successful*" with them. Write—then decide. You don't want to miss this chance. Find out by writing us a postal.

SUCCESSFUL Incubators and Brooders

This announcement isn't put here to make claims—exaggerated statements—or to sell you an incubator and then not stay with you and show you how to make money with it. Time enough to give you direct factory prices this year on many sizes from *$6.75 and up* when we *get together* and you see what *Succes ful Incubators and Brooders* and *Gilcrest* can do for you *working with you* on his *Successful Lessons in Poultry Raising* to suit your needs and experience. First price—simplicity—dependability—time saving—big hatches—big broods raised—cash in your hand profits are what you want to know.

But Gilcrest gives you, besides what others do, the personal attention and advice in his *free lessons* that no other maker ever has or ever can the way he can and will. Get these lessons—before you start—when you start—while you are hatching—how to make the biggest hatches and raise biggest broods—how to get biggest prices and sell for cash your whole year's output.

Successful Grain Sprouter—made in sections—supplies your fowls the year round with green food that makes 'em lay—just when egg prices are highest.

Gilcrest has mighty attractive poultry, too—high grade stock and eggs of all leading varieties—land and water fowls.

NOTE:—Our famous little booklet—"Proper Care and Feeding of Chicks, Ducks and Turkeys" is worth its weight in gold. Sent for 10 cents. But our big catalog is FREE. Send for it.

J. S. GILCREST, Pres. and Gen'l Mgr.

Notes from the South-west

Conducted by H. H. Stoddard, Riviera, Texas

SUNDRY MATTERS.

STUDY.

Be careful.

Parasites make work.

Simple inventions the best.

Do not imagine you know it all.

Eggs will continue high for years.

Outcrossing is necessary for vitality.

Experiment stations are the hope of all of us.

Ordinarily do not expect poultrymen to agree with you.

Never allow fowls, young or old, to become real hungry.

Labor saving in every industry is brought about principally by mechanical devices.

Traits, whether useful or not, sometimes persist for ages in a race of plants or animals.

Contrive to save your steps if you want to keep from running your legs off tending poultry.

Best laying breeds are the non-sitters. The contestant who stoppeth to rest winneth not the race.

Railroad kings will be sending out, bye-and-bye, cars with lecturers and movies, solely to teach poultry culture.

The middleman so much blamed nowadays, is simply part of the old "system." He is trying to get a living, that's all, same as the rest of us. But he must go all the same.

It payeth not to "cut off your nose to spite your face." Go without eggs and punish yourself in order to punish the cold storage men, will you?

The mail order house will be altered considerably under the new distribution methods. But it has taught the country a valuable lesson and blazed the path of progress. It showed the necessity of the future enlarged parcel post.

America's cheap land led to slovenly farming, especially in the West. That is one reason why England has beaten us, and Germany especially has done so, in work on the soil, including livestock branches, poultry excepted. Germany instructs children thoroughly in all the various arts of production, including farming. That is another reason. The congressional Investigating Committee which went abroad learned something.

A correspondent accuses me of hostility to shipping guaranted eggs by the association method. No, I want to see it carried out in marketing eggs, poultry, fruit, vegetables, and lots of other things, because that is the way most producers will have to follow. The movement in the direction of associative or cooperative buying and selling various products by all workers on the soil, is one of the most important of this day and generation. But personally, "me for" independent shipping, when you talk of eggs. All cannot do it; hence the importance of fostering cooperative marketing.

If anybody thinks the needed appliances for commercial poultry keeping can be invented in a year or five years, please present him with my compliments and tell him he was never more mistaken since he was born. Even such an important thing as the manufacturing of cotton cloth, an article of universal use, couldn't be done just right till, according to Atkinson, the machinery was changed again and again, till it was virtually entirely remodeled seven times in fifty years. You have to keep thinking, and as for your reading, if you do not sift poultry writings thoroughly, they will do you more harm than good, because they contain so many absurdities and contradictions.

BEST BY TEST

THE GREEN SHEEN STRAIN

SILVER CAMPINES

"THE HEAVIEST LAYERS OF LARGE WHITE EGGS"

SILVER KING FIRST COCK-CHICAGO.

SILVER PRINCESS FIRST PULLET-CHICAGO.

SWEEPSTAKE CHAMPIONS

At the Great Coliseum Show, Chicago, 1913

We won more prizes than all competitors combined. Among 159 entries we won

Cockerels, 1st, 3rd, 4th; Cocks, 3rd, 5th; Pullets, 1st, 2nd, 5th; Hens, 2nd, 3rd; Old Pens, 1st; Young Pens, 1st, 2nd.

SILVER KING Our great cock bird, established a world's record. Ten Cockerels and Pullets sired by him were awarded ribbons.

EGGS EGGS EGGS

I have mated eight star pens and I guarantee each to be headed by a Chicago 1913 Prize Winning Male. Mating list now ready. Place your order for hatching eggs early. Orders will be filled as received.

BEST BY TEST.

THE GREEN SHEEN STRAIN

BEST BY TEST

An educated farmer from Germany, with whom I talked lately, told me that before buying land in that country he studied at a dairy farm. It was for milk not butter, and the average yield of the cows was twenty to twenty-eight quarts a day. If less than twenty quarts average, during the milking period, the animal was sold to a beef producing farm. The butter farms had their standard, equally strict, of weight of butter. And how long did my visitor study at the milk farm? Three years, that's all. As he contemplated having four branches on his farm, namely, milk, grain, grapes for wine, and poultry, the latter on a moderate scale; he spent a fortnight with me and then hied to Petaluma, Cal., to stay there a month. Study before beginning and then all the while afterwards, that is the German of it.

Unless you are using the duplicate method, set your hens in the evening, after dark, instead of by daylight. They are much more apt to "stick." The lantern is a very useful thing in the poultry-keeper's hands. There is much that can be done about the fowl-house and much that can be learned, by lantern-light. You can frequently catch fowls to examine them for any desired purpose, when they are on the roost, even if they are not very tame; whereas in the daytime it may be hard to catch them singly and to examine into their condition, without causing them a great deal of fright; and fright, you know, is antagonistic to thrift. If it is necessary to catch your birds in the daytime, you should have a catching pen of latest approved pattern to toll them into, by throwing them some delicacy. Then you can catch them and cause only the very minimum of fright. Or starve them for a half day or so and then you can toll them into the catching pen with any sort of feed.

Boys have to pass through a dozen or more stages which they inherit from their barbarian ancestors. They enjoy seeing one of their playmates whipped as keenly as ever an Indian enjoyed torturing a prisoner. Not only feeding and petting a pup, squirrel, or pigeon is a pleasure, but to plague and torture it is also a greater one, to a boy of a certain age. To see you shoot some animal is a circus. Again, talk about the discordant noises of savage men, it is no circumstance to the din that your three-year-old youngster delights in. The love of hunting and shooting continues through the lives of many grown up boys, and interest in the pursuit of wild animals is almost always accompanied by interest in domestic animals, too.

Members of the A. P. A. are almost all of them hunters or anglers, or both. When the stage is reached in which the graduate from lower ranks loves better to hunt birds with a camera than with a shotgun; that is the finest ever. Shooting at a covey of birds on the wing, and wounding some that you do not get—Bah!

In a report from a State Experiment Station, on the quantities of different sorts of foods consumed by fowls when for eight and one-half months thirty kinds were always before them, it is stated that they ate scarcely any alfalfa meal, in spite of the fact that this pen was kept on a bare yard and was given but little other green food. "Poultry will not eat alfalfa meal, or shredded alfalfa, even when scalded, unless forced to do so by mixing it with other ground feeds." Thus far the report verbatim; but what under the sun is meant by "green food"? "Alfalfa meal * * or other green food"! Dried stalks leaves and blossoms of plants are no different from the various grains in their makeup except that they are less concentrated and contain more woody fibre. It is not bulk, or more or less of woody fibre, or of food constituents such as are in grain rations, that are especially useful when green food is afforded; but vegetable matter which is alive is what is needed, for an antiscorbutic, and alfalfa meal is "as dead as Julius Caesar."

A breeder lately said, "I am afraid to feed finely chopped green stuff to very young chicks for fear they will get the white diarrhoea that I have been reading about, and which is such a holy terror."

This was a case where "a little knowledge is a dangerous thing." A novice may pick up anything and everything in the everlasting, wishy, washy flood of poultry writings.

Green stuff is as natural for young chickens as big red apples are for children. The old hen (and she knows) snips off bits of herbage for her younglings, if she can find any that is tender enough to be snipped off.

White diarrhoea is occasioned by a specific germ. If it is not on the premises, green stuff cannot bring it, unless indeed it is clinging to it, any more than you can raise a crop of corn or oats without seed.

If other kinds of diarrhoea or looseness of the bowels are feared instead of

$8.50 Buys 150 Egg And 150 Egg INCUBATOR BROODER

Just Think of It!

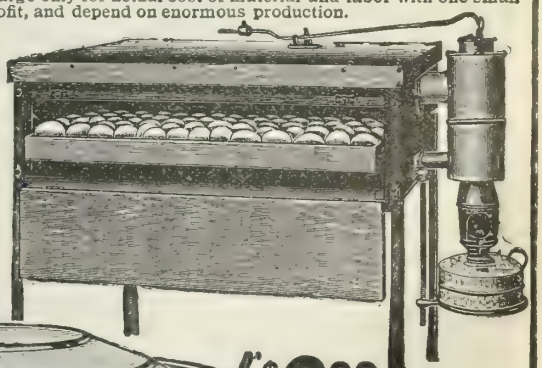
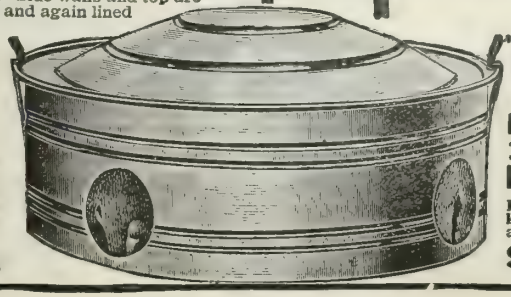
Why Don't You?



Poultry raisers! Get in on this offer quickly. In all of our 26 years' experience we have never been able to make so astonishing an offer as this. Don't miss it. Here, we give you everything you could want in a reliable hatcher, at a low price that has heretofore been impossible. Bear in mind that this incubator is fully guaranteed—shipped ready to use—no extras to buy. We charge only for actual cost of material and labor with one small profit, and depend on enormous production.

Fortunate deals in buying raw materials, our modern factory methods and our direct-to-you plan enable us to cut the price to a fraction. It's the most remarkably low price we have ever been able to make ourselves or have ever heard of elsewhere. The machine has the best regulator; dependable thermometer; strong, well-built egg-trays; all metal safety lamp with bowl stamped out of sheet steel; best lamp bracket; steel legs; best egg-tester. Write for this wonderful proposition on



The ROCKFORD INCUBATOR & BROODER

Incubator alone $6. Metal Brooder $3. Both Incubator & Brooder $8.50

You could not ask for better quality—to pay more is needless

It is heated with warm, pure air. Foul or impure air is carried off. No chance for lamp fumes to enter egg chamber. All parts are heated evenly. Side walls and top are made of 1-inch lumber and lined with heavy deadening felt, and again lined with half-inch lumber inside. Heat cannot get out—cold cannot get in—fuel is saved, The Brooder is water heated—fire-proof and weather-proof—easily handled.

$6.00 For This 150 Egg Incubator

Money Back Guaranty

It comes to you all set up (not in knock-down form) Just fasten legs and lamp bracket and start the hatch.

$3 For This 150-Chick BROODER

Order Today on Approval—Guarantee Protects You

Don't let anything keep you from this remarkable proposition. The quality is so good—the guarantee so strong and the price too low to let anybody miss it. We guarantee the incubator to satisfy you in hatches and also guarantee the metal brooder to raise chicks to satisfy you or we return your money. Send us your order today or write us for further information.

The Rockford Incubator Co. Box 15 Rockford, Ill.

the deadly "white" scourge mentioned above, why, all there is about it is simply to always give the young chicks the greens they want, and there will be no occasion for eating too much, and if everything else in your management is correct, they will be thrifty, and their plumage "as slick as a mole."

That American farm methods are wasteful is admitted on every hand. Millions of acres of soil which never before felt the plow are cropped over and over till their fertility is largely exhausted, the farm products being mostly marketed in big cities with the ultimate result that the wealth of the prairie soil passes via the sewer to the sea, as was first prominently mentioned by the great chemist Liebig.

There will be a great movement all over this country, inside of fifty years, to conserve the fertility of the soil and increase it. In time our tillable soil will not feed our two hundred millions or three hundred millions of population and crowds of our citizens will migrate to South America just as they are already going to Canada.

Poultrymen, unless they pay attention to the utilization of droppings, squander fertility faster than keepers of other stock because fowls consume so much concentrated food. What may be collected under the roosts is only half of the manure of twenty-four hours. The rest scattered in the daytime over yards or outside range, should be saved by cropping the ground every other year or every few years.

The way certain poultry editors, professors, and perambulating lecturers sometimes look at a thing, new, true, and valuable, is through glasses of jealousy; because by contrast, it belittles their own small stock of shopworn wares. They ignore it entirely, or else lie low and begin to teach it with a nonchalant air as if they had "known it all the while," as in the story of a woman in Nebraska (she was a real good woman all right) who inherited a great lot of expensive furniture from a relative in Pennsylvania. It was shipped to the woman mentioned and filled her house to overflowing. Her children said to the neighbors' children, "Mamma told us not to say anything about the new things, but act as if we had always had 'em."

There is a poultry editor by the sad sea waves of New England who, when valuable new discoveries or inventions are announced, is not man enough to welcome them and give credit. He keeps quiet and saws wood for awhile and then dresses up the new ideas a little differently and "acts as though he had always had 'em."

Many of my readers will know well enough who the editor referred to above, is, when I append the following from a letter just received: "I don't believe that he (the "always had 'em man") ever saw any good in anything on earth except himself and he discovered the Garden of Eden first or built it, and has sneered at everything since he first discovered poultry in 19411 B. C."

Parasites and noxious insects come and go in great waves. Much is said about wild birds destroying injurious insects. The rate of increase of all the lower forms of life is, however, so great, that when things are all right for the tremendous reproductive powers of nature to have full swing, you might as well dam the Nile with bulrushes as to head off insects by birds.

The microscopic foes of the insects themselves are sometimes rampant, and then the vast hordes disappear like snow in a January thaw. All the birds between two oceans could do little in comparison with the microscopic parasites which sometimes infest insects.

Now before these foes appear, there may be a great insect wave. Two seasons of exemption from disease, and sometimes one, when food is plenty, will make some species of insects appear in prodigious numbers, where there had been so few as to escape notice entirely. It is, however, but rarely that that the great numbers continue very long.

Usually some disease dependent on minute animals, or else fungous growths, sweeps them off as quickly as they came; and then the minute parasites themselves

Ironclad
TRADE MARK

WINS In The Two Biggest HATCHING CONTESTS Ever Held

THE Hatching Contests conducted by Missouri Valley Farmer and Nebraska Farm Journal are the Biggest Hatching Contests ever held in the world. The Ironclad Incubator is the only incubator that has for two years in succession won in these Big Contests. The last contest was won by Mrs. C. F. Merrick, Lockney, Texas, with her Ironclad Incubator. Read sworn and witnessed statement below:

IRONCLAD INCUBATOR CO., Racine, Wis. Lockney, Texas.

Gentlemen:—I am writing to let you know that I won in the Big Hatching Contest held by Missouri Valley Farmer and Nebraska Farm Journal. I placed 148 eggs in my 140-Egg Ironclad Incubator and hatched out 148 strong chicks. I also took off two more perfect hatches during the season and I wish you could see my chicks, they are doing splendid. My success has been perfect. I have examined quite a few incubators and I like none so well as the Ironclad.

Respectfully yours, MRS. C. F. MERRICK.

We Give 30 Days Trial—10 Years Guarantee

You have nothing to risk. We will send machines—let you use them 30 days—urge you to compare them in quality of material, hatching ability, workmanship and price—and if you don't find them satisfactory, send them back—we'll pay the freight charges and return your money. You are absolutely safe. We have to do as we advertise. If we didn't the publishers of this paper would not carry our advertising.

When an incubator is constructed of material of this kind it gives you the strongest and most durable incubator that can be made—a machine that will not warp or shrink or open up at the seams as every joint is lapped over with our galvanized iron covering.

Don't class this big all-metal-covered dependable hatcher with cheaply constructed machines.

Ironclads are not covered with cheap tin or other thin metal and painted like some do to cover up poor quality of material. Ironclads are shipped in their natural color—you can see exactly what you are getting. Don't buy any incubator until you know what it is made of. Note these Ironclad specifications: Genuine California Redwood, triple walls, asbestos lining, galvanized iron covering. Galvanized iron legs. Large egg tray, extra deep chick nursery—hot water top heat, copper tanks and boilers, self regulator, Tycos thermometer, glass in door and many other special advantages fully explained in free catalog. Write for it today or order direct from this advertisement and save time.

IRONCLAD INCUBATOR CO. Box 61 , RACINE, WIS.

TOO LATE

CONKEY'S ROUP REMEDY WILL SAVE YOUR LOSSES

Don't be "Too Late" when your fowls are sneezing, coughing or moping. Put in drinking water Conkey's Roup Remedy. It will keep this dread disease from spreading and save your losses. A preventive and remedy. Easy and convenient to use.

Fowls take their own medicine. Keep on hand and save your flock. Guaranteed satisfactory or money back. 25c, 50c and $1.00—Postpaid.

Write for Conkey's Poultry Book. Sent for four cents and dealers name.

vanish in turn for want of something to live on.

And thus nature see-saws back and forth, insatiably cruel all the time, and caring not which combatant is on top. Her chief care is that the conquered party shall not be wholly exterminated. When there is a great wave of insects, a few lurk in out of the way places, and escaping destruction, become the progenitors of those which are to make up the next great wave. It is just then when insects are few that birds are the most useful.

The stickfast flea, which sometimes appears in great numbers to annoy fowls, seems to be subject to great waves. They were a great pest in 1910, but have bothered but little since. No doubt they have diseases which are as deadly to them as yellow fever or Asiatic cholera are to mankind.

American Cornish Club Meet.

QUANTITY—Quality Extreme. The verdict of all who were fortunate enough to see the exhibit of the members of the American Cornish Club at Warrenton, Va., Dec. 16-20, 1913.

Two hundred and fifty-five Cornish on exhibition, consisting of 182 of the dark variety, 55 of the white and 18 of the yet non-standard Cornish, the Buffs.

Darks were ahead in numbers, as expected, because the dark Cornish are the "original Cornish," and a fine class they were, presenting 19 cocks, 28 hens, 27 cockerels, 28 pullets, and 16 pens, 8 old, and 8 young, to the public for inspection.

In darks the first cock was the 1912 club show winner of first cockerel, "John Bull," J. W. Ward's great winner, pronounced by gentlemen of such prominence in the poultry world as Mr. Drevenstedt, Mr. Minich, and others as the greatest Cornish male ever produced, and in this show beating the champion of all England, a bird that came in second, owned by C. H. Smith.

Hens a great class of 28, with C. H. Smith's "Lady Britton" first, a bird that has been a winner ever since she came to America, and long before, possessing remarkable type and most exquisite lacing and penciling. H. H. McCormick came in for second hen with a rare bird, not quite as good in lacing as "Lady Britton."

Cockerels, a class of 27, with Ward's male line, the strongest male line of Dark Cornish in America, again coming to the front and taking first cockerel on "The Sailor," a bird possessing everything that an A No. 1 Cornish male should have. C. H. Smith came in for second with a bird of good type but very purple in color and showing some white in wings.

Pullets a big class, 28 birds shown. William J. Caines, who produces some excellent American breed birds, taking first and second, the first pullet being an imported bird.

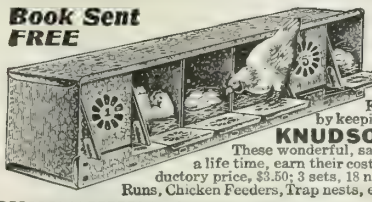
Pens, both old and young, extra classes, each having 8 entries and Smith winning both firsts on well matched pens. Caines took down second old pen, and Ward second young.

The White Cornish class consisted of 7 cocks, 9 hens, 11 cockerels, 11 pullets and 5 pens, with Mountsville Farm winning most of the principal prizes in all classes. The White Cornish showed great improvement in type at Warrenton, a matter on which the boys breeding whites have been working on for a long time and it is to be hoped that now with success nearly within their grasp the White Cornish breeders will continue along these lines.

The non-standard Buffs made a fair showing with some birds of very good type for the short time they have been bred, and some birds showing remarkable color.

Wednesday evening after the judging was all over the annual banquet was held in Warrenton's principal hotel, the Warren Green, and with nineteen members present from Minnesota, New Jersey, Maryland, Pennsylvania, Wisconsin, Georgia, Tennessee, West Virginia and Virginia, beside several guests of the club, a very merry evening was enjoyed.

Great interest was manifested during the entire show by all members present and we predict that 1914 will see Cornish taken up as seldom any other breeds have ever been taken up.



John W. Ward, Jr., is the secretary-treasurer for 1914, to whom all letters regarding club matters, membership, etc., should be addressed. Address him at Pennington, N. J.

A WORLD'S EGG LAYING CONTEST.

Hens From All Parts of the Globe Assembled at the Missouri State Poultry Experiment Station for the Greatest Breed Testing, Feeding and Egg Laying Experiment Ever Conducted.

ON December first, at the State Poultry Experiment Station at Mountain Grove, Mo., 1,040 hens began to make poultry history in the greatest egg-laying and feeding experiment ever conducted at any point in the world. These hens were from some of the best bred-to-lay flocks to be found, and from all parts of the globe. England starts the contest in the lead, a pen of 10 White Leghorns from Tom Darron making the best record for December by laying 206 eggs. One pullet in this pen laid 26 eggs in 31 days, another 25, and others, 24, 23 and 22 eggs each. Other parties have birds of the same strain entered in the contest, and it will be interesting to note the difference in egg production. Another pen of another variety contains 10 pullets which are full sisters from a high-producing hen. What will be the difference in the production of these sisters? Will there be any great difference, and what will be responsible for the variation? Will the English again carry away the honors in 1914; and, if they do, why is it that English hens can beat the Americans in egg production? Will the Australian and New Zealand pens make the high records in this country that they make in the contests in those countries, entire pens of hens averaging from 250 to 265 eggs each? If they can't do so well here, why? Is it the climate or the breeding, or what? Will some American or some Missourian be able to prove to the world that he knows some things about breeding hens for egg production, and that the world must sit up and take notice of our methods? There is no denying the fact that American breeders are making rapid advancement along this line, and we serve warning upon foreign nations now that if Americans do not win in this test, that the time is not far distant when they will do so.

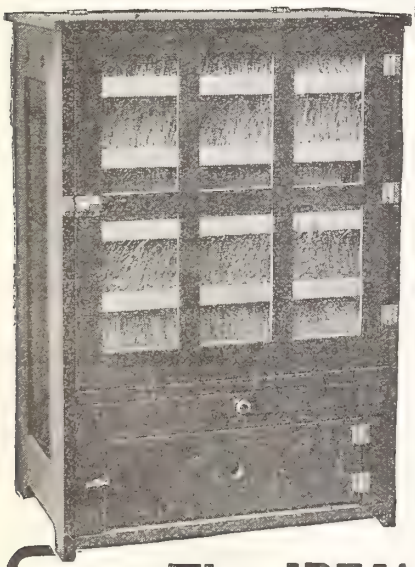
We were told by one of the contestants who has been winning many honors in contests and in the show rooms of foreign countries that the foundation stock of his flock of noted layers was imported from America. He took this American-bred stock and by close study and application of the principles of breeding for egg production he produced his famous strain of layers, and also combined show qualities in the same flock. If some American does not win in this contest it is because of the fact that we have gone to seed on the fancy side of the business before we even sprouted in our study of the science of egg production. It is not so today, however. Thousands of American poultry raisers are devoting their best thought and energy to an effort to increase the productiveness of their hens, and egg-laying contests are responsible for much of this interest.

This experiment was not begun under the best conditions, nor most favorable circumstances. Some of the foreign birds did not arrive here until two weeks after the contest started. Some pens were six weeks on the road in shipment, and six hens were dead in one pen when it reached Mountain Grove. A number of hens were dead in other pens because of long shipments. Many hens arrived out of condition and we have had cool, damp, rainy weather and two heavy snows since the first birds began to arrive and only a very few days of sunshine. Our altitude is also much higher and the climate quite different from some of the warm, dry countries and states from which many of the pens came. This has worked a hardship in many cases and made a situation which has been very difficult for us to control. The contest really should have begun on November 1 at the latest, and this would have given the birds time to become acclimated and also given us another month's egg yield, which we will practically lose in our totals, as the mature pullets laid many more eggs in November as pullets than they will lay next year in November as hens.

This experiment really consists of three separate contests. Each will be fed differently. Separate prizes will be offered in each, and a grand championship will be awarded for the highest record. The sixty pens in the National Contest are fed a very simple ration which was formulated by this experiment station, but what we believe is going to prove to be one of the best which can be used. The twenty-eight pens in the National Single Comb White Leghorn Contest are being fed a ration which has always proven good with Leghorns and which is looked upon as being the best for that variety. The sixteen pens in the National Utility Contest are composed entirely of Barred Plymouth Rocks, White Wyandottes, S. C. Rhode Island Reds and White Orpingtons. These

Pat. applied for

Make Fowls Exercise—Keep Vegetables Clean



Here's what you poultrymen have long been looking for—a cheap, convenient, sanitary and durable device for feeding green stuff to poultry. Hang one in each pen in your henhouse. It keeps vegetables and green stuff clean and makes the fowls exercise while they eat.

Carter's Sanitary Green Food Feeder

Is made of strong, soft, fish-net cord and lasts for years. There's nothing to get out of order or injure fowls' combs or heads. No fouling and waste of food. It holds one-half bushel of beets, cabbages, clover, meat bones or other similar food. Leading poultrymen are using it and sending in orders for more. It fills a long felt want. Green food turns winter into summer for the hens—makes 'em lay. Feed 'em this wasteless, sanitary way.

Price 35c each. Three for $1.00, postpaid. Special prices on larger quantities. Guaranteed satisfactory or money back. Order today.

H. F. PIERCE, Sole Mfr., 482 Wadsworth Bldg., Portland, Me.

Increase Egg Yield This Winter, Save Money on Feed, Make Chicks Grow Rapidly, Strong

by installing an Ideal Grain Sprouter and feed your hens the green food that is absolutely necessary to insure prolific egg production.

Eggs are going higher in price every year, the demand is far exceeding the supply, and it looks like *good times* and *plenty of money* for the man who has one of our sprouters.

The IDEAL Grain Sprouter

—is the *best machine* for sprouting grain ever made;
—will produce sprouts over two inches long in 24 hours;
—sprouts any kind of grain *better*, in *less time* and without fuss or muss;
—produces *three* to *four bushels* of feed from one *bushel* of grain;
—pays for itself in a single month by saving in feed bills, increasing egg yield, supplying food that makes chicks grow strong and vigorous.

The "Ideal" is made in several sizes—for a few hens up to hundreds. Can be used in summer (without lamp) as it has proper arrangements for moisture and ventilation to produce quick results and crisp feed.

CONSTRUCTION

Made of best lumber—double walls, *insulated* with heavy deadening felt—inside lined with galvanized iron—frame of trays heavy galvanized iron—bottom of tray heavy wire netting—front of machine glass, which induces green sprouts. These sprouts require very small amount of artificial heat which is produced by the Ideal Safety Lamp, the fumes of which pass through ventilators.

Get Special Low Price Offer Today

Don't delay, but write at once for special low price introductory offer, full particulars and description of this perfect grain sprouter. No poultry man should be without it. It is the *Biggest Money Maker for the Poultryman since the Incubator was Invented.*

Made by J. W. Miller Co., Manufacturers of Incubators, Brooders and Poultry Supplies, which is sufficient guarantee of its excellence.

J. W. MILLER COMPANY, Box 600 ROCKFORD, ILLINOIS

are the general-purpose varieties and are being fed a ration which proved best in our feeding experiments and which is also recommended by one of the leading experiment stations of this country. It remains to be seen what the results will be.

The total eggs laid in December were 6,792, or an average of over 6½ eggs per hen for both good and bad. The leading pen for the month averaged 20.6 eggs per hen.

Missouri has nearly as many pens as all the other states combined. Besides Missouri, the following states and countries are represented by the following number of pens:

7 Pennsylvania	7 New Zealand
6 Ohio	5 New York
4 England	4 California
4 Iowa	4 Texas
3 Nebraska	2 Michigan
2 Australia	2 Arkansas
2 Kentucky	1 New Jersey
1 Maryland	1 Illinois
1 Alabama	1 West Virginia
1 Massachusetts	1 Wisconsin
1 Ontario, Can.	1 New Hampshire
1 Brit. Columbia	1 Vancouver Island
1 South Africa	

The best record made by representatives from each country is as follows:

	Eggs.
White Leghorns made best English record	206
Buff Orpingtons made best United States record	152
Anconas made best Missouri record	147
White Leghorns made best British Columbia record	133
White Leghorns made best Vancouver Island record	109
White Leghorns made best South African record	86
White Leghorns made best New Zealand record	82
White Wyandottes made best Ontario record	66
White Leghorns made best Australian record	33

The Australian birds did not arrive for some time after the contest started. The Australian and New Zealand pens will be somewhat handicapped this year because of the fact that the pens which they have entered were hatched out of season. Their seasons are exactly opposite from our own. When we are having night, they are having day, and when we are having fall and winter they are having spring and summer. Most of the birds which were sent from those countries had to be hatched this fall and late summer, which was their spring, and their birds are, therefore very young.

National Egg-Laying Contest.

We thought best to divide this year's contest into three divisions.

The standing of the ten highest pens in this experiment is as follows:

Pen.		Eggs.
0	Foreign Leghorns, England	206
36	Buff Orpingtons, Texas	152
5	Anconas, Missouri	147
24	White Wyandottes, England	145
18	White Wyandottes, Pennsylvania	141
2	Anconas, Missouri	133
39	S. C. Reds, Missouri	126
1	Buff Leghorns, Missouri	124
4	Buff Leghorns, Michigan	120
13	Campines, New Jersey	113

The highest individual hen in this test was an English White Leghorn, which laid 26 eggs in the 31 days.

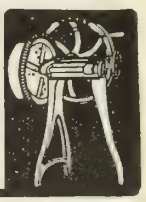
National S. C. White Leghorn Contest.

One notable record was that made by the pen of S. C. White Leghorns from South Africa. These birds were six weeks on the road and did not reach the experiment station until December 9, nine days after the contest started. They laid three eggs the next day and from one to ten each day following that, and finished the month as one of the ten highest pens in the Leghorn contest.

The standing of the ten highest pens in this experiment is as follows:

Pen.		Eggs.
79	S. C. White Leghorns, Pennsylvania	140
64	S. C. White Leghorns, British Columbia	133
65	S. C. White Leghorns, Missouri	113
77	S. C. White Leghorns, Vancouver Island	109
61	S. C. White Leghorns, Nebraska	108
80	S. C. White Leghorns, Missouri	106
60	S. C. White Leghorns, West Virginia	96
69	S. C. White Leghorns, Kentucky	96
71	S. C. White Leghorns, Missouri	90
81	S. C. White Leghorns, South Africa	86

A pullet from Missouri, pen 67, made the best individual record by laying 23 eggs.



National Utility Contest.

Here the Plymouth Rocks, Wyandottes, Orpingtons and Reds are to compete. The birds in this experiment seem to have arrived in poorer condition and suffered more from the changes in climate, altitude and weather than those in the other experiments. Some of these pens are also immature and many of the hens are just beginning to lay, so we look for much better records next month. The ten highest pens in this experiment are as follows:

Pen.		Eggs.
92	S. C. Reds, Pennsylvania	105
86	Barred Plymouth Rocks, Michigan	81
99	White Wyandottes, Arkansas	68
88	White Orpingtons, Kentucky	62
95	S. C. Red, New Hampshire	57
94	S. C. Reds, Ohio	53
85	Barred Plymouth Rocks, Texas	46
93	S. C. Reds, New York	29
89	White Orpingtons, Missouri	26
97	White Wyandottes, Texas	19

A White Wyandotte from Arkansas, pen 99, and a Barred Rock from Michigan, pen 86, tied for the best individual record by laying 21 eggs each.

BONE CUTTER FREE

Every poultry-raiser needs a "Dandy" Green Bone Cutter. Cut green bone keeps fowls healthy, vigorous and productive. It is a wonderful food for increasing the egg supply and for pushing the growing chicks. The "Dandy" prepares the bone fresh every day—just right for feeding to best advantage. It feeds the bone to cutters automatically and is the easiest running, fastest cutter made. Write for catalog. STRATTON MFG. CO., Box 17, Erie, Penna.

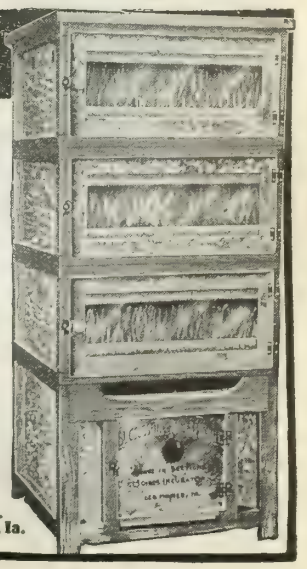
SOMETHING NEW!

A Grain Sprouter Made In Sections!



Doubles Your Egg Yield

Constructed of steel. *Double steel walls.* Made in capacities of from 50 to 600 hens. Fit the needs of both little and big poultry raisers. Grows as your needs grow. A brand new idea in grain sprouters. Positively fire proof. Completely safe in every detail. No wood to rot. Lasts practically forever.

"Successful" Sectional Grain Sprouter

will enable you to get three bushels *fresh, succulent, egg-making green food* from one bushel of oats, wheat or rye. It sprouts grain in 24 hours. Then gives an inch of crisp green sprouts every day. With it you can make your winter chicks grow faster—get them ready for market sooner—when prices are highest. You can make your hens lay more—*100% more eggs*—lay when egg prices are highest. It's a wonder! Can't warp, shrink or swell as wooden sprouters do. Has *large* glass doors and metal trays. It will make money for you. Send today for Free Book.

THE EGG QUESTION.

By Geo. H. Lee, Omaha, Neb.

THE price of eggs is exciting much comment at the present time and many ridiculous cartoons are appearing in the daily papers. At the same time there is general condemnation of cold storage, the one thing that has heretofore equalized egg prices between summer and winter.

It is within my recollection, just before the general adoption of cold storage for the preservation of food products, that, during the spring and early summer, eggs would be worth 8 to 10 cents per dozen. Then, in the midst of an ordinarily severe winter, the price would go up to 50 or 75 cents per dozen.

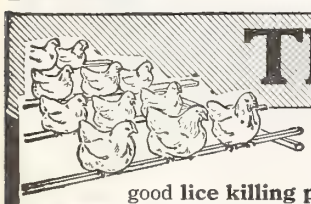
After cold storage had been proven effective for preserving eggs, the price soon became equalized, ranging between 15 and 25 cents per dozen the year round, with feed about half the cost of the present time.

So long as it is possible for any family, in town or country, to keep one or two dozen chickens in the back-yard, with little or no expense for feed or care, it is no more possible for any person, corporation, or combination to corner the egg supply than it would be to corner the bread supply so long as there is flour for sale in the market and housewives willing and competent to turn it into bread.

With the present high prices for feed there is little or no profit in eggs at 30 cents per dozen, except in case of the back-yard flock, fed principally from table and kitchen scraps. Here it is most all profit, and it is surprising that more people do not put in a few hens instead of consuming an ancient product and kicking about the price.

Eggs will continue to be eggs, and will steadily advance in price just so long as people continue to do two things: First, sell their eggs during spring and early summer, because of good prices, instead of hatching and raising more chickens. Second, avoid the small expense and labor incident to the keeping of a small home flock.

There is no complaint from those who keep chickens about the high price of eggs. Such complaint comes exclusively from those who do not raise chickens; who don't want to be bothered with them; who want someone else to do it for them at a price less than cost of feed.



For several years there has been an increasing demand for eggs and a decreasing supply—the latter due to high prices for grain and other feed, unsuitable breeding and hatching seasons, and good egg prices that tempted the selling of eggs for culinary purposes rather than their use in incubation.

What is a good, fresh egg from well-fed, healthy stock really worth? If we have been accustomed to paying 10 cents a dozen, then we will consider 20 cents a dozen as extraordinary and inexcusable. If, however, we had been used to paying $1 a dozen, then we would consider 60 cents a dozen a downright bargain.

Personally, I would much prefer a couple of good, fresh eggs at 5 cents apiece rather than 10 cents' worth of beefsteak. But, then, preferences don't count. We have to pay a premium if we want goods of any kind that are scarce, and just so long as the great majority of home owners prefer to consume rather than produce, then just so long will eggs maintain or advance in price.

THIS IS THE ALUMINUM "CONVENIENT" LEG BAND
Note the strong, secure fastener, so simple and complete—the number is not stamped in, but raised OUT—plain, readable—can't get full of dirt. Reaches you already bent in shape ready to put on—12 bands 20c; 30 for 45c; 60 for 75c; 100 for $1.00. Sample Free—

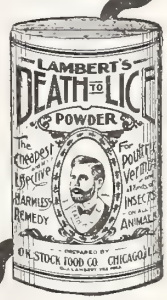
The Best Way

To Get Rid of Lice



on Poultry is to dust them separately with a good **lice killing powder.** Hold the fowl by the legs, head downward, so that its feathers will be open and the powder can penetrate through to the skin, especially around the vent and under the wings. **The best time** to do this is at night when the birds are at roost. The lice and mites are then on their job. It takes only a short time to dust an entire flock and the powder "works while you sleep." **The best lice killer** to use—

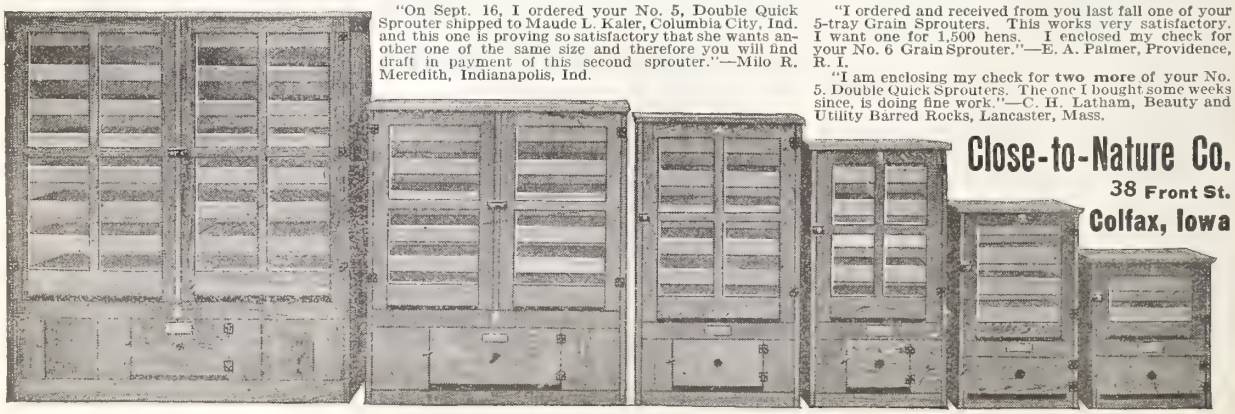
30 Years the Universal Favorite

The Old Reliable

LAMBERT'S DEATH to LICE

Its effect is immediate and it does not injure eggs, hens or chicks, neither will it soil or discolor the finest plumage. It is the most reliable powder and a sure Profit Payer.

If not at your Dealers, send 10c for sample. Larger sizes, 25c, 50c and $1.00. Latest Pocketbook of Pointers (invaluable to all poultry raisers) mailed for 2c stamp.



O. K. STOCK FOOD CO., 501 Traders Bldg., Chicago, Ill.

DOUBLE QUICK GRAIN SPROUTER

THE PERPETUAL POULTRY SILO--Grows Green Feed While You Wait

The First, the Original, the Pioneer of All Grain Sprouters. Built in six sizes, from ¼ bu. to 8 bu.; for a few hens to 1,000

The **Double Quick** originates and initiates—others imitate and appropriate. Fully 100 **Double Quicks** to every **half dozen** of all other kinds combined. Now in its **fourth** year—in use in **every** state and territory in the U. S.; in Canada and Mexico; in **eight** foreign countries; **thousands** have tested its value; many large poultry plants use from **one** to **five.**

"On Sept. 16, I ordered your No. 5, Double Quick Sprouter shipped to Maude L. Kaler, Columbia City, Ind. and this one is proving so satisfactory that she wants another one of the same size and therefore you will find draft in payment of this second sprouter."—Milo R. Meredith, Indianapolis, Ind.

"I ordered and received from you last fall one of your 5-tray Grain Sprouters. This works very satisfactory. I want one for 1,500 hens. I enclosed my check for your No. 6 Grain Sprouter."—E. A. Palmer, Providence, R. I.

"I am enclosing my check for **two more** of your No. 5. Double Quick Sprouters. The one I bought some weeks since, is doing fine work."—C. H. Latham, Beauty and Utility Barred Rocks, Lancaster, Mass.

Human Interest Talks With Poultrymen

These Talks With Thinking Men Indicate the Trend of the Times Toward the Evolution and Supremacy of Thought

By Helen T. Woods

THE growth and development of an individual is in direct proportion to his aims and ambitions. All progress is the fruit of minds that ferret out a better way. The man and woman who think not, neither do they dream, may, like the lilies of the field, be arrayed in great beauty, and be furnished nourishment sufficient for their needs, yet they travel backward, and do not so much as get a glimpse at the possibilities of the future.

It is the individual who thinks, and, thinking, acts, that once in a while makes a stride forward in this world. The pity is that so few exercise this right. We see people everywhere, sitting with folded hands, basking their thoughts in the warmth of self-satisfiedness, not sufficiently alive to risk the effort of a thought on the accomplishment of anything out of the usual routine. The same old thoughts have worn deep grooves which would require real and persistent effort to get out of. And thought ruts become chronic, like other unfortunate habits of long standing.

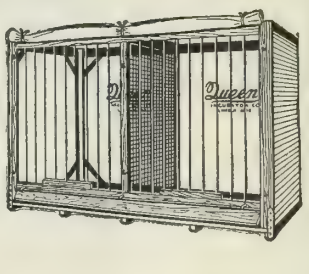
Following the return to the soil of the past decade, probably there is no class of people doing more thinking than those engaged in agricultural pursuits. A little more removed from the hurry and bustle of the crowd, a little greater freedom from custom, a little more oxygen in the lungs, a little purer food, a little nearer to Nature, a little more opportunity to live the simple life—these things ought to, if they do not, make of the man devoting his time to agricultural affairs a truer thinker than any other class of citizen. And that the trend of the times shows this to be a fact the following human-interest talks with poultrymen during the Madison Square Garden Show will prove.

They are given as near as possible in the words of the speakers, names being omitted.

* * *

How much thought does the average parent give the boy? Usually every member of the family keeps at him to do their bidding, everyone feeling justified in imposing on him in relation to time supposed to be his own; in expecting him to do all the things other people refuse to do; in paying him less for work well done than they would have to pay another; in expecting more of him in matters of politeness, gentleness, and obedience than is practiced by his elders. Practically, like the dog that is "only a hound," by all members of the household, it falls to the lot of the small boy to get "kicked around."

Really, now, how much chance do we give the boy to develop into a useful, helpful, right-thinking, optimistic man? Doesn't a boy get just as weary, just as hungry, and just as indignant for just cause as his elders? And hasn't he just as much to make him so?



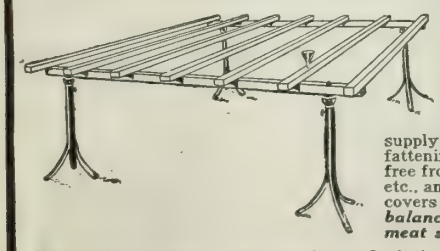
Give the boy a chance once in a while to appreciate a common brotherly interest in him and watch the result. Try it on your own son, or, if you haven't one, on the next lad you find being "kicked around" by his family or associates. He will show his appreciation even more than the stray dog that all but wags his tail off when you give his head a pat.

* * *

Sometimes we see a man so self-bound that he thinks the world revolves around his anatomy—and he usually calls himself a conservative. Such a man is, as a rule, so conservative that his views bear the ear-marks of having been wrapped in a mummy cloth a few thousand years ago and preserved in the atmosphere of the catacombs through all the stages of civilization down to the present time. He cannot see that the world moves except as it revolves around his marvelous ego. Anything which bears the stamp of his approval is an assured success, and he usually either discovered it originally or was the first to appreciate its true value.

Egotism and rank conservatism may sometimes in a lesser degree be useful qualities, but they do make an individual ridiculous at times. As the late Tom Reed said, when some men talk they say nothing, when other men talk

Queen Poultry Supplies



Are the best that experience, honesty and careful workmanship can produce. The Queen label on anything is a guarantee of quality. It is the assurance, to you, of success. Queen appliances and supplies are approved by the largest and most successful poultrymen as being dependable, thoroughly up-to-date, efficient, and exactly as represented. The line includes: ***Exhibition Coops, Lice-proof Roosts, Trap Nests, Shipping Boxes, Poultry Netting, Food and Grit Hoppers, Water Founts, Sprayers, Brooder Heaters, Poultry Markers, Clover and Bone Cutters, Feed Grinders, etc.*** Quality of design from the standpoint of efficiency is just as important as the quality of material or the quality of workmanship. The Queen label assures quality—whether it is an incubator, one of the many poultry appliances, or the all-important item of poultry feed.

The Queen Poultry Guide

is as distinctive in poultry books as are the Queen poultry supplies among other supplies. It will be found helpful—whether you own a large or small flock, or no more than a city-yard pen. It will prove a money-saving, money-making book to every owner of an incubator—whether the machine is a Queen or not. It contains just the information that you need about incubators—just the information so many books leave out. Get this new book now. A one-cent postal card will bring it to you. If you are interested at all in chickens, whether for pleasure or profit, you cannot do a wiser thing than get this book. Remember, it is free. We pay the postage on the book to you. It just costs you one cent to ask us to send it.

Success in Raising Chicks

depends very largely on what you feed and how you feed. Queen feeds are special purpose feeds. Adapt your chick-feed to the chick-need. Don't feed the young chick with its undeveloped stomach the same feed that you supply to a developed hen. Don't fail to supply grits. Don't expect your laying hens to produce eggs on fattening feeds. Feed both chicks and hens clean, sound grains, free from weed seeds, sweet meats, finely ground meal and bones, etc., and you will find that you feed for profit. The Queen line covers the whole range of poultry feeds and includes ***chick feed, balanced-ration mash, scratch feed, blood meal, ground bone, meat scraps, alfalfa meal, granulated charcoal, grits, etc.***

they say something, but when your dyed-in-the-wool egotist and to-the-manner-born conservative talks "he does subtract most frightfully from the sum total of human knowledge."

* * *

Isn't it worth while to stop and consider once in a great while what we are doing with our spare time? Most of us have contracted with an employer, or in the conduct of our own business, for the greater part of the working day. We will portion off ten hours for this purpose, which is more than many men give to it. Then take three hours for eating, which is likewise more liberal than the average man allows himself for meals. Follow this up with eight hours of sleep, which is more than the majority of mankind really get, and we are three hours yet to the good in every twenty-four, in addition to one day in seven when the working hours are lessened somewhat in most cases.

What becomes of this three hours once in twenty-four? What does the individual to whom it belongs get out of it? Perhaps it may be spent in visiting with friends, reading books, papers, or magazines, going to entertainments of one kind or another, or just lazing around by the fire, finding fault with the distribution of wealth meanwhile.

There isn't an individual anywhere but could have at least an hour out of the twenty-four to devote to thought and study and self-improvement, and if he really made a business of it he would hardly recognize himself in the course of three hundred and sixty-five days.

* * *

We hear people say, with a shrug of the shoulders, "That's past history," as though past history were not a thing of importance to the individual who wants to see his way through the present to advantage and move a step forward in the future.

Now, I wonder what would happen to a man whose past was suddenly and surreptitiously taken from him—all his worries and hardships, his undertakings and successes, his failures and mistakes, his good times and friendships of the past.

What would a man bereft of reminiscences have to go by? Doesn't the happy intervention of past happenings or a scene from the long ago suddenly reflected on the mind's eye frequently save a trying situation? Haven't you, happily, while in great stress from one cause or another, suddenly had flashed from the past some ridiculous incident, a thought of which brought genuine merriment rather than the storm that was about to break?

The past is a valuable acquisition to anyone, and all the time we can be making it in the nature of a real and still more valuable asset.

* * *

Every race of people the world over has a religion of some kind. Probably each of them at one time or another have felt that theirs was the genuine, but we are gradually coming to know that all so-called religions have been founded more or less on myth. They have thus been handed down from generation to generation, and for the want of something more tangible humanity has grasped the only thing in sight. But the creeds and dogmas, all purporting to be the only way, are passing. The past decade has shown long strides toward something better. Think, for instance, of the Presbyterian church ordaining several bright young men into her ministry who in a straightforward manner stated that they did not believe literally in the immaculate conception of Christ, the Crucifixion, the Resurrection, the Garden of Eden story, and countless other miracles as recited in our Christian Bible. Ten or fifteen years ago the church body would have stood aghast. Today it is looked upon as a step forward. Such men are welcomed into the church as needed propounders of the truth.

The new religion has no place for creeds or dogmas. It does not countenance magic. It is founded on scientific facts. It seeks the truth. It offers the individual liberty of thought. It believes in fresh air and sunshine and health. In doing as well as believing. That today is but a preparation for tomorrow. That the child of today is the father of the coming man, and that through him lies the hope of the universe. This new religion has left fear out of its vocabulary, as mankind's worst enemy. Fear cannot rule thinking men.

And there are other side lights springing up in the relation the church bears to the community. The great out of doors will inspire and uplift humanity more than a close, poorly lighted church, or one in which one may only be allowed to sit quietly while listening to a sermon on Sunday or a prayer meeting during the week. The church is all right in its place, but it must be different from the church of today and come to be used more and more for community interests. We need some sort of fountain head in every community—a place where

Don't Take Chances with Eggs
Buy Day Old Chicks

It's the only sure way to get a perfect hatch every time. You take absolutely no chances whatever. You can't lose. We absolutely guarantee safe arrival and full count of strong, healthy chicks at destination and entire satisfaction to our customers no matter how great the distance. Our chicks are noted for their vitality and stamina to live and grow and bring handsome profits to their owners.

Michigan Poultry Farm

Single Comb White Leghorns

are bred especially for heavy egg production and good size. They represent the most popular breed in existence. Our birds are all of vigorous stock, raised in open-air houses on dry foods and grow to good size. They are very prolific layers of large white eggs.

Anyone Can Become a Successful Poultryman at Little Expense

A few dollars for coops and about twenty-five Michigan Poultry Farm day-old chicks start anyone on the road to a successful poultry grower's career. We have supplied many of the largest and most successful plants in the country with foundation stock. The excellent quality of our birds always brings you top-notch prices for both chicks and eggs.

Our Customers Are Satisfied Customers. READ WHAT THEY SAY!

The chicks arrived Wednesday, 15th, O. K. They are a husky bunch of chicks. I am well pleased with them. Yours truly, Guy Pitts

Beginning March 1st We Will Ship 5,000 Chicks Per Week

Last spring we were swamped with orders. We could nowhere near meet the demand. And now, with a capacity of 5000 chicks a week, orders are already coming in at a rate that is bound to swamp us again before the end of the season. We fill our orders by the "first come first served" plan. It will cost you nothing to have a reservation order on our books. We don't ask you for a cent until time to ship the chicks. But we urge you to book your order early. No order too big for us to handle.

Send Today for Large, Beautiful Catalog

Fully illustrated and brim full of most useful information for poultrymen. Gives prices and full description of our birds and methods of doing business. Send for copy today. It's free.

public instruction in the nature of lectures and moving-picture performances, musicales and social good times, libraries and reading rooms, games and folk dances, shall all have a place. And this will be the church of the future.

* * *

It is an unusual trait in a man to have a deep-rooted love of children. To be sure, most men like their own offspring after a fashion, and take pride in seeing them do well, but it is a rare thing to find a man who really loves children, and it is a genuine hardship when such a man decides that for the good of the race he must forego the pleasure of having children in his own immediate family—but it sometimes happens. A highly strung, nervous, easily irritated man takes a mate, possessed of an almost identical nervous tendency, and the outlook for the progeny from such a union is not promising.

Eugenics is not so new as most writers would have us believe. Men and women generations ago have foregone their desire for offspring because of their ability to see undesirable blood taints that might be transmitted. No one who thinks wants to carry into unborn generations a tendency toward traits that bring only crime and sorrow in their wake. Humanity has thought long and deeply along these lines, but it is only lately that they have ventured to voice their thoughts. Today, everywhere, thinking men and women are coming to know that through better marriages and love of children beams the hope of the future.

The desire for children, the love of children, the pride in children; these form the lever that will raise humanity, if it is ever to be raised. The church, the state, can't do it. Importing low-browns and chumps to breed twice as fast as people of better stock won't do it. But now comes eugenics, and it can and will. What we want is a safe, sane, scientific study of everything involved in sex—not a mawkish, superficial skimming of froth. The whole subject in its anatomical, physiological, histological and psychological divisions should be approached as a sacred subject. For instance, marriage should be regarded as sacred, but society regards it as a vulgar joke and plays all sorts of tricks with the newly married couple. The air is vibrant with the beating of tin pans and the flat metallic note of the cow bell, not to mention the usual excessive tagging of baggage, showers of rice, confetti, and old shoes—these things follow a wedding at the present time as night follows the day. But when the absolute sacredness and solemnity of the marriage relation is brought about by eugenics, as it will be more and more as time rolls on, perhaps in fifty or one hundred years from now, such barbarisms as charivaris and playing tricks on "newly weds" will be regarded as the persecution of alleged witches in colonial times is today.

To get good children into this world will be hard. To keep certain bad ones out will be easy, quick and certain. Eugenics says emphatically that inferior immigrants must be kept out. Sterilization of criminals and defectives is another easy step. But there is another which needs no law to bring it about, and that is a certain innate feeling that families have had for one another of "being above." Sometimes this feeling of "being above" another family's station in life has been because of poverty, ignorance, bad manners, intemperance, disease or crime, but for some one cause or another it

My! What Large, Luscious Strawberries

That's what they'll exclaim and then quickly buy—at a good price—all such delicious berries you can produce. It pays to raise large, beautiful true-to-name standard varieties of berries such as

ALLEN'S Strawberry Plants Yield So Heavily

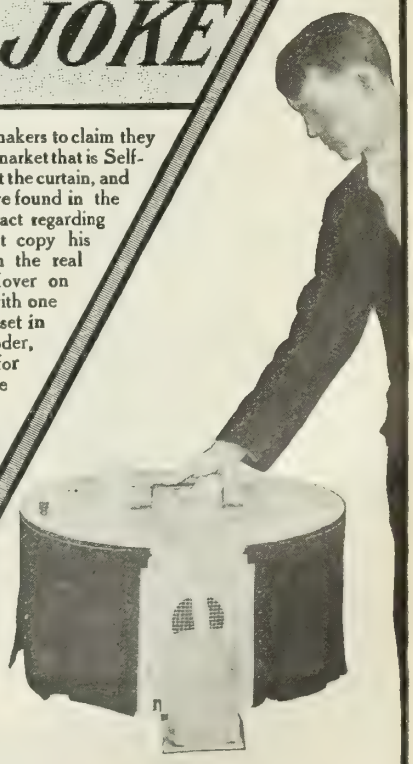
A BIG JOKE



It's a big joke on the other Hover makers to claim they have the only Portable Hover on the market that is Self-ventilating and Self-regulating, Warmest at the curtain, and a lot of other claims, when these features are found in the Ideal Portable Hover. Another indisputable fact regarding this Hover is its Originality, the inventor didn't copy his neighbor and then try to make a bigger noise than the real owner. The Ideal is next to the oldest Portable Hover on the market. It is the first one that could be picked up with one hand and carried any place with lamp burning. It can be set in any room suitable for brooding young chicks. Use it in a Brooder, Colonyhouse or Layinghouse, sets on level floor with no bridge for chicks to climb. The Double Drum Hot Air Heater will produce 15% more heat from the same amount of oil than a Hover using a single Drum Heater. This makes it a great Hover for Winter use. Our Automatic Lamp was especially designed for a Portable Hover; the oilfount is on the outside of the lamp box, feeding cool oil to the wick and just enough to keep it covered at all times, this makes it possible to place the burner close to the floor allowing the use of a tall chimney with a large airburning space around the lamp flame and still this chimney is not pushed up into the Heater to become overheated and cause trouble. This Lamp will never cause trouble by smoking. The Hover is all metal, but the double curtain is 24 inches in diameter, and will brood 100 chicks, and it is the lowest priced machine on the market. We have a Special Offer for you this month.

Used on Ohio State Farm. 17 Ideal Hovers were used on the State Farm at Dayton, Ohio, last season with wonderful results, the picture in this advertisement shows two Ideal Hovers used in an A shaped hoghouse on that Farm.

Queen Incubator and Ideal Hover. We sell the Queen Incubator, which we consider the best low priced machine on the market, and we make you a Special Combination Price on this and the Ideal Hover. We want you to write us at once for circulars of our Hover, Incubator, Oatsprouter, and Poultry Supplies, we will tell you all about our 12 months' course in Practical Poultry Keeping, Free to our customers and if you will mention this paper when writing, we will inclose a copy of "How to raise 90% of your Chicks." Write today. Dealers wanted to handle the Ideal Hover.

This is the Famous

Queen

The Incubator of Quality

Read This 4 Months' Record

This spring we purchased a Queen Incubator from you. Following are our hatches:

May—101 chicks from 105 fertile eggs
June—107 " " 107 " "
July—102 " " 106 " "

In August we loaned it to a neighbor and she broke the thermometer and went five days without one, and hatched 96 chicks from 108 fertile eggs. We think the Queen is the only incubator.

F. W. RATHBUN, Arlington, Neb.

Started With One Queen, Now Using Forty-four

This QUEEN worked so satisfactorily that in the following spring we ordered six more of the same size (360-egg). When we decided to establish our large hatchery in Philadelphia in 1911, we placed our order with you for twenty-three more 360-egg QUEENS. This spring (1913) we purchased ten of the Ranch size QUEENS (560 eggs) and altogether we are now operating thirty-four 360-egg QUEENS and ten 560-egg QUEENS. They turn out a better average per cent hatch and produce stronger chicks than any other make we ever used.

C. TOWNSEND ALLEN
Mgr. Orchard Poultry Farms
Philadelphia, Pa.

THESE are but two of many similar reports of success from Queen Incubator users. The Queen gets its great popularity from the good work it does—its uniformly big hatches, its strong, livable chicks. The Queen has the hatching faculty. It is strong and durable, built to last 25 years. It is up to date, with every approved incubating appliance and 28 special features. Paying more money than the Queen price will not get you a better incubator. The Queen sells at a *fair* price on a fair plan. Investigate the Queen. Start now. Write for our fine Poultry Guide and Catalog which gives particulars. Fully illustrated. It's free. Address

Box 4, Lincoln, Neb.

PRATT FOOD CO., Eastern Distributer, Phila., Pa.

has been chalked down against them, as being below others in the social scale. With the advent of eugenics, this "being above" means being fit. Children must come to know what it means to be well born, young men and young women will know what it means to be well mated, and the cry of a lack of increase in population will be answered by a race of better-born children. Self-preservation is an inborn trait, but can only be brought about by working for the good of all.

Of course, the ojector will urge that the great crowd will go on marrying as now, not forecasting one mite the quality of the generations to follow them. Granted. But listen to the slogan. A few, the choice spirits of the land, are already considering eugenic marriage and that number will increase. And the people who do this will not be of the number who only want one or two children. They will want half a dozen and the progeny of this picked class will rule the whole crowd in art, literature, morals, law, government, and institutions generally; they will put better food and more of it into the people's mouths, because they will improve productive methods; they will banish most diseases and not allow the unfit to propagate their kind; they will reform the public school system. In other words, they will look after human heredity and environment, the two existing influences. This is the true eugenics.

* * *

How many people are there living in the world who reach middle age without having formulated an idea as to what they are living for or what they would like to accomplish? We meet a good many.

There was a man, born of the average unthinking parent, who worried along through boyhood, picking up here and there a grain of knowledge, fighting through the hard and unyielding experiences of earning a living with little if any preparation for his work. He was fond of reading, he enjoyed nature, he loved music—and these awoke in him at the age of thirty-eight a desire to escape from his humdrum existence. They paved the way. He played piano and violin (entirely by ear), and one night as he sat improvising arias, marches, dirges—bringing out in melody his inborn feelings which fought for expression—the thought came to him that human accomplishment was mostly a matter of self-expression. He reasoned that he could not express in music what he did not feel, he could not accomplish in life what he did not feel interested in or strive after, and thus as his soul poured forth the melody life took on a deeper and more wonderful meaning and out of a chaos of existence came an orderly, well-defined life that meant something higher and better and more worth while every year that he lived. He called it getting the right mental attitude. As a man thinketh, so is he.

MISS CAREY, TOYNTON RECTORY, SPILSBY, ENGLAND

Feeding and Its Connection With Breeding.

"I WISH you would tell us how you feed." How often do we hear this remark from the lips of the novice! Alas, poor puzzled novice, he feels just a little worse off when he has sifted the various answers than he did before making inquiries.

Now, there is no use getting discouraged in this world, and when one is at a loss to know just what to do one needs to collect all available information and then sit down quietly and fit it together in a way that is suitable to existing conditions.

Feeding must ever, and will ever remain, a point where opinions differ widely, and each man is convinced that he has solved the problem, that his system gives him the best results. Why? You might just as well ask why some people thrive best on meat diet, others on fruit and vegetables. Natures vary to a very great degree; the different habits and conditions under which men and women live demand different supplies. One man's work is brain work and he requires fuel best suited to the condition. Another man's work is physical and naturally he requires food to build up muscle; and just as it is with man it is with bird and beast. Each breeder must select the diet for his birds largely along lines according to the work for which his stock is bred.

So it is that, in selecting a diet for poultry, the first point of all that must be settled is not what others do, but what you, individually, are breeding for. Eggs? Table birds? Show birds? Stock birds? And on this must hang to a large extent your course of action.

The diet that produces the finest specimens for the show room in the heavy breeds is far too costly for utility and entirely too flesh-forming to give the best results in eggs where the profits depend upon prolific laying. The diet that produces layers will not produce at the same cost such good table fowl, while none of these methods of feeding are entirely satisfactory if rearing stock birds, where strong frames, plenty of bone and vigor without too much flesh are required.

Having, therefore, decided to which class your birds belong, you can get at the particular requirement. Let us take egg production. The laying bird should be supplied with grain in plenty and allowed to select the kinds best suited to their needs. Vegetables or good, fresh green food must be supplied at all seasons of the year, and ground grains in hoppers, as well as meat meal, oyster shell, grit and water, always accessible.

Table birds, however, do better on a different diet. Here in England we use chiefly soft foods for fattening, making Sussex ground oats the chief diet, with barley or maize as a corn feed. Several American correspondents have asked me what Sussex ground oats is, which seems a strange question to ask this side of the water, as it is the English poultry keeper's staple diet for show birds, stock birds and table fowl. It is the whole oat ground up, husks and all, without waste, into a fine meal, softer and more fluffy than middlings and so fine that it is hard to detect any husk at all. There are very few mills that can grind it, as it needs a special stone, and in consequence is not one of the cheapest meals, but we are probably using it largely on the English stock at Harmony Park, where it will be obtainable. It is best used with cold skim milk or cold water and formed into a dry, crumbly paste. If properly mixed it is greatly relished by the birds. Take into consideration what a horse can accomplish on oats and the feeding quality of this grain can be better understood, for without doubt it is a big factor in frame building and vigor. Personally, we much prefer it to sprouted oats, which requires much time in preparation. But here we have a dozen different ways of feeding it to the birds, according to requirement.

It goes a long way, too, especially if mixed with one-third ground oats, one-third bran, one-third sharps, and for growing exhibition stock and stock birds the diet frequently consists of a daily regime of one-third meat, one-third vegetable and one-third various

FOXHURST FARM : LIME ROCK, CONNECTICUT, U. S. A.

meals mixed along these lines.

We usually cut the quantity of meal by half when feeding the male birds, as it is apt to make the combs too heavy, and to simplify the number of cooking stoves the meat is cooked in a bag or strainer and can then be lifted out, so the males get only the soup, while the meat is then chopped up and fed separately to the hens and pullets.

It is a fatal mistake, however, to attempt to cook Sussex ground oats, as the result is usually a wet, clammy mixture almost impossible to dry off, and if using other meals that have to be cooked we leave out the oats and use them to dry off the mixture after cooking is finished.

All mashes should be fed as dry as possible, as any excess of moisture tends to fat and to hinder the maturing of all reproductive organs. As a rule, birds fed on mashes well dried off and on hard grains will give a higher percentage of fertile eggs and strong chicks than birds fed on soft wet mashes.

One of the greatest uses, however, of Sussex ground oats is bone formation. It is well known that in Scotland one meets more large, big-boned men and women than in any other part of the British Isles, and the national dish of Scotland is oatcake and porridge. Many a poor Scot's child gets reared almost wholly on oatcake and porridge, and you will find that oats will do as well for your stock, whether it be horse or bird. You will get bigger-boned, stronger stock fed largely on oats than on any other food. Young chickens, however, just at the very moment you need most to develop frame for a good foundation, are too young to digest oats. Groats are too expensive, and here again the Sussex oats comes to our aid in providing, when mixed with milk, just one of the finest feeds imaginable for the youngsters. Sometimes feathering hangs a bit, the frame and flesh having run up to so great an extent, and this needs watching and counteracting, with other diets thrown in as needed to help feathering along; but it will be found that England's magnificent Orpingtons, Cochins, Brahmas are reared largely from the shell on Sussex oats and milk.

On our great fattening farms for our London market tons upon tons of the Sussex ground oats are used yearly, but for fattening ground oats are fed much softer, in some yards almost as thin as thick cream, and gallons of milk will thus be consumed a week. This produces a very white, tender flesh, and considerable weight can be put on a bird properly handled and confined in a fattening pen in the ten days usually allowed.

One frequent cause of failure regarding the diet of birds is its similarity all the year round, and yet right before us we have the best guide of all for feeding birds, and what does it tell us?

For the early spring, when the birds are mating and laying, plenty of insect life and a plentiful supply of green shoots, which, of course, can be copied in meat and sprouted oats. In summer, when the intense heat is so trying, an abundance of fruit and green food of all kinds, again copied by less forcing feeds and greater supply of vegetable food. Autumn, when moulting sets in, comes the harvest, and dry grain in abundance helps the birds through and to build up strength for the coming winter. When cold frosts set in, do the birds starve? Not in England, since the hedges are covered with an abundance of red berries of more heating nature, and can be replaced on the poultry farm by peas, peameal and the like.

So, then, puzzled novice, sit down and select your best road to success by following nature a bit at each change of the season, selecting the foods needed, as regards the building up of flesh, bone and the reproductive organs, making out your diet accordingly, and if you give due thought and study to the subject you will not be far out at the end of the year. Then balance your selections with the prices of foodstuffs and the prices you will realize on your stock, and your undertaking can be made a successful one.

"H & D" Shipping Boxes are neat, strong, light and compact. Made of double faced corrugated jute board, waterproof, sanitary, will not buckle or crush. Insure contents reaching purchaser in good condition and create a favorable "quality" impression. "H & D" Boxes are designed to meet all requirements of

My Three Party Offer— An Astonishing Money Saver

Let Me Mail It to You at Once

Your name and the name of two of your friends will bring you the most surprising incubator offer I have ever been able to make. I want *every* poultry keeper to know of the big profits possible with the Ideal Incubator. That's why I've planned this great offer. This year I am going to sell three hatchers where I formerly sold one. On three machines delivered freight paid to your station, I'll make an offer that is simply astonishing. Send me your name quick for the details of my plan.

Miller's Ideal Incubator

Made by the Man Who Knows—26 Years at It

If you can induce two more people anywhere to buy hatchers, here's an opportunity too good to miss. But if you only want to send me the names of possible buyers, send them in at once and I'll make a combination offer that will save money all around.

I Give an Unconditional Guarantee And Include All Extras

You get the "Ideal" all ready to start the hatch. I give you the best heating system—best regulator—handiest egg-tester, egg trays, thermometer and holder, etc. There are no extras to buy. And I prove with thousands of users that the "Ideal" is the top notch profit maker for the poultry keeper.

My Great Book "Poultry for Profit" FREE

Tells how the "Ideal" made poultry keepers successful—gives you suggestions and offers on good poultry houses—poultry supplies, etc., at low prices. Write for it—also get my three party money saving offer. Address

Best Safety Lamp and Burner

Sussex, Buttercups and Cornish.

Q. (1) Are the Sussex a good laying breed? What are their weights?

A. (1) A. A. Carver, Seville, Ohio, says that the Red Sussex will average about 150 eggs per hen a year. The eggs are light brown, some with a pinkish tint and will run about 1½ to 1¾ pounds to the dozen. Pullets usually begin to lay at 6 months. The Sussex is a large fowl. Weights for males are about 9 pounds and heavier; females, seven pounds and heavier. They have good big frame and can be made to take on weight readily.

Q. (2) Are the Sussex a darker red than the R. I. Reds?

A. (2) Color of males is a rich dark red, shading to chestnut in hackles striped with black having a green sheen. Tails black with green sheen. Mr. Carver recommends a dark mahogany male for breeding. Females are rich dark red with striped hackles and black, green-sheened tails. Same breeder recommends breeding females that are dark brownish red and not so brilliant as male.

Q. (3) Some claim the Buttercups are about equal to the Leghorns for egg production, is this correct?

A. (3) They are reputed to be exceptionally good layers. We have not had any personal experience with this variety.

Q. (4) Are Sussex, Buttercups, and Cornish good winter layers?

A. (4) The breeders say so.

Q. (5) In your opinion would the Buttercups be a good fowl for raising market poultry?

A. (5) We would not class them among the popular meat breeds for market poultry.

Q. (6) Some breeders are booming the Sussex, Buttercups and Cornish, as coming into popularity; what is your opinion as to claims?

A. (6) Breeders of these varieties are now striving to boom them. The Buttercup boom and the Sussex boom are fairly well launched. The Cornish boom is coming, if the attitude of the breeders at the big shows is any indication. Personally we have never bred or kept these varieties. It costs a good deal to do experimental work with poultry and, to date, no breeder of any variety has considered donating a pen of his favorites to our experimental farm for test purposes. We believe there is a good deal of merit in all three varieties named.

Q. (7) Which are considered the finest table fowl, the Sussex or the Cornish?

A. (7) It is largely a matter of individual opinion. Both are big framed, full meated, large fowl.

Q. (8) Are the Sussex a quick growing fowl?

A. (8) They are reputed to make very quick growth, to make good strong large frame and put on meat readily.

Q. (9) Cornish breeders claim they rank with Rocks, Wyandottes, etc., as layers. Please give your personal opinion of this claim.

A. (9) At the last New York show was the first time we ever had breeders of Cornish tell us that the Cornish were now being bred to be very good layers. We have repeatedly had breeders, who handled this variety when known as Indian Games, tell us that the breed would scarcely lay eggs enough to keep up a good supply of pullets. We know nothing about their laying ability from personal experience. We would like to have an opportunity to experiment with prolific laying Cornish. We like the fowl, it makes a fine big meaty body, is well set up, and puts on a fine lot of meat on the most attractive edible parts. Judge Drevenstedt assured us that he knew strains of Cornish that lay remarkably well. Some breeders claim that the compact make up of the Cornish, their shape and pinched tails, are prejudicial to good laying qualities. We don't believe that. There is nothing in the Cornish shape to prevent heavy laying, if the trait is bred into them by selection. If a duck can lay eggs, and we know that some are mighty prolific, there is no reason why a Cornish fowl can't lay plenty, for she has just as much "room for eggs" as any duck.

Q. What are the objections to these breeds, if any, and why are they not more generally bred? I. W. B.

Logansport, Ind.

A. We don't know of any objections. The Sussex and Buttercups are comparatively new varieties in this country and are now being boosted for public favor. The Cornish have long been favorites in England, so have the Sussex, and both are highly favored because of excellent meat qualities. The choice of a breed is largely a matter of individual taste. There are a lot of good ones, and most of them can be greatly improved by intelligent and practical selection and breeding.

Mouldy Sprouted Oats.

Q. My chickens act as if they had a cough and when they die have a yellow crust on their bills. I am feeding sprouted oats. The green grass like part

Wisconsin Wins In Big Hatching Contests Every Year

Winner 1910-1911-1912-1913

Mrs. J. McMahon, Veedersburg, Ind., won in Missouri Valley Farmer Hatching Contest, hatching 125 chicks from 126 eggs.

Mr. C. B. Armitage, Atwater, Ohio, won in Successful Farming Contest, hatching 181 chicks from 181 eggs in two hatches.

Mrs. J. W. Mize, Vaughn's Mills, Ky., won in Successful Farming Contest, hatching 208 chicks from 209 eggs in two settings.

Mrs. F. H. Lewis, Montrose, Pa., in 1913 won in Successful Farming Contest, getting 96 chicks from 96 eggs in one setting.

These contests were open to all makes regardless of price and prove beyond question that the famous Wisconsin machines are the **best for the money in the world.**

I stand ready to prove to you that Wisconsin Incubators are the best built and best equipped machines in the world for the money. You can't get bigger or better hatchings even if you pay twice the price. I build the outer walls of my incubators of Genuine California Redwood—costing 4 times as much as materials some manufacturers use. If you will write for my catalog, I will gladly mail you a sample of the lumber so you can see the quality and compare it with others. If you do this I know you will order a Wisconsin. One hatch will pay for your machines and more. If you are not perfectly satisfied, simply write me—send the goods back and I'll not only return your money, but pay the freight charges and charge you nothing.

ORDER DIRECT FROM THIS AD

130 Egg Incubator Chick Brooder

Both Machines For Only $10

Freight Paid East of Rockies

You can send in your order direct if you wish and save time. Money back if you are not pleased. I have been advertising in this paper for years. The publishers know me and know that I do just as I agree. I am undoubtedly making the readers of this paper the most remarkable offer on high grade incubators and brooders that has ever appeared in the paper. You take no risk. I give

Why Take Chances

Get This Free Book

Find out what an Incubator is made of before you buy.

Write for Free Catalog and we will send you a sample of the Redwood our Incubators are made of.

Wisconsins are bigger, better, more value than ever—no increase in price. Incubators have hot water heat, double walls, dead air space between, double glass doors, copper tanks and boilers, self-regulating. Nursery under egg tray. Incubator and Brooder shipped complete with thermometers, lamps, egg-testers, all set up, ready to use when you get them. Incubators finished in natural colors showing high grade California Redwood lumber used—not painted to cover inferior material. If you will compare our machines with others we will feel sure of your order. Don't buy until you do this—you'll save money—it pays to investigate before you buy. Money back if you are not satisfied.

WISCONSIN INCUBATOR CO., Box 76 , RACINE, WIS.

of the oats looks all right but the roots are mouldy. Can you help me?

Wisconsin. W. F. S.

A. Don't feed mouldy sprouted oats. Keep sprout pans clean and sun them often. Don't let the oats sprout too long. Feed when the sprouts are from half an inch to an inch long and the roots are sweet and clean. Clean up and disinfect your poultry quarters and get rid of any ailing specimens. Try to keep the healthy ones in good condition by good care, cleanliness and feeding wholesome food. When sprouting oats, wash the oats first before you put them in soak water.

Lays Soft Shelled Eggs Most of Time.

Q. I have a Barred Plymouth Rock hen that laid soft shelled eggs most of the year. She has just begun laying again and the first egg had a soft shell. Can you give me some advice as to what to do for her? I have done all I know how to do and am about discouraged.

Youngstown, O. M. R.

A. The best thing to do with that hen is to kill her and eat her. It is doubtful if any treatment would stop her from laying soft shelled eggs. She has been at it too long and it is probable there is some chronic disturbance of function of egg organs that won't respond to treatment. However, if you wish to try again, would suggest that you mix about five per cent of finely ground oyster shell with her mash food daily. Feed fresh raw greens freely. In the drinking water, use one teaspoonful of tincture of ustilago maydis to a quart of water and allow no other drink.

Wyandottes at Home and Abroad.

Q. (1) Are the Australian and English bred White Wyandottes larger than the American bred White Wyandottes?

A. (1) The Australian and English bred Wyandottes are usually coarser bred than our American birds. They favor bigger frames, looser plumage and a rather larger bird throughout than our fashionable, neat, rather close feathered 'Dottes.

Q. (2) Are the foreign bred Wyandottes any better layers than the American birds?

A. (2) We do not think so. We have always found Wyandottes exceptionally good layers.

Q. (3) How do the Wyandottes compare with other breeds in Australia and England, as egg producers?

A. (3) They have always been mentioned favorably.

Q. (4) Please give addresses of Australian and English breeders of White Wyandottes who breed for egg production. Geo. A. Everest.

Hyannis, Neb.

A. (4) We have no list of foreign breeders specializing in breeding for egg production and therefore give your address that any who see this may write you. We fail to see any good reason for importing specimens of an American variety of which we have so many good ones in this country, but probably you know best what you want.

Criticises Ladies' Home Journal Poultry Article.

Editor American Poultry Journal:

Am a subscriber to your good paper and have been a fancier and breeder of poultry for nearly twenty years. Of late I have been very much interested in the articles published in your November and later issues along the line of cost of production. They are of special interest

to me because I have a hope that someday, I, too, shall be partially dependent upon poultry raising for my income.

Among the number of papers that come to our house the Ladies' Home Journal is one that we especially prize, as it stands for all that is good in this life, but you will see by the article which I am going to quote, that even the best of papers get one pulled over them and publish articles that mislead the public.

Under the name of Gail Myers their November issue publishes the article "The Hen That Won't Lay in Winter." The writer, a widow, goes on to state that at the death of her husband she has a ten acre tract, and incidentally, a $3,000 mortgage to begin on. She decides to go into the poultry business and to quote her own words:

"I sent to two breeders for 50 eggs each of Rhode Island Reds and Buff Orpingtons, making one hundred in all. This was in February and by March had set every egg under hens and at the proper time. took off 97 of the downiest chicks that ever 'pecked'!"

All this from 100 eggs laid in February. On April 1, she hired a man to farm nine of the ten acres and she devoted all her time to raising chicks.

She says: "By December the chicks were in fine condition and during the next three months I took practically all the first prizes at poultry shows throughout the state." Forgetting to tell what state.

To quote further: "They began to lay in February and by March 1, I was getting fifty eggs per day from seventy-five hens." (Going some!) "And orders for eggs (settings) poured in so fast that it seemed almost impossible to supply the demand. I sold the eggs at $5 net for fifteen.

"Before summer had begun I had more than eight hundred chickens about equally between the two breeds. Built several coops along the most approved lines and was soon able to house several thousand birds." (How is this for a fairy tale?)

About this time the writer hits upon a plan to get winter eggs as follows: "Now grasshoppers were so numerous they destroyed one-fifth of all our cereal crops, moreover, the grasshopper is an ideal chicken food and tonic, and the bird will thrive on this tobacco-spitting kangaroo-like insect as nothing else will."

To make the story short a trap was prepared and in two weeks eighty odd bushels of grasshoppers had been secured and placed in storage for winter food, likely to supply the demand for eggs going at $5 per.

"The net income," she says, "from my poultry that year was thirty-eight hundred dollars, and our business increased 25 per cent each year for the next four years, when I sold out for $12,000."

I look upon such articles as the above as almost a crime. It fires the brain of the adult as the dime novel affects the youth. There are so many people in the world who are looking forward to the time when this one can get out of the shop, that one the office, and the other one may have spent some years of his youth as a farm hand, and was dragged out of bed at 4:30 a. m., but now, after a lapse of years, he too, hears the call of the soil and wants to return to his old haunts. It is upon us all. But what we need is the truth as you are laying it down. If we make the change, let it be with a clear understanding of conditions. It will save us many a heartache in the end. If eighty per cent of the people

HURRAH! Once More! HURRAH!

CHICAGO WINNERS

1911 1912 1913

At these, the greatest Barred Rock shows in all America, in battles with the Giants of the East and of the West, of the North and of the South, in competition with the best birds of some of the largest breeders of the entire continent,

ARISTOCRATS

Have Been Consistent Winners Each Year

In the show which just closed its doors on December 17, 1913, (mark the date), seventeen (17) birds of Aristocrat breeding were entered and twelve (12) of these were placed by the judge as winners. Think of it!

TWELVE WINNERS AT CHICAGO THIS YEAR WERE ARISTOCRATS

VICTORY after Victory in one state after another is added to the triumphant march of the conquering Aristocrats this season. They are simply irresistible.

GRAND SPECIAL COCKEREL SALE

is now going on—birds of great vigor, proud and stylish—ready to jump right into the breeding pen, ready for business. These Cockerels are so striking in quality, so sensational in color and barring in every section, that the reputation of anyone having Aristocrats will be established at once. They are carefully line-bred and pedigreed, therefore breed **powerfully** strong and true. They **reproduce** their wonderful color and barring.

IS THIS WHAT YOU WANT?

Prince Narrowbars as a cockerel, showing that extremely narrow, cleancut barring for which the Aristocrats are noted. He has now developed into a very full-bodied, magnificent cockbird.

EGGS for hatching: $10.00 for 15; $17.50 for 30; $25.00 for 50; $50.00 for 100 eggs. Eight strongly fertile eggs guaranteed to be in each setting.

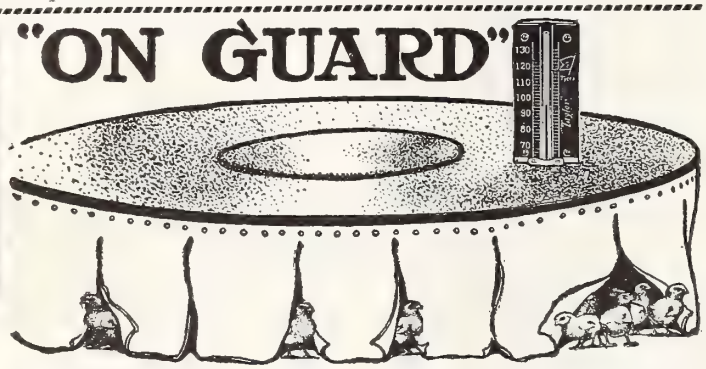
who go into this business make a failure, let's not be among the number. Give us the truth if dreams are shattered.—E. N. Tilton, Ashtabula, Ohio.



[Editor's Note.—We read that article in the Ladies' Home Journal and wondered how a reputable journal happened to publish a fake of that kind. However, in any publication office there are necessarily a number of persons handling copy of one sort or another and now and then "one gets slipped over," that never ought to see the light of publication. In the case of the magazine referred to, we do not suppose that editorial staff possesses much practical information about poultry. People who are not associated with the poultry business will believe almost any weird tale about poultry keeping and poultry profits. The ignorance of the great mass of people of the simplest matters of poultry keeping and farm life is a constant source of surprise to us. We often wonder how so many people can live so long on this earth, with so much going on about them, and never see any of it. A lot of folks never use their faculties of observation, if they ever did possess any, and let them atrophy from want of use.

We might have swallowed the grasshopper yarn because we have had many big tales of hordes of insect pests in certain sections of the country, but that hen tale from start to finish, has all the ear marks of a pretty raw fake. Publishing such stuff doesn't help anybody and it undoubtedly does harm.

As to the poultry business, we will gladly publish all the facts and figures we can get that help to tell the truth about the business. We want the facts, both good and bad. We believe that more people rush into the poultry business, expecting to make a fortune, who are wholly unfitted for the business, than into any one other business. It is a surprise to us that so many succeed as well as they do. From our own observation we do not believe that there are proportionately any more failures in the poultry business than in other occupations. A good many men and women have gone into poultry with little or no capital and very limited experience and have won a living out of it. But it isn't a bonanza, or a get rich quick business, and there are no fabulous profits except on paper. The right person with a liking for the business, plenty of push and pluck and determination to succeed, can get a living and something more out of poultry, if he or she works hard for it.—Editor.]

"ON GUARD"

To show the exact temperature under the hover you need an accurate, dependable brooder thermometer—a "Tycos".

"Tycos" Brooder Thermometers
"ALWAYS TELL THE TRUTH"

They are positively permanently accurate. When buying a new brooder or incubator, insist that the manufacturer equip it with "Tycos" Thermometers. Go to your dealer for "Tycos" Thermometers for your old machines. If he cannot supply you—send direct to us, giving his name.

Condition Your Poultry to Get Fertile Hatching Eggs

The crying need of every poultry raiser right now is fertile eggs for hatching—on the condition of your poultry depends the fertility of your setting eggs and vitality of the chick.

So sure am I that Dr. Hess Poultry Pan-a-ce-a will invigorate and tone up your fowl, make your hens lay and increase the fertility of the eggs, that I have told your dealer to supply you with enough Pan-a-ce-a for your whole flock and if it does not do as I claim, return the empty packages and get your money back. Pan-a-ce-a costs only 1c for 30 fowl.

1½ lbs. 25c; 5 lbs. 60c; 25-lb. pail $2.50. Except in Canada and the far West.

More About the Egg Boycotters.

Editor American Poultry Journal:

Having read your able article in the Boston Post of Dec. 14, I would like to add my testimony to that of the woman from California. I think these would-be egg price reformers and egg boycotters are perhaps misled by the many glowing advertisement which they read in current magazines. One woman asked me if I had tried the new system of raising chickens, saying that by its use one could get eggs any time one wished and it was all done in the incubator. This is only one example of the impressions made upon the minds of intelligent people who have not investigated the subject.

I will not mention any names, but it happens that, with several others, I was led to believe that by the use of this same incubator I could hatch and brood chickens at the same time in the same machine. Suffice it to say that I learned the folly of my ignorant, though innocent, interpretation of the advertisement.

If the housewives want to get two cent eggs I would recommend that they send to some good breeder and get a few hens and go into the business for themselves and keep a strict account of the eggs produced, and the cost of feed, and see how rich they will become in a few months. I dare say that many of these well-meaning women, and no doubt the men who are in sympathy with them, are like the girl who told me that she did not know that it cost anything to keep hens, she thought they picked up most of their living. They do pick it up, but a lot of cold cash, in the form of purchased grain, has to be put down before they can pick it up.

These people do not consider the price for hatching eggs, and the many of these that do not hatch, and the many chicks that die, and then the half of the chicks raised that are males. Perhaps some of these women are like the boy who asked: "Does that rooster lay?" Neither do these people consider the many dollars spent for feed and the anxious care given to the pullets for from four to eight months before they lay their first egg.

I have been in the poultry business six years and always run behind on my feed bill in the fall. This year with

eggs at 60 cents a dozen, my output of eggs in October brought in $9.27 and my feed bill for the month was $42.85. In November the value of eggs laid was $4.70 and the cost of feed was $33.20. That is not getting rich very fast.

I have talked with several women, who keep hens, who say they haven't seen an egg in three months of fall and early winter from 200 hens, and no eggs means something to the small producer. We have no objection to anyone abstaining from the use of eggs, we are obliged at times to do so ourselves, but we do object to this wholesale fuss which is going to ruin the many poor women who are struggling to get a few of life's necessities out of a few hens. I would recommend that the housewives' league investigate both sides of the question thoroughly before going into such rash foolishness as an egg boycott.

I once thought that the farmer's wife couldn't help being a good cook with plenty of eggs at her command, but I see things from a different standpoint now. If one cow and twenty-five hens are kept the family enjoys milk and eggs, no account is kept as to whether the animals pay their board or not, but when there are five cows or more and the flock of hens reaches hundreds, it is a different story. Mrs. A. B. B.

Epping, N. H.

(Note.—We are glad to get above letter from Mrs. B. and hope the women of the Housewives' League will read it. —Ed. A. P. J.)

Winter Molt.

Q. I have a few hens that I bought about October 1 to improve my flock. They soon started laying and have been laying very well until December. Since then they began to fall off rapidly in yield and in January began to molt. Will you tell me various reasons for molting in cold weather so that I may avoid it hereafter? They have also been afflicted with soft to thin yellow droppings. I feed corn, wheat and oats for grain, a dry mash of corn meal, gluten, bran, middlings and meat scrap. Feed green food at noon. I tried withholding green food, have fed moist mash and put potassium permanganate in the drinking water, but these things don't influence it.

Kinsman, O. L. G. M.

A. Any radical change in method of living, climate, or food is liable to start a molt in fowls in the fall. Shipment for any considerable distance and a complete change of habit of living may start a good yield of eggs followed by molting and falling off of egg yield.

Your rather rich mash probably helped to start the molt. It was a mistake to cut out the green food. Abundant greens might have helped to stave off the molt, particularly if you had cut down the mash supply. Condition of bowels indicates that they ate rather too freely of the mash. Your method of treatment was all wrong. Don't be in a rush to use a remedy in the drinking water. If you had stopped the mash and fed simply scalded "mixed feed" (wheat bran and middlings about equal parts) in place of the mash for a few days the bowel trouble would have disappeared. Permanganate of potassium is bad for the eggs and bad for the egg yield, and, personally, we do not believe it is of any particular value in the drinking water. It undergoes chemical change quickly and we have only found it of use when freshly prepared and used for local applications. If you had substituted feedings of scalded mixed feed for the regular mash two or three times a week we believe you would have had very little trouble.

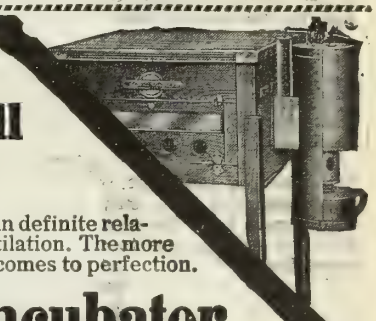
Barley and Oats.

Q. (1) Do you advise feeding barley in connection with other grains? Is it better than oats?

A. (1) We have fed a good deal of barley and like it for poultry food when a good quality can be had cheaply. We like it either whole or ground. Usually mix it with wheat to cut down the amount of higher cost wheat used. Have not used it as a substitute for oats. We wouldn't want to get along without oats and haven't found any substitute for good oats.

Q. (2) Would English White Leghorns stand a chance of winning in a medium sized American show, or are they so very different from our own Leghorns?

A. (2) The American exhibition White Leghorn is quite different from the English show type.



Q. (3) Dealing with the question of egg production from a point of view of yield only, is it best to line breed or to continually outcross?

A. (3) H. H. Stoddard explained that pretty thoroughly in his article on a "Utility Breeding Chart" in December A. P. J.

Q. (4) Will an egg kept in a vacuum or in water for about a week hatch?

South Vancouver, B. C. D. G. G.

A. (4) We don't know. Try it and report.

As Heat Rises Moisture Must Fall

High heat must have low moisture.
Low heat must have high moisture.

This is a rule never to be violated. A certain definite relation exists between heat, moisture and ventilation. The more closely it is observed, the nearer the hatch comes to perfection.

Mandy Lee Incubator

Adapts the Moisture to the Heat

It is the one scientific incubator, because it is the only one that *measures* and secures right relations of hatching requirements. Hatching with the Mandy Lee is exact work. Thermometer, Hygrometer and Triple Automatic Regulator cannot go wrong like machines watched and "tended" without knowing what is wrong or what is required.

Heat Moisture and Ventilation Measured—No Guessing

Everything is measured, not guessed at, in the Mandy Lee. All is automatic. See Lee's latest catalog for particulars on modern scientific hatchers.

Use Germozone this year, standard remedy of the world for *Roup, Colds, Cholera, Canker, Bowel Complaint, etc.* Also *Lice Killer, Egg Maker and White Diarrhoea Remedy.* All Lee modern poultry books free. Address

Good Things for Everybody

Helen F. Woods, Editor

MODERN EDUCATION FOR CHILDREN.

DR. MONTESSORI'S RECENT visit to this country has awakened in the minds of many people a new understanding of child education. In most of the large cities where she spoke, so great was the interest of our people that crowds were turned away unable to gain entrance.

In Boston, Tremont Temple was packed both morning and night, to the very doors and "standing room only" was the announcement from the box office hours before the speaker was to appear. People came from all sections of New England to hear this marvelous woman tell of the method which is working out so successfully in the Houses of Childhood in Rome and other Italian cities.

Dr. Montessori, a modest appearing, pleasant voiced, motherly woman, spoke in her native tongue, while Miss Anne E. George, one of her first American pupils and the translator of her book, acted as interpreter.

While Dr. Montessori may not, as critics claim, have solved the problem of child education, she has, without doubt, grasped the fundamental principles, and has therefrom, evolved something a little better and nearer the ideal than anything heretofore brought to the attention of educators.

Education, the development of that which is, can, according to Dr. Montessori, be best brought about by the presentation of stimuli suitable for awakening in the child its natural activities and interests. She advocates first, proper tools, and then, absolute freedom as to selection and length of time which the child shall devote to the work. The child's individuality should at all times be encouraged and fostered.

The old theory has been, that a child could not keep up his interest in an object or subject for more than a few moments at a time, and all kindergarten and primary school work has been based on this theory for many years. Change, constant change, from one thing to another has been advocated as necessary for best results in teaching young children. Dr. Montessori claims that much of our inability to think uninterruptedly on any one subject for more than a few moments at a time is due largely to this mistaken idea in child training. Her attention was first called to this by the persistency of a little child in her school who was loath to give up a set of geometrical inserts (as used for sense training, sight and touch, in the Montessori system). The child had selected them at the beginning of the period, and had repeatedly with her index finger felt the shapes of the inserts, and again the geometric openings wherein the inserts fitted. She had scattered them all about her, and fitted them back where they belonged, repeatedly; and yet when the program was to be changed, the child persistently clung to the inserts. Dr. Montessori allowed her to do so, and on watching, found that the child for more than forty times repeated her work of taking out, and fitting in, the inserts. She then, quietly, and without word from Dr. Montessori, put them in their respective places and was quite content to begin work of another kind.

This compulsory changing from one thing to another when the child is not ready to grasp other subjects, is what Dr. Montessori calls the suppression of the child's natural bent or inclination. If he is given the right stimuli, his mind reaches after a thing, and just as he is entirely absorbed in it, we take him by the arm, saying, "Come now, it is time to do this," or "that" and thus not only suppress the best there is in him but institute revolt, and though we do not know it, encourage disobedience.

Dr. Montessori is emphatic in her disapproval of "grown up tools" for children, as bringing about a great waste of energy and force; while work with tools suitable to the child, is reposeful, and delightful. According to Dr. Montessori, a child working or studying with adult tools, soon develops "nerves" and irritability, and thus does not accomplish the purpose for which they are given him. The value of Dr. Montessori's system of education lies chiefly in the development of the individuality and in the training of the senses, for herein is the basis of all future mental development.

The environment of childhood must have good or evil effect on the adult. Could educators and legislators be brought to see the importance to coming generations of proper working stimuli, with freedom in their selection and study by the children of today, the present stunting system of education would soon be a thing of the past. When we consider how the environment of an individual affects that individual's ability to accomplish, it ought not to be difficult to realize how a child in the atmosphere of a chaotic school room, under the rule of a nervous, irritable teacher who has no sympathy with or interest in her pupils, is one that has proved a curse to thousands of children.

THE BIGGEST WINTER LAYERS

Kellerstrass Strain "Crystal" White Orpingtons

Are the **grandest utility** birds on record today, and as to their **fancy quality** they won first at Madison Square Garden, New York, 1905, 1906, 1908, 1909, 1910; also at Crystal Palace, London, England, and Chicago and Boston. If you need some birds to **improve your stock** or for the **show room** write us. We have them, and **the kind that win** as our past record shows. Stock for sale at all times. Remember, we are the **originators** of **"Crystal"** White Orpingtons, and breed only the one kind. We devote our whole time to this one breed. Eggs for hatching, write for prices. Send for our catalogue.

KELLERSTRASS FARM
ORIGINATOR OF CRYSTAL WHITE ORPINGTONS
9502 WESTPORT ROAD, : KANSAS CITY, MO.

Every child should be surrounded by the proper stimuli to arouse his interest and ambition, his individual aptitude in any direction being encouraged rather than suppressed. When his interest is aroused along any line, he should be allowed to work at it until his effort has brought about results. This will not only encourage perseverance but will prove to him the value of continued thought and effort in any direction. At such a time, interruption for any other line of work would be decidedly unwise and result in breaking up mental habits that should be given every encouragement.

The best training that any child can receive is the ability to think for himself. An absolute independence of thought should be encouraged rather than suppressed, yet all parents and teachers aim to relieve the child of the burden of thinking throughout his growing up, and then expect him to be able to exercise that right wisely and well when grown to man's estate. The ability to think for himself and the power to concentrate his mind, will accomplish more for him in the educational line than any amount of memory drill, or "temporary retention" as practiced through school and college courses.

There should be a sifting of the wheat from the chaff in all school curriculums. There is so much presented to pupils that is not worth learning and yet, if there is not time enough during the day to cram it all in, children are expected to spend hours at night fixing some worthless information on the memory, at least until the following day's recitation. In addition to this cramming of worthless information, there is an immense amount of hard work brought about trying to impress something on a youth's mind that could be learned by him naturally, a little later. This is a very great waste of time and energy, and takes the child's time and attention from work that would naturally make a deep and lasting impression on him, if given him at that time.

But in all child education simplicity should be the watchword—no roundabout rules or dogmas, no burdensome recitals of non-essentials. What we need are simple truths and well grounded elementary knowledge—these things, with proper incentive to individual thought, such as may be brought about by the reading and study of inspiring literature, will incite in him a love and devotion to study along the line of his individual bent, which is the true education.

Chicken Timbales.

Take the light meat from two uncooked chickens and pass through a meat chopper. Add a teaspoonful of salt, a little pepper and nutmeg. Beat into this the whites of three eggs, doing so gradually, and then add slowly one pint of cream. Bake in buttered timbale moulds placed in hot water until chicken is tender. Remove from moulds and serve immediately.

Chicken Broth.

Use the carcass and dark meat left from making timbales, by covering same with cold water and place on back of stove to simmer. When the meat all falls from the bones, remove them, and add a few pieces of celery, a sprig or two of parsley and a slice of onion. Two tablespoons of rice may also be added if liked. Noodles, or light feathery dumplings either, are very delicious with chicken soup. Just before serving, add a cup of sweet cream. If well seasoned this soup is very nourishing and greatly enjoyed by children as well as adults.

Chocolate Pie With Meringue.

Melt one square of chocolate over hot water (or use one heaping tablespoon Bensdorp's Cocoa). Add a tablespoon of sugar and four tablespoons of hot water, stir and cook until smooth. Turn into a bowl and add three-fourths cup of scalded milk. Then sift together one-third cup of flour, half teaspoon of salt and half a cup of sugar and stir these into the hot liquid, stirring and cooking until thickened. Then add the well beaten yolks of two eggs to which has been added one tablespoon of sugar. Add also a teaspoon of vanilla. Bake with one crust, allowing about twenty minutes in a medium oven. When baked cover the top with a meringue made of the whites of two eggs, a little sugar and flavoring, and return to the oven to brown.

Fritters.

Beat two eggs until very light and add two-thirds cup of sweet milk, one-half teaspoon salt, two tablespoons melted lard or butter and flour enough to make a stiff batter that will drop from the spoon in lumps. Add also one heaping teaspoon baking powder. These may be used as plain fritters or varied by the addition of sliced banana, shredded pineapple, sliced apple or any fruit at hand. Fry in deep, smoking hot fat, and serve at once with syrup.

Rice Griddle Cakes.

Into two cups of hot boiled rice, stir a teaspoon of salt and two cups of sweet milk. When cool add the yolks of two eggs beaten light and two cups of flour sifted with three teaspoons of baking powder. Fold in the whites of the two eggs beaten dry, and bake on a hot well greased griddle. Serve immediately with butter and syrup.

Crullers.

Beat both whites and yolks of two eggs and the yolk of a third egg together until light. Add one cup of sugar, one teaspoon salt, one-fourth teaspoon mace, one cup milk (sweet), one level teaspoon soda, four and one-half level teaspoons cream of tartar and about five cups of sifted flour. Use no more flour than is actually needed to handle. Fry in deep smoking hot fat and drain on brown paper.

Old Fashioned Pork Apple Pie.

Slice eight peeled apples into a butter pan, sprinkle with a little nutmeg, salt, and a cup of sugar, or a little molasses and cinnamon may be added if preferred

to all sugar. Over top of the apples place thin shavings of tender, fat salt pork, as thin as it can be sliced, then cover the pork with tender pastry, pushing the edges of the crust down between the apple and dish. Bake in a moderately hot oven until the apples are tender, and serve hot.

———o———

Sussex at Madison Square Garden.

NEW YORK, the metropolis of America, is well worthy of her title. The poultry show held between Christmas and New Years did its part in making it the city of all cities. The writer upon entering this spacious, beautifully decorated garden, was not only impressed with the quality of exhibits shown in well-filled classes, but the system and working out of this, the world's great show, as well. Every breed and variety of poultry, including many new varieties, were shown in well-filled classes. Among the comparatively new breeds shown in all the large cities this season are the Sussex. This much talked of breed, that has been bred in England for the past quarter of a century, has forced itself forward by its own merits, and is now sweeping two continents like wildfire, and bids fair to distance all other breeds in popularity.

All nations are awake to the fact that the Sussex have created this demand for themselves. The writer, while attending this show, became acquainted with several of America's largest poultry breeders, in the east and central west, who are taking Sussex with the breeds they are already exhibiting. These progressive poultrymen, ever alert, and wishing to keep pace with public demands, are getting in on the ground floor by taking Sussex now, and all agree that the prediction made by America's foremost journalist two years ago, that the Sussex would sweep America, is coming true. This is certainly the fancier's opportunity—these beautiful birds develop early, consume less feed, best of winter layers, and are pronounced by poultry critics as the ideal table fowl.

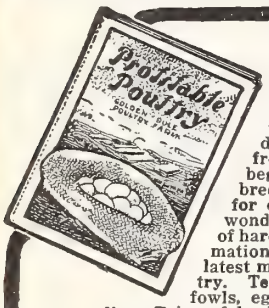
Sussex, viewed from every angle, are bound to create the largest poultry boom in America. Mr. Clem Watson, one of England's foremost judges, made a fine showing of imported birds in several varieties and capturing all the prizes in light Sussex.

Dr. Conrad of Hagerstown, N. J., the oldest breeder of Speckled Sussex, won the best ribbons on birds raised on his farm in the Catskill mountains. Dr. Conrad had every reason to be proud of his birds for they showed size and quality.

Carvers' Red Sussex Farm had the largest showing of Reds and, with one exception, won over Judge Watson's string of imported birds. Mr. A. A. Carver, one of the pioneer breeders of R. I. Reds, always ready to advance with the times, was one of the first to embrace the predicted opportunity of getting in on the ground floor, and nearly two years ago imported from England's finest strains, some very fine Red Sussex. No expense was spared in selecting the parent stock for this, the first Red Sussex Farm established in America. The young stock from these high-class birds were exhibited and won at Buffalo, Cleveland, Chicago and New York.

The boom is on. The wise poultry man will embrace this golden opportunity and get in on the ground floor.

The question so often asked—what is the best breed for all purpose fowl?—has been answered. Sussex meet every requirement, and are the breed of the hour.



M. M. GENSEMER,
Mgr. Carver's Red Sussex Farm.

NO LIVING MAN

5TH YEAR — POINTS THE WAY — START RIGHT — YOU END RIGHT — SEE THAT "XX"?

can hatch **one** egg the Magic Egg Tester rejects **before** incubation. We challenge the world to do it. Why put eggs under the hen or in the incubator that you are not first **sure** about? You **lose** if you do it. You are wasting the earliest and best hatching month if you delay its use. **Heed this warning,** or next May you will wish you had. "The Magic Egg Tester is the poultry raiser's *vade mecum.*" $2.00 each, and **and no further expense to use.** One year's trial, **fully guaranteed,** and cost refunded if not satisfied. Experimental specialists in incubation, giving the latest and best methods with each Tester. Circular mailed for the asking.

MAGIC EGG TESTER WORKS, Dept. B Buffalo, N. Y.. also Bridgeburg, Canada.

A MONEY MAKING POULTRY BOOK.

Finest published, 128 pages of practical facts. 180 beautiful pictures. This book will put you on the right track to make dollars in place of cents out of poultry. A real guide written from 25 years of practical experience and success. A book for beginners and everyone seeking advice on breeding, feeding, raising and hatching; plans for colony yards and farms. Describes most wonderful money making farm with 50 varieties of hardy pure-bred birds. Lots of valuable information about **Indian Runner Ducks** and all the latest methods of making a good living from poultry. Tells where to obtain lowest prices of best fowls, eggs, incubators, fireless brooders and supplies. Price of book is 50 cents, but to get it introduced quick, will send it to you for 10 cents. Money returned if not satisfied.

BERRY'S POULTRY FARM, Box 115 Clarinda, Iowa.

BABY CHICKS DROPPED AT YOUR DOOR
— BY THE EXPRESSMAN —

300,000 "Better Hatched" Chicks for 1914

It is not now a question of whether to buy chicks, but where to buy them—you want quality, vitality, quick and efficient service, with prices that are not unreasonable. We have hatched and delivered chicks for four years, beginning with a capacity of 8,000 eggs, until now we can accommodate 95,000 eggs at one time. We have not advertised extensively; our customers come back each season with increased orders. There is a reason—it's the "BETTER HATCHED" chicks that people demand; we use no coal or lamps for heating, our hot-water boilers are all heated with natural gas, assuring a uniform temperature; no prematurely hatched chicks, no delayed hatches, every chick hatched in pure air and out on time; they are the ones that can travel 2,000 miles, grow every mile of the way, arrive strong and healthy and continue to thrive.

The 10,000 pure bred hens that lay eggs for this plant are all on free range, healthy, strong and full of vigor. If you desire chicks from this kind of stock, with a strong guarantee behind them, in lots of 25 to 2,000, send for our free catalog, describing our plant and the following varieties of fowls:—**S. C. White Leghorns, S. C. Brown Leghorns, S. C. Buff Leghorns, Barred Rocks, White Rocks, S. C. and R. C. Reds, S. C. Black Minorcas, White Wyandottes, S. C. White Orpingtons, S. C. Buff Orpingtons.**

We quote wholesale prices in lots of 500 and over. We make a specialty of White Leghorns and Barred Rocks in thousand lots. Deliveries begin March 1st. A hatch each week.

The Co-Operative Breeding and Hatching Co., Box A, Tiro, Ohio

THIRD INTERNATIONAL EGG LAYING CONTEST.

Report for Month Ending December 31, 1913.

THE third International Egg Laying Contest conducted at Storrs, Conn., under the auspices of the Connecticut Agricultural College, made very satisfactory progress during the month of December. There was an increased production of 1,933 eggs over the preceding month or a total of 4,194 for the month. Only four pens and these include four varieties, have not yet laid any eggs, all of which means that 95 per cent of the pens have been producing. A question that has long been asked and which is as yet perhaps unanswered is, "What breed will lay the most eggs?" Many individual poultrymen have very strong opinions on this question while some others have conceded that it is largely a matter of care, management and breeding and it is undoubtedly true that poor Leghorns will lay fewer eggs than good Rhode Island Reds. If birds of different breeds are of equal merit so far as their egg producing ability is concerned, it is a debatable question as to which will yield the most eggs. It is interesting to note in this connection that of the 100 Wyandottes entered in the contest 49 per cent laid during December. Of the 150 Rhode Island Reds in the competition, 46 per cent laid during the month, and of the 340 Leghorns 47 per cent were laying. In other words, of these 590 pullets, including the Rhode Island Reds, Wyandottes and Leghorns, the greatest difference in egg yield between any two of these three breeds is 3 per cent.

The Experimental Pens.—The methods and feeds for the experimental pens supplied by the Storrs Agricultural Experiment Station have been previously described. The experimental pen of Plymouth Rocks have only begun to lay so that conclusions are scarcely warranted at this time. It is, nevertheless, interesting to note that the two best pens are two that have received the sour milk ration, one without any succulent food and the other without any beef scrap, respectively. The Leghorn experimental pens began to lay much earlier than the

NOW READY

NEW 1914 PRAIRIE STATE CATALOG

One of the world's foremost experts on artificial incubation and the rearing of poultry, wrote this big 112 page book. His advice is worth hundreds of dollars, especially to the beginner. For example—he tells you how, by studying the ways of hens that stole their nests, he hit upon the idea of the moistened Sand Tray and how it resulted in a wonderful increase in the number of strong, vigorous **"chicks that live"**—the profit producing kind—the only ones you can afford to raise.

PRAIRIE STATE INCUBATORS and BROODERS

are used and endorsed by leading Agricultural Colleges and Poultry Experts, the world over. For over 30 years they have maintained the lead and with the many new 1914 features, they are simply incomparable. Beginners will be particularly interested in the new Keystone Model which maintains Prairie State quality with all the new improvements and yet sells for only $9 and up.

Send Your Name on a Postal for FREE Book

Do it today. A delightful surprise will await you for this is more than an ordinary catalog. It contains in addition to full descriptions of Prairie State machines and their exclusive features, about 60 pages of other valuable information on poultry raising. For example—**How to Feed, Rear and Breed for Best Results; How to Grow Green Feed in Winter; How to Build Poultry Houses; How to Treat Diseases; How to Preserve Eggs, etc., etc.**

This big, new 112 page book is FREE if you send now. Write—

Above All—The Henderson Strain

AMERICA'S FOREMOST

Barred Plym. Rocks for Exhibition and Utility

Madison Square Garden, New York, Chicago and St. Louis Winners

This grand strain is large framed, with wonderful type, has long, deep bodies, broad backs, well spread tails carried low, and that snappy distinct barring to the skin, that wins in the best of competition.

My first prize cockerel and grand champion male at Chicago 1912 in a class of 54 of the best in the world proves that my strain carries the maximum of quality in Barred Rocks today. His type and barring created a sensation among Barred Rock breeders of the world. A number of his wonderful sons will head my 1914 breeding pens.

When you start to make up your breeding pens this year and find that deficiency which you desire to overcome, **remember that I have the strongest lines of breeding Barred Rocks in America**, and can furnish males and females with the quality desired to balance the pen and improve the progeny.

My **Barred Rocks** have won consistently at all the large national shows for the last 20 years in all competition as a result of being line bred and pedigreed. Compare my winnings with those of any other breeder and form your own conclusion as to who has the best producing strain.

First Prize Pullet Bred Cockerel, Coliseum, St. Louis, 1913

For the season of 1914 I will mate 50 breeding pens in both my **Cockerel** and **Pullet lines**, from which I will furnish eggs for hatching at prices quoted in my mating list and catalog which describes each individual specimen that I will have in breeding. These pens will contain my Madison Square Garden, N. Y., Chicago and St. Louis winners and their descendants. The inherent characteristic quality as bred in the **Henderson Strain** both in the Cockerel and Pullet lines, and demonstrated by their public record in the best show rooms in America, enables me to mate for the season of 1914 the strongest breeding pens of **Barred Rocks** in the world.

Write for my new Catalog-Mating-List which minutely describes these pens and **the largest exclusive Barred Rock farm in the world.**

SATISFACTION GUARANTEED

W. W. HENDERSON, BRIDGETON, ST. LOUIS COUNTY, MISSOURI

Rocks and have as a matter of fact produced so well that the leading pen stands fourth from the top of the list of all pens with a scorce of 255 eggs. As has been pointed out these birds are not in competition and they therefore do not appear among the leading pens given below. This particular pen is being fed the sour milk ration without any beef scrap. It is hoped that before the year is over these ten experimental pens will offer some suggestion as to the value of sour milk as a substitute for green food, or beef scrap or for both.

The prizes for the month have been awarded as follows: The blue ribbon or first prize went to Tom Barron, Catforth, England, whose White Wyandottes produced 213 eggs. The second prize was awarded to Francis F. Lincoln, Mt. Carmel, Conn., whose White Leghorns laid 172 eggs, and the third ribbon went to Cecil Guernsey, East Cobleskill, N. Y., whose pen of Leghorn pullets laid 163 eggs during the month.

During the month of December, 2 Buff Orpingtons, 3 Barred Rocks, 3 White Rocks, 3 Buff Wyandottes, 12 Rhode Island Reds, 14 White Wyandottes, and 15 White Leghorns, a total of 52 individuals each laid 20 eggs or more, the highest individual production being 28 eggs in 31 days by an English White Wyandotte. The ten best pens for the month produced 1,463 eggs or approximately 122 dozen, which sold for about $60. It cost approximately $15 to feed these ten pens or 100 birds for the month. The ten poorest pens in the contest laid only four eggs, 1/3 of a dozen. In other words it took about $15 worth of feed to get 15 cents worth of eggs. These pens remind one that,

"Of all sad words of tongue or pen
The saddest are these 'An eggless hen.'"

The ten best individual records are as follows:

Pen		No.		Eggs
14	White Wyandotte....	5	Eng.	49
14	White Wyandotte....	7	Eng.	42
14	White Wyandotte....	8	Eng.	42
30	R. I. Reds.....	2	Penn.	41
4	Barred Rocks	7	N. Y.	40
20	Buff Wyandottes.....	5	Mass.	40
14	White Wyandotte....	6	Eng.	39
35	R. I. Reds.....	2	N. H.	39
35	R. I. Reds.....	6	N. H.	39
53	White Leghorns.....	2	Conn.	39

The ten leading pens to date are as follows:

Tom Barron, Catforth, near Preston, Eng.
White Wyandottes 330
Francis F. Lincoln, Mt. Carmel, Conn.
White Leghorns 307
Neale Bros., Apponaug, R. I.
White Wyandottes 269
Merrythought Farm, Columbia, Conn.

West Mt. Poultry Yards, Naugatuck, Conn.
White Wyandottes 149
Pinecrest Orchards, Groton, Mass.
S. C. Rhode Island Reds..... 145

Chicago Poultry Breeders' Association Holds Successful Show.

The first annual exhibit of the Chicago Poultry Breeders' Association, held at East End Hall, Chicago, Jan. 5-11, 1914, opened with eleven hundred entries, many of the classes were well filled, competition being strongest in Barred and White Rocks, White Wyandottes, Columbian Wyandottes, Rose and Single Comb Reds, White Orpingtons and Single Comb White Leghorns. There was quality enough in all classes to make competition lively, Single Comb White Leghorns being the strongest contested class. A nice display of Bantams, which was much admired, was cooped on the stage while some freak exhibits, including a "cock tailed" hen and a "Red Orpington cock," attracted much attention. With the weather all that could be desired, the attendance was good and receipts very satisfactory to the management.

MONMOUTH FARMS
S. C. White and Buff Leghorns

Eggs for Hatching Our 1914 matings of Monmouth Prize winners are producing eggs from which some wonderful leghorns will be hatched. Place your order now for one or more settings. Orders for eggs from our "20th Century Dual Purpose" matings accepted for 100 and 1000 lots. 85 per cent fertility guaranteed.

Baby Chicks We ship lively and hardy day-old chicks any reasonable distance. Orders for delivery from February 1st to July 1st. See our mating list.

FANCIERS IDEALS NO. 3

Leghorn Shape as Seen by Leading Fanciers and Judges

By LOUIS A. STAHMER

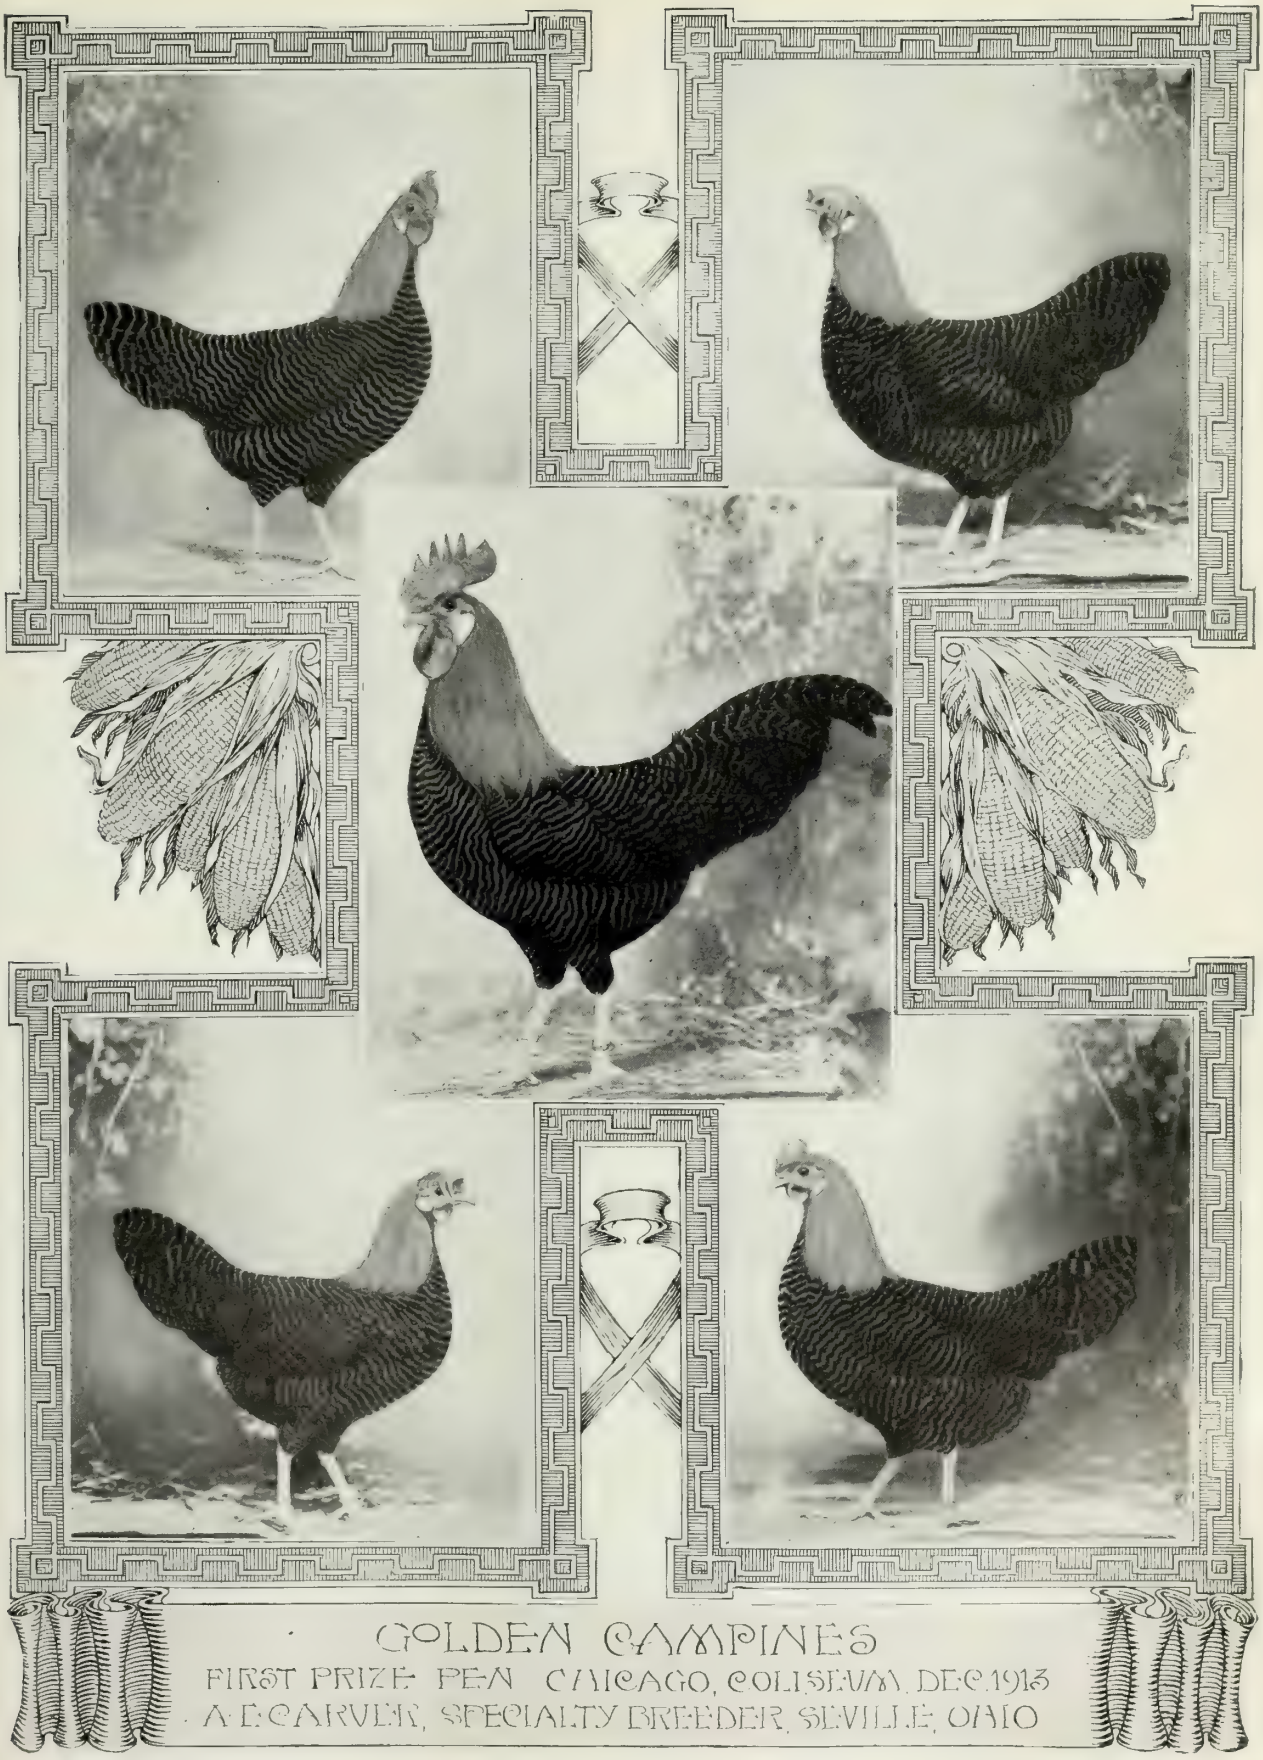
THERE are no more enthusiastic fanciers than the Leghorn breeders. The way they responded to our invitation to mark their criticisms on the blue print illustrating a pair of birds of their breed, which were submitted to them, showed that they know absolutely what they want in the requirements of their accepted ideals. More breeders complied with our request and sent in their criticisms than we have received from Plymouth Rock and Orpington fanciers, and the prints came back quickly, too. This all goes to show that the fanciers of this breed are live ones, and is one of the reasons for the continued popularity of an old breed which has stood the test of time and outdistanced all new varieties originated during the last ten years. The great improvement in Leghorns is due mainly to the activity of the fanciers, and if we compare the type of the birds today with those of a decade ago we are struck at once with the great superiority in the shape of these fowls, and it shows what can be accomplished by selected breeding methods. Well can we remember the White Leghorns that were shown some 15 years ago, with their short backs, large combs, short shanks, tails almost perpendicular, and yellow ear lobes. To compare with the birds of today, the difference in the two types would be almost as great as that between a truck horse and a blue-blooded racer. There is something elegant and aristocratic in the shape and pose of a fine young cockerel or pullet; the grace and proud carriage is suggestive of quality throughout, and the fine lot of white eggs laid during the course of a year on a minimum consumption of food all adds to the ever-increasing demand for these fine fowls.

IDEAL LEGHORN SHAPE IN THE MAKING.

The above illustration shows how the birds appeared on the blueprint which we sent out. The reason we sent blueprints was that a pencil line would show up nicely from the blue background, enabling the fancier to see the criticism better which he had made. This method has worked out very nicely and the results have been very satisfactory to our subscribers and to the breeders interested in the breed.

We submitted 100 11x14 blue prints as per illustration on this page to the leading breeders and judges of Leghorns in the United States; 32 accepted them without any criticism; nine practically without any criticism, and the criticisms on the balance that were returned were as follows:

Criticisms on the male: The majority of the criticisms were on the head points and the tail carriage; 12 of them suggested a higher tail carriage; 3 of them wanted the tail carried lower; tail too massive, 1; shorten tail, 3; back too long, 3; more breast, 5; neck not arched enough, 2; neck thicker, 1; neck too thick, 1; body deeper from back to keel, 2; back too straight, show more curve, 2; more keel, 1; sickles and lesser sickles more curving and not as long, 3; more thigh, 1; body too long from shoulder to tip of tail, 1; legs too short, 3; comb follows neck too much, 15; make spikes on comb more vertical, 8; make blade of comb uniform in height, 3; comb too small, 1; comb too large, 3; comb too high in front, 1; spikes too large, 7; beak too long, 1; more space between first and second spike, 1; beak heavier and more curved, 1; wattles too large, 5; lobes too large, 9.



The criticisms on the female were as follows: Comb too large, 7; comb too small, 1; ear lobes too small, 1; beak too long, 1; neck heavier where it joins back, 4; raise tail, 4; spread tail more, 1; neck too thick, 1; neck too long, 1; back too long, 3; body not long enough, 1; body too deep from back to keel, 1; lower tail, 4; show more fluff, 3; thighs too heavy, 1; show more body between tail and end of wings, 4; shorten up deck (tail) feathers, 1; front of comb too large, 2; show more thigh, 2; too much keel, 1; show more keel, 1; back to slope up the tail, 3; back to slope down to tail, 5; joints too heavy, 1; tail not long enough, 2; entire neck too thin, 3; shanks too long, 1; make the breast more prominent, 1; saddle not full enough, 1; legs and shank too large, 2; show one more feather in tail, 1; too much fluff, 1.

One criticism was received from a breeder who claims he has bred this variety for ten years. He states in his letter that the illustration was a freak, and birds of this kind could only be produced by introducing foreign blood, and going on further he describes a type for Leghorns as they should be according to his idea. In looking up the show record of a recent big show where this gentleman exhibited we find he did not get into hailing distance of fifth prize, which goes to show that he had better get in line with the other 99.

IDEAL LEGHORN SHAPE. BY LOUIS A. STAHMER.

The above illustration, a reproduction from a drawing by Louis A. Stahmer, shows the ideal shape for this breed as accepted by leading judges and breeders of this country. These criticisms were obtained from the East, West, North and South, thus making them to be of national character, and the above illustration can be accepted by the established breeder or amateur as a reliable guide to which to breed. There is a great desire among fanciers and breeders for a better understanding of "breed types," and as we are always willing to co-operate with them in bringing this knowledge before the interested public, we invite further criticism on the above drawing. We trust that the above illustration meets with the approval of the breeders and judges to whom prints were submitted.

Golden Campines when they have the type and the color which are required for this breed are a truly handsome variety of fowl. Carver's first prize pen at the big Chicago Coliseum (December, 1913) show have all the desirable characteristics of the breed and were easy winners. Besides winning first pen, they also won first cock and second hen. We predict a great future for this breed, and only regret that we cannot show the wonderful coloring of the bird in their natural state. Their catalog describes them fully and is sent free. Address A. A. Carver, Seville, Ohio. (L. A. S.)

Autochrome first prize cockerel White Plymouth Rocks at Cincinnati, December, 1913. The wonderful type of this bird is very much in evidence in the picture and was the reason for winning easily in a big class under Judge Theo Hewes at that show. Bred, owned and exhibited by U. R. Fishel, Hope, Ind. (L. A. S.)

Autochrome of "King Diamond," heading first prize pen National Meet American Buff Wyandotte Club, Rochester, N. Y., 1913. First prize cock, shape and color special, Madison Square Garden, December, 1913. Nuff said; the picture speaks for itself. (L. A. S.) Bred and owned by Rocky Run Farm, Northfield, Ohio.

Autochrome of First White Orpington Cockerel at Chicago. Bred and owned by Aldrich Poultry Farm, Columbus, Ohio. A beautiful specimen of the breed and winner in the best class of birds exhibited in the entire show. (Breast appears flat on account of photographing too late in the day.)—L. A. S.

Autochrome of first prize Silver Campine cockerel at Chicago Coliseum show. Besides winning 1—3—4 cockerel Mr. Hering won also 1—2—5 pullet, 1 old pen, 1 young pen, 3—5 cock, 2—3 hen. There were fully 140 birds in the class, with remarkable quality. Send for mating list. Frank E. Hering, South Bend, Ind. (L. A. S.)

Autochrome of first prize Blue Orpington cockerel at the Madison Square Garden show. Winner in the largest class of Blue Orpingtons ever shown in America. A bird with rare quality and most beautiful type and color; a typical Orpington. Bred, owned and exhibited by Capt. Max de Bathe, Hartley Court, Reading, England. (L. A. S.)

Autochrome of S. C. Rhode Island Red; first prize pen cockerel, Cleveland Coliseum Show, Dec. 2-7, 1913; first prize pen cockerel, Madison Square Garden, New York, Dec. 26-31, 1913; color and shape specials at Cleveland. A bird of unusual type and color; pose does not do him justice. (L. A. S.) Bred and owned by Ira Crowther, Willoughby, Ohio.

ACTUAL PHOTOGRAPHS IN NATURAL COLORS IN THIS ISSUE

"We Lead, Others Follow"

The American Poultry Journal in order to live up to the above motto takes the lead once more and shows in this supplement something out of the ordinary in poultry illustrations. The pictures shown in colors in this issue are actual photographs in natural colors made directly in the camera and unretouched by hand. There are several methods of color photography, but they are not all adapted for the photographing of chickens, as the exposure has to be a prolonged one. A new method of sensitizing the plates and powerful artificial light has reduced the exposure so much that it is now possible to photograph almost anything under the sun in its natural colors. The process of recording the impression in colors on the plate is a mechanical one, and for that reason its absolutely true, or as near as it is possible by utilizing the four-color method of blue, yellow, red and black.

The pictures are made on glass, and for that reason cannot be retouched, as the light will have to go through the colors when the engravings are being made, and it stands to reason, therefore, that any kind of paint would obscure the light; hence no sickle feathers can be added, no breasts filled out, no combs made to order. The birds must be good in every respect, as the camera will reproduce every defect. Of course, from an advertising standpoint, pictures of this kind are far superior to those made from paintings and the breeder who has the goods and is not afraid to show them in their natural state will reap the benefit. Improvements are constantly being made in this novel photographing process, and we believe that this method of illustrating will revolutionize the illustrating of poultry in the future. The American Poultry Journal, always a believer of truthful publicity, has gone to great expense in producing this novel color insert, knowing that our subscribers are of the appreciating kind.

To Ira Crowther, U. R. Fishel, Rocky Run Poultry Farm, Frank E. Hering, Capt. Max de Bathe and Aldrich Poultry Farm belongs the honor of being the pioneers in having the first poultry pictures reproduced by this method in any poultry jonrnal in the world, and to Louis A. Stahmer, our artist, belongs the credit of having made the first poultry pictures to be used for this purpose.

This excellent White Wyandotte Cockerel headed Arthur Duston's Framingham, Mass., prize winning pen at Madison Square Garden, December, 1913.

First Prize Cockerel, Chicago, 1914, a bird of unusual type and Leghorn quality. Bred and owned by N. P. Easling, Pekin, Ill.

One of Pope and Pope's Louisville, Kentucky, prize winning pullets. A fine specimen of the breed and good in every section.

Second Prize Silver Campine Cockerel, Madison Square Garden, December, 1913. An ideal type and snappy barred bird. Bred and owned by the Martling Hennery, Ridgefield, N. J.

BARRED PLYMOUTH ROCKS
FIRST PRIZE WINNERS AT CHICAGO, DEC 1913
BRED AND OWNED BY H. C. HAWKINS, LANCASTER MASS

The Barred Plymouth Rocks at Chicago is always the largest class at this show and we believe that nowhere superior birds of this breed are shown. A. C. Hawkins is one of the oldest breeders of this variety, having bred them continually in line for over twenty-five years. It is natural, then, for him to know the requirements of the breed as thoroughly as could be known, and his numerous winnings at Madison Square Garden, Boston, Chicago, Cleveland and other big shows are absolute proof that he does. The above illustrations, showing the first prize cockerel-bred pen, portrays faithfully the type and the coloring of the birds, and his winnings of 1st and 5th cock, 4th exhibition hen, 1st and 3d exhibition cockerel, 1st and 2nd pullet-bred cocks, 1st exhibition pullet, 2d exhibition pen, all made at the last Chicago Coliseum show gives him an enviable string of victories. Send for his new mating list. It's free. A. C. Hawkins, Lancaster, Mass.

When it comes to producing eggs in large numbers, they are in a class by themselves. Midlothian Farms make a specialty of trap-nested, bred-to-lay poultry, and the above are only a few of a large number of birds with high egg records. Write for their catalog.

A Large Profitable Egg Farm

By J. C. Johnston

PERHAPS no village in the whole world is better known to the breeders of Standard poultry than Tinley Park, Ill. This little hamlet, situated near the outskirts of the city of Chicago, was, until a few years ago, known only to the near-by farmers and to the traveling public, who, journeying to and from the Great Metropolis of the West, heard the station called, and passed on their way with never a second thought of the place. Almost as by magic Tinley Park fame began to spread abroad, as it increased in circumference it gained in velocity until it has swept over the entire world.

What has brought about this great change; what has made Tinley Park famous? The answer is Midlothian Farms. A few years ago an enterprising business man of Chicago began to investigate the poultry business with a view to establishing a plant that should meet the demand of all branches of the poultry industry. The result was the selection of Tinley Park with its splendid location and many beautiful surroundings and the establishment of Midlothian Farms. A short inspection of the farm will convince even a novice that the plans for the equipment of the place were drawn by a masterhand. The immense buildings, brooder houses, incubator cellars, in fact everything on the farm, is arranged for comfort and convenience.

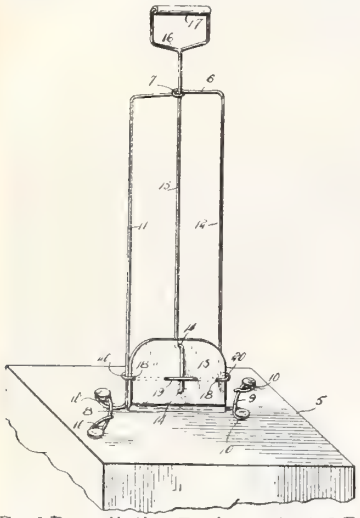
John G. Poorman, proprietor of this vast establishment, is a man of years of experience, of keen intellect and a strictly up-to-date business man. Under his management the business of the farm has increased by leaps and bounds. That all admirers of Standard Poultry might be supplied from Midlothian farms the management adopted varieties covering a wide scope of the field of standard poultry. Here are bred and reared White and Buff Orpingtons, Barred and White Plymouth Rocks, Rose and Single Comb Rhode Island Reds, Single Comb White Leghorns and White Wyandottes.

From these varieties eight hundred selected pullets are trapnested annually. At the close of the year those that have made the very best records are mated to produce the layers for another season. Those falling short of first-class go to the utility flock while any that fall below the normal egg yield go to the fattening house and are specially fitted for the market. From six thousand to ten thousand head of poultry are produced annually. This is stock grown on the farms and does not include the thousands of baby chicks that are incubated here and shipped to supply the ever increasing demand for this branch of the Midlothian products. Early in January the mammoth incubators are put in operation and from then until the close of the breeding season they pour out a continuous stream of chicks that are greedily claimed by the ever-increasing market. Thousands of those go to the brooder houses, where, under the constant care of the management, they speedily grow to broiler size. At this time they are subjected to a severe culling, the select ones going to the colony houses on free range while the others go to the fattening house where they are specially fed and fitted for market.

This is one of the most profitable branches of the business on the farm as "Midlothian milk fed broilers" are greedily bought on the Chicago market at prices far above the regular market prices. Realizing that commercial and fancy qualities must go hand in hand to make the poultry business eminently successful the management of Midlothian Farms started at the beginning to develop their flocks along these lines. They have, by careful trapnesting, selecting and breeding for Standard requirements, developed strains in all their different varieties that show splendid type while at the same time they have proven their merit as egg producers, many of them having egg records ranging from two hundred to two hundred and seventy-five eggs per year.

Midlothian Farms do not claim to be producing the best exhibition quality in the world, but they do claim and testimonials from their thousands of satisfied customers bear them out in it, that they are producing fowls that come nearer meeting the demands of the average poultryman than has ever been produced by a like establishment. Their facilities for the production and rearing of poultry are unsurpassed. The equipments for housing and feeding are of the most modern type, while the integrity and honesty of the management is beyond reproach. What more is needed to insure the success of Midlothian Farms and Hatchery which has already been well established?—J. C. Johnston.

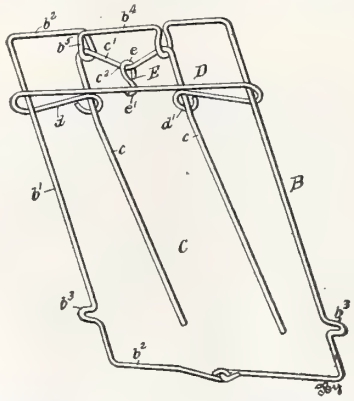
Type of Single Comb White Orpingtons bred by John G. Poorman, Midlothian Farms, Tinley Park, Ill.



A league similar to a baseball league is to be formed by the poultry associations of Southern Michigan. Kalamazoo, Jackson, Flint, Lansing, Grand Rapids and Battle Creek will be the charter members of the new association.

The reports of forty-five public refrigerators of the United States, just out, shows that on July 1 there were stored in these houses 2,922,800 cases of eggs, thirty dozen to the case, or a total of 87,684,000 dozen, or 1,652,208,000 eggs. These eggs were valued at 24 cents a dozen, or a total of $21,044,160.

Recent Inventions for Poultrymen

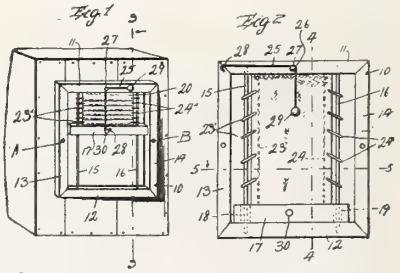


By Lester L. Sargent, Patent Attorney, Washington, D.C.

AN unusual number of novel poultry inventions made their appearance during December. The "holiday season" was suitably recognized by two inventors. The first of these—Harvey T. Swanton, of Rubicon, Wis.,—devised

Fowl Decapitating Device, patented Dec. 16, 1913, by Harvey T. Swanton, Rubicon, Wis. No. 1,081,411.

an invention that will be appreciated when holiday dinners are in prospect. It is a Fowl Decapitating Device of the guillotine type, consisting of a U-shaped wire frame attached to a block, and having an eye formed in its central portion, in which the shank of a handle is vertically movable. Guide wire members brace the knife and hold it in place in the U-shaped frame, so that it may be brought down with rapidity and precision



Trap Nest Front, patented Dec. 16, 1913, by William F. Mahony, Washington, D. C. No. 1,081,317.

at the crucial moment. Patent No. 1,081,411.

In the same class is the Poultry-Trap-Nest Front of William F. Mahony, of Washington, D. C. The Mahony device is constructed of wire, bent to form a gate over the front of the nest, to be swung open by the fowl entering the nest box. This releases the supporting means from the locking device on the gate frame and operates to lock the gate closed when the gate swings to closed position. Patent No. 1,081,317.

That sense of seclusion and privacy sought by all birds when they wish to lay is found in the Nest-Trap for which Charles L. Grant, of Merchantville, N. J., has taken out letters patent. The trap

Nest Trap, patented Dec. 16, 1913, by Charles L. Grant, Merchantville, N. J. No. 1,081,605.

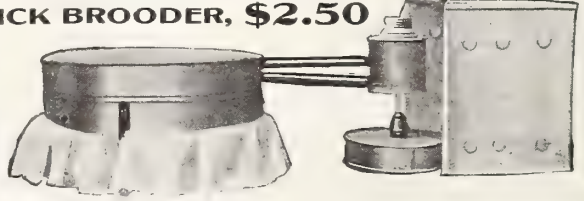
may be applied to ordinary nest boxes. A subdued light and ample ventilation are afforded. No large openings exist through which a hen may thrust her head when curious or frightened, whether outside or within the nest, and which are a defect complained of as existing in some trap nests. The invention includes a main frame or nest, with vertical guide elements secured to it, and a gravitating

BUFF ORPINGTONS

WIN AT CINCINNATI, Dec., 1913, four times as many FIRST PRIZES as any competitor; all specials offered on Buffs and special for best display of Orpingtons. Our First Prize Sweepstakes Champion Cockerel, "KING B," is undoubtedly the best Buff Orpington that has been produced to date.

It matters not how strong the competition, their correct color, splendid type and size make them easy winners wherever they go. We can furnish winners for any show in the world and eggs that will hatch them. If in need of good stock or eggs, write us.

BRUCE & ABBOTT : : BOX 10 : : WHITELAND, INDIANA

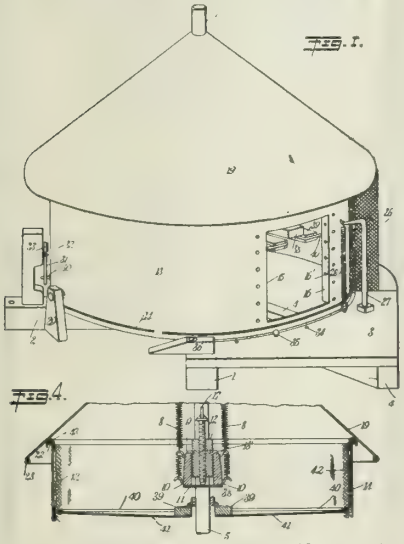


125 Egg Incubator for $6.98

OUR POOR MAN'S FRIEND—GUARANTEED FOR 5 YEARS

and will hatch any egg that any other incubator will hatch. It has triple wall, the outside is covered with metal, has the same fixtures that any high-grade incubator has. It is a plain hatcher with no complications. A child can run it. No possible way for it to catch fire from its own lamp. We want you to get our book that tells you all about our incubators and brooders. This incubator can't be equaled for double the price. Think of it—only $6.98.

30 to 50 CHICK BROODER, $2.50

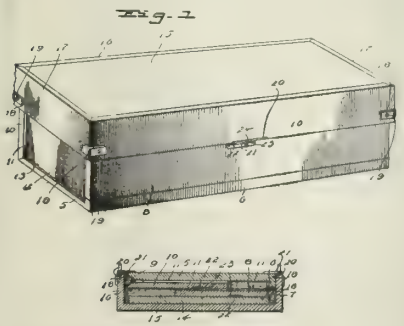


The Brooder illustrated, at right, will care for from 30 to 50 chicks. It is all metal and comes to you all complete for $2.50. Hot Water Circulation which is positive. Can be put in any ordinary dry goods box in 10 minutes. A warm flannel that is warmed by the water tank above drops on the chick's backs and hovers them like a mother hen.

Send a postal before you forget it and get our big book describing 53 different articles we make for you. Now is the time to get ready for Spring Hatching. GET YOUR ORDERS IN EARLY.

WENDELL INCUBATOR CO., 51 Main Street, HOLLY, MICH.

bar movably connected with them, and having a curtain attached to the bar, and with means for its operation. A right angular trigger is pivoted at the elbow on the main frame above the slide bar, provided with a weight at one end, and hooked at the other end, the hook being normally held rocked upwardly, and engagable with a pin on the slide bar when rocked downwardly to yieldably hold the slide bar raised. It should be noted, however, that the entrapped hen cannot escape from the nest until the curtain is raised by hand. Patent 1,081,605.



A Brooder invented by John A. Clark, of Bolckow, Mo., is constructed so as to automatically close up and house and protect the chicks when a certain number have entered it. The brooder is

Brooder, patented Dec. 16, 1913, by John A. Clark, Bolckow, Mo. No. 1,081,811.

operated by gravity, and while it is not a weighing machine, it may be adjusted to act as such for all practical purposes in poultry raising. Patent 1,081,811.

For carrying eggs in larger quantities, Madison L. Funk, of Madison, Okla., has devised a Collapsible Egg-Case. When not in use for the shipment of eggs the case can be folded to occupy small space.

Collapsible Egg Case, patented Dec. 9, 1913, by Madison L. Funk, Madison, Okla. No. 1,081,229.

Bottom and sides are hinged together, and ends removably secured to the bottom. The cover has catches to engage with the side walls of the body portion of the egg case. Patent 1,081,229.

A new Egg Carrier, the invention of Robert O. Hammond, of Farmingdale, N. Y., is one of the interesting poultry inventions of recent date. The patent rights in the invention have been acquired by the Tywacana Farms Poultry Co., of Farmingdale, N. Y. An egg box

is provided having rectangular compartments for the eggs—one in each. The egg holder for each compartment is folded from a flat bank, bent up to form and having one flat side and opposite curved sides bearing against a flat side of the egg compartment. Approximated free edges bear against the other side

Egg Carrier, patented Dec. 2, 1913, by Robert O. Hammond, Farmingdale, N. Y. No. 1,080,276.

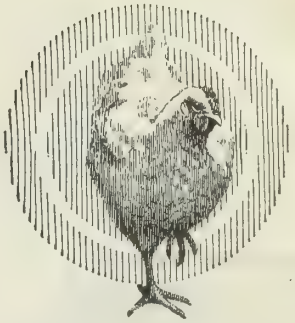
of the compartment. A rectangular top and a rectangular bottom having close engagement with the top and bottom of the compartment complete the device. The approximated free edges of the egg holder are for the purpose of adjustment to the egg, to accommodate eggs of varying sizes. These edges are held in position as adjusted by the wall of the compartment. Patent 1,080,276.

An Egg-Supporting device invented by James L. Shute, of Seattle, Wash., has been protected by two patents of recent date. One of these is directed to the egg-supporting surface of incubators. Spaced rollers are provided, covered by a fabric proportioned to permit slack

Egg Supporting Device, patented Dec. 16, 1913, by James L. Shute, Seattle, Wash. No. 1,081,870.

between each two rollers. Gears are provided on the ends of the rollers, meshing with a worm journaled along the side of the frame and which may be turned by a hand wheel, thus rotating the rollers, moving the fabric and turning the eggs

POULTRY FLATS



Are Sure to Revolutionize Poultry Raising for Profit, Because:

1—You need no brooders, and these alone are a great expense.
2—Each Flat will brood and raise 600 chicks, and do it right.
3—Each Flat is a unit—a basis of calculation.
4—Each Flat will house and winter without fire 72 old birds.
5—All work is done under cover and you need not move three feet from one spot in doing it—no exposure to weather for man or birds.
6—Easily cleaned—no lice.
7—You can build one in your back yard.
8—Covers 24x36 feet and includes six runways. Can make runways as large as space will permit.
9—In the Flat you have everything you need, at one cost—a complete plant.
10—If you build a common, ordinary poultry house, your extras will cost more than an Ott Brooder and Winter House combined, and then you only have the old way.
11—One Flat will make you money right off the reel.
12—With a Flat you are starting right. One will make you money. Build as many as your time and means will permit. any one, who is at all handy with tools, can construct one.

Read the book "Poultry Flats" as written by Mr. Edward Amherst Ott, the man that knows and does. One man sold $800 from just one, on a back lot. The book also contains letters from those who have built in twenty-one different states. Read these. Send us 25c, that's all, and we will send you the book and the INLAND POULTRY JOURNAL for six months. This paper is known all over the world as one of the best,—so do this now and you will always be glad. Address

Indianapolis, Indiana

Guaranteed Eggs *and* Certified Chicks

ARE the next steps in Commercial Poultry Keeping. Standardized products are the newest thing in the solution of market problems. The dairyman can now furnish certified milk and cream; the apple grower can guarantee his fruit under the national apple act, and the beekeeper can sell his honey with a guarantee of standard quality. The poultryman can standardize, too. If you would have the plan and methods, read

The Guaranteed Egg, By Howard Mittman

and

Certified Poultry Farms, By P. A. Maurer

ARE you putting your profits into the feed bin, as many poultrymen are doing? By buying cheap feeds, changing from one brand to another, and costly experimenting, they are using up the profits that might be saved. A manufacturer tells how the business looks to one who is both poultryman and feed dealer. It's all in the article,

What's In the Poultry Feeds?

The average man on an average farm with an average flock has little chance to make money. The quickest improvement comes from putting the flock above the average. There are three ways of doing this: Breeding, hatching or brooding. The details are given in the article,

New Blood For Old Farm Flocks

These and other practical articles are appearing in the February issues, along with

The Diary of a Commercial Hen

The unique poultry serial of the year.

and providing an improved hatching surface. Patent 1,080,489 covers this part of the invention, which includes means for disconnecting some of the rollers when desired. The other Shute Patent—No. 1,081,870—involves somewhat analo-

Egg Supporting Surface for Incubators, patented Dec. 2, 1913, by James L. Shute, Seattle, Wash. No. 1,080,489.

gous mechanism, but employs a rack bar to engage with the roller gears, or star wheels. A grid is also provided comprising bars spaced immediately over the rollers extending longitudinally of them, in combination with adjacent bars aiding in holding the eggs in a given position in contact with adjacent rollers. The grid holds the eggs in position while being turned.

A novel Thermometer-Holder for Incubators is the invention of William G. Weed, of Stamford, Conn. It comprises a tripod formed by slitting a piece of sheet metal and bending the strips to form legs, leaving a head above the legs.

Thermometer Holder for Incubators, patented Dec. 2, 1913, by William G. Weed, Stamford, Conn. No. 1,080,131.

A carrier is pivoted to the head for engaging the thermometer plate. With this device the thermometer may be placed in any desired position among a batch of eggs. Patent No. 1,080,131.

A Machine for Washing Eggs by means of revolvable brushes has been invented by Elmer B. Cook, of Gilroy, Cal. The usefulness of such a machine where a large number of eggs are handled is obvious. The machine serves the further purpose of conveying the eggs from inlet to outlet of the machine where they are discharged into a receiver at the lower end—for the machine is set on an incline. Three brushes are employed, driven by suitable gears which are actuated by a motor (if available) or otherwise. The brushes all revolve in the same direction. The tufts of bristles are disposed spirally. The tufts rub upon the egg and shift it

Box 82 Winchester, Indiana.

INCUBATOR FREE

If You Make the Best Hatch.

Successful Farming will give to the person making the largest hatch this season an Incubator Free. Write at once for particulars. You are going to hatch just as many chicks as you possibly can anyway, and you may just as well enter your name in Successful Farming's Annual Hatching Contest. You may win back the full price of your New Incubator in cash. It costs nothing to enter the contest and you can use any incubator advertised in Successful Farming (nearly all known makes). Enter your name and later report your hatch as directed. Don't neglect this—write for particulars right away before you buy if possible. Remember it costs nothing.

Successful Farming, : Des Moines, Iowa

toward the opening at the lower end of the machine. Water is supplied to the brushes from a tank positioned above them and which has minute outlet openings over the brushes. The trian-

gular arrangement of the brushes serves to support the egg as it is brushed along and cleansed so that it may emerge perfectly white or brown according as the hen laid it. Patent 1,081,367.

N. P. B. Ellegaard of Petaluma, Cal., has patented a new Fireless Brooder. This brooder has a central chick compartment and a surrounding space for hot sand or other heating medium. The partitions are arranged so that the heat may be supplied to the chicks from above, the effect being the same as if the chicks were brooded by a hen. An adjustable top is provided adapted to be raised and lowered and supported at different elevations in the chick com-

partment—which is circular. Ventilating openings and disinfectants are accessories of the device. Partitions prevent the chicks from crowding and injuring each other. Felt strips depending from the cover of the chick compartment provide an effective hover device, and may be easily removed for renovation. Patent 1,082,116.

A Poultry-Feeder of the exerciser type has been patented by Cyrus W. Zimmer, of New York City. It is operable in part through gravity, and presumably this eliminates a difficulty accompanying some feeders of this sort—that they call for to great an exercise of muscle on the part of hungry hens. A cone and pendulum member are suspended from the mouth of a hopper. The operating pendulum rod is pivotally mounted upon a transverse rod. The swinging movement caused by hens picking on the

WHY FEED CRYS-CO GRIT? 10 REASONS

1. BECAUSE it increases the egg yield considerably, therefore **Your Profits.**

2. BECAUSE it contains **99% Pure Carbonate of Lime** which makes the shells—hard shells which means less loss in shipping.

3. BECAUSE it contains pure silicate grit, giving the hen finer plumage and being cubical in form a perfect grinder, thereby insuring digestion of the food.

4. BECAUSE in **Crys-co** you have a perfect shell producer and grit combined, far superior to oyster shells and ordinary grit.

5. BECAUSE it means economy, as **Crys-co** goes half as far again as shells, as there is no waste, and you need no additional grit.

6. BECAUSE it promotes digestion, keeping the hens healthy, and in a great measure prevents egg eating.

7. BECAUSE it costs no more than ordinary shell or grit

8. BECAUSE it has the hearty endorsement of many of the most prominent fanciers and poultry raisers in the U. S. Men who know (Original letters on file.)

9. BECAUSE you are raising chickens for the results and not for the pleasure only of seeing them around or the work there is in it.

10. BECAUSE as a wide-awake poultry raiser you want better results and in **Crys-co** you will find them. Let us prove it to you.

Therefore buy a sack from your dealer to-day, but look for the trade-mark on a white sack, or write us.

Valuable booklet free.

Current News of the Poultry World

by J. F. Shureman

One of four hens in a pen, in the laying contest at the Aurora (Ill.) poultry show in January, laid two eggs in one day, according to report. The four hens in the pen laid five eggs during the day, so one of the hens must have laid twice.

Edward Corton, who has demonstrated "scientific" poultry picking at several New England poultry shows, established a record at the Derry, N. H., show that will be hard to beat. He killed and picked four birds in 2¾ minutes, and, according to the timers, picked one of them in 20 seconds. This may seem incredible to the farmer who has spent an hour in killing and picking one fowl, but it is scientific methods that count in these days.

"The Southwestern Poultry Mirror" is the name of a new poultry publication launched at Hutchinson, Kan., in January. N. W. Larimore is the editor and Giles E. Miller is business manager. Here's our best wishes—and also our sympathy.

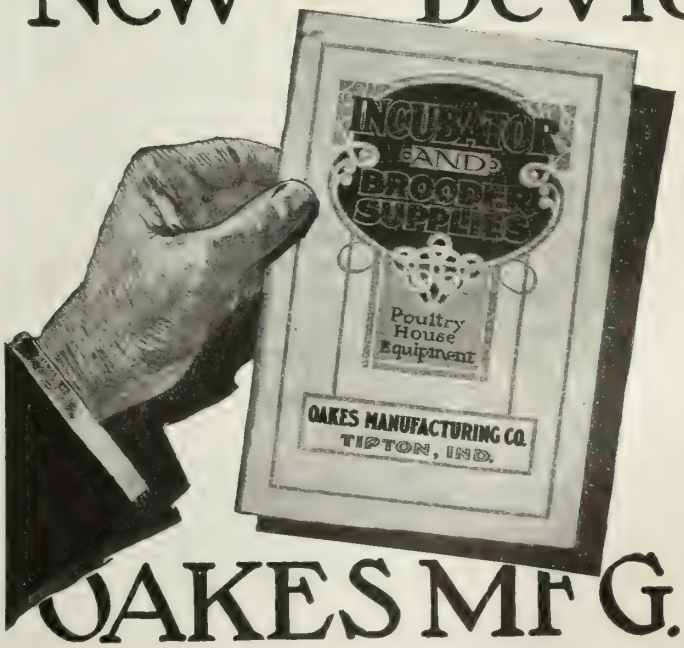
One of the freaks at the recent Chicago Poultry Breeders' Association show was a bird that appeared to be half hen and half rooster, but which has never laid an egg or crowed. The bird has spurs and tail feathers longer than those of the average rooster, but its head and breast are those of a hen.

J. H. Darling, head of the poultry department of the Mansfield, Ohio, reformatory, is the inventor of a scheme that he claims will double the egg product of a flock of hens. His plan is to divide the day of twenty-four hours into halves and make the hen's day twelve hours long, six hours of light and six of darkness. The hencoop is a huge steel box, ventilated and illuminated with electricity. The lighting system is such that "sunrise" and "sunset" come gradually, just as in the longer natural day. Secretary S. T. Campbell, of the A. P. A., had better look after his fellow citizen before the fool-killer gets him.

"Poultry," the magazine that for some seven or eight years has been published at Peotone, Ill., has been purchased by C. M. Walter, of Kalamazoo, Mich., and will be published and issued from that city hereafter. Mr. Walter is a practical poultryman and has had some experience in the publishing field. He will no doubt make a success of his new venture.

What purports to be the nucleus of the "largest poultry breeders' organization in the world" has been launched at Asbury Park, N. J., by J. Robert Livingston and others. It will be known as the "Inter-State Club" and its object is "to bring closer together the poultry fanciers of the entire country." Fifty thousand postal cards have been sent out, soliciting memberships from every section of the United States. The promoters of the enterprise also expect to establish near Wanamassa, N. J., a "permanent school for practical poultry raising on a profitable and scientific basis."

The state of Colorado imports $4,000,000 worth of poultry and eggs annually, but if the increase in the production of these commodities continues as during the past two years, the time is not far distant when the state will be an exporter of poultry and eggs instead of an importer. According to official figures, in 1912 the production of poultry and eggs in that state increased $960,000 over the previous year, and it is conservatively estimated that the production for 1913 was at least $1,000,000 over that of 1912.



At the poultry show in Boyertown, Pa., in January, Elliott Herbine, a Rhode Island Red breeder of Oley, Pa., had a hen on exhibition that was a true Rhode Island Red hen except that she was covered with "hair" instead of feathers, like a Silky. She was a "sport" from Mr. Herbine's flock.

During the year 1913 poultry to the amount of $3,000,000 was shipped from Enid, Okla., to the Eastern markets, a record that puts Enid on the map as a poultry shipping point.

At the annual meeting of the Iowa State Poultry Association at Des Moines in January, a committee was appointed to try to secure an appropriation from the next legislature for the furthering of the poultry industry of the state. By a vote of fifty-two to two it was decided to hold the next state show in Davenport.

As a result of several poultry meetings held near Mountain Grove, Mo., thirty farmers in that vicinity have signed agreements to handle their poultry under the direction of the Missouri State Poultry Experiment Station at Mountain Grove, as an extension department of the

Our Mating List is Free, we will be pleased to send it.

BEULAH FARM

McLEOD BROS. Box A. Stoney Creek, Ontario

You Hatch Healthy Chicks With the Hatchalot

To make money you must have healthy early chicks, plump, vigorous and active, that will grow fast. The 60-Egg Hatchalot Incubator produces just that kind—as large as the shell permits, with husky constitutions.

The Hatchalot gives a *mild,* moist, natural heat because its boiler is so large. Chicks hatched in such heat are always vigorous. The regulator is absolutely dependable.

The 60-Egg Hatchalot Incubator is made of clear cypress—built to last. Year after year it proves first in economy, ease of operation and results. **Price, $7.50.**

Chicks Are Always Healthy Under International Sanitary Hovers

Your chicks must be brooded right, with plenty of fresh air and reliable overhead warmth. International Sanitary Hovers are used on the largest poultry farms because they *keep* chicks healthy. Made of metal, heavily insulated, heat radiated from above. Circular and warmest just inside the curtain, preventing crowding at centre. To set it up, you simply light the lamp and it is ready for use anywhere. Cannot burn, break, or warp. It is the only fresh-air hover. **Price, $8.50.**

You Save Grain and Labor With The 6 in 1 Exerciser Feeder

A large metal hopper on four strong iron legs, makes the fowls exercise for their feed, keeping them healthy and preventing waste of food. Saves labor. Beside grain exerciser, it contains six other compartments for dry mash, beef scraps, charcoal, grit, etc. Makes other feeding devices unnecessary. **Price, 40-quart, $4.75; 20-quart, $3.75.**

COMPLETE CATALOG FREE. Send your name now for our complete catalog, helpful and valuable to *every* poultryman. Ask us for the name of dealer nearest to you.

Hover-Incubator Mfg. Co., Box 511, Browns Mills, N. J.

experiment station. Each farmer agrees to keep an accurate account of expenses and revenue from his flock, and these reports will be used as a basis for a comprehensive report on the value of poultry as a farm side line.

A concrete building with a capacity for nearly 9,000 birds is to be erected in Fort Worth, Texas, for the annual exhibitions of poultry held in connection with the National Feeders' and Breeders' Association. Plans are already under way for the construction of the building.

Arthur R. Coulson, the well-known poultry and feed dealer of San Francisco, Cal., at one time one of the most prominent poultrymen on the Pacific coast, was found guilty of murder in the first degree by a jury in a San Francisco court recently, the jury recommending that the penalty be fixed at life imprisonment. Coulson was charged with the murder of two men in a San Francisco garage last September.

One of the interesting exhibits at the Iowa State show in Des Moines in January was a flock of sixty wild Mallard ducks, the property of F. A. Geneser, of Monroe, Iowa. Two years ago Geneser secured a number of Mallard duck eggs in the swamps of Northern Iowa, took them home and hatched them under hens. Last year he raised a large number and now has the largest flock of domesticated wild ducks in the world.

Frank C. Hare, of the Bureau of Animal Industry, Washington, D. C., formerly of Quincy, Ill., has been assigned to the work of organizing poultry clubs throughout the state of South Carolina, principally among the boys and girls of the state.

A Black Minorca hen owned by Mrs. Grace Roberts, of Pueblo, Colo., is said to hold the world's record for the production of a large egg. This hen laid an egg that weighed exactly five ounces and that was nearly as large as an ostrich egg.

T. F. Puckett, for many years a famous horseman of Kentucky, has purchased a tract of land near Sacramento, Cal., and will engage in the poultry business on a large scale.

A new poultry exhibition building to cover not less than an acre of ground is to be erected in Salt Lake City, Utah. Stock is to be issued at $5.00, par value, no one person to have more than two shares. Members of the Salt Lake County Poultry Association subscribed for 200 shares at a recent meeting of the association. The entire fund for the construction of the building will be raised from the sale of stock.

Canadian poultrymen are going to petition the Dominion Government to pass a bill prohibiting the importation of diseased poultry for breeding purposes.

A Barred Rock hen belonging to Mrs. E. B. Duff, of Worcester, Mass., hatched out sixteen chicks on Christmas morning.

Over a thousand new members were added to the roll of the Rhode Island Red Club of America during 1913.

A. S. Williams, an inmate of the State Hospital for the Insane at Watertown, Ill., during the year 1913 raised 1,300 chickens, 76 geese and 200 ducks.

Feed Me Number 4

and I'll fill your egg basket all winter. It is a scientific fact that Prescription No. 4 contains more egg-making material than a ton of oyster shell and 25 pounds of beef scrap combined. It is the egg maker SUPREME. Make your dealer get it for you.

Prescription No. 4 is par excellence for ducks, and the greatest growth-maker known for young chicks.

Five pounds, $1; 1 pound, 25c, and your money back after using if not satisfied. Circular free. Write today.

NABOB REMEDY CO., Box A, GAMBIER, OHIO

A Colony Brooder

More than Just a Coal Stove

The Newtown Giant Coal-Burning Colony Brooder not only soon earns its cost by cutting down fuel expense 75%, but its

Automatic Coal Feeder holds a 24 to 48 hours' supply of coal, feeds it just as needed, and insures a constant, even fire, easy to control.

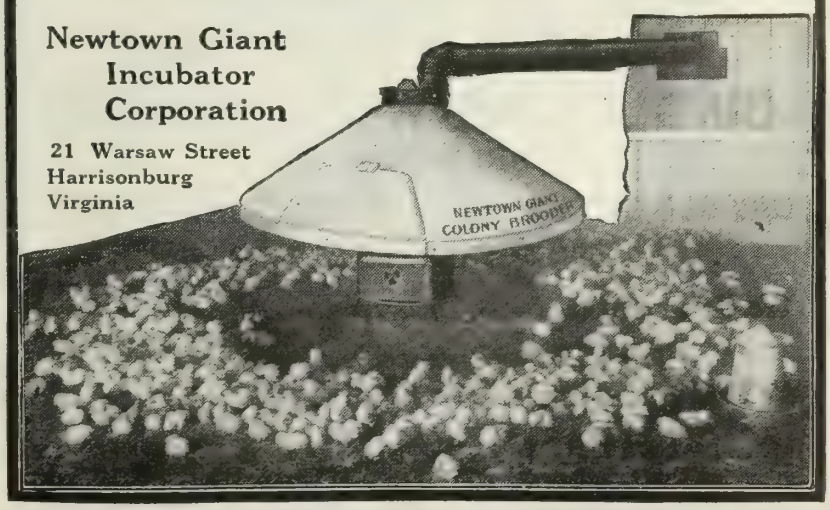
Heat Radiator prevents the heat escaping up the chimney, distributes all of it to the chicks and saves much fuel.

Automatic Temperature Regulator opens and closes the draft by the expansion of a thermostat, placed just above the chicks, and holds the temperature at the right degree all the time without any attention.

Fire proof. No lamp fumes or soot. Can be installed and put to use in barn, colony house, or regular poultry building. Gives solid comfort to the chicks day and night.

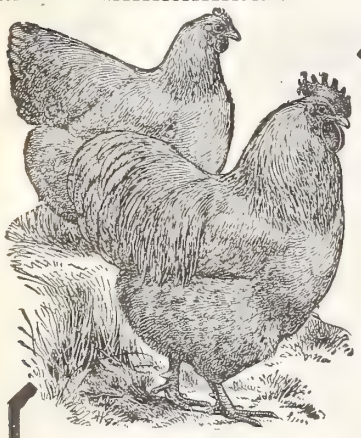
Newtown Giant Colony Brooder

saves worry, time, money and labor. It is practical, simple and dependable. Try it and learn how easily you can grow plenty of good chickens.



This brooder is made in two sizes. The smaller accommodates any number of chicks up to 500; the other, 1,000 to 1,500. The chicks may be brooded in one flock, or divided by low partitions into two or more flocks if desired. Chicks of different ages may thus be brooded at the same time.

The Newtown Coal-Burning, Self-Feeding, Self-Regulating Colony Brooder will insure your success this season.



Ask your dealer for a demonstration, or write today for our Brooder Circular. Mailed free.
We prepay freight if there is no Newtown dealer in your territory.

Here's the Breed for Flesh and Eggs

WE have devoted 10 years to specializing on S. C. Buff Orpingtons and scientifically line-breeding to develop a strain that not only wins the first prizes in the leading poultry shows but also excels in size, fine buff color and as heavy egg producers. Our cockerels make fine, juicy broilers and capons.

Sunswick Farm S. C. Buff Orpingtons

are ideal fowls for the *utility* poultry farm as well as for the poultryman who desires birds that will win for him in the hottest competition at the shows.

Our Record of Winnings at the Big Shows

Sunswick Buff Orpingtons have won the majority of first prizes on this breed at the leading shows each year since 1907. We have 1,000 choice yearling fowls now in stock which will make you fine exhibition or breeding birds.

Eggs for hatching and Day Old Chicks from our choice pens. Prices very reasonable—quality considered. Book your order early.

Write Today for Free Catalog

We have a large, beautiful catalog which will be mailed free to anyone interested in a profitable breed for either exhibition or utility purposes. Send for it today. ***We specialize in S. C. Buff Orpingtons and Buff Orpington Ducks.***

Harbaugh's Black Langshans

Made a Sensational Record at Madison Square Garden, New York, Show, 1914

At this greatest of all shows my birds won an unequalled record of merit from a great quality class. I won: Cock, 4th and 5th; hen, 1st and 5th; cockerels, 1st, 2nd and 5th; pullets, 1st and 3rd; pen, 1st and all Specials.

My Birds Have Won at Philadelphia, Baltimore, Hagerstown, Etc.

for years and have an unapproached record for **winning** and **breeding** quality.

STOCK FOR SALE **EGGS IN SEASON**

Absolute satisfaction assured to all. Circular free.

I also breed ROCKS, MINORCAS and R. I. REDS. **Write me your wants.**

FRANK HARBAUGH Box A MIDDLEBURG, MARYLAND

PEARL "THROW PEARL TO POULTRY AND WATCH RESULTS" GRIT T.O.M.Co. TRADE MARK

Pearl Grit Makes Hens Lay

THEY can't help it. It's full of egg-making ingredients. It furnishes the hen just what she needs—lime for the shell—sulphur and carbohydrates for the egg itself. Makes them lay better in winter as well as summer. It's the best and most economical grit money can buy.

Pearl Grit

Not only makes hens lay—it also keeps them in health. Pearl Grit serves the same purpose in a chicken's gizzard that teeth do in the mouth of a human being. It grinds up the food—aids digestion—makes the bird strong, vigorous, healthy and supplies color for most beautiful plumage.

Pearl Grit is especially valuable to hens during the molting season. It furnishes feather-making material as well as strength to lay and molt at the same time. No shells, lime, magnesium, etc., are necessary when feeding Pearl Grit. It serves a double purpose. Saves time, labor and expense.

We have issued a valuable booklet for poultry raisers. It tells how to cure many of the most common poultry diseases with the most common remedies. Also tells why Pearl Grit is such a practical food. Send for a copy today. A postal will do.

Start Right

Too many chicks are lost through bowel trouble.

Feed your chicks nutritious Milk Substitute and save them.

Blatchford's "Mammoth Chick" Milk Mash

will do the work. Try a bag from your dealer or write us.

Don't take chick chances

Blatchford's Calf Meal Factory
Waukegan, Illinois

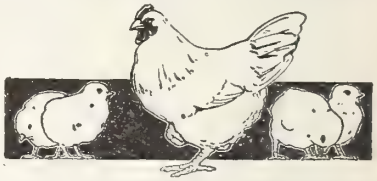
Double Your Egg Yield!

Mr. Poultryman: You want more eggs from your hens. We want to help you. That's the reason we are publishing *"The Golden Egg"* —*to help you.*

This Book Free to You

This book is brimful of information of vital importance to poultrymen.

Feed your hens right—you'll average *200 eggs a year.* *"The Golden Egg"* tells exactly what and how to feed them. Fresh cut bone, prepared in a Humphrey Bone Cutter, makes bone, muscle, feathers and *eggs.* Feed your hens *The Humphrey Way.* Thousands of farmers have tried it out. They've found it means big profits for them.



Just put your name on a post card and request us to send *"The Golden Egg."* Then you've taken the first step on the road to doubling your egg profits. Write *to-day.*

THE HUMPHREY
GREEN BONE and VEGETABLE CUTTER
will save half your feed bills and double egg yield. Guaranteed to cut more bone, in less time, with less labor, than any other. Send for Special Trial Offer and handsome catalogue.

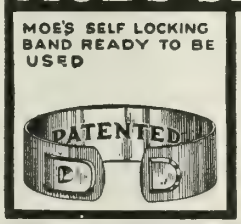
S. C. BLACK ORPINGTONS

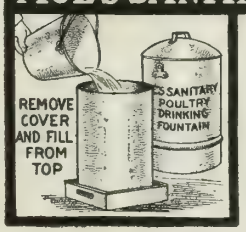
A few nice females and males for show or breeding. Prices reasonable.
EGGS, $4.00 PER 15.

Foster & Johnston, R. R. 7, Fort Wayne, Indiana



MOE'S NEVER FAIL TRAP NEST

(Patent Pending)
A solution of all trap nest troubles—for, as the name implies, it never fails.
Lice-proof, fully sealed back and sides, but affording plenty of air when the hen is trapped. Can be placed anywhere in the poultry house. The trap is easily removed, so that the nest can be used as an ordinary one. Set up and ready for use when shipped.
No. 33, 1 foot square, complete 75c
No. 34, 14 in. square, complete $1



MOE'S SELF LOCKING LEG BAND

(Patented)
You simply push it together to lock it and it can only be removed by destroying the band. A sealed band that requires no sealer.
Every band has its own raised or embossed number.
12 Bands, any size 15c
Liberal Discount on Quantities

MOE'S SANITARY POULTRY DRINKING FOUNTAIN

(Patent)
The most popular fountain on the market. Fills from the top.
Dead air space keeps water cool in summer and from freezing in winter. Drinking pan now made square, which does away with spilling when hung up. Can be used for two pens at the same time. Prevents chickens from getting their wattles wet and freezing in the cold weather. Manufactured in three sizes:
No. 1, 1-gallon capacity - $1.25
No. 2, 2-gallon capacity - $1.75
No. 3, 3-gallon capacity - $2.25

Also specially constructed for ducks and pigeons.

These Are a Few of the Good Things in MOE'S LINE.

Write for complete catalog. If not at your dealer's, write us mentioning dealer's name and we will see that your wants are filled at above prices, your city.

OTIS & MOE, 2011 Otis Bldg., CHICAGO, U. S. A.

Pullets—Alfricha Meadows, 1; Robincrest Farms, 2; Edwin M. Morris, 3.

BUFF WYANDOTTES.

Cocks—W. G. Marshall, 1; W. F. Schultz, 2; Besuden Bros., 3; Stuart A. Howland, 4-5.
Hens—W. G. Marshall, 1-4; Stuart A.

E. B. Thompson's "Imperial Ringlet" Barred Plymouth Rocks

Win the most remarkable record beyond all precedent in Barred Rock history at the imperial and most classic show of all America—Madison Square Garden, New York—winter of 1913, winning as follows:

First, second, sixth and eighth on cockerels.

First and sixth on pullets.

First, second and fifth on exhibition pens.

First on cockerel mated pen.

Second, third, fourth and fifth on cocks.

The Imperial Prize of the show, Sweepstakes special for champion male.

Sweepstakes special for champion female.

Diploma presented by the Amer. Poultry Ass'n for best cockerel.

Sweepstakes cup for best Plymouth Rock hatched in 1912, male or female, any variety.

Challenge silver cup for best exhibition pen.

Special best shaped male.
Special best colored male.
Special best colored female.

Best cock, cockerel, hen and pullet, four best cockerels, four best pullets, $25 special prize, presented by the New York Show for finest display.

All silver cups and cash specials—four times as many first prizes as any competitor.

More first prizes than all competitors combined. More first, regular and special prizes than won by any exhibitor of any breed.

My Exhibit of 56 Birds Was the Best the World Had Ever Seen

No other Barred Rock breeder has ever produced or is producing such matchless quality. Every feather in my exhibit was bred on my farm. My First Prize Champion Cockerel and First Prize Champion Pullet are years ahead of their time. They are the product of the highest skill.

No other Barred Rock breeder has ever accomplished the unprecedented achievement of winning the two greatest prizes in the world, Sweepstakes Champion Male and Sweepstakes Champion Female, at one show in Madison Square Garden. For 26 years at New York my "Ringlet" victories have been complete; my clean sweep of 1ST, 2ND, 3RD, 4TH AND 5TH PRIZES on pullets has never been approached at Madison Square Garden

and stands alone and unequalled. The Imperial "Ringlets" are the standard by which all other Barred Rocks are judged. To meet success in winning prizes you must have my birds and eggs. I will sell you grand exhibition birds for any show, and breeders of this Richest First Prize, New York, blood mated to produce prize winners. Richly illustrated 70-page catalogue upon request. It is full of original pictures of New York winners from life. When writing mention Am. Poultry Journal.

See my ad on back cover page for wonderful 1914 record at New York

E. B. Thompson

Pens—Ira M. Crowther, 1; Wyebrook Farm, 2; Lester Tompkins, 3; United Breeders, 4-5; R. P. Deming, 6.

E. B. Thompson's "Imperial Ringlet" Barred Plymouth Rocks

Are Fashion's Proudest Birds

First Prize Cockerel and Champion Male and First Prize Pullet and Champion Female at Madison Square Garden, New York, 1913

The record of my Barred Rocks at Madison Square Garden, 1913 and 1914—two years in succession—is the Capstone to their unexampled record for twenty-six years. For these achievements see opposite page and back cover page.

You are now thinking about eggs to produce the Silver Cup and Blue Ribbon winners for next season's shows

Think of the great satisfaction of winning prizes on birds you raise with your own hands—from the time the chick first sees daylight until the Blue Ribbon hangs on the coop in the show room. The delight of winning on a bird you owned all its lifetime cannot be described.

My Imperial "Ringlet" Eggs will prove a splendid investment

You may raise a single chick worth twenty times the cost of the eggs—a bird worth hundreds of dollars—hundreds of my customers have done this. Remember, the first prize cockerel or pullet at a great show always comes out of one egg.

The birds in my matings have wondrous beauty of even blue color and narrow, sharp, evenly divided "Ringlet" bars, outside and to the skin. They have fine heads, grand size, majestic shape, stylish carriage, good length bodies and backs of great breadth carried to low, well spread tails; besides they are the richest first prize New York winning blood in the world.

My matings are wonderful in their high quality and blood lines

Barred Rock breeders who visit my farm declare my matings are unequalled. I strongly urge all Barred Rock Fanciers to come and see these matings—they cannot be equalled in all America and I want you to see them—yon need this Imperial "Ringlet" blood and barring to win prizes.

My Eggs are the best that money can buy—They produce first prize birds

To produce the finest first prize show birds demands ths highest degree of expert knowledge—My birds are mated by my own hand.

Cockerel from "Ringlet" Eggs wins 6 first prizes

Mr. E. B. Thompson, Madoc, Ont., April 1, 1913
Dear Sir:—
Kindly quote prices on one setting of eggs from your best cockerel mating pen. Out of the last eggs I got from you I raised a male bird that won 6 first prizes last year. He has never been beaten.
Truly yours, A. H. Watson

I Will Help You to GREATER SUCCESS and LARGER PROFITS

Richly illustrated 70-page catalogue upon request.

EGGS from the finest Exhibition Matings in the World, $10.00 per setting; four settings $35.00; one hundred eggs $60.00.

E. B. Thompson

Lock Box 510, Amenia, N. Y.

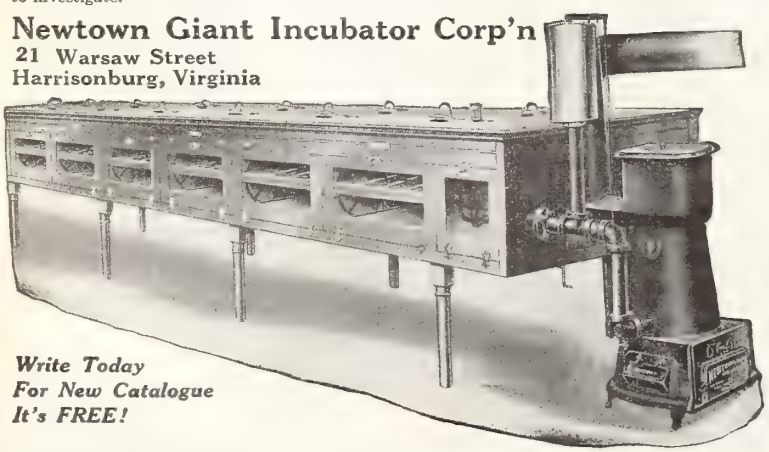
C. A. KEEFER (A J 5) MUSKEGON, MICHIGAN

Real Safety for Your Eggs

Hatching eggs are worth good money. Time is valuable during the hatching season. It is not necessary to "take a chance," to risk the loss of either. The Newtown Giant Incubator is equipped with five automatic safeguards against "off temperature." These form the most effective system of temperature control and positively prevent chilling and overheating of eggs. On no other incubator can you find so many dependable appliances to perform this important work as on the



NEWTOWN GIANT INCUBATOR

The Automatic Coal Feeder supplies fuel at all times in exactly the necessary quantity. This insures a steady, even fire.
The Automatic Regulator on the heater controls all drafts through the action of a float in the expansion tank.
The Automatic Temperature Regulator on each compartment maintains any desired temperature in that compartment.
The Temperature Indicator above the machine registers the exact temperature and calls attention to any variation.
The Automatic Electric Alarm rings a bell in any part of poultry plant or dwelling if the temperature approaches the danger point.

Other Exclusive Features

But temperature control, important as it is, is only one reason why the Newtown Giant Incubator deserves your consideration. The time-saving ONE-MINUTE EGG-TRAYS TURNER, the SINGLE AND DOUBLE DECK CONSTRUCTION, the AUTOMATIC REGULATORS OF MOISTURE AND VENTILATION, are all valuable and exclusive features.
This machine hatches the largest, heaviest, strongest chicks ever produced by artificial methods. Guess-work has been eliminated—certainty of results takes its place. You owe it to yourself to investigate.

H.W. JOHNS-MANVILLE CO., New York and All Large Cities

Don't Feed Green Food!

Do away with the bother by using

Succulenta Tablets

They are better and cheaper and more relished by all fowl. Simply dissolve one tablet in one quart drinking water for fowl. Sample can (100 large tablets) by mail 60c. Can of 250 large tablets by mail $1.00. YOUR MONEY BACK IF NOT SATISFIED. Drop postal for particulars to The Succulenta Co., P. O. Box 405- 1, Newark, N. J.

SMALL FRUITS

Bring Quick Money

There's big and *quick* money in Strawberries and in all Small Fruits. You don't have to wait long years to reap your harvest. We are headquarters for Summer and Fall Bearing Strawberry Plants, Raspberries, Blackberries, Gooseberries, Currants, Grapes, Fruit Trees, Roses, Ornamental Shrubs, Eggs for Hatching, Crates, Baskets, Seed Potatoes, etc. Best varieties at the lowest prices. 30 years' experience. *Our free catalogue contains valuable information. Write today.*

L. J. FARMER, Box 436, Pulaski, New York

FEED

More Phosphorus and Less Protein!

"Hen-o-la" Dry Mash

Fed in conjunction with

"Hen-e-ta" and "Succulenta"

Requires Absolutely Nothing Else

Because the three make a *complete balanced ration*, rich in phosphorus.

The Lack of Stamina and Vitality

In the birds is the cause of 95% of the failures in the poultry business. Therefore see to it that you are one of the successful 5% this year by putting your birds on this economical scientific *horse sense* system that *produces* Stamina and Vitality; convince yourself by giving it a thorough trial.

Let us send you report from a leading experiment station that has fed 31,500 lbs. "Hen-e-ta" during the past four years, and is still feeding same.

The above system makes poultry-keeping wonderfully simple and cheap.

If your dealer will not supply you, please write us for full information and prices on "Hen-e-ta," "Hen-o-la" Dry Mash and "Succulenta" tablets—green food substitute.

Valuable Booklets Free

If you will give us your dealer's name and address.

WM. CREDE — 670 Slade Ave. — ELGIN, ILLINOIS

Single Comb Rhode Island Reds

By Traveling Shoe Salesman, after 5 years' careful reading and experimenting with chickens. To start with, we procured the finest prize winners possible and have always enjoyed the highest standard in color, shape and size, but to get a large flock of hens that would all lay eggs up to a perfect specific gravity and hatch a perfect, strong and healthy chick was no small matter. This has finally been accomplished, and it gives me pleasure to offer for sale this season the finest eggs for hatching possible for skill to produce. Price per setting, 15 eggs, $2.50; price per hundred quoted on application; 25 fine young Cockerels, $3.00 to $5.00 each.

Ideal Coal Stove Brooder

Send For Our Free Booklet

Describing the Ideal Coal Stove Brooder. Price $17, with Automatic Regulator $22.

Save money in raising chicks.

The Ideal Coal Stove Brooder heats poultry houses and broods large flocks, gives 97 per cent efficiency, in some cases as high as 99 per cent; no other system can equal these results. Coal burning and self regulating. Economical, safe and far superior to oil burners. No coal gas, no fumes. Small and large farms are using the Ideal with success. Investigate at once by sending for booklet—"The Merits, Economy and Effectiveness of the One Best Brooder."

The fire pot of the Ideal is the largest; will contain more coal and distribute more heat than any other make of Brooder.

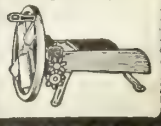
The 3 GREAT EGG MAKERS THAT PAY FOR THEMSELVES IN A YEAR.



CROWN BONE CUTTER $6.50 Has hardened steel knives. Price, like picture, $8.50; for bolting to table, $6.50. For larger sizes see our Book

Unless fed plenty of FRESHLY CUT GREEN BONE, with the meat and grissle still sticking to the bones as you get them sweet from the butcher, and CUT CLOVER, hens can't lay as many eggs as they should. The bone must be freshly cut or it's tainted, and spoils the eggs, and often poisons hens. Clover must be cut into short lengths, or most of it is wasted, and what is eaten is fibry and often clogs the crop. If you don't give hens lots of ground SHELL and GRIT they can't digest properly nor get out of food what they must have to make eggs.

Don't depend on buying cut bone because you can't get it fresh, and dry bone and meat scrap are poor substitutes. The only satisfactory and profitable way is to own these three splendid machines. They 're not expensive, are easy running, not complicated, and built to last a life-time.

GEM CLOVER CUTTER $9 Cuts green or dry clover even and easy. Screw feed & adjustable cutter bar. Blades always square to bar. Price, like picture $9; high legs, $10.

WILSON BROS. BONE CUTTERS, CLOVER CUTTERS & GRINDING MILLS

GRINDING MILL $5 Best hand mill for grinding easily, quickly, Dry Bones, Shells, Grit, Charcoal, Corn, Wheat, etc. Price with Stand, $7; like picture $5. Larger sizes, hand and power.

WRITE FOR FREE BOOK

DON'T KEEP HENS UNLESS YOU CAN OWN THESE MACHINES

They won't pay you well enough for eggs or table. Keep a record of results and you 'll soon prove that these machines will pay for themselves in a year.

Handled by nearly all dealers and hardware stores, or shipped direct. Write for our prices on all sizes — hand and power.

Do your neighbor's cutting and make money. We also make the CORNING FEED MIXER, the best mash and grain mixer in the World. Every Wilson machine is absolutely guaranteed. Write to-day for FREE BOOK & Price List.

WILSON BROS. DEPT. F 25 EASTON, PA.

Pacific Coast Department

Conducted by H. H. Collier, Tacoma, Washington.

THE twentieth annual show of the Tacoma Poultry Association is a matter of history, but it will go down as one of the best ever attempted in the Northwest. By actual count there were two thousand and fifteen entries, one hundred and sixty-two exhibitors. The largest class of the show was White Wyandottes, with 174 fowls. White Leghorns was a warm class, with 139; Barred Rocks, 145; Buff Rocks, 74, and Anconas, with 122 entered. James A. Tucker, of Concord, Mich., placed the awards and he gave the best of satisfaction.

President Fred A. Johnson, of the Tacoma Poultry Association is the man we picture this month. We thought it a good idea to go from coast judges to breeders for a while and fixed on Fred Johnson for the simple reason that he has won more premiums in poultry shows than any man on the Pacific coast. Fred joined the Tacoma Poultry Association at its second annual show, and since that time he has been an active member in every sense of the word. For years Fred has shown more fowls than any other exhibitor, and he has filled nearly every office in the association from president to a member of the executive committee. In fact, I can not remember the year that he was not on the list of officers.

Mr. Johnson came to Washington from the woods of Minnesota. He was born in Norway and always had a fondness for poultry. The first birds Fred ever owned were hatched under a crow. He had no setting hen, so he made an old black crow do the work. From early childhood Mr. Johnson has had a mania for chickens. He would rather breed poultry than do anything else, and when it came to breeding good ones, ask "Jimmie" Tucker and he will tell you that he has given Fred more prizes than any other one exhibitor on the coast. Fred has never been in a sense a specialty breeder. He has bred most all kinds. He began with Single Comb Brown Leghorns and is breeding them today, but he carries several other breeds and has made good in several varieties. Mr. Johnson is not a poultry farmer in the sense that he owns a big farm, but he is more of a town lot fancier. In the early days of Tacoma, he bought a small place in the south end of Tacoma. Near this place there was a lot of state school lands. These lands were donated to the school fund when Washington became a state by the United States government. From a small start in land Mr. Johnson's property grew. He soon found that his first holdings were not large enough to yard his poultry, so when the state decided to sell the school land Fred bought quite a nice little chunk. These lands sold for very small prices and one had ten years within which to pay for them. Long before the payments all came due, Fred had his lands covered with fowls, and then people began to buy all around him, and the first thing he knew he was worth a bunch of money that he never dreamed of making out of the chicken business. He credits his prosperity to his fowls and I think rightly so. If he had not bred chickens he would not have had any use for the land, therefore he would not have bought. Buying these lands made it possible for him to give up the poultry business had he so desired, but today he is more of a chicken fancier than ever, which goes to show that prosperity has never ruined a good poultryman.

FRED A. JOHNSON
President Tacoma Poultry Association
Tacoma, Washington

Mr. Johnson is a man of family and has four fine boys and one daughter. His second son is now a member of the firm and the way they grow Brown Leghorns is an eye-opener to everyone that meets them in the show room.

The market for eggs has kept steadily up since the last of September, despite the fact that the commission men were ready to break the market at the first opportunity. Friday a week ago eggs wholesale brought 40 cents per dozen, but we find them Saturday, January 10, at 36 cents, with a chance for them to go a little lower. Eggs will rule low now until the hatching season begins, and then look out for a higher price.

If you intend to have early broilers this spring you should get busy and set your eggs not later than the first of February. Few people will have setting hens so early, but a good incubator will do the work. The man who can get out chicks the last of February in the weight breeds, such as Plymouth Rocks, Wyandottes, Orpingtons and Rhode Island Reds, can hope to have layers next fall when eggs are high. It is the pullet that will lay in October and November that will bring the 50 cents price for eggs. Last season we went on a small ranch where everything had to be built from the raw land up. Having no house where an incubator could be run I decided to set hens. I first built a setting coop. This coop was built as follows: I made a lean-to shed, two feet wide and twelve

BLUE RIBBON POULTRY FARM

CLEAN SWEEP AT ST. LOUIS

Showing at both shows the same week in the one city, we won 9 Firsts and 8 Seconds out of a possible 10 in each class. This record has **never been equalled** in Black Orpington history.

BLUE RIBBON STRAIN

is acknowledged by all to be the best, not only for exhibition, but for egg production and table use. The **Greatest Winter Layers** known. Pens now mated for egg trade. Show birds for any show. Breeding stock in any quantity. Catalogue and Egg circular free.

Blue Ribbon Poultry Farm -:- Box A -:- Columbus, Indiana
BLACK ORPINGTON SPECIALISTS

feet long, divided into compartments of eighteen inches wide by two feet deep. The front of the lean-to was made two feet high and fourteen inches high in the back. I used one twelve-inch board and one two-by-four-inch board for the back, nailing this onto the partitions. For the front, used one twelve-inch board at the top and left the bottom of the front open and fitted twelve-inch boards in front of each nest. These boards or doors were hinged from the top with leather straps. On each door there was a cord tied and this was tied when the doors were up and untied and the doors let down at nights when the hens were on the nest. For the floor the earth was used. A nest was scooped out in the ground and oat straw was used for the litter in the nest.

For a top to this house, three twelve-feet 1x12 boards were nailed together, making a good solid top. Over the top tarred paper was used for roofing. The top was hinged on the front of the coop so that it could be raised up from the back.

In front of this row of rests, runs eighteen inches wide by two feet long were made. These partitions were made of twelve-inch boards; on top of these boards were nailed two-by-four boards. This gave a runway eighteen inches wide by four feet long. For a top a frame was made the whole length of the run (four feet wide by twelve feet long). This top was hinged on the runways so that it could be easily lifted. These runs were made separate from the coops. It could be pushed away or closed up, just as one desired. My idea for building it thus was to be able to clean up the runs by raking them after pulling the runways away from the nest proper. In the front of each runway I used a tin can for a water vessel. This I nailed to the side of the partitions. This made it easy to go along and fill the water cans. The feed for the hens was put in these runways each morning and fresh water given. The little doors were raised and each hen could come off, eat and drink or dust without disturbing the other setters. In this nest one hatch, where eight hens hatched the same day on thirteen eggs each, resulted in eighty-eight chickens, or an average of nearly eleven chicks to the hen. This I considered fine, and the fact that no hen could disturb another saved many eggs from being broken.

By going all around the neighborhood and telling each neighbor that I wanted setting hens I was able to get all I could use; in fact, in the latter part of the spring I could not use all that was offered. I built another setting house similar to the one above described, and had the best season and the most healthful fowls that I ever raised.

As each hen hatched I doubled up the chicks. Each hen was given an average of twenty chicks. Ordinarily that is too many, but if one would work it the same as I did they would find their chickens doing well. For brood coops I took two pieces of one-by-twelve five feet long, two pieces of one-by-twelve two feet long, and made this into a box. Then one piece one-by-twelve two feet long was sawed diagonally across. This gave me two slanting pieces twelve inches at one end and about a sixteenth at the other. These two pieces were nailed on the long boards upright, with the wide end at the front. At the front there was a two-foot piece twelve inches wide, nailed so as to make the front of the coop proper. For a top, three pieces of twelve-inch stuff were nailed together and batterned over the cracks to prevent them leaking, the top being three feet long. The cleats were nailed on the underside so that they would hold against the top and bottom (front or back) of the coop. This gave me a brood coop two-by-two feet, with a cover over it, and in front I had an open runway of two-by-three feet. Over this open runway I put a frame on hinges. I hinged it to the brood coop proper so that it could be easily raised.

In front of the coop or hover a one-by-four piece was used, this being two feet long. In the center of the brood coop a

Carver's Imported Royal Red Sussex won at Chicago 4 FIRSTS

NORWICH AUTOMATIC EXERCISERS AND FEEDERS

Are guaranteed rat, rain and sparrow-proof. They will reduce your feed bills 25 per cent; your labor to practically nothing; they will improve the condition of your flock and thus increase the egg production. They will pay for themselves in ninety days in feed alone. Send today for free booklet explaining our thirty days' trial offer. WHITE ORPINGTONS

Remember that

Russell Cave White Orpingtons

Layed more eggs than any other pen of Orpingtons, all varieties competing, at the Missouri National Egg-laying contest, besides winning the cup for the greatest number of eggs during the month of February, against all breeds.

My winnings this year are as follows: The Great Hagerstown Fair, 1st and 3d hen, 1st and 2d cockerel, 1st and 3d pullet, 1st pen—no cock shown—special for the best hen in the show. Augusta Poultry Show: 1st and 2d hen, 1st and 2d cockerel, 3d, 4th and 5th pullet, 1st pen and specials. **Cocks, Hens and Pullets at $5 and up. Express prepaid. Satisfaction guaranteed.**

Russell Cave Poultry Yards, Add. Louis Lee Haggin, Prop., P. O. Box 1025, Lexington, Ky.

big round nest was scooped out in the ground and oat straw was thatched around the sides and bottom up to about four inches. This gave the little chicks a good soft place to rest and at the same time kept in all of the heat that the mother hen might produce. In other words, the mother hen was used in the same way that the ordinary hover is used. She was down so that all of heat was kept in this enclosure, and even if the little chicks were not all under her at the same time, they could go under and push some other chick out when they got chilly. This brooder worked the best of any I ever used, and the deaths among my chicks was the smallest I ever had. In fact, these mother hens did so well that my wife is now convinced that the hen is the best mother after all.

After the little chick got used to the quarters a brick was put under the corner of the coop and the chicks were allowed to go where they would, but the hen was kept in this enclosure at all times. We have a lot of rain on Puget Sound, but with this kind of coop you can raise chicks out doors throughout the year. Even in the cold rainy mornings of last spring one would find these hearty little chicks going everywhere, and they did not give any more trouble kept this way than they would have been had one a hundred in a brooder.

Where one can not get hens he should buy an incubator and if he expects to breed any great number of fowls the incubator and brooder will be better and cheaper to handle, but for a few chicks nothing will beat the old mother hen, either for hatching or as mothers.

In Tacoma we have a butcher by the name of Siegel. He is a man that stands well in the community and sells a lot of poultry products in the course of a year. Mr. Siegel is a German and sometimes mighty plain spoken. He is a fancier of Black Minorcas and a good solid member of the Tacoma Poultry Association. Just before Christmas I was in Mr. Siegel's market. I heard him talking turkey to the different ladies that came in. One lady said, "What are turkeys worth?" Mr. Siegel said, "This lot is worth 32½ cents per pound; this lot is worth 30 cents; these, 25; the next lot 20; over there we have some at 18 cents, and if they don't please you in price, we have some in the back room that we will give you for nothing." Having raised my turkeys this year I did not take much interest in the prices asked, but could not help asking questions when I heard Mr. Siegel say that he would give a turkey for nothing. Mr. Siegel said:

"Those 32½-cent turkeys are fine prime stuff, home grown and perfectly fresh. After you leave that lot, the next are poorly fed, immature specimens that have not had the care and have not been gotten ready for a decent market. The other turkeys are from cold storage. The ones that I will give away are so bad that I would not have the heart to take money for them, yet I know that they are being daily served in the restaurants.

"Harry, if you poultrymen would get together and get a law passed that would not allow cold storage men to put fowls in cold storage without they were first drawn, you would have the business 'yinced.'" I did not know what Mr. Siegel meant by being "yinced," but I was soon convinced from what he showed me that a fowl would not stand up in cold storage if it was first drawn before being frozen. I talked turkey with Mr. Siegel for some time. He said that those breeding America's greatest fowl should get busy and get a cold storage law. That all turkeys came to maturity just before the holidays and that there was no reason why turkeys should be kept in storage for over six weeks. There are few cold storage plants here in Washington. We do not produce enough poultry or eggs to make a cold storage business a very large affair. Prices of eggs or poultry seldom go low enough to warrant people putting fowls or eggs in cold storage, but on the other hand nothing

BIRD'S PARTRIDGE ROCKS

Win all Firsts Competed for at the Great Chicago and New York Shows, Dec. 1913

The above record in hot competition is the greatest ever made in the history of the breed. Every winner from our own yards.
The grandest exhibition and breeding birds for sale. Our strain will win you prizes and make money for you. Get our catalog containing details of our wonderful prize records, etc. **EGGS** from America's Undisputed Champions at **$10 per 15.**

GIANT BRONZE TURKEYS

Again they Gobble, Gobble, Gobble, "The World's Champion Bronze"

At Madison Square Garden, December, 1913, in the hottest competition, our turkeys made their greatest record by winning 20 of the 25 prizes, including all the firsts. Every winner from our own yards except fourth cockerel. We will please you with the the best exhibition and breeding birds at right prices. Satisfaction or your money back. Write wants. Eggs in season.

CLOSE-TO-NATURE OPEN AIR HOVER—The Longest Portable Hover Ever Made

Applies the three Close-To-Nature principles:—(1) **Contact Warmth**—the chicks nestle against a warm body as with the hen: (2) **Open Air Ventilation**—fresh temperate air, not hot air like in hot air brooders: (3) **No Piling or Over-crowding**—chicks in narrow long rows.
Combines the **Fireless** with the **Lamp**—use the lamp for very young chicks and discard it as they grow older; use it in the day time when chicks are running out but extinguish it when the chicks cluster for the night.
Nothing like these hovers and brooders now on the market. Get full information and very low prices.

CLOSE-TO-NATURE COMPANY **38 FRONT STREET** **COLFAX, IOWA**

"ROYAL—FIRST PRIZE PEN ADULT S.C.R.I. REDS CHICAGO SHOW DEC. 1913. BRED AND OWNED BY F.E. HARRISON MENOMINEE MICHIGAN.—REDS"

Harrison's "Royal Reds" were very much in evidence among the winners at the recent Chicago show. Last year "Royal Reds" won the display on single combs, and those who follow the winnings closely will remember the great amount of favorable comment that was made regarding first, second and third prize pullets. This year Mr. Harrison succeeded in repeating his wonderful win by capturing first, second, third and fourth prizes in the pullet class. They were four good ones of the proper shade of color and carried the earmarks of the "Royal Red Strain." We have personal knowledge of a case where a customer purchased a pullet from Mr. Harrison and succeeded in raising from her enough good ones to win first pen and first pullet at one of the best shows held this season. —A. O. Schilling.

affects our winter prices as much as the cold storage products that are shipped into the Northwest by the middle West cold storage plants. If there was a law in Washington forcing all cold storage people to so label their eggs and poultry, then winter eggs and poultry fresh from the farm would bring much better prices. There was a law offered at the late session of the legislature defining cold storage eggs, but it failed to pass the house after passing the senate. The poultrymen of the state will have another chance to get that law this fall. There will be a general election; at all general elections the people can initiate laws. There is a movement on foot to offer such a law to the people this fall. At a meeting of the American Poultry Association held in Spokane, a committee was appointed to bring up such a law. The chairman of that committee is H. J. Shepherd, of Spokane.

The annual meeting of the American Poultry Association, Washington Branch, was held at Spokane the 26th of December. There were a good many in attendance and quite a little enthusiasm shown. A committee was appointed from the branch on a show circuit. It was the sense of the meeting that the show circuit commence in November and wind up in February. The object being to keep a continuous interest in pure-bred poultry from the late fall to early spring. It was the opinion of many that if the shows came on a circuit in this way the poultry papers would be able to give more publicity to the show, print better reports of the awards, and all exhibitions would get more entries and the attendance would be larger for the reason there would be no conflicting dates. This committee was instructed to write to all of the secretaries of associations who are members of the branch and ask for their dates. Once these dates are fixed, to advertise the circuit in all of the poultry papers.

If every secretary of a poultry show in Washington will write to Harry H. Collier and give their dates for 1914-15, it would be a big help to the committee. Oregon and Idaho will appoint a committee on circuit to confer with the Washington committee. C. F. Williams, of Salem, Ore., and R. G. Bailey, of Lewiston, Idaho, represented their states at the Washington branch meeting. The joint committees will meet soon and fix dates for the next winter's shows. Some cities have already claimed dates as follows:

Tacoma, the week following Christmas.

North Yakima, second week in January.

Walla Walla, third week in January.

Spokane, third week in December.

Skagit County, second week in December.

Portland, Ore., first week in December.

Seattle is holding its show this year the third week in January. At the present writing I have not learned what week Seattle will take. The show that makes the big success another year will be the one that is held the second week in November. The reason why this week is so good is the fact that a lot of breeders get out birds for the fairs and the city that will take the second week in November will get all of these early birds in fine bloom. The December and January shows come too late to show the fall fair birds, yet there are a big bunch of them.

LONGFIELD R.C. REDS AT THE GREAT CHICAGO COLISEUM SHOW, DECEMBER, 1913

Won 1 Cock; 1, 3 Hen; 1 Old Pen; 3 Young Pen; 5 Pullet; Gold Watch for best display; $10 cash for best mated pen; also shape and color specials on First Hen. In addition to our winnings, W. L. McMillen, who breeds our strain in its purity, won 1 Pullet; 2 Hen and 3 Cock. **Longfield Reds will win for you.** In the past 3 years at this great show we have won 8 firsts (4 times as many as any competitor). Write for illustrated mating list.

LONGFIELD POULTRY FARM BOX 321 BLUFFTON, INDIANA

Do You Know That Kennedy's Improved Champion Strain SILVER and GOLDEN CAMPINES

"The fowls with a character all their own" are the aristocrats of the show room in America. They have won the blue and red in the hands of my many customers at every show of note, such as New York, Boston, Baltimore, Philadelphia, Buffalo, Cleveland, Chicago, Los Angeles, Atlanta, Allentown, Hagerstown, Syracuse, as well as from coast to coast in Canada. Write me your wishes. I do not exhibit myself, so can fix you up right for any show. Send for **Campinology**, "the story of the living egg machines." Ten cents is appreciated.

Special. If you contemplate purchasing eggs for hatching, remember I make a specialty of supplying same from the grandest birds, that are properly mated for best results, and they will unquestionably produce winners.

J. FRED N. KENNEDY, Box F, Birch Cliff, Ont., Can.

Fairfield White Rocks to the Front

At the Great Baltimore, Md. Show, January, 1914

In competition with the best North and South I won **Special for Best Display. Color Male and Female Specials,** also **Cock 1, Hen 1-5, Cockerels 2-5, Pullets 2-3,** Exhibition **Pen 1.** I also won **Gold Special** for 2 best males and 4 females. This is one of the best classes ever shown. **At the Great Allentown, Pa. Fair,** Sept. 1913, I won Cock 1, Hen 5, Cockerel 1-4, Pullet 2, Pen 2. **At Bridgeton, N. J.,** Cock 1-2-4, Hen 1-2-3, Cockerel 1-2-3, Pullet 1-2-3, Pen 1. Best Display in American Class, Special for best female in Show, Etc. These records prove dependable quality.

Winners at the Iowa and Illinois State Fairs; also at the Chicago Show and Iowa State Show. Won second old pen, second young pen, and second best display in the hottest class ever shown in this great show. **A very desirable lot of breeding and exhibition stock for sale.** Write for our mating list describing our 1914 matings.

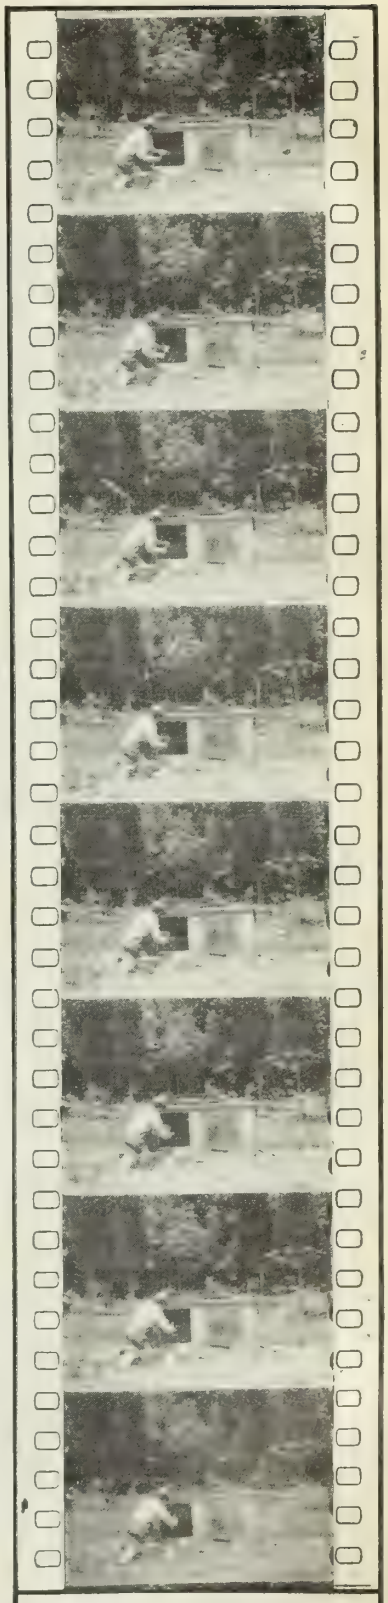
IOWANA FARMS POULTRY DEPARTMENT
DR. BRYANT SMITH, MGR. :: BOX S, DAVENPORT, IA.

Poultry work views direct from Uncle Sam's moving picture films.

UNITED STATES GOVERNMENT POULTRY MOVIES.

Practical, Modern, Educational Work Being Done by the United States Department of Agriculture — Governmental Experimental Farm at Beltsville, Maryland, Is a Busy Place.

By Prince T. Woods, M. D.



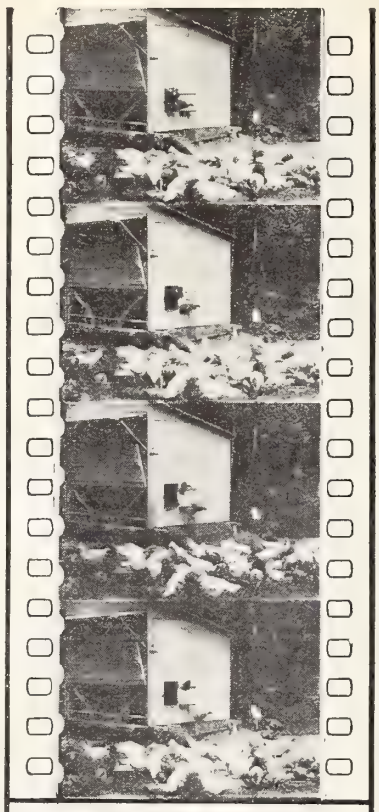
OUR Uncle Sam secured a real "live wire" in poultry work when he captured Harry M. Lamon, senior animal husbandman in poultry investigations, Bureau of Animal Husbandry. Mr. Lamon is primarily a fancier, he was thoroughly well inoculated with the fancy before he developed much practical interest in utility poultry and his interest in Standard-bred poultry is going to prove a valuable asset to the department of poultry investigations of the United States Department of Agriculture and a benefit to poultrymen generally.

Much has been done at the Government Poultry Experimental Farm, Beltsville, Md., since we visited the farm less than a year and a half ago, and there is much more doing. Harry M. Lamon and his able assistants have been busy, very busy, and along practical lines. They are not only busy with experimental work at the farm, gathering material for poultry instruction work, but are busy with lecture work and getting farmers and farmers' wives, sons and daughters together for instruction work in poultry husbandry and for effective cooperation.

On the experimental farm there are some fine flocks of the leading popular varieties of Standard-bred poultry, and bye and bye our Uncle Sam will have some of the best well-bred poultry in the land. The utility side of the business is being given due measure of attention, too. It is a good work, well begun; but it is only a beginning and we doubt if the workers themselves appreciate what a big work the department of poultry investigations is destined to ultimately accomplish. At the present time the work is only in the embryonic stage, but it is a mighty promising and healthy embryo. Already big strides forward have been made.

During the past year a good deal of time has been devoted to making films for moving pictures. Uncle Sam has very properly decided that the movies are going to prove exceedingly valuable for instruction work in poultry husbandry. Many moving picture lectures on poultry work have already been given and have been wonderfully well received. The audiences pack the lecture halls and talk about the poultry movies for months afterwards. The moving picture indelibly stamps its lesson in the brains of the audience, they are keyed up to the lesson throughout the "picture show." As the pictures from the films are thrown on the screen the lecturers explain the lesson, but the pictures tell the story. The audience is personally conducted through the various stages of poultry work and gets a lasting and helpful impression. It is ages ahead of the old-time lecture droned out to an audience that was half asleep and the other half largely inattentive. There is no going to sleep at our Uncle Sam's poultry moving picture shows—everybody is wide awake and eager for more.

The past season has been a busy one in film making. Uncle Sam now has



Poultry work views direct from Uncle Sam's moving picture films.

films that already cover a wide field in practical poultry instruction work. The moving pictures begin with the cleaning and disinfection of the poultry house. The audience sees it done and is told all about it. Then comes gathering and sorting eggs, all phases of handling of eggs during incubation and the care of chicks, both by natural and artificial means, to the minutest detail. One film shows the embryology of the chick in all its wonderful detail—the growth of the embryo chick is shown from the first day up to and including the twenty-first day. The pictures are good and have received very favorable comment. Besides the inestimable value of these pictures of the development of the chick in teaching embryology, there is a great object lesson for farmers and others showing just what takes place in eggs when they are held in warm weather. As we said before, it is a good work well begun.

Of course the poultry movies are a new departure, and there is much yet to be done. It is only a beginning of a great educational work and it has proved a very successful beginning. Our Uncle Samuel is to be heartily congratulated on his work and on his workers. A few of them are young, but they will outgrow it, and they are very promising youngsters; the "deadwood" has been pretty well weeded out.

Just now the instruction work is largely in line with that of small plants and farm poultry. It will be a big undertaking and a good work to better small plant and farm poultry conditions. Most farm flocks will stand a lot of improvement. But, although this work may begin with farm poultry, it isn't going to stop there. In the years to come, when our Uncle Samuel and his helpers get deep into the problem of feeding the people, farmers and others are going to be taught to specialize more. Whatever a man can do best he will be helped to do. Whatever a farm will produce best will become that farm's specialty. We are not going to dabble along indefinitely with poultry as a side issue on the farm. It has been a farm side issue almost long enough. In the years to come the side issue farm poultry will be only a small flock of fifty or more well-bred fowls, designed primarily to supply the farm home table with eggs and poultry. The farmer will be busy with other things more to his liking; he will be working his particular specialty to the limit of its capacity and he will cease trying to spread himself out thin over a multitude of "side lines on the farm."

Poultry work views direct from Uncle Sam's moving picture films.

Some men who are especially well fitted for and interested in poultry work will specialize in the various branches. We will have big hatching plants, big rearing plants, big market chicken farms, egg farms, and so on all along the line. The poultry movies are going to create and stimulate interest in specialized poultry husbandry and we are certain to have moving pictures covering specialty poultry work for the education of students of poultry husbandry. Our Department of Agriculture specialists will ultimately become vocationists and promoters of specialty work on the farm. They will be able to show the students and beginners what specialty they are best fitted for, to help them to develop themselves and to get them located suitably. Efficiency in all branches of the work will be demanded and recognized. The round pegs will be fitted into the round holes and the square pegs into the square holes.

It is a great work, this, that Husbandman Lamon and his associates have begun. We hope that this administration, and each succeeding administration, will help the good work along. A good deal has been accomplished in one or two years, but it is as nothing to what can be accomplished in the next ten or a dozen years, if we all work for progress and development.

With this article are shown illustrations taken direct from Uncle Sam's moving picture films.

Wysocki's Silver Campines

Winners at Chicago, Jan. 1914, 1st Pen, 2nd Cockerel, 2nd and 5th Pullet. Eggs and day old chicks at reasonable prices. Mating list upon request.

JAMES S. MILES & SON -:- -:- PETERSBURG, ILLINOIS

The Latest Improved Brooder Stove

Here's the stove that is meeting with enthusiastic approval of breeders everywhere. The stove that incorporates **ALL the features essential** for successful and economical Colony Brooding—that is **absolutely reliable** under any and all weather conditions—that **will not smoke or throw off fumes.** The stove with a regulator that controls the flow of oil under any possible emergency and keeps the temperature where it should be. **The stove that ventilates** as well as heats your brooder house. The stove that positively eliminates White Diarrhoea. Use a

Duplex Combined Brooder Stove and Ventilator

Three Sizes

50 to 300 Chicks
100 to 800 Chicks
500 to 1500 Chicks

Economical to Install; Profitable to Use.

and you not only get perfect ventilation but you save the time, labor and expense of working out and installing an independent system. It is foolish to try to heat all outside by getting your ventilation through a hole in the roof and side walls when a **Duplex** will give you better results without.

Here's How the Duplex Does the Work

No. 1 is the cold air pipe connecting with the outside. This pipe brings the cold air from the outside into the inner chamber (2) where it is heated before it passes into the brooder room. Note how the air goes down in this chamber, then rises, going up under the deflecting cover, then out into the brooder room proper. 3 is the flue which goes out through the roof and carries off the smoke, fumes, poisonous gases and air off the floor. 4 is the radiating drum through which the heat which is not radiated from the inner and outer heating surface, must pass before it can get out through flue 3. 5 is the fire-box proper. Note the double heating surface. The arrows under the burner show where the air is taken off the floor and carried out of the building through the stove. This makes a perfect circulation of air in the room without the loss of a single heat unit.

The Duplex System of Colony Brooding can be installed with less expense than any other system in use anywhere. Raises enough **MORE** chicks out of the first batch to pay for itself. Efficient and economical. Costs less for fuel and is dependable at all times. Raises chicks as successfully in mid-winter as in May and June.

Help Nature Raise Strong Chicks

YOU cannot raise the chicks. No matter how hard **YOU** try or how much attention **YOU** give your chicks **YOU** cannot raise them. The only thing **YOU** can do is **help.** Nature must do the work. The only way for you to help is to provide conditions which make it possible for Nature to do the work. All that Nature asks for is clean, well ventilated, evenly heated quarters and plenty of room for exercise. These combined with reasonable care in feeding will make it possible for Nature to do the work for YOU. Chicks which Nature raises are always strong and healthy. The easiest way to help Nature is to install the Duplex System.

Every Chick Saved Is a Dollar in Your Pocket

FREE Let us send you our free book "Colony Brooding." Tells all about this wonderful chick-saving system—how to cut the labor and expense in two and increase profits. Write now for special low freight prepaid price and thirty day actual operation guarantee to those who answer this ad.

WHAT ONE OF OUR CUSTOMERS DID

First Prize Photo for 1913. Gets 100 Chicks. Raised 50 Very Fine Pullets from 100 W. Orpington Chicks.

Stop 20 1-2, Wickliffe, Ohio, Oct. 8, 1912.

M. Uhl & Co.: I am sending you a few pictures of the 100 W. Orpingtons received of you April 10th. I raised 92, only one died from sickness, the rest from overcrowding. Got 42 cockerels and 50 pullets. They are a fine bunch and I get a great many compliments. Even old chicken raisers said right from the start that they were the best day old chicks they had ever seen. To raise 92 of the 100 was beating their record. It is all in the quality, so I am more than pleased. I sold 35 of the cockereis when two months old for $1.50 each. Photos were taken at about four months old. You will hear from me again in the spring.

THE WORLD'S BEST WYANDOTTES

SILVER, GOLDEN AND WHITES. We have the finest lot of both old and young birds that we have ever offered, **at bargain prices.** 2,000 head to select from, many grand show cocks. Let me know your wants in anything from utility to the finest show birds. My Wyandottes have won more than 300 premiums at Madison Square Garden, New York, and have been winners at all the large shows of America. I have line bred them for 30 years and you get the benefit of this fine blood when you buy a **Keller** Wyandotte. Also the very finest narrow laced GOLDEN SEBRIGHT BANTAMS. Large circular free.

Brookside Farms, Ira C. Keller, Box 75, Prospect, Ohio

FARRANT S. C. BROWN LEGHORNS

At the GREAT COLISEUM SHOW, Chicago, December, 1913

I won 1st, 4th cock, 1st, 5th cockerel, 3rd, 5th Pullet, six ribbons on seven entries. Show birds for sale that can win for you anywhere. Chicago winners heading all pens. Write for mating list.

F. M. FARRANT, 745 Prairie Ave., KALAMAZOO, MICH.

S.C. BROWN LEGHORNS

PRIZE WINNERS

The kind of birds the fancier loves to raise. I won 1st on cockerel, 3d on cock, at the Boston show, 1907; 2d and 5th cockerel, 3d and 5th cock, 3d and 6th hen, Boston, 1908; 1st on cock, 3d on pullet, at Madison Square Garden, 1905; 1st cock, 2d and 3d on cockerel, 1st on pullet, 1st on pen, and 10 special premiums at Chicago show, 1905, winning fifteen prizes on eight birds. At Chicago, December 1909: 1st and 2d cock, 1st and 5th cockerel. First cock, 1st cockerel at the Great Chicago Show, 1910. A choice lot of show and breeding stock now ready for delivery. Circular showing my winnings free. Write now.

"O.K." Poultry Litter

TRADE MARK

is cheaper to use and ever so much better than Straw, Clover, Alfalfa, Sawdust, Shavings or anything ever thought of for litter.

"O. K." KEEPS THE BROODER CLEAN DRY SWEET

WITHOUT ONCE CLEANING OUT

Imagine the comfort, convenience and time saved running your brooders like this. Remember, one lot of "O. K." Litter lasts until the chicks have outgrown the brooder without once cleaning out. In COOPS, LAYING HOUSES, COLONY HOUSES and SCRATCHING PENS, "O. K." Litter dries up the droppings so that the house is always dry, clean, sweet-smelling and sanitary, and needs cleaning out only once in three or four months.

Tell us how large your house is—we will tell you how much "O. K." Litter you need. Write today for

FREE Sample of "O. K." and New Poultry Book

210 Eggs in 259 Days

This was the official record made by one of the females in our pen at the International Egg Laying Contest at Storr's Agricultural College last year. Our five birds in this pen made a record of 836 eggs in 9 months and 11 days of actual laying. Eggs for hatching. Send for catalogue.

SINGLE COMB BLACK MINORCAS
AND CANADA'S BEST S. C. REDS

At the American Black Minorca Club Show, 1910-1911 and 1911-1912, I won the club cup for best collection. This, with my wonderful wins at Boston, New York, Guelph, Toronto, and London establishes a show record that has never been equaled on the continent on S. C. Black Minorcas. I won the club cup at Guelph in 1910 and 1911 and sold the birds that won it in 1912 on S. C. Reds. I am anxious to get cleared out and will sell about 25 S. C. cockerels at $2.00 to $5.00, bred from our best blood. I will just have one pen of S. C. Black Minorcas (hens) this season, the best I ever owned, from which I will sell a limited number of eggs at $10 per 15. Also one choice pen of S. C. Reds, $10.00 for 15 eggs. Please send for Sale Catalog and Testimonials. We please our customers.

CHRISTIE'S
S. C. White and Brown Leghorns

Having been bred for 14 consecutive years, represented all over the world, they stand today without an equal as egg producers, the foundation upon which all branches of the poultry industry hinge. We have been shipping our

S. C. White and Brown Leghorn Day-Old Chicks and Eggs for Hatching

to all parts of the United States and foreign countries for ten years, and during this time we have shipped over 1,000,000 chicks and 800,000 eggs for hatching, and we have yet to find one displeased customer, a record attained by very few. Before placing your order, write today for our illustrated catalogue, and read what thousands of our pleased patrons say in regard to the **World's Greatest Layers.**

PEABODY FARMS DEPT. A HINSDALE, ILLINOIS

Loyd's Prize-Winning Partridge Rocks

Make two good winnings at two good shows in one week. At Boston we won 3d, 4th and 6th Cock, 6th Hen, 2d, 4th, 5th and 6th Pullet, 3d Pen. Birds were sixty hours on the road and were judged shortly after reaching show room. At Columbus, Ind., we won 2d, 3d and 4th Cock, 2d, 3d and 4th Hen, 1st, 3d and 4th Cockerel, 1st, 3d and 4th Pullet, 1st, 2d, 3d and 4th Pens, cup for best display in Plymouth Rock classes, and cup for largest and best display in show. Coupled with our winnings at Chicago, Cleveland, Cincinnati, Nashville, Indianapolis, etc., leads us to believe we have some good ones. Stock for sale. Eggs after Feb. 10th.

C. J. LOYD & SON - - GREENSBURG, IND.

If I Buy Baby Chicks Will They Mature Into Pullets Like These?

Will they grow into birds that I can feel proud of and that will lay Winter eggs in quantities, or win the blue ribbons for me, or will they be just scrubs, that's the question before everyone who buys day-old chicks. It is not the first price that counts—but will they be right at maturity ?

Caldwell's White Plymouth Rock (Fishel Strain) "Baby Chicks of Quality"

From Utility Matings

Will mature into long backed, well made birds, pure white in color, that will be the secret of "Winter eggs." Every utility breeder is descended from known good layers that have been bred that way.

From Exhibition Matings

Will mature into blue ribbon winners. Every exhibition pen is made up of birds with good combs, of good type and chalk white in color, possessing the rich blood lines of generations of Fishel blue ribbon winners. Our birds were among the principal winners at the Indiana Fanciers' Show, Indianapolis, 1912.

Our Flocks are Vigorous

All Fall our flocks have roamed meadows and woods accumulating health and vigor. They are now in Winter quarters so full of life and vitality that their chicks will be strong and sturdy.

Here is the Caldwell Selling Plan

We are now booking orders for "Baby Chicks of Quality" for Spring delivery. We never have been in such fine shape to handle orders of any size. Our fine plant is fully stocked with the finest birds we ever owned of both utility and exhibition quality. An early placed order enables us to so arrange our hatchings that we save money. By your faith you are entitled to that saving so we will allow you discounts for early placed orders, the earlier the greater the discount. **Safe arrival of chicks is guaranteed.**

A New Catalog Is Now Ready

One of the finest ever issued by any breeder. It tells just how "Baby Chicks of Quality" are produced and describes every grade of stock that we have to sell with prices. A copy is ready for you.

ROSE AND SINGLE COMB REDS

We have won more prizes in the last three years, in the largest shows of the country, than any other exhibitor. This is not hot air but facts and is easily proven. We are in a position to furnish stock for any show, large or small and are offering some bargains for quick sales. If you want to improve your flocks, our blood lines will do it. If you want to win, we can help you. Our beautiful catalog of 64 pages, printed in three colors, contains many articles on raising and caring for poultry. It will be sent for 20 cents in cash or stamps. We are the largest breeders of Rhode Island Reds in the world, and if you are in need of anything, come to headquarters.

BUSCHMANN-PIERCE RED FARMS - - INDIANAPOLIS, INDIANA

American Poultry Association

The poultry industry of this country amounts in the aggregate to one billion dollars per annum. These figures paralize the imagination.

The American Poultry Association is the largest live stock organization in the world and its membership is increasing with tremendous rapidity. On its roll are the leading breeders and representative poultrymen of Canada and every state in the union.

Every breeder, fancier, man and woman in the United States and Canada who is interested in poultry of any kind should join this great organization.

The American Standard of Perfection

The Standard of Perfection is the official guide for the breeding, mating and judging of all poultry. It gives a close and detailed description of every breed and variety of chickens, ducks, geese and turkeys, with illustrations from living models. This book is published by the American Poultry Association at an enormous expense and is the American authority. You can not raise poultry successfully without this American Standard of Perfection. Prices postpaid from the publishers of this paper. Cloth binding, $2; leather binding, $2.50. Send all orders to American Poultry Journal, 542 So. Dearborn St., Chicago, Ill.

On its shoulders rest this gigantic Billion-Dollar Industry.

Your interests will be promoted and safeguarded. You may compete for the association diplomas and gold and silver medals at the shows, and be entitled to all the help that honest organized effort can give you.

You will have a voice in shaping the course and policy of the association. Making it recognized by nations and governments. Your name should be one of the thousands of the honored members of this association. We urge you to write immediately for information and application blank. Address

E. B. THOMPSON, President, Amenia, New York
S. T. CAMPBELL, Secretary

American Poultry Association, Mansfield, Ohio

Are your New Year resolutions still kept?

* * *

This has been a great season for the "Flea." Will give full reports in our next. A grand association has been formed.

* * *

The question of the day is—to put the exhibitors' names on the coops before judging. It is the modern method of honor. Vote for it.

* * *

The two big Red Men of New York, Messrs. I. W. Bean and H. W. Alt.

* * *

The two Small White Men, Messrs. Arthur G. Duston and A. J. Fell.

* * *

We will now have to find a class for Jack McKay and Bill Campbell.

* * *

The Garden Show was a hummer—nothing like it ever before. In simple greatness it was great, above all expectations, and a great success, thanks to Chas. D. Cleveland.

* * *

Mrs. D. W. Young is still awaiting the Clyde Proper tie and the Link Orr hat. Someone surely should go with those men when they buy dress goods.

* * *

Charlie Welles spent a day at New York looking them over. His tracks led straight to Barred Alley and were lost there.

* * *

The Poultry Journal Subscription Booth at the Philadelphia Show was a great success. Let others also try this idea.

* * *

Mr. E. B. Thompson's great win at the Garden, New York, Show is the finish of a 30-year record of breeding and exhibiting. In cockerels winning all five prizes is most liable to stand for many years to come. He also had others that could have been placed.

* * *

We now have with us several English breeders with large strings of birds for several shows. Mr. Wm. H. Cook and Mr. Clem Watson intend to display at Baltimore and Boston besides here.

* * *

Their lines of Orpingtons, Cochins, Games, Sussex, etc., have met with much favor among the breeders.

* * *

Just what became of Atherton's hat at Boston is the question. His story is good to tell and sounds well, but is very, very thin.

* * *

If a man would be honest he must keep in training, remember that.

* * *

"Shall I dissolve another pearl in the chalice for your breakfast?" asked

Carver's Royal Red Sussex were the Champion Reds at Buffalo, Chicago, Madison Square Garden and Cleveland this Season.

GOLD AND SILVER CAMPINES

MANHATTAN FARMS

Again They Head the Procession!

Have You Noticed My Winnings This Year?

MY birds swept the decks at New York State Fair, Rochester Industrial Exposition, Greater Buffalo Poultry Show, Madison Square Garden, and at the American Campine Club's official show at Philadelphia, where we were awarded both Golden and Silver Championship Cups on best display and winnings. These were real shows, having good hot classes, and again my birds are

THE PACEMAKERS OF AMERICA

If yon want some good stock, either for utility or show purposes, general stock list is now ready. Yours for the asking.

Our Egg Matings this year have never been more carefully selected. Will have but two prices:

BEST MATINGS, $1.00 PER EGG GOOD MATINGS, 50c PER EGG

Send in your name on a postal for mating list. It will be ready February 1st, and contains description of the finest Campines in America. There is nothing better in Campines anywhere.

MANHATTAN FARMS
GEO. E. NOETH BRIGHTON N.Y.

Charmion. "No," replied Cleopatra. "Pearls are too commonplace and inexpensive. Boil me an egg."

* * *

According to reports, McAvoy, the Houdan breeder (?), pleaded guilty to defrauding and was fined $750.00. That seems rather cheap and we will comment further on full details.

* * *

The poultry industry owes it to itself to follow up cases of this kind in the future. Let us aim to keep this business clean and above question. The man who will skin a fancier should go to jail for life.

* * *

It pays to be a booster, always—a knocker, never—and to play the game like a gentleman. The voice with the smile will win.

* * *

There was a little hen
And she laid a little egg,
So long ago we've forgotten.
And when the egg was young
It was very, very good,
But when it was old it was rotten.

* * *

The greatest thing ever—is what the "Boys" down East say of our New Year number. It was some Journal.

* * *

Mrs. Wm. H. Moore entered the hall of fame at the Philadelphia show by winning highest honors on her Black Cochin Bantams. They also repeated at Baltimore.

* * *

There is always sunshine, we only have to move into it.

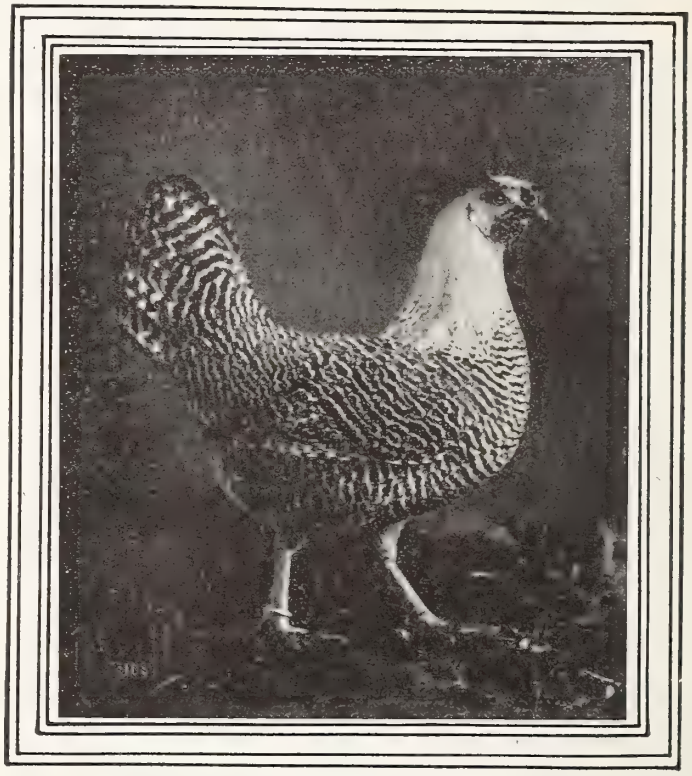
* * *

As we expressed ourselves earlier—the shows are larger and better than ever. The attendance better and the prospects bright for a wonderful season ahead. Strive and do your share.

* * *

Mr. Arthur Trethaway wore his best smile at the Garden Show. The Minorcas pleased him and particularly the win made by Yama Farms. Well he knows Minorcas and should be happy with that class.

* * *



For many years their line was up with the best here and was felt at our best shows, where they made valuable records.

SOME PERTINENT OBSERVATIONS CONCERNING CAMPINES.

Frank E. Hering, South Bend, Ind.

I HAVE been frequently asked by beginners as well as by men who have had considerable experience in breeding Campines, to give my views of the hardiness of this fowl and its egg laying possibilities. I take this opportunity to comply with these various requests; and I do so the more gladly because I wish to help those that contemplate breeding Campines, as well as to encourage any breeder who may have embarked on such venture and may have struck a bit of ill fortune during the initial year.

Several years ago I imported from England the very best Silver Campine male that I could buy—the cock bird which is now widely known among Campine fanciers as Silver King I. I also imported all my females, purchasing the very best that had been raised to that time. From this mating I henhatched all the young stock. The "broodies" and their chicks were placed on sandy soil. They were fed exactly as chicks of other breeds are fed. However, it is very necessary to keep the little ones out of high grass

First Silver Campine pullet, Chicago Coliseum. Bred and exhibited by Frank E. Hering, South Bend, Ind.

The Golden Road to Success

ALDRICH CHICK GROWER, a Specific for Bowel Trouble, and BONE-A-TONE, a Bone-Producing, Health-Giving Tonic.

READ CAREFULLY THE EVIDENCE OF AMERICA'S MOST NOTED POULTRYMEN:

Hope, Indiana.

Gentlemen: I wish to state that Aldrich Chick Grower reached us in due time, and I must say it is **without doubt** the Greatest Remedy we ever used along this line, and we have been raising fancy poultry since 1883. It is a frame builder and a body vitalizer. We have never used anything that made chicks grow up so readily as your Chick Grower. I can truthfully recommend to all poultry raisers this **Great Remedy**, and I assure you as long as you manufacture it and it proves the good merit it has this season we will continue to purchase it of you and order more in a few days. I note what you say in regard to BONE-A-TONE. I would like very much for you to send me a quart. It is surely a good Tonic, as you have given size and fast growth to your stock.

Wishing you every success, we remain,
Very respectfully yours, J. C. FISHEL & SON.

Collegeville, Pa.

Dear Sirs: It gives me great pleasure to report that your CHICK GROWER and DIARRHEA REMEDY is one of the Greatest Remedies that the poultryman has ever been able to get hold of. It is surely a wonder. I cannot recommend it too highly. Wishing you every success, I beg to remain,
Yours truly, F. G. BEAN.

NOTE.—Judge Bean judged the pens and females in the White Orpington class last December at MADISON SQUARE GARDEN.

CORDOVA, ALA.

Aldrich Poultry Remedy Co.

Dear Sirs: I have given your WHITE DIARRHEA REMEDY a most thorough test. While I have lost **at least** 50 per cent of all chicks hatched during the last two years by **this scourge, I HAVE NOT LOST A SINGLE CHICK** since using your REMEDY. I DO NOT GUESS about it, for I know it to be both a cure and an ABSOLUTE PREVENTATIVE. To test it I would divide the hatch and feed exactly the same, but give one-half of chicks the Remedy in their drinking water and the other the plain water. **NOT A SYMPTOM** ever appeared in the flock given the Remedy, while in 3 or 4 days the others were all stuck up with white diarrhea. I would put them on the treatment and all chicks that were able to eat and drink QUICKLY RECOVERED, and not another chick became affected, although the sick and well chicks remained together.

I consider your cure **The Greatest Blessing** for the poultry interest of any discovery in 25 years.

Respectfully, POPE M. LONG.
Breeder of Silver and Partridge Wyandottes.

The above evidence is proof conclusive of the merits of THE NEW DISCOVERIES made by Messrs. Rawnsley and Aldrich.

PRICES: ALDRICH CHICK GROWER, $1.00 per quart jar, enough to raise 100 chicks beyond the danger point. BONE-A-TONE, $2.00 per quart.

DON'T LOSE YOUR CHICKS when an ABSOLUTE REMEDY can be secured at a nominal cost

ALDRICH POULTRY REMEDY CO. :: 4045 North High Street :: COLUMBUS, OHIO

or any kind of vegetation that holds dew. Campines are very similar to Leghorns and other Mediterraneans in that they do much better if the feathers of the young stock are not saturated with rain or with dew. Young Campines are very active foragers. They grow very rapidly. Six months' pullets, if they have received the proper care, are ready to lay.

The best Campines now on my plant were bred there. The first Chicago cockerel, 1913, which is considered by poultry artists and judges as the best feathered male Campine exhibited to date in this country—as well as his full brother that headed the first young pen at Chicago—were hatched last March, permitted to run on range until the first week in November, and were put into the show room with very little special attention.

The cut of the first Chicago pullet, 1913, which appears on this page, shows the type and the feathering of the very last word in improved Silver Campine females. The clearness of barring and the sheen on this pullet are as pronounced as any fancier could wish. The picture is practically untouched and for that reason will serve as a model to guide Campine breeders.

I have found Campines a hardy fowl. At this writing I have baby chicks in my brooder house—hen-hatched, active little creatures—that meet the inclement weather of this third week in January with a disregard of temperature that speaks very strongly for the vitality of this fowl. As I have some Leghorns on the plant, I have been in position to compare the two breeds. It is my conviction that the Campine lays, in general, the larger egg—one whose shell is even whiter and whose texture is finer than that of the Leghorn. There is more meat on a Campine than on a Leghorn of the same weight, and the quality is a bit finer and not so fibrous. Leghorns and Campines are equally good foragers, but the latter are not nearly so timid, and do not require the fencing and the overhead netting that my Leghorns do.

Campines should be kept in draught-proof houses. These should, if possible, be raised eight to twelve inches above the ground. The fowl is sufficiently hardy to meet successfully the varied climatic conditions from Texas to British Columbia, if it is protected from draughts and from an undue amount of dampness.

I have very recently built some breeding houses for Campines on my plant, one mile west of South Bend, Ind. After three months' trial, I am prepared to pronounce the houses well suited for winter purposes. They are about half open-front, and face southward, toward the Kankakee marsh. The floors are cement, that is, laid on a gravel foundation, one foot higher than the surrounding land.

Visitors will be gladly shown over the plant by my manager, Mr. Harmon Bradshaw, the well-known White Leghorn breeder, who is associated with me in the breeding of "the living egg-machines." Any breeder or fancier desiring information on special points connected with this variety will receive prompt answer to inquiries sent me.

E. A. Webb's Barred Rocks Win at St. Louis, 1913

First and second pullet, special for best shaped female, also second pullet mated cockerel. **At Illinois State Show, 1914,** fourth cock, third exhibition pullet, third cockerel bred pullet, third cockerel bred hen. I have 50 grand cockerels and a few pullets for sale. I will sell eggs from 6 of the greatest pens in America. My birds are pedigreed and line bred. Satisfaction guaranteed. Henderson & Billings - - St. Marys, Ontario

1889 **The Twenty-Fifth Anniversary** 1914

OF

THE PARKS' STRAIN OF BRED-TO-LAY BARRED PLYMOUTH ROCKS

An occasion we are proud to commemorate. Not alone to the great number of years "that in reality makes this the Oldest Laying Strain of today," but to the success that has crowned our effort, not only in our own hands, but with our customers, as last month's ad in A.P.J. proved.

These World's Egg Records are the result of a quarter of a century of selecting, trap-nesting, pedigree breeding, and scientific matings.

The same progressive principles have been used in the business end, and today our strain of Bred-to-Lay Barred Rocks have the distinction of being the most widely bred ,and I believe are in more satisfied customers' hands than all other laying strains combined.

We point with pride to our January, 1914, Show winnings in five States. Not that we claim a show bird strain, but that we have a bred-to-lay strain good enough to win in ordinary competition.

SELECTED INCUBATOR EGGS **$5-15, $8-30, $11-50, $20-100. $2-13, $6-45, $12-100.** **Place Your Orders Early**

Eggs scientifically packed, "not boxed." See article in this issue.

Pensacola, Fla.—Eggs received O. K. Your system of packing is excellent.—Edw. J. Landt.

Lowell, Mich.—Chix arrived today. I never saw a livelier bunch.—W. Willard.

I still have a few pedigreed breeders and cockerels for foundation stock. Chick circular free. Send dime for large 40-page catalog—deduct same from your first order. Tells why the Barred Plymouth Rocks outlive all the BREED BOOMS. How I feed, breed and am able to produce record layers.

J. W. PARKS, BOX J, ALTOONA, PENNSYLVANIA

Madison Square Garden Show

Continued from page 219

give the class is far short of its real worth. The first prize cockerel was all we can expect, a great bird and great winner to be, for in shape, finish and head he was near ideal, with fine carriage and perfect condition—a picture. First pullet, a dream, of the best quality we can find in a White Wyandotte.

Onlya Farm, Florham Park, N. J., won 2nd pen, with a grand mated collection. Their several records this year will tell of their quality. In Barred Wyandottes they won cock 2-3, hen 2-3, cockerel 1-2-3, pullet 2-3 and pen 2. Charlie Staaff, the manager, has done well with these, breeding them to excellent shape and good color.

In Buff Wyandottes the honors were pretty well divided among several well known breeders as follows: Besuden Bros., W. G. Marshall, S. A. Howland W. F. Shultz, L. W. Winner and Doctor Sanburn.

Partridge Wyandottes, a very large and beauty class, one of the choicest ever brought together. Mr. Chas. H. Wood, Worcester, Mass., was the man of the hour here, making a really phenomenal record by winning cock 1-2-4, hen 2, cockerel 1-3-4, pullet 1-4-5, pens 1-3, display and all specials. The general quality and character of this line are seen in every bird shown—evenness with splendid markings and extra fine heads most noticeable, and in form as good as we can expect to see. First cock a particularly fine specimen and well shown, with all winners birds of exceptional merit.

The Sheffield Farms, Glendale, Ohio, exhibited here as fine a line of birds as they ever did, but it is a question if they were in same condition; their quality is well known and their line one of the best, being most excellent in size and type. They here won cock 5, hens 3-4-5, pen 2-5.

Minch Bros., Bridgeton, N. J., won pullet 3. In Light Brahmas they won cock 1-5, hens 2-4 and pullet 2. This line has been very successful this season at Philadelphia, Hagerstown, etc.

Mr. Paul W. Doll, White Plains, N. Y., after winning well at the Palace New York show, also got in here with hen 1, on a beauty.

Mr. D. Lincoln Orr, beside his duties as postmaster, found time to win some prizes with his Columbian Wyandottes as follows: Cock 1, hen 2, cockerel 4, pen 2. Mr. Orr was also displaying his famous feeds here.

Other winners in this class were J. H. Wendler, J. S. Rittenhouse, Harwood Farms, Harry B. Miller, A. C. Hawkins,

Barred Wyandottes were shown by Onlya Farm as already mentioned, and the Wilhelmina P. F. They won cock 1, hen 4, cockerel 4, pullet 1, pen 1. There was class in this variety.

Reds of both varieties were here in quality and quantity. It was a glorious display, with well known breeders from all sections competing. The United Breeders, So. Braintree, Mass., a company of our best-known breeders, including I. W. Bean, A. W. Dilley and F. L. Hayden, all "Red Men" of note, won in Single Combs: Cockerel 4, pullet 4, pen 4-5. In Rose Combs: Cock 1-5, hen 1-2-5, pullet 1, pen 4, best display and specials. Their winning Rose Comb cock, a bird of special merit, type of the best and the quality in evenness of color. We greatly admired their winning females, sound, even color, nice heads and the best of form.

Mr. Lester Tompkins, Concord, Mass., won in Single Combs, cock 1-3-5, hen 4, cockerel 6, pullet 2, pen 3.

Mr. H. P. Deming, Robertsville, Conn., who has been a very consistent winner in S. C. Reds for some years, won pullet 1 and pen 6. This pullet was one of the bright gems of the class, a real beauty, finely shown; there is value to her kind.

Schenley Heights P. F., Pittsburg, Pa., here won in S. Combs, cock 2, hen 3, cockerel 5. In Rose Combs, cock 4. This line has been most liberally shown and has made the best of records this year at the New York Palace, Philadelphia, Allentown, etc.

In S. Combs, first hen went to Mr. F. L. Ober, Verona, Pa., on a hen of great beauty and value.

Mr. Jos. Russell, Toronto, Ont., won hens 2-5, and in R. Combs cockerel 2.

Mr. Ernest Underhill, Morris Plains, N. J., won cockerel 3 in S. Combs. This is a bird of rare beauty.

Mr. F. H. Stillwagen, Allentown, Pa., a Red winner of note this year was also in the honor class here.

In Rose Combs, Simmons & Crittenden, Geneva, O., won cock 2 and shape special on a bird of rare beauty, and pen 2. Cockerel 917, a beauty in color and fine head. Their whole exhibit was one of quality.

Payne Brothers, Portland, Conn., have proven themselves regular winners here for years in Rose Combs, and again this year won first prize pen. In both quality and mating this was a beauty collection. They also won hen 3 and specials. Heads a feature in this line.

Mr. Ira M. Crowther, Willoughby, O., won first prize pen on S. C. Reds. This pen was one of the high spots in the class of grand quality and beautifully mated and shown. Mr. Crowther has been a prominent winner for some years, and we hope he will again come east, for his quality looks good to us.

Mr. Harold Tompkins, Concord, Mass.,

won in R. Combs, third pen and third cockerel. He is bound to edge in on any competition and has the quality the judges have to consider.

Leghorns.

There is unusual interest in the Single Comb White Leghorns at the great Garden Show every year, with expectations and hopes at fever heat. The great question for an age has been, What will Dan Young bring down and what can he win this year? Year by year the S. C. White Leghorns have been improved, and yearly it seems to us impossible that this breeding wizard can come back and show improvement over his previous great records and quality. But this is just what he has done for years past, and I believe proposes to do for years to come. Say what we can of his past great winners, and they deserve well all that has been said, he came back this year and exhibited and won on a "Marvel," a bird of beauty and quality that no human mind can improve, unless that be Mr. D. W. Young. With condition and quality considered, Mr. Young never won higher honors than he did this year, for aside his regular winnings, his "Marvel Cockerel" won the highest honors of the show, the A. P. A. gold medal, for being the "Best Cockerel in the entire show."

Mr. Young won cocks 1-2-5, hens 2-3-4, cockerels 1-3-4-5, pullet 5, pen 1, display and specials, and all this in a class of 204 birds.

Skylands Farms, Sterlington, N. Y., have made several records this year of particular note, and their win here is one of credit to Mr. Harlo J. Fiske. Mr. Fiske has step by step brought his line to the front and has for several years been a leading contender at our best shows. Here he won cocks 3-4, cockerel 2, pullet 4, pens 2-5. He won specials for best headed male and best headed female, and President's $100 challenge cup for display. This is his third win of this cup and now is final owner.

The Maryland Leghorn Farm, Cambridge, Md., made their first exhibit here and won first prize pullet. Mr. W. C. Bowman, the manager, has had charge of this farm less than a year and his work is to be commended. But few live to win a first at the Garden Show their first year out in S. C. W. Leghorns. You have done well, Billie!

Mr. Stewart Haddock, Poughkeepsie, N. Y., exhibited but a few of his birds, evidently being satisfied with his winnings at Buffalo, Philadelphia and the Palace New York Show.

Two very neat and fine cockerels were shown by Mr. Albert Waldron, Titusville, Pa. This quality is full of promise.

One of the most interesting exhibits seen here was the display of S. C. White Leghorns by Mr. Edgar Briggs, Pleasant Valley, N. Y. This line is well known the country over for its practical qualities. They lay eggs, but we were also pleased to note their excellent quality. In size, shape and general condition they are much better than we expected. Mr. Briggs has made a grand success with his line and deserves well from the breeders.

In S. C. Brown Leghorns, Rockfellow & Hubbard, New Haven, Conn., following up their grand winnings at other shows, won here, cock 2-4, hens 1-3, cockerels 1-2-3, pullet 2-4, pens 1-2, best display and specials. We think this the equal of any record ever made at this show, with a class of 78 birds competing.

Mr. Frank Schellang, Erie, Pa., won cock 5, hen 4-5, pen 3.

Mr. L. E. Merihew, Marathon, N. Y., in S. C. Buff Leghorns, won cock 1-4, hen 3-4, cockerel 3-5, pullet 4.

In S. C. Black Leghorns, Turtle Point Farms, Saratoga Springs, N. Y., won cock 2-4-5, hen 4-5, cockerel 1-3-4, pullet 1-3 and pen 1.

NIXON'S WHITE WYANDOTTES in their 21st YEAR

Boston; Madison Square Garden

The oldest and most reliable of White Dott tribes. They have made good in the thickest of trouble, winning out against the best that could be raked up for the big National Club meet at Albany, N. Y., 1913. There were others, but just fast enough to get beat. Say! Talk about quality. Why, it's better than ever. Big, plump, pure white birds in any number you wish, to win at any show you wish, and to breed the quality you wish. **Eggs ready January 15, 1914,** from the grandest yards I ever mated. Utility eggs in any number from excellent mated pens. Come to the old reliable specialist. No better egg machines in America. Write today. Literature.

CHAS. NIXON, Judge and Breeder, WASHINGTON, NEW JERSEY

PALACE N. Y. SHOW, 1913

WINNING BARRED PLYMOUTH ROCKS

In a class of 213 birds, bred and shown by America's Leading Breeders in one of the largest and best classes ever exhibited, I won **Special First for Best Cockerel,** Mating Pen, Second Pullet Mating Pen, Fourth Exhibition Pen, **First and Third Pullet-bred Cocks,** Fourth Pullet-bred Cockerel, Second and Third Cockerel-bred Hens, Second and Third Cockerel-bred Pullets. **Specials, etc.** A record of merit in all classes.

Palace, New York Show, 1912

In a class of "Royal Merit" my winning First Prize Pullet was the sensation of the entire class. I also won Second Pen, Second Hen, Fourth Cockerel and Specials. At **Madison Square Garden, New York, 1912-13,** I won Seventh Pullet. This line has been bred for years in line and has made records at several shows. Choice stock for sale at all times, selected breeders a specialty in trios and pens, mated to produce superior quality. **Eggs for Hatching** from selected exhibition matings, $10 per setting. Utility mating eggs at special prices of $10 per 100. Write me your wants, I can and will please you. My utility lines are exceptionally heavy layers.

D. G. GENNERICH **MOUNT KISKO, NEW YORK**

Hundreds of birds are exported annually in a wide variety of breeds, and we satisfy our customers in each one so they come again. **Won't you send us a trial order.** Write to England for my latest price list.

TOYNTON, SPILSBY, ENGLAND Cable: Carey, Spilsby **or** **HARMONY PARK, SCOTCH PLAINS, NEW JERSEY, U. S. A.** Cable: Harmony Farwood

Minorcas.

In S. C. Black this was to our mind the best class seen to date, with 78 birds competing. The very best of quality was here shown by the best known breeders. Mr. Frank McGrann, Lancaster, Pa., made his first exhibit of some years here, and won a total of 41 points on 15 entries, with birds of his own breeding, as follows: Cocks 2-5, hens 2, cockerels 1-2, pullets 1-2-5, pen 2, and many specials.

The Yama Farm's winnings are given in with the Barred Rocks. They breed both varieties.

Orpingtons.

In all varieties of Orpingtons the competition was of the best and while in most cases the prizes were split up between several breeders, there was quality in all and honors for all that could get even a remote mention. In Buffs, the Joe Pye Orpington Farm, Norwalk, Conn., won cock 1-4, cockerel 4, pen 4.

The Sunswick P. F., South Plainfield, N. J., hen 5.

Miss Henrietta E. Hooker, South Hadley, Mass., hen 1-2, pullet 3, pen 2.

Mr. M. F. Delano, Vineyard Haven, Mass., cock 2-3, cockerel 2-3, pullet 5, pen 5. In White Orpingtons, cock 5, hen 2-5, cockerel 5, pullet 1-3-4.

Mr. Hugh A. Rose, Welland, Ont., in Buffs, cock 5, hen 3, cockerel 1-5, pullet 1-4, pen 1. In Blacks, cock 5, cockerel 2, pen 3-4.

The Foxhurst Farm, Lime Rock, Conn., here made a most wonderful winning in S. C. Black Orpingtons. We doubt if a better record could be made at any time, with 135 birds competing they won cock 1-2-4, hen 1-2-3, cockerel 1-3-4-5, pullet 1-2-3-4-5, pen 2. This line and quality was in the extreme beautiful and in best possible condition.

The Aldrich Poultry Farm, Columbus, O., also made a record in S. C. White Orpingtons by winning cock 1-2-3, hen 1, cockerel 1-2-3, pullet 2, pen 1. In shape and condition this line was good to see; it is a record of merit and an assurance of quality.

Wm. Moore, Hamilton, Ont., won in Whites, cock 2, hen 3, pen 2.

Blue Orpingtons numbered 104 birds and were a quality lot, well shown. Mr. Haldie Nicholson, Leominster, Mass., winning cock 2-5, hen 1, cockerel 2, pullet 1-5, pen 2-3.

Capt. Max De Bathe, England, who was the judge here last year, came as an exhibitor and won cock 3, cockerel 1-3, pullet 3, pen 4.

Mr. W. H. Depper, South Lincoln, Mass., cock 4, hen 4, pen 5.

Miss H. E. Hooker, hen 2-5.

A. O. V. Orpingtons were shown by Wm. H. Cook, Orpington, England, who won all prizes.

Campines.

Favorites and gaining in favor, is the word with Campines. In Silvers, 139 birds were seen. Mr. M. R. Jacobus, Ridgefield, N. J., winning hen 1, pullet 1-5, pen 1. In Golden, cock 3, hen 2-5, cockerel 4, pullet 1, pen 3.

The Manhattan Farms, Brighton, N. Y., won on Silvers, cock 2-5, hen 2, cockerel 5, pullet 4, pen 3; on Golden, cock 1-5, hen 3-4, cockerel 3-5, pullet 3-4-5, pen 2. Thus, like in former years, this line has been shown and has made excellent records at several of our best shows.

The Schenley Heights P. F., Pittsburg, Pa., won in Silvers, cock 1, hen 3, cockerel 1, pen 5; in Golden, cock 4.

E. F. Dean, South Williamsport, Pa., Silvers, cock 4, cockerel 3-4, pullet 3, pen 2; Golden, cock 2, hen 1, cockerel 1-2, pullet 2, pen 1.

Dark Cornish.

Another most excellent class here, with general quality of a very high order. Mr. John W. Ward, Jr., Pennington, N. J., won cock 2, hen 2-3-4, cockerel 1-4, pullet 1-4, pens 1-2.

Dr. W. A. Low, cock 1, pullet 3. The reader can imagine the quality of this cock to beat Ward's famous John Bull.

Brahmas.

Were one of the best classes seen here in years, Mr. E. J. Stroud, Asbury Park, N. J., winning first prize pen. The male here was one of the best we have ever seen, in shape; color and markings also very fine.

Other winners were Minch Bros., Spring Brook Farm, H. C. Wood, W. T. House, E. I. Collins, Riverdale P. F.

Langshans.

In Blacks a royal class of quality, with shape and color seen at its best. Mr. Frank Harbaugh, Middleburg, Md., did the clean-up act by winning cock 4-5, hen 1-5, cockerel 1-2-5, pullet 1-3, pen 1.

Black Spanish.

Here were seen a class of 49 Black Spanish, the best we have ever seen, Mr. R. A. Rowan, Los Angeles, Cal., winning all prizes offered. His display was beautiful to see, particularly the first prize cock that the boys named Hank.

Anconas.

In Single Combs the class numbered 114 birds and was the equal of any we have seen. Mr. H. Cecil Sheppard, Berea, O., won cock 2, hen 1-2-4, cockerel 1-2-3, pullet 1-4-5, pen 3, and specials.

Other winners were J. O. Somers, A. E. Wohlert, G. W. Cisco, Geo. J. Hanks, C. A. McKeown, F. W. Mains. It was real quality all through.

In Rose Combs, Mr. Sheppard won cock 1-2-3, hen 1-2-3-5, cockerel 1-2-3-5, pullet 1-3, pens 1-3, all specials.

Other Varieties.

Houdans, a small class of fine birds. The White Houdans shown by Mr. Bearman were particularly attractive.

Polish and Hamburg rather scarce, the breeders holding for the club show at Boston.

Sussex a very nice lot, with several English birds competing. Mr. Clem Watson doing very well.

Standard and Pit Games seen in good classes.

YOU NEED CHICKS

that will mature into strong, hardy, healthy pullets! You need chicks that will make a paying flock for you, whether for utility, breeders or exhibition.

Take Your Choice

	Per 25	Per 50	Per 100
S. C. White Leg....	$2.50	$5.00	$10.00

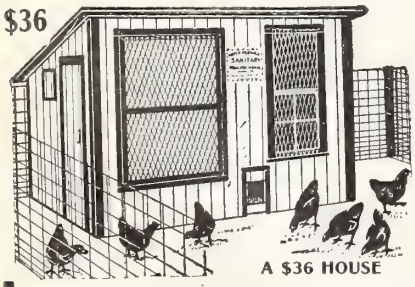
And forget the troubles that come to those who buy inferior chicks! Remember that A Bird in the Hand is Worth Two in the Shell. **Catalog Free on request.** Get your order in for early delivery—shipping each week.



Twentieth Century Hatchery
Chatfield, Dept. B, Ohio

DON'T KILL or sell your laying hens

Use the **Potter System** and pick out the layers from the loafers and diseased hens. Keep only healthy laying hens. The **Potter System** is a secret and the greatest discovery of the century in the poultry world on the subject of Egg Producing Hens. Used by over 50,000 satisfied poultry keepers, who are saving dollars every year. Our new 100-page Potter System book, **"Don't Kill the Laying Hen,"** contains the secret and knowledge about laying and non-laying hens. It's a revelation to poultry keepers, and you will learn how you can use the Potter System on your flock, keep less hens, get more eggs and make more money using it. Write today, sending two red stamps to cover postage on our large catalog and circular telling all about Potter Poultry Products made for Particular Poultry People. If you are particular and want to make more money on your flock, you will write us today.

$36

A $36 HOUSE

No. 5, style "D" 8x10-ft. Potter portable open front, fresh air, scratch shed house, equipped with No. 17, style "A" 5-ft. 3 perch complete hennery outfit for 30 hens. Price of complete house, $36. Painted 2 coats.

DON'T BUILD

YOU can buy better, cheaper, more complete ready (factory) made hen-houses, roosting and nesting fixtures, coops, etc., from Potter & Co., because they buy lumber in carloads, cut and fit all parts perfectly by automatic machinery and deliver the house, coop or fixture you need in convenient sections all ready to set up.

Potter Poultry Houses and Fixtures

Portable, Sanitary, Inexpensive

Have been on the market for over ten years and are used and recommended by thousands of poultry keepers who want the best and buy the best in poultry houses and equipment. Catalogue mailed for two red stamps to cover postage. Write for it today and save money.

T. F. POTTER & CO. Box E-21, Downers Grove, Ill., U. S. A.

Bantams.

Bantams were a show in themselves; it was a great quality display, the Black Breasted Reds, the largest and best class we have ever seen, with the Old English Games next in numbers. In Sebrights, Cochins and Japs the entry was very good.

Turkeys.

Here, again, we must say it was the largest and best exhibit we have ever seen. In Bronze particularly they were great, and Bird Bros. deserve every credit —they sure have the goods.

Ducks and Geese.

Were seen in good classes and in all varieties, the Runners and Pekins leading, with the Orpingtons close up.

Pigeons.

We are not experts in these classes, but still feel very safe in saying there were thousands here to admire.

From first to last this was a monster and most successful show, evenly balanced, with all varieties and all birds well represented. Quality was the slogan, and in this we find the real value of the Garden awards. As a rule we believe the judging was quite satisfactory; where it failed is known to the secretary, and the breeders can rest assured he will do his utmost to remedy all just causes and place this show on the highest possible plane. In this Garden show we have a something we can all feel proud of and through which we can assure greater success for all interested. Let every man do his full share, now.

For list of awards see page 289.

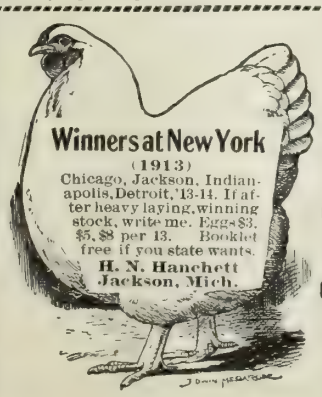
Madison Square Garden Show

(Continued from Page 218)

Schottelius has also shown that the presence of bacteria is an important factor in the digestion of cellulose in chickens.



CAECA—The two caeca are blind tubes which hold back some substances on their way to the large intestine, and give the bacteria more time to act on them.

LARGE INTESTINE—The large intestine begins just below the caecal openings. It receives the waste material from the small intestine. During its passage through the large intestine water is absorbed and it leaves the body combined with the waste material from the kidney in a semi-solid mass.

The author has endeavored to present the subject of digestion in the fowl in as concise and practical a manner as possible.

He realizes that he has by no means exhausted the subject but has only given a glimpse of the wide field for research open to those interested in the scientific feeding of poultry.

Are You Getting Results

from Your Advertising

?

Results depend upon good copy—it must be well written and different from the others—it should be a "Live Wire" so that it will draw and hold attention.

Maybe your copy lacks that snap and pulling power which brings inquiries and orders.

Could be improved on—couldn't it? Well here's the help you need.

If you are an American Poultry Journal advertiser this service is free.

Just send us your subject and the amount of space (it must be four inches or more). We write the copy absolutely free and turn it over to the A. P. J.—they do the rest.

You do not pay us one penny; we have our arrangements with the A. P. J.

Now send in your subject—we will turn it into live drawing copy—and it is absolutely free to you.

"When, Where and How" to Brood Chicks.

On page 189 of this issue will be found an interesting advertisement of the Self-regulating Portable and Adaptable Hovers manufactured by Cyphers Incubator Company, Buffalo, N. Y., and for sale at this company's six places of business, Buffalo, N. Y., New York City, Boston, Mass., Chicago, Ill., Kansas City, Mo., and Oakland, Cal. Following are two sample reports from Cyphers Company customers, telling of the good work done by these low-cost brooding devices.

"Hutchinson, Kansas, July 14, 1913.
Cyphers Incubator Co., Buffalo, N. Y.

We believe that no other make of brooding devices comes as near reaching the 'acme of perfection' as does the Portable Hover. We know whereof we speak—because we have used others. To all poultry growers we wish to say that they need not fear to use Cyphers Portable Hovers at any time of the year. At all seasons we have found them absolutely reliable. The temperature in these Self-regulating Portables is easily maintained, even in very changeable weather. Often when our section was visited by blizzardy conditions we would worry about our little chicks, but in every case found them 'snug and warm' and perfectly unharmed. In future we shall use Cyphers Portable Hovers exclusively. They are large and roomy, are automatic in ventilation and produce large, strong, healthy chicks.

O. H. Guy & Son,
per O. H. Guy."

"Canton, Mass., July 17, 1913.
Cyphers Incubator Co., Buffalo, N. Y.

Am very well pleased with your Self-Regulating Adaptable Hover. I installed it in a home-made brooder, made from two packing boxes and found no trouble in regulating the temperature under these conditions. Have had a very successful hatching season and thanks to your not-to-be-beaten Hovers have raised nearly every chick hatched. Put three broods through one hover and from all causes lost only ten chicks out of 275 that we put under it. From the first day to the time these chicks were taken out, they grew rapidly and seemed happy and contented at all times day and night. F. L. Moss."

The reader is requested to look up the Cyphers Company's full-page advertisement of these brooding devices on page 189 of this issue.

One of the Old School

There aren't many of the old school left, and when we hear of one of them still up to his old game of capturing blue ribbons it kind of makes us feel good all over. There are so very few of them, and they have done so much for the success of the poultry industry, that it seems like a shame that they can't go forth and shout their success from the house-tops.

But retrospection plays an important part in their life; looking back over their trials and triumphs no doubt affords them a great amount of pleasure. Can you imagine greater pleasure than to be one of the very few who have seen and participated in the wonderful growth of the poultry business.

Just think of it!—starting in the game when the public took poultry raising as a joke and continuing until he has helped it grow into a billion-dollar industry and still growing very rapidly. The gentleman to whom we refer, and who has helped to make the poultry business a billion-dollar industry, is our old friend, A. C. Hawkins, of Lancaster, Mass.
